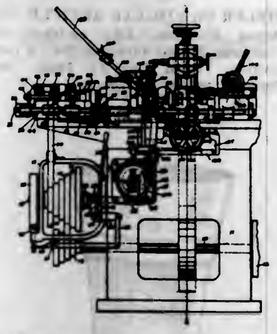
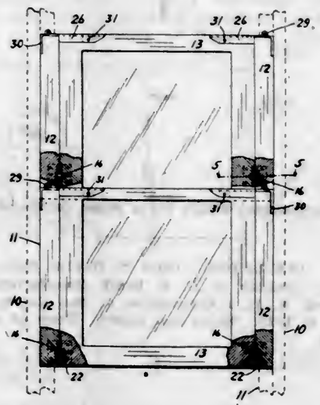
REISSUES



FEBRUARY 9, 1926.

16,259. APPARATUS FOR PITTING OR CORING FRUIT. ARTHUR L. DUNCAN, Oakland, Calif. Filed Dec. 9, 1925. Serial No. 74,402. Original No. 1,498,078, dated June 17, 1924, Serial No. 690,416, filed Feb. 4, 1924. 30 Claims. (Cl. 146—28.)



6. A peach halving and pitting apparatus including means for cutting a peach annularly to separate the pulp substantially into halves, with a portion of each adhering to the pit, means for separating the adhering portions of the halves from the pit, peach feeding means including a pair of peach impaling knives, and means for centering the peach onto said knives.

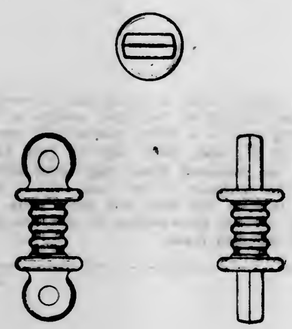
16,260. GRINDING MACHINE. WARREN F. FRASER, Westboro, Mass. Filed Aug. 4, 1925. Serial No. 48,131. Original No. 1,470,605, dated Oct. 16, 1923, Serial No. 456,411, filed Mar. 28, 1921. 24 Claims. (Cl. 51—50.)

1. A grinding machine having, in combination, means to grip one end of a blank, means to rotatably support the opposite ends of said blank during the grinding operation, means to feed said blank to said gripping and supporting means, means including said gripping and supporting means adapted to rotate said blank, a rotary grinding member, means to move said grinding member into and out of contact with said blank and means to release said blank from said gripping and supporting means.

16,261. WINDOW SASH. AMABLE S. TUÑEZ, Easton, Pa., assignor of one-half to Morris Levin, Philadelphia, Pa. Filed May 14, 1925. Serial No. 30,374. Original No. 1,521,409, dated Dec. 30, 1924. Serial No. 648,759, filed June 30, 1923. 5 Claims. (Cl. 20—49.)

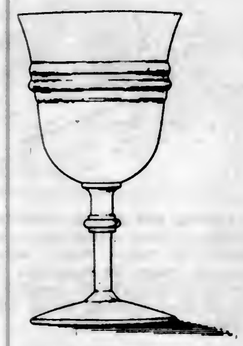
1. In a window sash, a sliding stile pivoted thereto, a pivot plate carried by the upper portion of the stile, a connecting plate of a width substantially equal to the thickness of the sash, hinge lugs on both plates, the length of the combined hinge lugs being substantially equal to the thickness of the sash, and a hinge pin extending through the lugs, said pivot plate having a portion of channel cross-section to embrace the upper portion of the sash frame.

DESIGNS



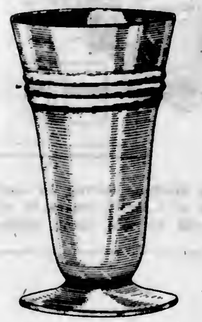
FEBRUARY 9, 1926.

69,380. PAPER CUTTER. CARROLL H. BLAISDELL, Providence, R. I. Filed Nov. 1, 1923. Serial No. 7,643. Term of patent 3½ years.



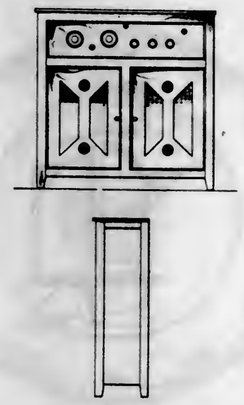
The ornamental design for a paper cutter, as shown.

69,381. INSULATOR. LEON S. BRACH, East Orange, N. J., assignor to L. S. Brach Manufacturing Co., Newark, N. J., a Corporation of New Jersey. Filed Mar. 5, 1925. Serial No. 12,608. Term of patent 7 years.



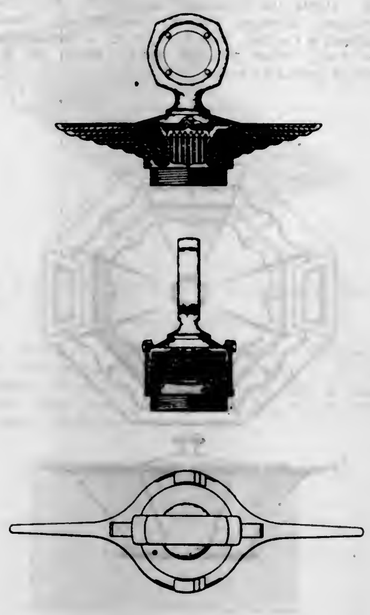
The ornamental design for an insulator as shown.

69,382. GOBLET OR SIMILAR ARTICLE. GERARD S. BRYCE, Mount Pleasant, Pa., assignor to Bryce Brothers Company, Mount Pleasant, Pa., a Corporation of Pennsylvania. Filed Dec. 14, 1925. Serial No. 15,752. Term of patent 14 years.



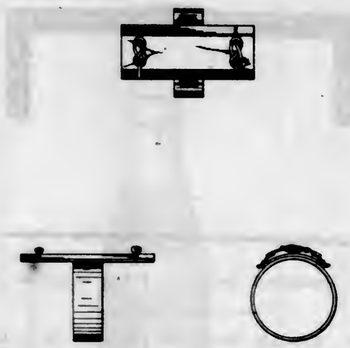
The ornamental design for a goblet or similar article, as shown.

69,383. TUMBLER OR SIMILAR ARTICLE. GERARD S. BRYCE, Mount Pleasant, Pa., assignor to Bryce Brothers Company, Mount Pleasant, Pa., a Corporation of Pennsylvania. Filed Dec. 14, 1925. Serial No. 15,751. Term of patent 14 years.



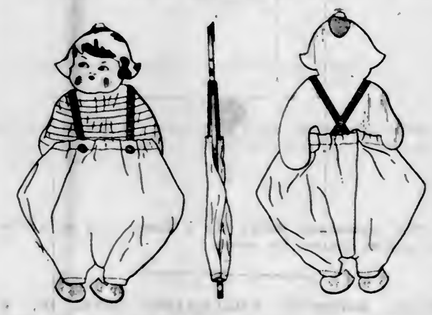
The ornamental design for a tumbler or similar article, as shown.

69,384. RADIATOR CASING. DOROTHY W. DAY, Chicago, Ill. Filed May 15, 1925. Serial No. 13,447. Term of patent 14 years.



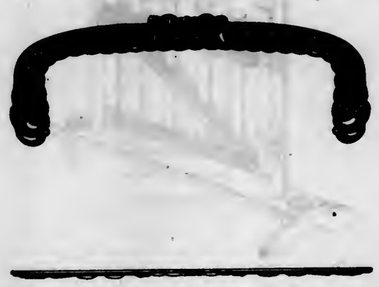
The ornamental design for a radiator casing, as shown.

69,385. AUTOMOBILE RADIATOR CAP. STEPHEN FAITH, Chicago, Ill., assignor to Faith Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 3, 1925. Serial No. 15,630. Term of patent 7 years.



The ornamental design for an automobile radiator cap, as shown.

69,386. RING. WILLIAM S. FOLEY, Kansas City, Mo., assignor of one-third to Edward T. Petersen, Kansas City, Mo. Filed Aug. 26, 1925. Serial No. 14,601. Term of patent 7 years.



The ornamental design for a ring as shown.

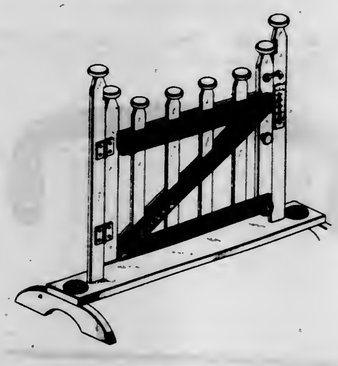
69,387. NOVELTY HOLDER FOR SOILED OR CLEAN HANDKERCHIEFS. ELMER P. GOLDSMITH, Newark, N. J., assignor to Miller & Goldsmith, New York, N. Y., a firm consisting of William G. Miller and Elmer P. Goldsmith. Filed Nov. 13, 1925. Serial No. 15,415. Term of patent 3½ years.

The ornamental design for a novelty holder for soiled or clean handkerchiefs as shown.

69,388. BAG FRAME. WOLF T. GOLDSMITH, Newark, N. J. Filed Dec. 11, 1925. Serial No. 15,717. Term of patent 3½ years.

The ornamental design for a bag frame, as shown.

69,389. BAG FRAME. WOLF T. GOLDSMITH, Newark, N. J. Filed Dec. 11, 1925. Serial No. 15,718. Term of patent 3½ years.

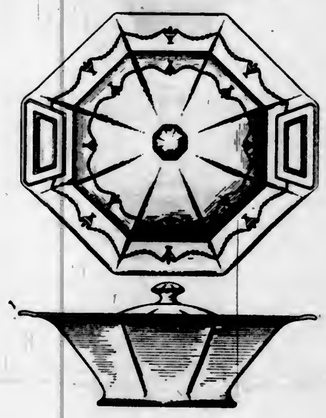


The ornamental design for a bag frame, as shown.

69,390. FINGER RING OR ARTICLE OF SIMILAR NATURE. BENJAMIN GROSS, New York, N. Y., assignor to Benjamin & Edward J. Gross Co. Inc., New York, N. Y., a Corporation of New York. Filed Nov. 28, 1925. Serial No. 15,575. Term of patent 3½ years.

The ornamental design for a finger ring or article of similar nature, as shown.

69,391. SOUVENIR EMBLEMATIC GATE. IDA S. GRUNDLOCK, Philadelphia, Pa. Filed Sept. 21, 1925. Serial No. 14,842. Term of patent 3½ years.

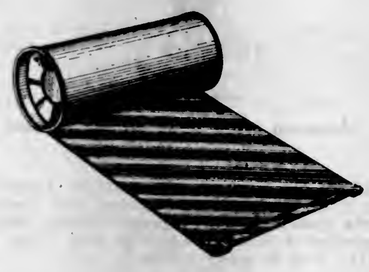


The ornamental design for a souvenir emblematic gate, as shown.

69,392. WAITING-STATION BOOTH. BENNET D. HAEUSSLER, Marion, Iowa. Filed Nov. 10, 1925. Serial No. 15,399. Term of patent 14 years.

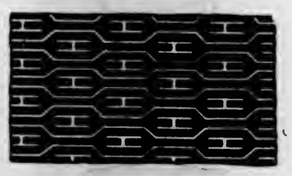
The ornamental design for a waiting station booth, as shown.

69,393. DISH OR SIMILAR ARTICLE. WILLIAM D. HAVILAND, Limoges, France, assignor to Theodore Haviland & Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 20, 1924. Serial No. 8,687. Term of patent 14 years.



The ornamental design for a dish, or similar article, as shown.

69,394. PLATE OR SIMILAR ARTICLE. WILLIAM D. HAVILAND, Limoges, France, assignor to Theodore Haviland & Co. Inc., New York, N. Y., a Corporation of New York. Filed Dec. 4, 1924. Serial No. 11,583. Term of patent 14 years.

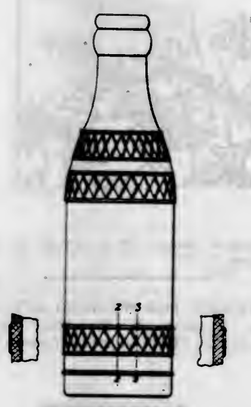


The ornamental design for a plate or similar article, as shown.

69,395. MEMORANDUM PAD. LEO LEROY HENRY, Cedar Rapids, Iowa, assignor to Julian E. Jackson, Cedar Rapids, Iowa. Filed Apr. 3, 1925. Serial No. 13,004. Term of patent 14 years.

The ornamental design for a memorandum pad as shown.

69,396. SAFETY PAPER. HERBERT WILBY HETHERINGTON, Providence, R. I., assignor to The J. C. Hall Company, Providence, R. I., a Corporation of Rhode Island. Filed Sept. 2, 1925. Serial No. 14,700. Term of patent 14 years.



The ornamental design for safety paper substantially as shown.

69,397. BOTTLE. CARL A. JONES, Bristol, Va. Filed Dec. 4, 1925. Serial No. 15,634. Term of patent 14 years.

The ornamental design for a bottle, as shown.

69,398. BOTTLE. MORRIS I. KATZ Springfield, Mass Filed Aug. 27, 1925. Serial No. 14,613. Term of patent 14 years.

The ornamental design for a bottle, as shown.

69,399. TEXTILE FABRIC. WILLIAM C. KORZINEK, Cliffside Park, N. J., assignor to Golding Bros. Company, New York, N. Y., a Corporation of New York. Filed Dec. 11, 1925. Serial No. 15,715. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

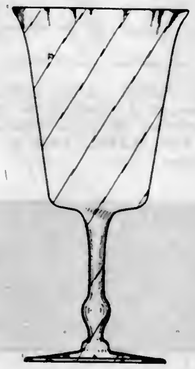
69,400. TEXTILE FABRIC. OSCAR KRAUSE, Far Rockaway, N. Y. Filed Dec. 22, 1925. Serial No. 15,824. Term of patent 3½ years.

The ornamental design for a textile fabric, substantially as shown.

69,401. TRIMMING FOR WEARING APPAREL. MORRIS LADIN, Brooklyn, N. Y. Filed Feb. 5, 1925. Serial No. 12,273. Term of patent 7 years.

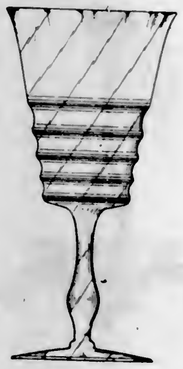
The ornamental design for trimming for wearing apparel as shown.

69,402. RADIATOR CAP. ALOYSIUS C. LIPPERT, Kenosha, Wis., assignor of one-half to Clayton A. Norton, Chicago, Ill. Filed Dec. 9, 1925. Serial No. 15,700. Term of patent 3½ years.



The ornamental design for radiator cap as shown.

69,403. PERFUME CONTAINER. CHARLES LIONEL MARCUS, New York, N. Y. Filed June 20, 1924. Serial No. 9,930. Term of patent 14 years.



The ornamental design for a perfume container as shown.

69,404. GLASS GOBLET OR SIMILAR ARTICLE. WILL CAMERON MCCARTNEY, Cambridge, Ohio, assignor to The Cambridge Glass Company, Cambridge, Ohio, a Corporation of Ohio. Filed Nov. 19, 1925. Serial No. 15,471. Term of patent 7 years.

The ornamental design for a glass goblet or similar article, as shown.

69,405. GLASS GOBLET OR SIMILAR ARTICLE. WILL CAMERON MCCARTNEY, Cambridge, Ohio, assignor to The Cambridge Glass Company, Cambridge, Ohio, a Corporation of Ohio. Filed Nov. 19, 1925. Serial No. 15,472. Term of patent 7 years.

The ornamental design for a glass goblet or similar article, as shown.

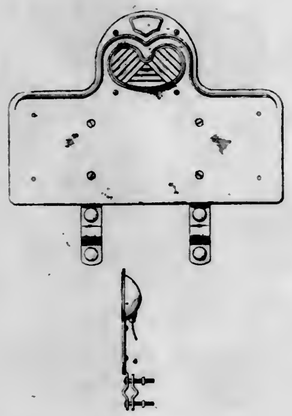
69,406. CABINET FOR A SOUND-REPRODUCING MACHINE. MARTIN NYSTROM, Chicago, Ill., assignor to The Brunswick-Balke-Collender Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 13, 1924. Serial No. 11,056. Term of patent 7 years.

The ornamental design for a cabinet for a sound reproducing machine as shown.

69,407. CABINET FOR A SOUND-REPRODUCING MACHINE. MARTIN NYSTROM, Chicago, Ill., assignor to The Brunswick-Balke-Collender Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 13, 1924. Serial No. 11,057. Term of patent 7 years.

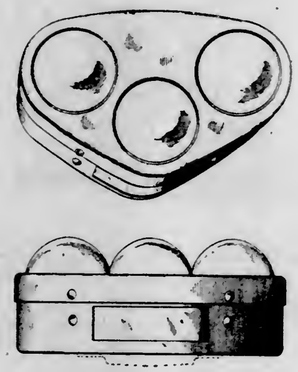
The ornamental design for a cabinet for a sound reproducing machine as shown.

69,408. CABINET FOR A SOUND-REPRODUCING MACHINE. MARTIN NYSTROM, Chicago, Ill., assignor to The Brunswick-Balke-Collender Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 13, 1924. Serial No. 11,058. Term of patent 7 years.



The ornamental design for a cabinet for a sound reproducing machine as shown.

69,409. LIP-STICK HOLDER. ROBERT E. POWER, Los Angeles, Calif. Filed June 27, 1925. Serial No. 13,923. Term of patent 14 years.

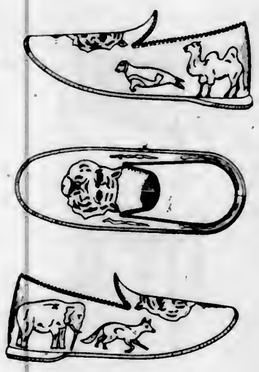


The ornamental design for a lip stick holder, as shown.

69,410. COMBINED LIGHT AND LICENSE-PLATE HOLDER. OLIVER C. RITZ WOLLER, Chicago, Ill. Filed Nov. 7, 1925. Serial No. 15,378. Term of patent 14 years.

The ornamental design for a combined light and license plate holder, as shown.

69,411. AUTOMOBILE SIGNAL LAMP. OLIVER C. RITZ WOLLER, Chicago, Ill. Filed Oct. 30, 1925. Serial No. 15,297. Term of patent 14 years.

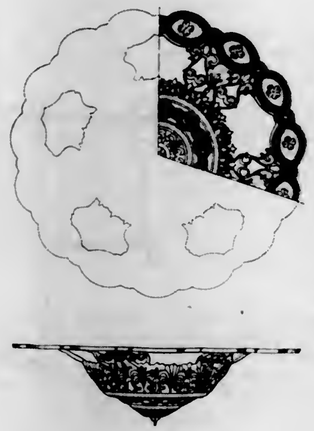


The ornamental design for an automobile signal lamp, as shown.

69,412. CHANDELIER OR THE LIKE. FREDERICK ROWTONS, New York, N. Y., assignor to Harry Hilfman, New York, N. Y. Filed Oct. 3, 1925. Serial No. 14,999. Term of patent 3½ years.

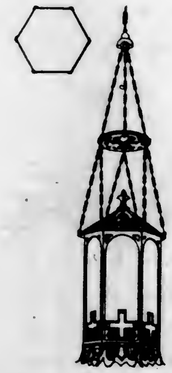
The ornamental design for a chandelier or the like as shown.

69,413. SLIPPER. NORBERT ROSENBAUM, New York, N. Y. Filed Aug. 29, 1925. Serial No. 14,638. Term of patent 3½ years.



The ornamental design for a slipper as shown.

69,414. LIGHTING-FIXTURE CANOPY. HERMAN A. SAFION, New York, N. Y. Filed Dec. 5, 1925. Serial No. 15,651. Term of patent 3½ years.

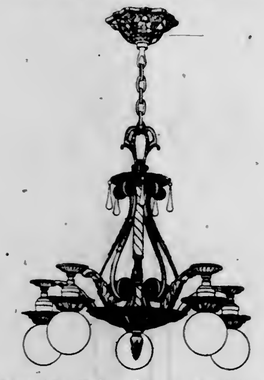


The ornamental design for a lighting fixture canopy, as shown.

69,415. LIGHTING-FIXTURE PLATE. HERMAN A. SAFION, New York, N. Y. Filed Dec. 5, 1925. Serial No. 15,652. Term of patent 3½ years.

The ornamental design for a lighting fixture plate, as shown.

69,416. ILLUMINATING FIXTURE. CONRAD SCHMITT, Milwaukee, Wis. Filed Oct. 5, 1925. Serial No. 15,020. Term of patent 7 years.

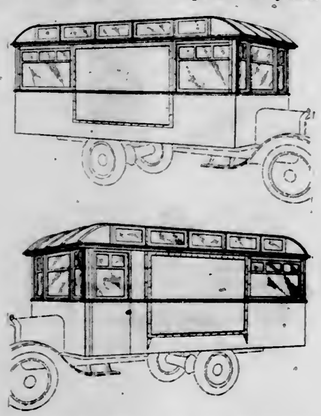


The ornamental design for an illuminating fixture, substantially as shown.

69,417. LAMP. GEORGE VEETMEIER, Milwaukee, Wis. Filed Oct. 8, 1925. Serial No. 15,066. Term of patent 7 years.

The ornamental design for a lamp as shown.

69,418. CHANDELIER OR THE LIKE. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Harry Hilfman, New York, N. Y. Filed Oct. 3, 1925. Serial No. 15,003. Term of patent 3½ years.

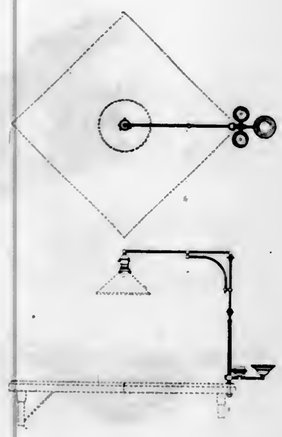


The ornamental design for a chandelier or the like as shown.

69,419. TRAY FOR CUPS OR SIMILAR ARTICLES. HENRY WELLEN, New York, N. Y. Filed June 6, 1925. Serial No. 13,689. Term of patent 7 years.

The ornamental design for a tray for cups or similar articles substantially as shown.

69,420. AUTOMOBILE BODY. GEORGE PHILLIP WIEDMAN, North Tonawanda, N. Y. Filed Oct. 6, 1925. Serial No. 15,035. Term of patent 14 years.

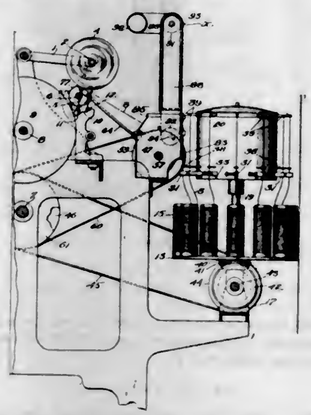


The ornamental design for an automobile body as shown.

69,421. SPOUT FOR BATH AND LAVATORY FIXTURES. MAXIMILLIAN W. WUESTHOFF, San Francisco, Calif. Filed Nov. 27, 1925. Serial No. 15,555. Term of patent 14 years.

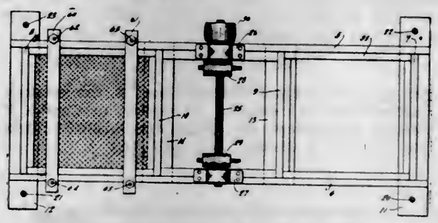
The ornamental design for a spout for bath and lavatory fixtures, substantially as shown.

69,422. COMBINED BRIDGE-LAMP BRACKET AND SMOKING SET. RAY ZUG, Los Angeles, Calif. Filed Oct. 6, 1925. Serial No. 15,031. Term of patent 14 years.



The ornamental design for a combined bridge lamp bracket and smoking set as shown.

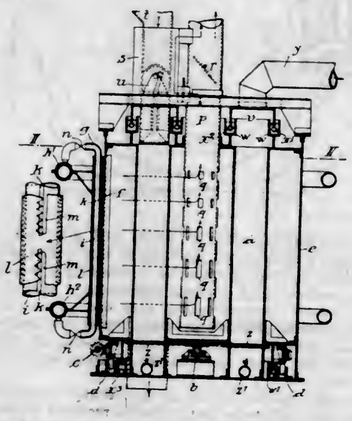
PATENTS



GRANTED FEBRUARY 9, 1926.

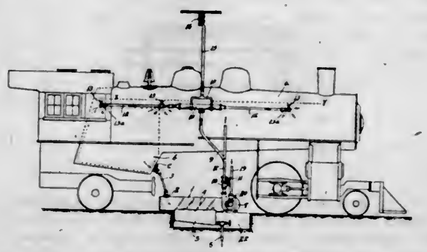
1,571,925. WINDING MACHINE. EDWARD JAMES ABBOTT, Wilton, N. H. Filed Jan. 28, 1914. Serial No. 815,088. 47 Claims. (Cl. 242—35.6.)

1. In combination, winding mechanism, a supply package carrier holding a plurality of packages of yarn to be unwound, breakage or exhaustion detectors and tying mechanism controlled by said detectors operating automatically whenever the supply from one of said packages to the winding mechanism ceases, then to tie together the leading end of the yarn in another package to the following end of the yarn passing to the winding mechanism.



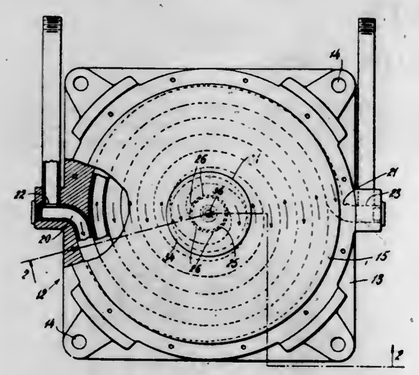
1,571,926. MIXING MACHINE. JOSEPH J. BABKA, Berwyn, Ill. Filed Feb. 7, 1924. Serial No. 691,126. 24 Claims. (Cl. 83—73.)

1. In a mixing machine, a series of superimposed screens, sets of baffles interposed between adjacent screens each set being so arranged as to divide the material and deflect part in one direction and part in another, a supporting frame, and means for vibrating said frame.



1,571,927. APPARATUS FOR CARBONIZING BITUMINOUS FUELS. ADALBERT BESTA, Duisburg, Germany. Filed Dec. 27, 1924. Serial No. 758,379. 11 Claims. (Cl. 202—9.)

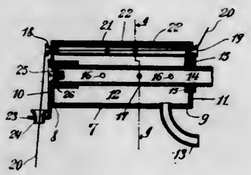
1. An apparatus for carbonizing bituminous fuels, comprising, in combination, a plurality of cells spaced apart and fixedly grouped into an annular series; means for rotating the cells; means for heating the cells on all sides; means for feeding the cells with the respective fuel one after the other at one definite place; means for



compressing the fuel in the filled cell at a neighbouring place, and means for discharging the degasified fuel again at a neighbouring place, substantially as described.

1,571,928. METHOD AND APPARATUS FOR WASHING LOCOMOTIVE BOILERS. WILLIAM J. BOHAN, St. Paul, Minn. Filed July 13, 1922. Serial No. 574,799. 4 Claims. (Cl. 122—397.)

1. The method of washing out and refilling a locomotive boiler while under its own steam and without blowing down the same, which consists in connecting a condnit adjacent the botton portion thereof, connecting conduits at spaced points well above the bottom thereof, providing a sludge collecting means drawing the water from the boiler through said first mentioned conduit and sludge collecting means and then forcing said water at high pressure through said last mentioned conduits into the boiler to set up a violent circulation therein to stir up and loosen any sediment, and continuing said operation whereby said sediment will be loosened and carried from said boiler and largely collected in said sludge collecting means, and then drawing off said water and supplying said boiler with clean hot water.



1,571,929. DIE HOLDER. WILHELM B. BRONANDER, Montclair, N. J. Filed May 18, 1922. Serial No. 561,798. 20 Claims. (Cl. 18—5.3.)

1. A die holder having a portion with a surface adapted to hold a matrix and conduits in said holder adjacent the matrix holding surface for conducting a heating or cooling medium, said conduits comprising a pair of interwound spirals communicating with each other at their central portions forming a single closed continuous passage, one of said conduits having an inlet at its outer end and the other conduit having an outlet at its outer end.

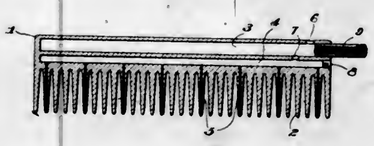
12. A die holder having a surface for supporting a matrix, said surface having a central recessed portion and a resilient, disher disc adapted to seat in said portion and having a flange adapted to rest on the matrix.

1,571,930. STEAMING DEVICE FOR YARNS. PAUL CESAR, Brooklyn, N. Y. Filed May 4, 1925. Serial No. 27,664. 2 Claims. (Cl. 28—59.)

2. A device of the character described comprising a closed cylindrical hollow body forming a steam chamber, a steam supply pipe supported centrally within the same and provided with steam outlets in its sides and with a drain opening in the bottom, a drain pipe secured in the bottom of said steam chamber, a yarn guide steam pipe supported in said steam chamber near the top thereof and provided with steam inlets, yarn guide eyelet secured in said body for guiding the yarn into said yarn guide steam pipe, a yarn guide bracket and a screw for securing said bracket to the said body and for securing the aforesaid elements in position.

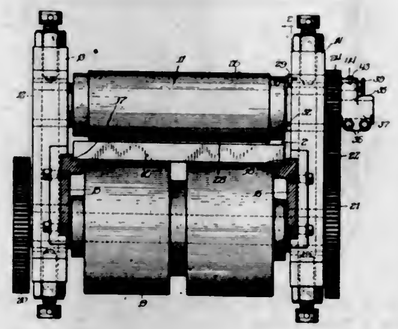
1,571,931. COLLAPSIBLE DRILL BIT. WALTER L. CHURCH, West Columbia, Tex. Filed Jan. 9, 1923. Serial No. 611,632. 12 Claims. (Cl. 255—76.)

1. In a drilling apparatus, the combination of a rotary tubular driving member having a threaded section, a detachable shank, a boring tool carried by the lower end of the shank, an expander movable within said shank, and an engaging member having a slidable connection



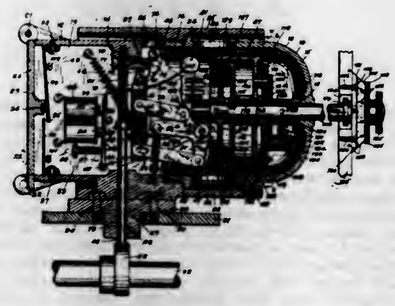
with said expander and actuated thereby into intermeshing engagement with said section to lock said shank with said driving member.

1,571,932. PROCESS OF PREPARING YEAST-NUTRIENT SOLUTIONS AND OF MANUFACTURING YEAST THEREFROM. ROBERT L. COBBY, Chevy Chase, Md., and RUTH GLASGOW, Pittsburgh, Pa., assignors, by mesne assignments, to The Fleischmann Company, a Corporation of Ohio. Filed Mar. 13, 1919. Serial No. 282,505. 4 Claims. (Cl. 195—20.)



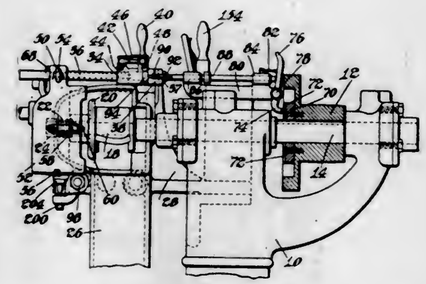
1. In the art of manufacturing yeast the steps which comprise preparing a yeast-nutrient solution consisting essentially of molasses, cereal material and yeast nourishing salts, producing an acid condition in the solution to a degree somewhat in excess of that preferable for yeast propagation, and introducing a compound containing yeast-assimilable inorganic nitrogen and having an alkaline reaction, in such amounts that both the degree of acidity is lowered and the amount of assimilable nitrogen is raised to that preferable for yeast propagation.

1,571,933. FOUNTAIN COMB. JAMES E. CUNNINGHAM, McKeesport, Pa., assignor of one-half to Charles F. McCoy, McKeesport, Pa. Filed Apr. 8, 1925. Serial No. 21,510. 4 Claims. (Cl. 132—13.)



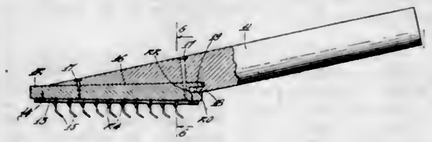
1. A fountain comb comprising a body provided with a pair of reservoirs and a passageway establishing communication between said reservoirs, said body having a filling opening communicating with one of said reservoirs and located between the end of the body and the said passageway, and a closure plug common to the said filling opening and the said passageway adapted to uncover said passageway while maintaining the filling opening closed.

1,571,934. ROLL CONTROL. SAMUEL ELDER, Washington, D. C., assignor to Miehle Printing Press & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 27, 1923. Serial No. 659,495. 2 Claims. (Cl. 101—285.)



1. In a press, an impression roll, supports for said roll, a shaft for the roll, a driven gear loosely fitted on said shaft, means carried by the shaft adapted to operatively connect the gear to the shaft, and means adapted to engage the roll to lock it against rotation.

1,571,935. SAFETY DEVICE. AUGUST L. N. FLEMING, Lyndhurst, N. J., and WILLIAM T. CRISWELL, New York, N. Y. Filed Dec. 15, 1922. Serial No. 607,127. 39 Claims. (Cl. 177—314.)

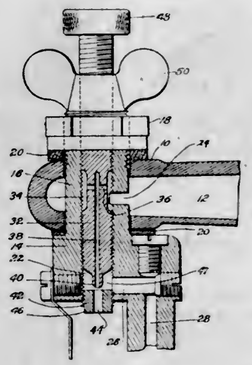


1. A safety device having an alarm, comprising an electric circuit leading to the alarm, means interposed in the circuit for sounding the alarm, operative means, circuit closing means operative by the operative means when operated for closing the circuit to operate the alarm sounding means, said closing means controllable according to different determined adjustments for being releasably locked against closing the circuit to prevent normally operating the alarm sounding means with the operation of the operative means and the closing means readjustable for being unlocked and operated by the operation of the operative means to close the circuit for operating the alarm sounding means, and permutation means operative for controlling the selective adjustments of the closing means.

1,571,936. ABRADING MACHINE. ALFRED B. FOWLER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 22, 1920. Serial No. 425,755. 32 Claims. (Cl. 51—100.)

1. In a grinding machine, an abrading tool mounted for traversing movement along the work, and means including a templet actuated by the traversing movement of the tool for rocking the tool towards and from the work to impart a predetermined shape to the work.

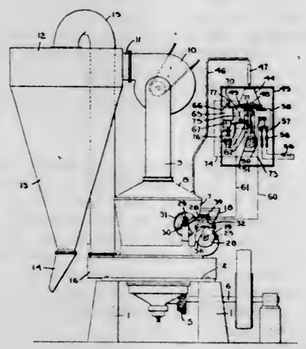
1,571,937. CARD. WHITNEY M. FRYE, Wilton, N. H. Filed Nov. 16, 1923. Serial No. 675,223. 3 Claims. (Cl. 119—93.)



3. In a hand card, the combination with a back having an arcuate closed slot in one edge thereof, of a handle secured thereto extending substantially the whole distance thereacross, one end of said handle being sawed to provide an inclined surface for attachment to the back, and a tongue portion projecting in the direction of said inclined surface and extending into said slot, the sides of said tongue portion being parallel to said inclined surface.

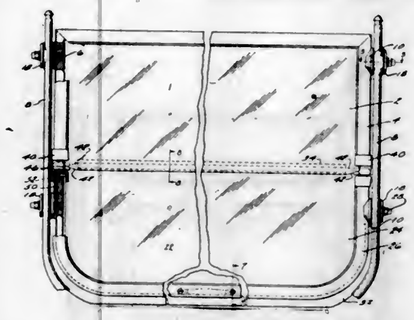
1,571,938. PROCESS FOR THE PRESERVATION OF FRESH FRUITS AND VEGETABLES. HARRY R. FULTON and JOHN J. BOWMAN, Washington, D. C. Original application filed Sept. 14, 1925, Serial No. 56,415. Divided and this application filed Oct. 3, 1925. Serial No. 60,331. 2 Claims. (Cl. 99—1.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. An improved process for preparing fresh fruits and vegetables for market, which comprises the application to the surface of such articles of an aqueous solution containing the sodium oxide radical and the boric acid radical in equal proportions and of such a strength as to effectively retard the growth and development of the organisms that cause stem-end rot, blue-mold rot, and other forms of decay.



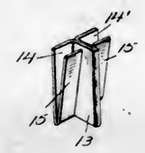
2. An improved process for preparing fresh fruits and vegetables for market which comprises the application to the surface of such articles of a solution containing approximately 5 parts by weight of borax and 1.39 parts by weight of anhydrous sodium carbonate in 100 parts by weight of water, to effectively retard the growth or development of the organisms causing stem-end rot, blue-mold rot, or other forms of decay.

1,571,939. APPARATUS FOR APPLYING LIQUIDS. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 8, 1923. Serial No. 661,682. 9 Claims. (Cl. 91—45.)



1. In an apparatus of the class described, a casing having a jet-opening and a liquid-inlet-opening, an air-nozzle delivering to the jet-opening, and means arranged to permit the relation of the jet-opening to the air-nozzle and to the liquid-inlet-opening to be varied.

1,571,940. AUTOMATIC FEED-REGULATING MECHANISM. PETER J. GAGNON, Jr., Lowell, Mass., assignor of one-third to Joseph L. Henderson and one-third to Albert J. Gagnon, both of Lowell, Mass. Filed Apr. 10, 1924. Serial No. 705,572. 15 Claims. (Cl. 83—44.)

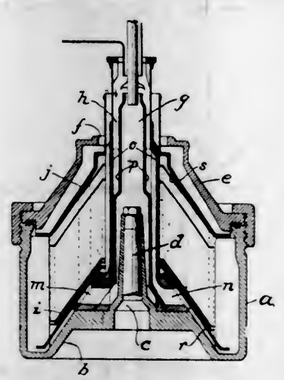


1. In a machine comprising a rotatable member and means for actuating the same including a ratchet and a co-operating pawl, a reciprocable pawl carrier, an electromagnet mounted on said pawl carrier for controlling the relation of said pawl to said ratchet, means for supplying an electric current to said electromagnet and means for controlling said current whereby said pawl may be caused to engage, or to be disengaged from, said ratchet.

1,571,941. WINDSHIELD. GEORGE E. GODDARD, Detroit, Mich., assignor, by mesne assignments, to Dodge Brothers, Inc., a Corporation of Maryland. Filed June 27, 1921. Serial No. 480,589. 6 Claims. (Cl. 296—84.)

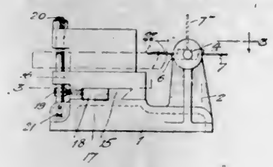
1. A windshield for automobiles having, in combination, a frame having three sides, a glass mounted in the frame and having the corners at the ends of the free edge of the glass bevelled off at an angle to said edge, and a cap secured to the frame and having an inwardly extending projection engaging one of the bevels on the glass and having its edge at the end thereof in line with said edge of the glass.

1,571,942. BUCCO-LINGUAL DENTAL ATTACHMENT. AMSHEL GUERT-GRINBERG, New York, N. Y. Filed Aug. 28, 1923. Serial No. 659,796. 1 Claim. (Cl. 32—12.)



As an article of manufacture, a dental anchor comprising a blank of sheet material of rectangular formation and having a cutaway portion at one edge thereof to provide spaced resilient tongue members at one side of the transverse center of the blank, the opposite portion of the blank being bent upon itself on the longitudinal center thereof to provide a denture engaging tenon, the latter portion of the blank being further bent on lines parallel to and equidistantly spaced from the line of fold of the said tenon to provide opposite angularly disposed flanges, said resilient tongue members being bent backwardly upon said flanges and disposed in spaced inclined relation wtih respect thereto.

1,571,943. PROCESS OF SEPARATING WAX FROM MINERAL OIL DISTILLATES. SELDEN H. HALL, Poughkeepsie, N. Y., and CYRUS HOWARD HAPGOOD, Nutley, N. J., assignors to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 8, 1921. Serial No. 499,325. 4 Claims. (Cl. 233—11.)

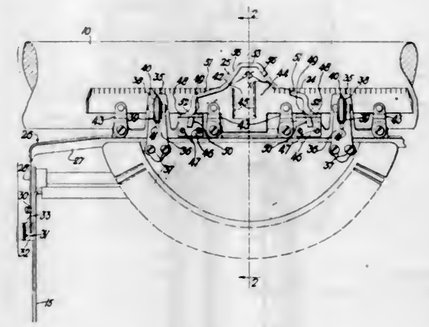


1. The process of separating wax from mineral oil wax distillates, after the wax distillate solution has been refrigerated to throw out of solution the wax in crystalline form, which comprises subjecting the mixture of oil and wax to centrifugal force, feeding water of a temperature sufficient to melt wax contacting therewith to the periphery of the mass of the mixture undergoing centrifugation,

thereby forming a surrounding envelope of water contacting with and adapted to melt the outer layer of wax, separately discharging the oil and the melted wax

and water, and heat insulating the inflowing water and the outflowing wax and water from the mixture of wax and oil.

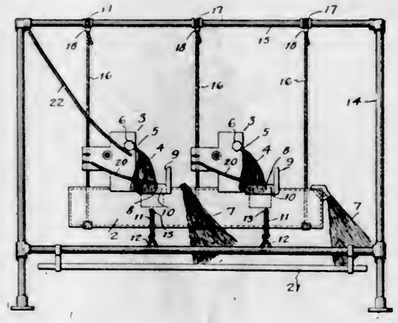
1,571,944. APPARATUS FOR PRESETTING LATHE TOOLS AND THE LIKE. EDMUND F. HEARD, Elizabeth City County, and MAYO M. FITZ HUGH, Newport News, Va., assignors to Newport News Shipbuilding & Drydock Company, Newport News, Va., a Corporation of Virginia. Filed Nov. 10, 1924. Serial No. 748,944. 7 Claims. (Cl. 33—185.)



1. Apparatus for presetting tools for lathes and the like comprising centers similar to lathe centers, a gauge supported thereby and means for supporting a tool block in fixed relation with respect to said first mentioned centers and in a position corresponding to that of the tool block when on the lathe with respect to the lathe centers.

1,571,945. FOOD PRODUCT. HARRY M. HEIMERDINGER, Blackfoot, Idaho. Filed Oct. 21, 1925. Serial No. 63,863. 4 Claims. (Cl. 99—11.)

1. A food product consisting of the cooked and dried pulp portion of a farinaceous vegetable in very finely comminuted form, said product containing from about 5 to 8% of water and a high proportion of yeast-food substances.

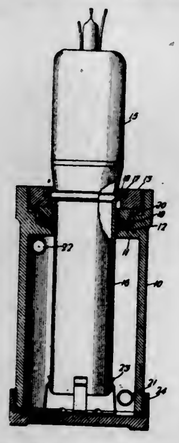


1,571,946. TYPEWRITING MACHINE. WILLIAM F. HELMOND, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 8, 1923. Serial No. 673,454. 8 Claims. (Cl. 197—135.)

1. In a typewriting machine, a platen, and a device for flexing and holding a card to the platen, consisting of a spring bow and anchoring means therefor, the free ends of the bow being held in engagement with the anchoring means by reason of the distending force of the

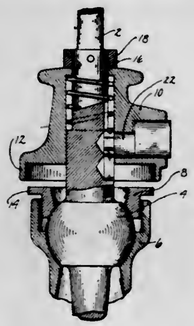
bow, the latter having only the distal portion of the cross-reach thereof as the means for holding the card to the platen.

1,571,947. SWINGING HOBBYHORSE. HARRIETTE ENSLEY HODGSON, New York, N. Y. Filed Aug. 6, 1924. Serial No. 730,360. 2 Claims. (Cl. 155—62.)



1. A swinging hobby-horse comprising an elongated barrel-like body having the effigy of an animal head rising therefrom, with means for suspending the body in a frame or from other overhead support, to swing lengthwise, a rope which passes upward from the body and forms part of the suspension means being engaged with the forward part of the animal head to prevent lateral tipping.

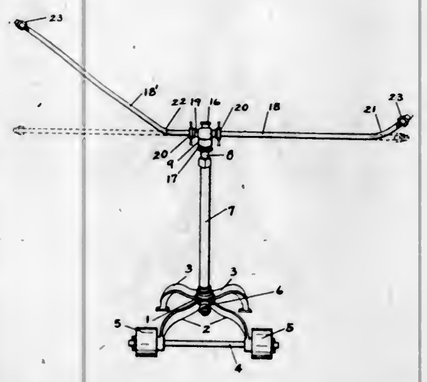
1,571,948. ELECTRON-DISCHARGE DEVICE. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 9, 1922. Serial No. 566,973. 5 Claims. (Cl. 250—27.)



5. In combination, a vessel having an inwardly projecting flange, an electron discharge device arranged within said vessel, said device comprising a metallic cup-shaped anode having a flared end, an annular projection on said anode adjacent said flared end, a two part collar

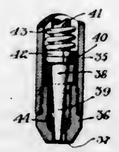
having an inwardly projecting shoulder arranged between said projection and said flared end, a screw threaded connection between said vessel and said collar, a gasket

interposed between said collar and said flange, and means for circulating a cooling medium helically around said anode.



1,571,949. TRANSMISSION LOCK. RUSSELL HUFF, Detroit, Mich., assignor, by mesne assignments, to Dodge Brothers Inc., a Corporation of Maryland. Filed July 2, 1921. Serial No. 482,046. 2 Claims. (Cl. 70—128.)

1. A transmission lock construction having, in combination, a gear shifting lever mounted for universal movement, means movable longitudinally of the lever to hold and release the lever, and a lock for said means comprising a rotatable bolt having one transverse dimension greater than another, the lever being provided with a groove to receive the bolt varying in width at different points and arranged so that the bolt when in one angular position will pass longitudinally therethrough, and when in another angular position will be held from movement longitudinally of the groove.

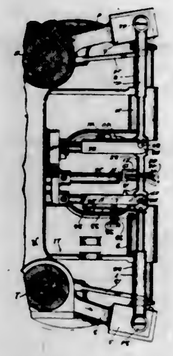


1,571,950. SPRINKLER. HERBERT S. HUMPHREY, Kalamazoo, Mich. Filed Sept. 14, 1922. Serial No. 588,179. 3 Claims. (Cl. 299—69.)

3. The combination of a base provided with a supply connection, an upright on said base provided with a hollow spindle at its upper end having a lateral discharge opening, a sprinkler head rotatable on said spindle and having a chamber embracing said discharge opening thereof and opposed arm nipples open to said chamber, a pair of arms provided with spray nozzles at their outer ends threaded into said nipples for rotative adjustment therein, the outer end of one of said arms being curved

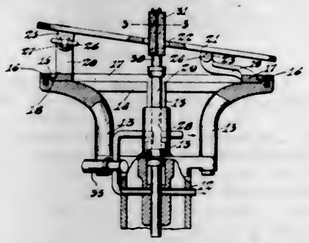
laterally but being otherwise substantially straight, the other arm being angled adjacent its inner end but otherwise substantially straight, and lock nuts on said arms coacting with said arm nipples whereby the arms may be secured in their adjusted positions.

1,571,951. DUPLEX EYELETING MACHINE. GEORGE W. JACQUES, Stratford, Conn., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 26, 1920. Serial No. 406,054. 6 Claims. (Cl. 218—15.2.)



6. In combination, a sleeve, a set element made fast in one end of said sleeve and having a setting surface and a perforation centrally thereof merging with an annular recessed portion, and a punch having a punching element passing through said perforation and an enlarged head slidably mounted within said sleeve in position to impinge on the rear end of said set, said punch element being throughout of substantially smaller diameter than said recessed portion to form therewith an annular chamber of substantial width.

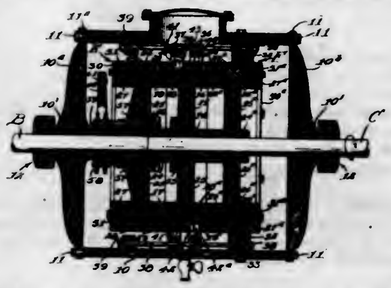
1,571,952. FASTENER-SETTING MACHINE. GEORGE W. JACQUES, Stratford, Conn., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 17, 1920. Serial No. 424,606. 13 Claims. (Cl. 218—15.2.)



1. In an eyelet-setting machine, in combination, punch-and-set work-feeding mechanism, a presser-foot and a

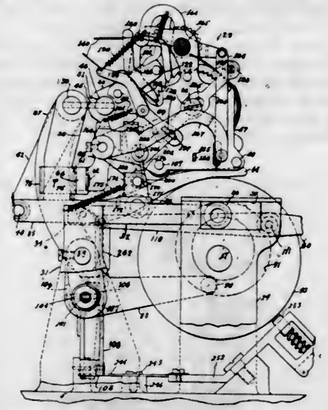
work-support having lateral movements, means for causing said presser-foot and support to normally engage the

work during the feed thereof, and means actuable at will for maintaining said presser-foot retracted substantially from the work-support.



1,571,953. RECIPROCATING ABRADER. CUTLER D. KNOWLTON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 12, 1920. Serial No. 358,054. 7 Claims. (Cl. 51—50.)

1. In a machine for grinding dies, an angular non-rotary grinder mounted to reciprocate in a straight path an adjustably inclined die support surrounding the grinder and being rotatably adjustable to bring different parts of a die into contact with different portions of the grinder, and a high speed pneumatic motor having direct connection with the grinder whereby it is adapted to reciprocate the grinder without shock at a linear velocity substantially approximating the effective speed of the periphery of a grinding wheel.

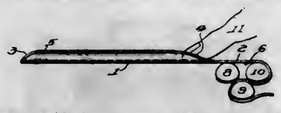


1,571,954. FLUID POWER TRANSMITTER. EDMUND B. LAMBERT, St. Paul, Minn. Filed Sept. 25, 1924. Serial No. 739,870. 9 Claims. (Cl. 60—53.)

8. In a device of the class described, three elements, viz; a driven rotor, a stator and a driving rotor, all having a common axis, the intermediate and one of the other elements forming a co-operating pair having an annularly shiftable fluid chamber between them, said intermediate and the other element comprising a second pair of cooperating elements having an annularly shiftable fluid chamber between the same, said intermediate element being formed with passageways affording communication between adjacent ends of said chambers, an adjustable filler member carried by one element of the first pair and adapted to alter the capacity of the fluid chamber between the elements of said pair, gates on one element of the first pair and gates on one element of the

second pair, said gates being arranged to respectively intercept the fluid chambers formed by said paired elements.

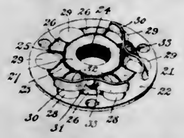
1,571,955. PAPER-SUPPORTING CARRIAGE AND GUIDING MEANS. WILLIAM W. LASKER, Brooklyn, N. Y., assignor, by mesne assignments, to Powers Accounting Machine Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Mar. 28, 1917, Serial No. 158,142. Divided and this application filed Feb. 1, 1918, Serial No. 214,852. Renewed Feb. 27, 1924. 51 Claims. (Cl. 101—94.)



1. In apparatus for testing cocks and the like for combination of a carriage support; a paper support slidable and swingable on said carriage support and adapted to be moved into and out of locking engagement therewith.

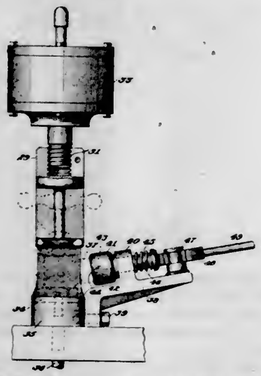
22. In an apparatus of the character described, the combination with printing means of a rotatable shaft; paper engaging means on said shaft; a paper backing means; carried on said shaft for spacing the engaging means; means for holding said shaft and the parts thereon in frictional engagement during printing; means for supporting said shaft; and means cooperating with the backing means and said supporting means for effecting printing.

1,571,956. SURGICAL INSTRUMENT. JOHN H. MOLINELLI, West Pittston, Pa. Filed Mar. 10, 1925. Serial No. 14,357. 6 Claims. (Cl. 128—361.)



1. An obstetrical instrument made entirely of thin flexible non-resilient sheet metal and comprising an elongated nearly flat operating portion readily manually

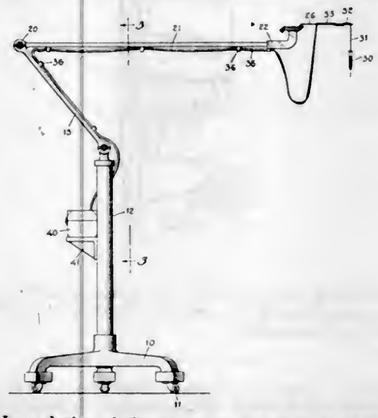
bent and shaped transversely into an arcuate or cylindrical form, and a normally flat handle freely bendable to conform to the shape, size and position of the fingers



of any user, said instrument being provided with a continuous smooth rounded dull marginal edge free from corners or sharp angles.

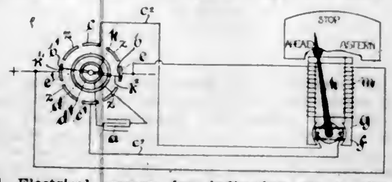
1,571,957. COMBINED FIXTURE SUPPORT AND LOOM FASTENER. EDWARD W. MOON, Youngstown, N. Y. Filed Apr. 21, 1924. Serial No. 707,882. 7 Claims. (Cl. 240—85.)

1. A light-fixture support comprising a crow foot having a flange, an axial socket and a wall surrounding said socket and connecting the outer end thereof with said flange, said flange having a loom opening therein, and a clamp secured to said surrounding wall and adapted to securely fasten a length of loom passed through said loom opening.



1,571,958. AIR-OPERATED TESTING DEVICE. ROBERT H. MUELLER and CHESTER W. HATHAWAY, Decatur, IH., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Nov. 3, 1921. Serial No. 512,696. 28 Claims (Cl. 73—51.)

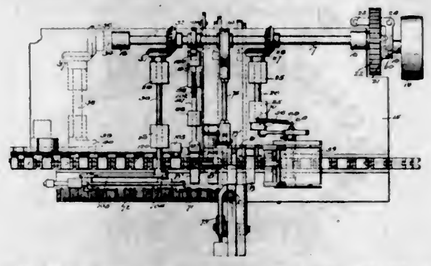
1. In apparatus for testing cocks and the like for porosity and key leakage, the combination of a base to receive a cock nipple and having an inlet for fluid pressure, a movable pressure head to engage the other nipple of the cock and having a fluid-pressure outlet passage providing circulation through said inlet, cock and outlet, and means for opening and closing said outlet passage.



28. In a testing apparatus, the combination of a base to receive a cock nipple and having an inlet for fluid pressure, a movable pressure head to engage the other nipple of the cock and having a fluid pressure outlet passage, a casing, a piston in said casing, a thrust rod coupling said piston and movable head, fluid pressure connections on one side of said casing to actuate said piston, and a spring on the other side of said piston automatically to move said piston in the opposite direction upon release of fluid pressure.

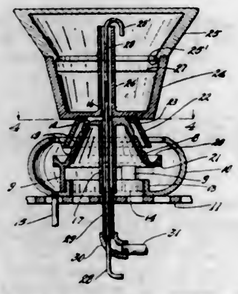
1,571,959. SURGICAL-INSTRUMENT SUPPORT. ADELE MULLIGAN, New York, N. Y. Filed July 12, 1923. Serial No. 651,004. 4 Claims. (Cl. 174—89.)

1. In a device of the character described, a pedestal, an arm carried by said pedestal, a rail supported by and in transverse relation to said arm and a plurality of independent instrument carriers slidable on said rail, each provided with depending members to clasp the rail and prevent angular displacement of said carriers thereon.



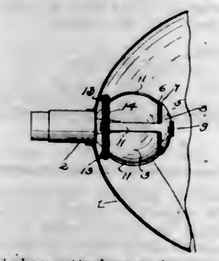
1,571,960. ELECTRICAL MEANS FOR INDICATING AT A DISTANCE THE MOTION OF AN APPARATUS. JOHN CUTHBERT NEEDHAM, Chiswick, London, England, assignor to himself and Evershed & Vignoles, Limited, Chiswick, London, England, a Company of Great Britain and Ireland. Filed Nov. 17, 1920. Serial No. 424,576. 3 Claims. (Cl. 177—337.)

1. Electrical means for indicating at a distance whether a mechanism is in motion and if so in which of two directions, comprising, in combination, a source of continuous electric current, an electrical condenser, a polarized indicator and commutating means operated by the mechanism under observation for alternately connecting said condenser with said source to charge said condenser in a direction dependent upon the direction of rotation of said commutator and connecting said condenser with said indicator so that said condenser can discharge through said indicator.



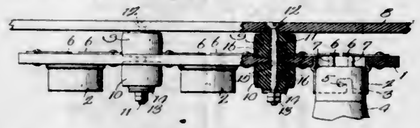
1,571,961. MATCH-MAKING MACHINE. THOMAS A. NEVINS, New York, N. Y., assignor, by mesne assignments, to Hercules Match Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 28, 1922. Serial No. 603,865. 6 Claims. (Cl. 98—7.)

1. In a match-making machine of the type for making book matches, a folding mechanism for closing the book before the stapling operation takes place, said means comprising a rocking shaft and a hooked member carried thereon and adapted to fold the larger flap of



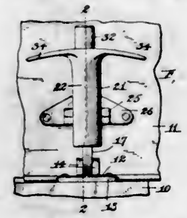
the match book over into position above the matches in the book, and a reciprocating member for folding the smaller flap to position overlying said larger flap.

1,571,962. LIQUID-FUEL BURNER. WILLIAM H. OVERTON, Chicago, Ill. Filed Oct. 20, 1924. Serial No. 744,530. 8 Claims. (Cl. 158—92.)



8. An apparatus comprising a liquid fuel burner; an appliance mounted on said burner and comprising a container including a lower body part and an upper cover part seated thereon to be moved upwards therefrom, a fuel supply tube on said burner, a tube formed integral with said lower part and extending upwardly in said container, and a water supplying tube extending through the tube on said burner and through the tube on said lower part for supplying water into said container to be converted into steam therein, said tube on said lower part providing a conduit for feeding steam from said container to said burner.

1,571,963. ANTIGLARE ATTACHMENT. PATRICK W. PADDEN, Toledo, Ohio. Filed Aug. 28, 1925. Serial No. 53,177. 2 Claims. (Cl. 240—48.6.)

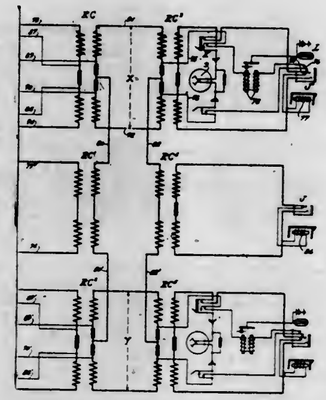


1. An anti-glare attachment for motor vehicle head lamps comprising a pair of shields, each of said shields being formed to include a body portion and a plurality of lamp bulb embracing ribs, and a pivotal connection between the body portions of said shields permitting of relative adjustment of said ribs about the longitudinal axis of the lamp bulb upon which the shields are applied.

1,571,964. MOUNTING FOR THERMIONIC VALVES. HUGO PERLESZ, Chicago, Ill., assignor, by mesne assignments, to Zenith Radio Corporation, a Corporation of Illinois. Filed July 23, 1924. Serial No. 727,686. 1 Claim. (Cl. 248—30.)

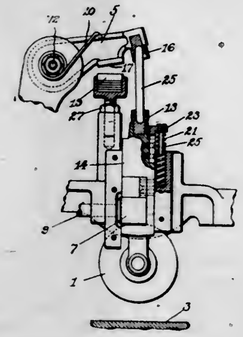
The combination with a mounting plate; of a support for said plate; bolts carried by said support and passing through holes formed in the mounting plate substantially midway between the sides of the plates, these holes being larger than said bolts and affording clearance between said bolts and mounting plate, said mounting plate also being formed with recessed seats on both sides thereof at and around each of said holes, the side walls of each of said recesses being endless; cushions disposed between said support and the adjacent side of said mounting plate and snugly received in the seats upon this side of said mounting plate; and other cushions snugly received in the seats upon the other side of said mounting plate and aligned respectively with the cushions upon the first side of the mounting plate, said bolts passing snugly through the aligned cushions and clamping the same and the mounting plate therebetween in assembly with said support, said cushions positioning said bolts clear of the mounting plate whereby a direct compressive force will be exerted on at least one of the cushions upon movement of the mounting plate in any direction relative to the support.

1,571,965. AUTOMOBILE HOOD FASTENER. WILLIAM F. POLSON, Buffalo, N. Y. Filed Mar. 9, 1923. Serial No. 623,872. 7 Claims. (Cl. 292—109.)



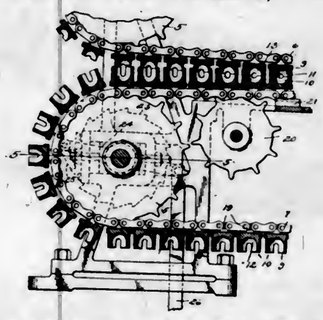
1. In an automobile hood fastener, a barrel having means for engagement with a hood, a screw bolt entering one end of said barrel, a spring withing said barrel surrounding said screw bolt and bearing with one end against a fixed part of said barrel, a washer on said screw bolt capable of movement lengthwise thereon but held against rotation, and an adjusting nut threaded onto said screw bolt, said washer bearing against the opposite end of said spring, said washer and adjusting nut having interlocking parts.

1,571,966. TELEPHONE TRUNK CIRCUIT. ARTHUR J. RAY, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Sept. 7, 1923. Serial No. 661,366. 13 Claims. (Cl. 179—27.)



1. In a telephone system a trunk line interconnecting two exchanges, a switch controlling relay responsive to

interruptions in a closed direct current circuit including both conductors of said trunk line in series, a second



trunk line identical to the first, and a phantom trunk line superimposed on the conductors of both of said trunk lines.

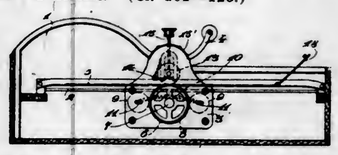
1,571,967. STAMPING MECHANISM FOR EVENING AND GRADING MACHINES. WILLIAM THOMAS BUCKINGHAM ROBERTS and FRED RICKS, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 14, 1924. Serial No. 713,227. 7 Claims. (Cl. 101—18.)

1. In a machine of the class described, a stamping member, a driver therefor, a spring adapted to urge the driver in a direction to impart stamping movement to the stamping member, means for normally holding the stamping member in raised position against the force of the driver spring, said means being adapted to be moved to release the stamping member, and thereby permit the driver to impart a stamping stroke to the stamping member, and a stop for arresting the movement of the driver before the stamping member completes its stroke.

1,571,968. CIGAR-MAKING MACHINERY. HARRY L. ROBY, Barnesville, Ohio. Filed Nov. 13, 1924. Serial No. 749,626. 10 Claims. (Cl. 131—9.)

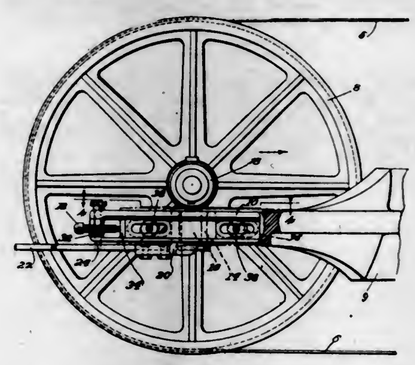
1. In a cigar molding machine, spaced upper and lower sets of endless carriers, mold sections mounted for travel in unison with said carriers, and means for imparting power to said carriers.

1,571,969. COMBINED IRRIGATING AND FROST-PROTECTING SYSTEM. CHARLES C. RUPRECHT, Orlando, Fla. Filed Mar. 5, 1923. Serial No. 623,005. 6 Claims. (Cl. 126—59.5.)



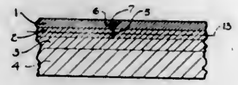
1. In a system or apparatus of the character set forth, the combination of a pump, a pipe communicating with the inlet side thereof, a pipe extending from the delivery side thereof and provided with a plurality of branch pipes each having a valve therein, said branch pipes having means for securing either burners or spray nozzles thereto, means for supplying water and means for supplying fluid fuel to the first-mentioned pipe, and a by-pass connection between the first and second pipes, said connection having a valve therein adapted to permit circulation from the second pipe to the first pipe upon the development of a predetermined pressure.

1,571,970. FERTILIZER. HOWARD SANDERSON, Baldwin, N. Y., assignor to Emanuel David, New York, N. Y. Filed Jan. 24, 1924. Serial No. 688,291. 2 Claims. (Cl. 71—6.)



1. A fertilizer embodying the shells of cacao beans in comminuted form.

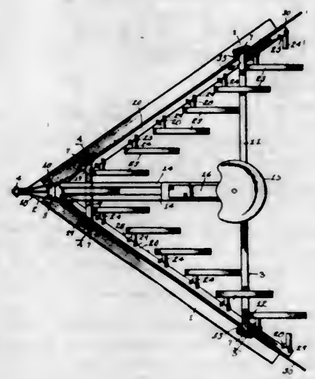
1,571,971. DUPLICATING MACHINE. ILJA SCHEINKER, Vienna, Austria. Filed Mar. 6, 1925. Serial No. 13,506. 4 Claims. (Cl. 101—126.)



1. In a duplicating machine, the combination of a frame adapted to support a matrix or stencil, inking mechanism including an inking roller rotatable below said matrix, a pressure roller above the matrix or stencil in vertical axial alinement with said inking roller, and means for adjusting the pressure of the pressure roller against the inking roller.

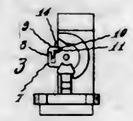
1,571,972. TENSIONING DEVICE FOR ENDLESS-BELT MEMBERS. GUSTAV ADOLF SCHETTLER, Leeds, England, assignor to The Turner Tanning Machinery Company, Peabody, Mass., a Corporation of Maine. Filed Nov. 20, 1923. Serial No. 675,946. 10 Claims. (Cl. 308—14.)

4. In a mechanism of the class described, an endless belt, a roller for supporting the belt, a member upon which the roller is mounted, said roller having a supporting bearing mounted in said member, and a rotatable eccentric member for moving the supporting bearing in directions to slacken or to tighten the belt.



1,571,973. LEATHER BELT AND PROCESS OF PRODUCING SAME. HOMER J. SHIVELL and KARL W. KOERNIGER, Kingsport, Tenn., assignors to Grant Leather Corporation, a Corporation of Virginia. Filed Dec. 3, 1920. Serial No. 428,160. 4 Claims. (Cl. 149—6.)

1. The process of manufacturing leather for power transmission belts and the like, which comprises removing the epidermis, the grain and a portion of the "real skin" of the leather, thereby removing that part of the leather containing the enlargements of the pores and leaving the upper surface smooth, and impregnating the remaining portion of the leather with an oily lubricant, and filling up the pores in the "real skin" with a finely divided filler which has a considerably higher melting point than said lubricant, and which is of such a character as permanently to fill said pores.



1,571,974. COMBINED HARROW AND FLOAT OR CLOD CRUSHER. PHILIP W. SIMONS, JOHN H. PURNELL, and HARRY L. CARR, Hastings, Mich.; said Purnell and said Carr assignors to said Simons. Filed Apr. 7, 1924. Serial No. 704,637. 10 Claims. (Cl. 55—23.)

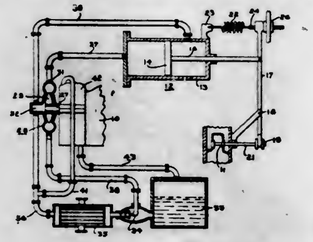
1. In a structure of the class described, the combination of a shoe terminating in a standard at its front end, a pair of inwardly inclined rearwardly diverging float members secured to said shoe, uprights carried by said float members, front and rear cross bars connecting said uprights, longitudinal frame bars mounted on said cross bars, draw bars connected to the front cross bar, to the front ends of said longitudinal bars and to said standard, tooth bars having teeth mounted thereon, hangers for said tooth bars slidably mounted on said uprights, hanger bars slidably engaged with said hangers, supporting links pivotally mounted on said

float members and pivotally connected to said hanger bar, and means for securing said hanger bars in their adjusted positions.

1,571,975. FIREARM. CARL GUSTAF SWEBILIUS, New Haven, Conn., assignor, by mesne assignments, to The Marlin Firearms Corporation, New Haven, Conn., a Corporation of Delaware. Filed May 29, 1920, Serial No. 385,210. Renewed Nov. 17, 1925. 9 Claims. (Cl. 42—25.)

6. In a firearm, a breech bolt having a groove, an ejector lying in said groove, said groove having a socket in one side wall, a lug on said ejector arranged in said socket, and a spring pressed stud overlying the opposite end of said ejector.

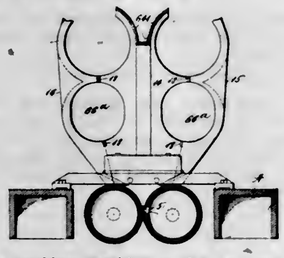
9. In a firearm, a breech bolt having a groove, an ejector slidably mounted in said groove and a spring pressed stud overlying said ejector.



1,571,976. PROCESS OF MAKING TRANSPARENT PAPER. CHARLES E. SWETT, West Roxbury, Mass., assignor to United States Envelope Company, Springfield, Mass., a Corporation of Maine. Filed Aug. 11, 1924. Serial No. 731,526. 3 Claims. (Cl. 91—68.)

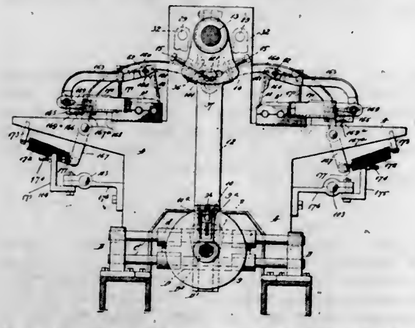
1. The treatment of glassine paper with a nonaqueous solution of tannic acid.

1,571,977. FLUID-PRESSURE GOVERNOR. HENRY R. TROTTER, Swarthmore, and HENRY F. SCHMIDT, Lansdowne, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 28, 1924. Serial No. 702,498. 7 Claims. (Cl. 264—14.)



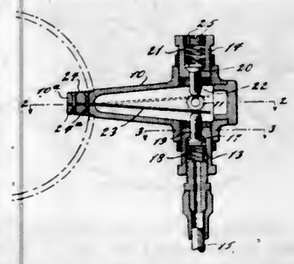
1. In a fluid pressure governing system, the combination of a fluid motor embodying a pressure responsive element, a rotating shaft, a centrifugal pump

driven by the shaft for delivering fluid under pressure to the motor, means for supplying the pump with fluid under pressure, and means for delivering a counter-



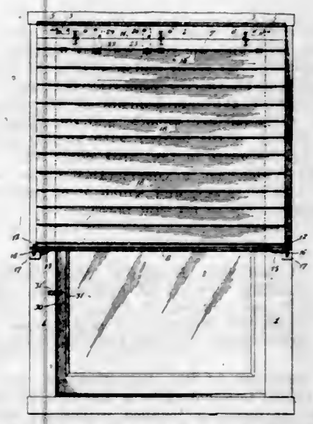
acting pressure of fluid to the pressure responsive element for off-setting the effects of variations in supply pressure to the pump on the operation of the motor.

1,571,978. WASTE-DELIVERY MEANS. HARRY TUNSTALL, Fairhaven, Mass., assignor to Alsatian Machine Works, Limited, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 14, 1923. Serial No. 674,710. 4 Claims. (Cl. 19—116.)



4. In a combing machine a fan, a pair of drums located side by side, each drum comprising an outer perforated rotatable member and an inner cylindrical stationary member having openings located to cooperate with said fan in providing suction through said drums and means for rotating said outer members towards each other.

1,571,979. SLIDING-BAR TOP-COMB FRAME. HARRY TUNSTALL, Fairhaven, Mass., assignor to Alsatian Machine Works, Limited, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 14, 1923. Serial No. 674,711. 8 Claims. (Cl. 19—118.)

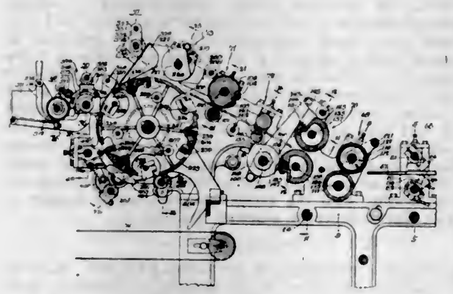


4. In a combing machine of the kind described, a top comb frame, an oscillating shaft, a link connected thereto to be operated thereby, a slinding member and ways therefor, said sliding member being connected to said link whereby it will be given a horizontal reciprocation, a second shaft, connections between said sliding member and said second shaft whereby said second shaft will be operated and connections between said top comb frame and said second shaft comprising a second sliding member and rectilinear ways whereby said second sliding member may be moved horizontally and give to said top comb farme a horizontal movement.

1,571,980. GASOLINE ENGINE. WILLARD I. TWOMBLEY, New York, N. Y., assignor, by mesne assignments, to The Wilcolator Company, Newark, N. J., a Corporation of Delaware. Filed June 6, 1922. Serial No. 566,423. 4 Claims. (Cl. 123—124.)

1. A control device for internal combustion engines having exhaust and intake manifolds, which comprises a casing disposed adjacent the exhaust manifold and having a fuel inlet and an air inlet, a valve controlling each inlet, these valves having stems lying in opposed relation, an outlet from the casing connected to the intake manifold of the engine, and a thermostatic element in the casing affected by the temperature in the exhaust manifold and having a movable end lying between the valves and operable to open either valve without affecting the other.

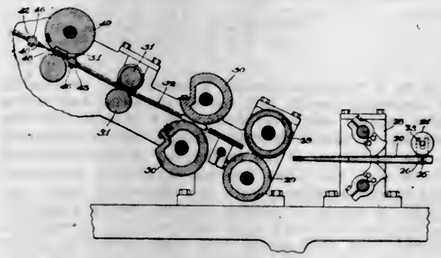
1,571,981. DEVICE FOR AFFORDING PROTECTION AGAINST THE ELEMENTS. GEORGE I. VAIL, Cleveland, Ohio. Filed Oct. 19, 1922. Serial No. 595,482. 6 Claims. (Cl. 156—43.)



1. In a device for affording protection against the elements, the combination of a window-frame; a transverse supporting bar positioned transversely of and against the outside of said frame; two clips each provided with a notch intersecting its lower edge, secured to and projecting from the rear surface of said bar; two

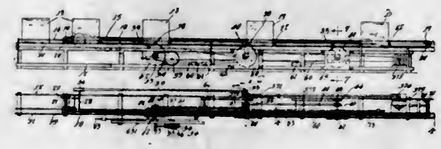
pins projecting from the lateral faces of the jambs of said window-frame, said clip-notches adapted to engage said pins; a frame hinged at its upper end to said transverse bar; oscillatory vanes mounted upon said hinged frame and means for oscillating same; and means for holding said hinged frame in an inclined position with reference to said window-frame.

1,571,982. PURIFICATION OF HYDROCYANIC ACID. MARK WALKER, Los Angeles, Calif., assignor to The Pacific R. & H. Chemical Corporation, El Monte, Calif., a Corporation of California. Filed Oct. 26, 1925. Serial No. 65,037. 5 Claims. (Cl. 23—151.)



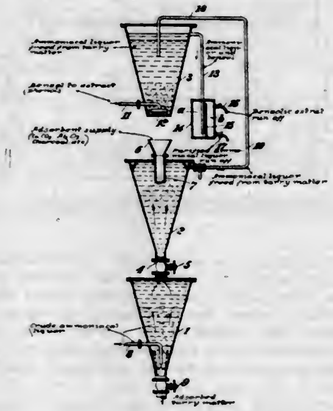
1. The process of purifying liquid hydrocyanic acid containing hydrogen sulphide consisting in reacting the hydrogen sulphide with sulphur dioxide.

1,571,983. PAPER-BAG MACHINE. HERMAN G. WEBER, Marinette, Wis., assignor of one-half to American Lakes Paper Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 24, 1923. Serial No. 670,433. 73 Claims. (Cl. 93—21.)



1. In a machine of the class described, the combination with mechanism for advancing a paper tube, of means for forming a lip in the tube during the advance thereof including a cutter having its operating portion normally moving at a different speed than said tube and adapted to automatically conform to the speed of the tube while in engagement therewith.

1,571,984. PAPER-BAG MACHINE. HERMAN G. WEBER, Appleton, Wis., assignor of one-half to American Lakes Paper Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 2, 1925. Serial No. 6,166. 13 Claims. (Cl. 93—20.)

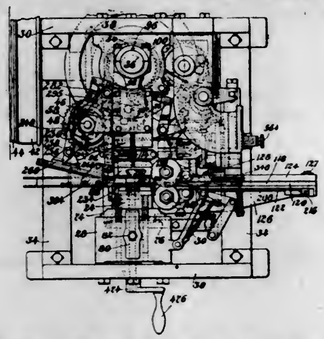


1. In a machine for making paper bags, the combination with a tube former adapted to have a strip of paper folded thereover with the edges overlapping to form a seam, of means for advancing the folded strip longitudinally of said former, and means for closing said seam comprising co-operating pressure rolls acting on opposite faces of said seam and rotated by frictional pull of the latter.

1,571,985. MACHINE FOR GRINDING GLASS PLATES. KARL A. WEBER, Los Angeles, Calif. Filed Mar. 18, 1924. Serial No. 700,035. 9 Claims. (Cl. 51—76.)

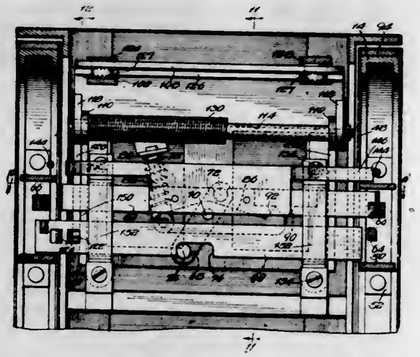
1. A machine for grinding an edge of a glass plate comprising a line of support upon which the glass may be stood on edge in a substantially vertical position, means for guidingly maintaining it in such position, and grinding means moving in the line of feed of the glass and located substantially on a level with said line of support and onto which the glass moves and by which it is supported on edge while being ground.

1,571,986. PROCESS FOR THE PURIFICATION OF CRUDE AMMONIACAL LIQUORS. ANTON WEINDEL, Essen-Ruhr, Germany, assignor to Zeche Mathias Stinnes, Essen-Ruhr, Germany. Filed July 23, 1924. Serial No. 727,747. 3 Claims. (Cl. 23—196.)



1. A process for the purification of crude ammonical liquor, consisting in subjecting the liquor to a two-stage treatment comprising the steps of initially allowing a solid adsorbent to act for some time to adsorb the finely divided particles of tar and, after removing the adsorbed mass, of extracting the pre-purified liquor with a solvent for recovering the phenols in solution.

1,571,987. MACHINE FOR OPERATING UPON STOCK. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 15, 1920, Serial No. 410,443. Renewed June 23, 1925. 62 Claims. (Cl. 164—22.)

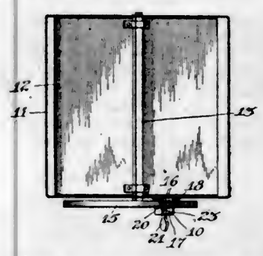


1. A machine of the character described having, in combination, initially idle means for operating on

stock, feed mechanism for advancing the stock to the operating means, and means arranged to be engaged

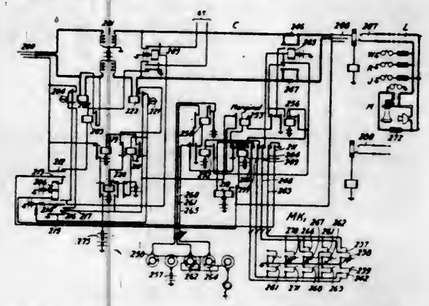
by an end face of the stock as it is advanced for controlling the action of the operative means.

1,571,988. SERVICE CABINET. ARTHUR H. WOODWARD, Chicago, Ill., assignor to International Register Co., Chicago, Ill., a Corporation of Illinois. Filed July 2, 1923. Serial No. 648,886. 35 Claims. (Cl. 232—1.)



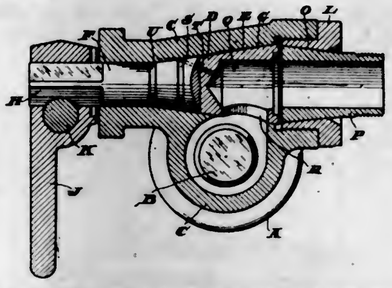
2. In combination, a compartment having a plurality of openings permitting access to the interior thereof, doors for closing said openings, locking means for each of said doors, detent means adjacent the door hinges for engaging said locking means one at a time to prevent the opening of the corresponding door, said detent means always retaining one of said doors closed, and signal means for each one of said doors, said signal means operated by said detent means to indicate which of the doors may be unlocked.

1,571,989. AEROFOIL. PAUL G. ZIMMERMANN, Keyport, N. J., assignor to Aeromarine Plane & Motor Company, New York, N. Y., a Corporation of New York. Filed May 29, 1922. Serial No. 564,281. 5 Claims. (Cl. 244—12.)



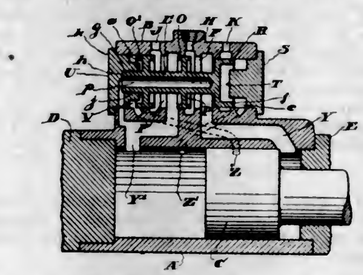
1. An aerofoil, the upper cambered surface of which rises from the forward region with a decreasing slope rearward to a point in advance of the region of maximum camber, and within about the first 20% of the chord at which point a longitudinally extending break or dip in the curve occurs, from which the surface rises again in a second slope rearward toward the point of maximum camber.

1,571,990. LOCK FOR DAMPER REGULATORS. JOSEPH ALSFASSER, Chicago, Ill. Filed Sept. 12, 1923. Serial No. 662,192. 1 Claim. (Cl. 26—295.)



A bracket having a body portion consisting of parallel separated connected walls, the ends of both walls terminating in apertured lateral walls adapted to receive means whereby it may be secured in position, said parallel walls being provided with aligned apertures in which a lever secured to a damper may operate, there being an aperture in said body portion, the axis thereof being transverse to said first mentioned apertures, a nut confined between and contacting with the parallel walls of said body portion, and a screw arranged in said last mentioned aperture and being in threaded engagement with the nut confined between said walls, said screw which is arranged in said aperture providing means for co-operating with the member secured to the damper to hold said member in adjusted position.

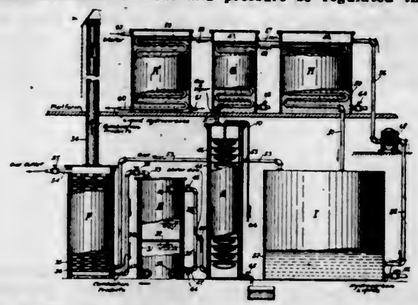
1,571,991. TELEPHONE RINGING SYSTEM. RAND S. BAILEY, Montclair, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 9, 1925. Serial No. 7,972. 3 Claims. (Cl. 179—44.)



1. In a telephone system, a called line, a plurality of connecting circuits each having answering and calling ends, ringing equipment including a plurality of keys common to said connecting circuits, means responsive to the connection of the calling end of said connecting circuit with the called line for operatively associating said ringing equipment with the connecting circuit employed, a source of ringing current, means responsive to the actuation of one of said keys for transmitting current from said source over said connecting circuit and disconnecting said common ringing equipment from said connecting circuit, and means responsive to the actuation of another of said keys for disconnecting said common ringing equipment from said line and preventing the transmission of current from said source.

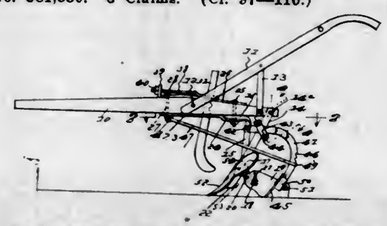
1,571,992. THROTTLE VALVE. LEWIS C. BAYLES, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 9, 1923. Serial No. 650,352. 2 Claims. (Cl. 251—98.)

1. A throttle valve comprising a one piece plug having a tapered bearing portion and a straight bearing portion, a recess extending partly through the plug, a port for permitting the passage of pressure fluid from the recess, a circumferential groove formed on the tapered portion of the plug between the ends of said tapered portion, and a passage through the plug for admitting pressure fluid from the recess to the groove, thereby reducing the holding pressure against the plug to prevent any lubricant existing between the plug and its seat from being forced out from therebetween.



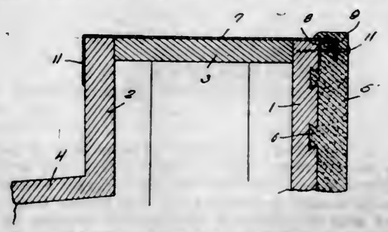
1,571,993. VALVE FOR ROCK DRILLS. LEWIS C. BAYLES, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Original application filed Oct. 16, 1922, Serial No. 594,728. Divided and this application filed Jan. 15, 1925. Serial No. 2,553. 3 Claims. (Cl. 121—28.)

1. In a rock drill, the combination of a cylinder, a piston within the cylinder, a valve chest having a valve chamber and an inlet port communicating with the valve chamber, exhaust ports connecting the valve chamber with the atmosphere, and a valve within the chamber to control the ports, said valve having a central head with a holding face, an end head of the same diameter with separate holding and actuating faces and another end head of smaller diameter with an actuating face to enable pressure fluid acting against the last said actuating face to overcome pressure fluid acting against the holding face of the other end head.



1,571,994. PROCESS FOR THE CONSTRUCTIVE CONVERSION OF HYDROCARBONS. HAROLD R. BERRY, Brooklyn, N. Y. Filed Sept. 18, 1922. Serial No. 588,848. 13 Claims. (Cl. 196—62.)

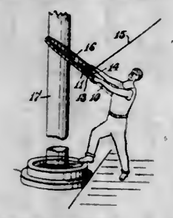
1. A process for the constructive conversion of liquid hydrocarbons of higher boiling points, into liquid hydrocarbons of lower boiling points, simultaneously with the adding of carbon in chemical union with hydrogen to hydrogen-containing gas, which consists in introducing into a confined space hot hydrogen-containing gas, and liquid hydrocarbons, and causing the same to counterflow in intimate contact, so that the liquid hydrocarbons constantly enter increasing temperature, and the hydrogen-containing gas constantly enters reduced temperature, with conditions of heat and pressure so regulated that



part of the hydrogen-containing gas combines with the liquid hydrocarbon, and part of the liquid hydrocarbon combines with the hydrogen-containing gas, thus decreasing the gravity of the liquid hydrocarbon, and increasing the gravity of the hydrogen-containing gas, and so conditioning the operation that substantially the entire liquid and gaseous materials are withdrawn as a heavier gas and a lighter liquid.

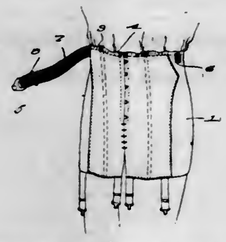
1,571,995. CONVERTIBLE PLOW FRAME. FRANK W. BOMAN, Moro, Ark. Filed Aug. 12, 1922. Serial No. 581,530. 8 Claims. (Cl. 97—110.)

1. An implement of the character described including a beam having rearwardly directed handle bars, a plow stock operatively pivoted to the beam extending downward therefrom, a brace adjustably engaged with the beam forward of the stock for forward and rearward adjustment and extending downward across the stock to a point rearward of the same and being pivoted to the stock, a rudder pivoted upon the lower end of said brace rearward of the stock for vertical movement, and means for holding the rudder in vertically adjusted position.



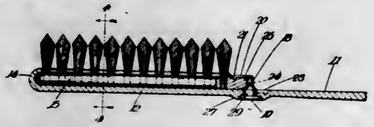
1,571,996. CAPPING FOR STUCCO WALLS. LEO IGNATIOUS BRADDOCK, New Smyrna, Fla. Filed May 18, 1925. Serial No. 31,101. 5 Claims. (Cl. 72—88.)

1. In combination, a parapet wall including a lath structure and a top, a plate disposed over the top and having an inverted U-shaped extension on its end de-



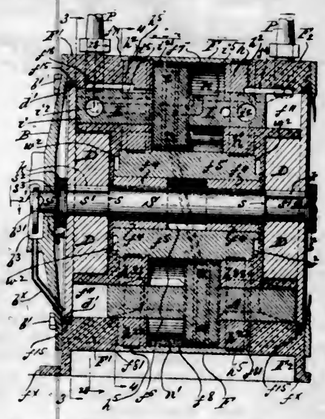
pending in front of the lath structure, and stucco applied to the lath structure to extend in and about the extension and over the adjacent portion of the plate.

1,571,997. TAKE-DOWN SLING. WALTER E. BUZAY, Wichita Falls, Tex. Filed Apr. 7, 1925. Serial No. 21,321. 2 Claims. (Cl. 214—3.1.)



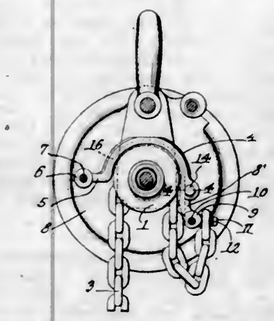
1. A take down sling comprising a cylinder embracing portion, a pair of laterally spaced outwardly extending arms, and means for attachment to a hoisting cable, substantially as described.

1,571,998. CORSET CONFINER. EFFIE S. COLEMAN, Birmingham, Ala. Filed July 2, 1925. Serial No. 41,121. 1 Claim. (Cl. 2—26.)



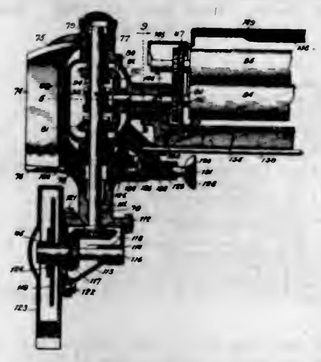
A corset confiner of the class described comprising an elastic band secured at one end to one side portion of a corset adjacent the upper edge thereof, said band adapted to extend across the front of the corset adjacent the upper edge, an eye secured to the opposite side portion of the corset adjacent the upper edge thereof, a hook carried by the free end of the band and adapted for detachable engagement with said eye, means for adjusting the length of said elastic band, and a series of hooks secured to the front of the corset and adapted to extend over the upper edge of the corset and the upper edge of the elastic band for preventing the upper movement of the latter.

1,571,999. TOOTHBRUSH. LEMUEL MORGAN DAVIS, London, England. Filed Nov. 29, 1924. Serial No. 752,851. 5 Claims. (Cl. 15—176.)



1. A tooth-brush comprising a brush-head, a handle separable therefrom and provided at one end with inturned side and end walls forming a socket adapted to slidably receive the brush-head, said handle being provided with a perforation adjacent the entrance to the socket, and a latch in said perforation, said latch comprising a stud adapted both to turn and to slide in the perforation, a head on the rear end of said stud adapted to engage the handle from the rear, and a spring-arm projecting radially from the front end of the stud and adapted to engage a depression on the front surface of the brush-head.

1,572,000. ROTARY ENGINE. JOSEPH DEUBEL, Clifton, N. J. Filed Apr. 4, 1921. Serial No. 458,440. 17 Claims. (Cl. 123—14).

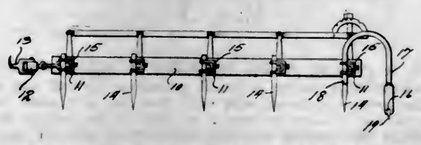


1. In a rotary engine of the character designated, the combination with the stationary frame work and rotatable shaft mounted therein of duplicate piston-cam discs rigidly attached to said shaft and inversely opposed to each other, reciprocatory abutments controlled by said piston-cam discs, one of which is formed with longitudinal transfer ports, the auxiliary abutment endwise movable relatively to the piston head, compression pistons on said reciprocatory abutments, medial compression cylinders in which said reciprocatory pistons are positioned, conduits connecting the opposite ends of said compression cylinders, annular channels into which the piston cams on said rotatable discs protrude, means for introducing gas into said annular channels, and for alternately firing the charges as compressed in said annular channels, for the purpose described.

1,572,001. CHAIN HOIST. JACOB DOTZERT, Detroit, Mich., assignor to Wright Manufacturing Company, Lisbon, Ohio. Filed Mar. 5, 1925. Serial No. 13,202. 1 Claim. (Cl. 254—171.)

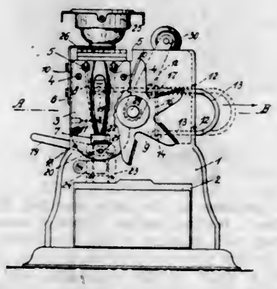
The combination with a hoist including spaced members, a sheave mounted for rotation therebetween and having a series of periphery recesses, and a load chain supported by the sheave and having certain of its links seated in the recesses, of an arcuate guard extending over and partly around the sheave in close proximity thereto and concentric therewith, said guard having a longitudinal groove for the reception of the outstanding portions of the links engaging the sheave, sleeves integral with the guard, attaching means extending through the sleeves and into the spaced members, and supporting lugs extending in opposite directions from the guard, there being sockets in the spaced members for the reception of said lugs.

1,572,002. WRINGER MECHANISM. ALBERT J. DREMEL, Racine, Wis., assignor to The Maytag Company, Newton, Iowa, a Corporation of Iowa. Original application filed Feb. 11, 1918, Serial No. 216,436. Divided and this application filed Jan. 12, 1920. Serial No. 350,856. 33 Claims. (Cl. 68—32.)



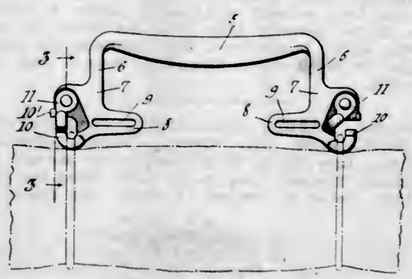
1. In a device of the class described, a vertical power shaft, a wringer in operative relation to the power shaft, the wringer being so mounted as to enable it to be swung in a substantially horizontal plane from one position to another about the shaft as an axis and also so mounted as to swing to different positions about a horizontal axis.

1,572,003. STOVE-LEG LOCK. RIVES FLEMING, Richmond, Va. Filed Apr. 27, 1925. Serial No. 26,136. 3 Claims. (Cl. 126—304.)



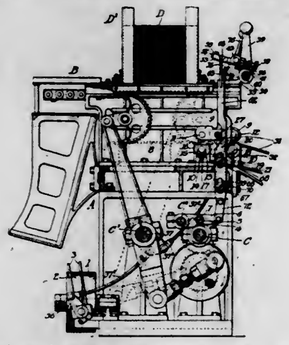
1. The combination with a stove of a leg and means for locking the leg to the stove comprising a tongue having a slot on the leg adapted to be received in locked relation by a sheet metal sleeve fastened to the stove.

1,572,004. WEEDING ATTACHMENT FOR HARROWS. JESSE A. GASKILL, Imbler, Oreg. Filed Aug. 8, 1925. Serial No. 49,077. 3 Claims. (Cl. 55—3.)



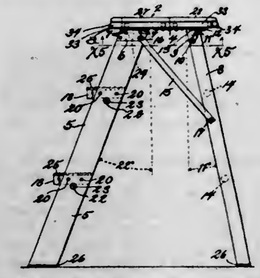
1. The combination with a harrow having downwardly depending teeth, a transversely extending series of socket members carried at the rear end of the harrow, of a weeding attachment comprising a transversely extending rod, supports therefor extending upward, forward and then downward and engaged in said socket members, the rod being loosely mounted within the lower ends of said supports to permit the supports to be adjusted upon the rod to suit the socket members on the harrow.

1,572,005. SHARPENING MACHINE FOR PENCILS AND OTHER STYLES. EMIL GRANTZOW, Dresden, Germany. Filed Mar. 13, 1924. Serial No. 698,953. 3 Claims. (Cl. 120—95.)



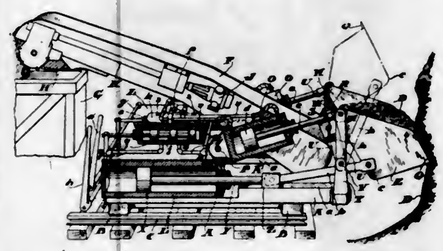
1. A sharpening machine for pencils or styles comprising in combination a guide funnel for the pencil to be sharpened composed of a stationary cutting plate having an oval aperture extended at the lower end by a rectangular aperture and of a plate-like element oscillably mounted on said cutting plate, means for securely holding said oscillable element in contact with said cutting plate, a spring for making this oscillable element oscillate away from said cutting plate when the securing means are rendered inoperative, an angular element below said funnel serving as gauge for the point to be produced, and means for adjusting this gauge element in its position.

1,572,006. HANDLE. FRANK WILBAR GRIFFIN, Galesburg, Ill. Filed Jan. 26, 1924. Serial No. 688,741. 1 Claim. (Cl. 224—57.)



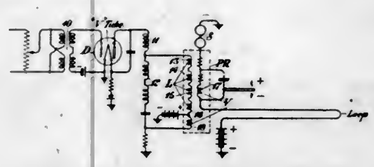
A removable handle including right angled end portions formed with enlargements, one surface of each enlargement being cut away, each enlargement having a cut out portion extending from one edge thereof, defining a hook, a stop adjacent to the outer edge of each enlargement, a pivoted keeper embodying a length of sheet metal bent upwardly to provide a finger grip, said pivoted keepers being mounted within the cut away portions of the enlargements to close the hook members, and said keepers adapted to engage the stops to restrict movement thereof.

1,572,007. STOP MECHANISM FOR BLANK-FEEDING MACHINES. SIGWALD C. GRUNLER, Chicago, Ill. Original application filed Oct. 9, 1922, Serial No. 593,332. Divided and this application filed Sept. 6, 1924. Serial No. 736,267. 14 Claims. (Cl. 192—126.)



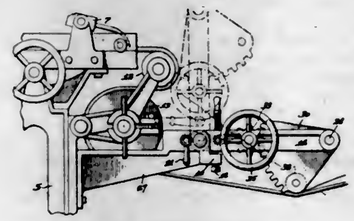
1. In a machine of the type specified, the combination of blank feeding means, driving means therefor, and starting and stopping means comprising a starter, a spring applied thereto adapted to turn on the driving means, a shaft, means connecting said shaft with the starter, a lever mounted to turn on said shaft, a spring applied to said lever, pins secured in said shaft and lever, the relation being such that when said lever is free to turn on said shaft said pins will transmit the tension of the spring applied to said lever to said shaft and will turn said shaft to throw off the starter and stop the machine, and the relation being such also that when said lever is turned to relieve said shaft from the tension of the spring applied to said lever, the starting spring applied to the starter will turn on said driving means and start the machine, and will also turn the shaft on which said starting lever is mounted to advance the pin secured therein toward the pin secured in said lever, whereby when said lever is released the spring applied thereto will turn said lever to cause the pin secured therein to engage the pin secured in said shaft, the spring applied to said lever being sufficiently strong to rotate said shaft to turn off the starter and stop the machine, a lock arm pivoted adjacent to the lever on the starter operating shaft, and a projection thereon adapted to interlock with a shoulder on said lever to secure said lever in position to relieve the starter operating shaft from the tension of the spring applied to said lever, thus permitting the spring applied to the starter to actuate the same to start the machine.

1,572,008. SAFETY COLLAPSIBLE COMBINATION STEPLADDER AND STOOL. THOMAS WILLIAM HALL, Long Beach, Calif., assignor of one-half to Charles Knutson, Long Beach, Calif. Filed Dec. 11, 1922. Serial No. 606,198. 1 Claim. (Cl. 228—2.)



A combined stool and stepladder construction, comprising a top tread formed of front and rear sections hinged together, supporting legs rigidly secured at their upper ends to one of the sections of said top tread, treads secured between the supporting legs intermediate their upper and lower ends, a pair of rear legs pivotally secured at their upper ends to the other section of said top tread for supporting the combined stool and ladder in an operative position, and braces pivotally connecting the supporting legs and rear legs, the construction and arrangement being such that the rear legs and rear tread section will automatically move to collapsed position when the combined stool and stepladder is lifted by the front tread section.

1,572,009. SHOVELING AND LOADING MACHINE. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 11, 1925. Serial No. 55,678. 8 Claims. (Cl. 214—90.)

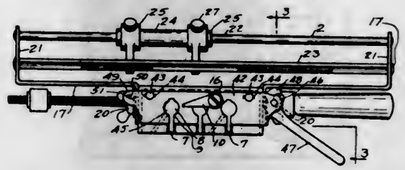


1. In a shoveling and loading machine the combination of a carriage, a scoop, a pair of digging, elevating and lowering cylinders on the carriage having pistons and piston rods and links connecting said piston rods to the heel of the scoop, a pair of dumping and scoop adjusting cylinders on the carriage above the digging cylinders having pistons and piston rods and links connecting the said piston rods to the back end of the scoop, and links connecting the said back end of the scoop to the carriage at a point near the forward end of the carriage, whereby the scoop may be thrust forward and swung upwardly and downwardly by the digging cylinders, and may be adjusted and tipped into rearward dumping position by the dumping cylinders.

1,572,010. DETECTOR CIRCUIT. JOSEPH HERMAN, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 13, 1923. Serial No. 668,384. 6 Claims. (Cl. 178—88.)

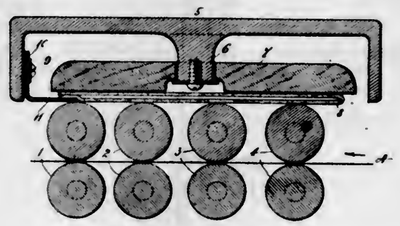
1. A detector circuit comprising a highly sensitive detector tube having a small operating current and a polar relay associated with said detector, said polar relay having a large operating winding in the output circuit of the detector and responsive to he detected operating current to shift the armature of the relay, a small biasing winding supplied with a biasing current, and an auxiliary holding winding continuously supplied with current in a direction determined by the position of the relay armature.

1,572,011. TIRE-BUILDING MACHINE. WALTER H. HERMANN, Lancaster, Ohio, assignor to Hermann Tire Building Machine Company, Lancaster, Ohio, a Corporation of Ohio. Filed Sept. 22, 1923. Serial No. 664,156. 6 Claims. (Cl. 154—10.)



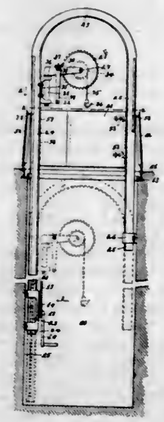
1. In a tire building machine from which material may travel to a core for the fabrication of a tire on the core, brackets adjacent the core, arms having the inner ends thereof pivotally supported from said brackets and swingable upwardly away from the core to a position at an angle to said brackets, and a roller supported from said arms and adapted for adjustment when said arms are lowered adjacent to said core.

1,572,012. PRODUCTION OF ALUMINUM PRINTING PLATES. LOUIS J. HERTLIN, Woodhaven, N. Y. Filed Apr. 23, 1923. Serial No. 634,180. 4 Claims. (Cl. 95—5.7.)



1. The method herein set forth of producing aluminum printing plates, consisting in preparing an original design in miniature, making a photographic negative thereof, printing a half tone positive therefrom on a sensitized aluminum plate, retouching by hand the aluminum key plate thus attained, etching said aluminum key plate, ink-rolling said key plate and imposing an impression thereof on glass, using said positive print on glass for the making of a negative, and using said negative in an enlarging apparatus to transfer the design to a sensitized aluminum plate which is then developed, etched, and preparatory for use in the press, substantially in the manner and for the purpose described.

1,572,013. FILE GAUGE. WILLIAM HILTON, Seattle, Wash. Filed Mar. 30, 1925. Serial No. 19,516. 2 Claims. (Cl. 76—31.)

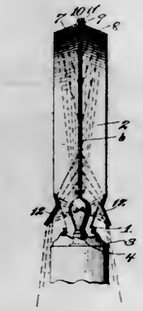


1. In a file gauge of the class described a saw holding base, slotted plates on the sides of the said saw holding base, a cam shaped lever for holding the plates toward one end and a means for resiliently holding the plates toward the opposite end.

1,572,014. CLEARER FOR DRAWING FRAMES. PERCY A. HOOD, Yarmouth, Nova Scotia. Filed Aug. 15, 1924. Serial No. 732,186. 3 Claims. (Cl. 19—139.)

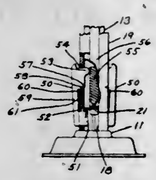
1. In combination with the front top roll of a drawing frame or the like a cover and a wiper mounted thereon having a substantially horizontal portion the free edge of which reaches to about the centre of front top roll and in close proximity thereto.

1572,015. HOISTING APPARATUS. EDWARD D. HOOKER, New York, N. Y., assignor to Gillis & Geoghegan, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 2, 1923. Serial No. 672,266. 4 Claims. (Cl. 214—1.)



1. In a hoisting apparatus, a hoistway closure, a vertically movable hoist-supporting member, adapted to contact directly with and open said closure, and a laterally openable guard gate carried by said member.

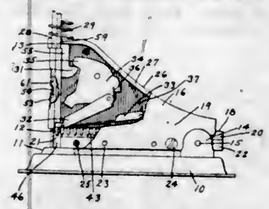
1,572,016. ILLUMINATING SIGN FOR GASOLINE PUMPS. DWIGHT W. HUSTON, Springfield, Ohio, assignor to Wayne Tank & Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Feb. 15, 1924. Serial No. 693,043. Renewed Dec. 6, 1924. 9 Claims. (Cl. 40—130.)



4. An illuminating sign for gasoline pumps comprising a pedestal with a single electric lamp therein, a sign panel rising from the pedestal provided with signs upon

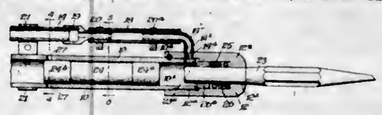
opposite faces thereof, and means for reflecting the light rays upon the opposite faces of the panel, the base of

the pedestal having opposite downwardly and outwardly disposed reflectors for reflecting the light rays upon various parts of the gasoline pump.



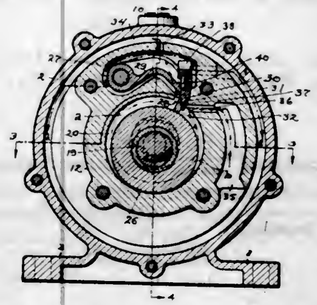
1,572,017. STAPLE BINDER. DANIEL L. IRVIN, Curwensville, Pa., assignor to A. H. Irvin Company, Inc., Curwensville, Pa., a Corporation. Filed Oct. 20, 1921. Serial No. 509,067. 2 Claims. (Cl. 1—2.3.)

1. A staple binder comprising a casing having slots in the side walls thereof, a supporting bar mounted in said casing for supporting a staple strip that is composed of individual staples connected in series, said bar having a cutting edge at one end, means for feeding said strip cutting edge at one end, means for feeding and strip along said bar so that said strip will project beyond said cutting edge, means to limit such projection of the strip to correspond to a single staple and operative also to serve as a guide for one edge portion of said single staple, a plunger having a cutting edge to cooperate with the cutting edge of the bar and operative to be driven so as to sever said single staple and drive the same, auxiliary guide means operating as levers extending through the slots in the casing for guiding the opposite edge portion of said single staple, and means operated by the plunger for setting said auxiliary guide to guiding position.



1,572,018. STAPLE BINDER. DANIEL L. IRVIN, Curwensville, Pa., assignor to A. H. Irvin Company, Inc., Curwensville, Pa., a Corporation. Filed Dec. 13, 1921. Serial No. 522,084. 1 Claim. (Cl. 1—2.3.)

A staple binder having a supporting bar for supporting a staple strip, said bar having a cutting edge at one end, means for feeding said strip along said bar, a plunger having a cutting edge for cooperating with the cutting edge on the bar for cutting said staple strip, a guide structure enclosing said plunger, a sleeve interposed between said guide structure and plunger, a spring operative to provide a frictional holding effect between said sleeve and plunger, a base opposed to said bar, means serving normally to position said plunger above said base and die, and means for positioning said sleeve normally so as to project downwardly below the bottom face of said plunger, the projecting portion of said sleeve comprising on each side a three sided channel wall and a downward extension of one of the walls in line with

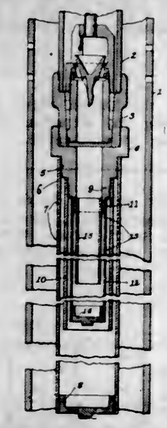


the staple strip, and said sleeve being operative to slide along said plunger responsive to contacting with said base during downward movement of said plunger.

1,572,019. FLUID-PRESSURE HAMMER. JOHN A. JACKSON, Chesterton, Ind., assignor, by direct and mesne assignments, to The Ryan Car Company, Chicago, Ill., a Corporation of Maine. Filed Dec. 28, 1917. Serial No. 209,278. 1 Claim. (Cl. 121—21.)

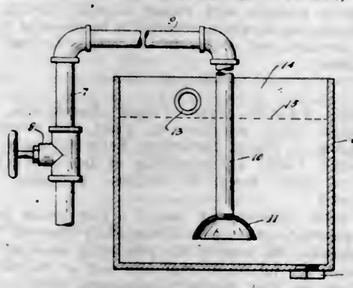
A device of the character described, comprising, in combination, a main casing, a piston hammer reciprocable in said casing, an external fluid supply pipe for applying fluid to opposite ends of said hammer, a valve device for alternately establishing communication first with one end and then with the opposite end of said hammer, a tool-holder casing carried by the casing and having a portion adapted to receive and guide the shank of a tool operable by said hammer, a shock-absorber disposed in said second casing between the tool-holder portion thereof and said main casing and independently of said tool shank, and a shock absorber element in said fluid supply pipe, said fluid supply pipe being connected adjacent the end of the main casing opposite to said tool-holder casing, and to said tool-holder casing intermediate said main casing and the tool guide portions thereof.

1,572,020. HYDRAULIC REDUCTION DRIVE. JOSEPH F. JAWOROWSKI, Cleveland, Ohio, assignor of one-half to Samuel E. Dettelbach, Cleveland, Ohio. Filed Feb. 20, 1925. Serial No. 10,676. 5 Claims. (Cl. 192—58.)



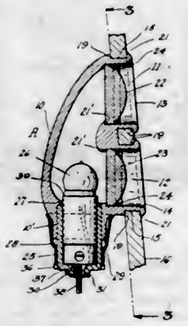
1. A fluid power-transmitting device, comprising a casing, a rotatable body therein having a shaft journaled within said casing and formed with circular chambers, a crank shaft having rollers operating in said chambers, oscillatory abutments mounted upon said body and engaging said rollers, and said body having passages therein on opposite sides of said abutments adapted to permit circulation of a fluid through said chambers and casing.

1,572,021. FURNITURE POLISH. JOHANNE JOHANSEN, Newport, R. I. Filed Aug. 2, 1924. Serial No. 729,719. 1 Claim. (Cl. 134—24.)



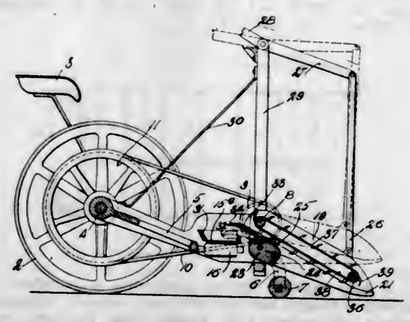
The herein described furniture polish consisting of 6 ounces linseed oil, four ounces kerosene, four ounces vinegar, two ounces turpentine and one teaspoonful spirits of camphor, thoroughly commingled by agitation.

1,572,022. TRAP FOR OIL-WELL PUMPS. DE WITT C. KING, Fillmore, Calif. Filed Apr. 28, 1924. Serial No. 709,509. 3 Claims. (Cl. 103—220.)



1. The combination of an oil well pump and a trap, said trap comprising a tubular casing secured upon the bottom of the pump, said casing being perforated at the top and closed at the bottom, a second and shorter and smaller casing open at the bottom and secured to the bottom of the pump within the first casing; a third and smaller casing secured to the bottom of the pump within the second casing, said last casing being perforated at the top and closed at the bottom and of the length of the second casing; and a fourth and still shorter casing open at the bottom secured to the bottom of the pump within said last casing.

1,572,023. DISSOLVING APPARATUS. HARRY D. LATHROP and WALTER H. PAULSON, Chicago, Ill.; said Paulson assignor to said Lathrop. Filed July 26, 1924. Serial No. 728,509. 2 Claims. (Cl. 23—267.)

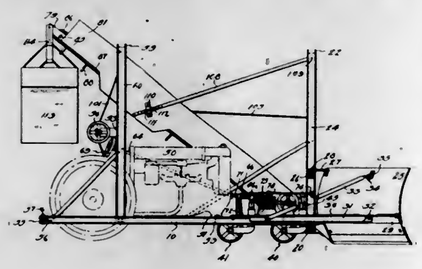


1. In combination, a supply conduit provided with a control valve, a flat bottom receptacle having a discharge opening formed in one of its side walls adjacent the top edge thereof, a conduit mounted in said opening to provide an overflow, a conduit having connection with the supply conduit and extending over the edge of said receptacle and downwardly centrally within the receptacle a short distance from the bottom thereon, and a cup shaped member mounted on said outlet end for distributing fluid in the lower part of said receptacle.

1,572,024. VEHICLE LAMP. NEIL MACINNES, Chicago, Ill. Filed June 28, 1922. Serial No. 571,386. 13 Claims. (Cl. 177—329.)

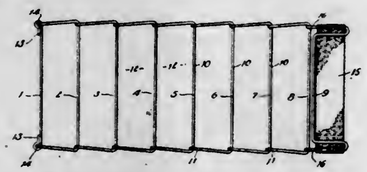
4. A vehicle lamp including a casing open at its lower end and having adjacent windows formed therein, means for securing the casing to a bumper bar of a vehicle, a lighting element support having a portion passing into the opening at the lower end of the casing, and means for removably securing the support to the casing.

1,572,025. BERRY HARVESTER. HORACE B. MACLATHLIN, Kingston, Mass., assignor of one-half to Franklin E. Smith, Newton, Mass. Filed Oct. 21, 1924. Serial No. 744,896. 13 Claims. (Cl. 56—330.)



5. A berry harvesting machine having a scoop comprising a series of substantially parallel spaced fingers having uninterrupted berry guiding channels between them, and means cooperating with each of said channels for positively propelling berries along the channels substantially from one end to the other of the latter.

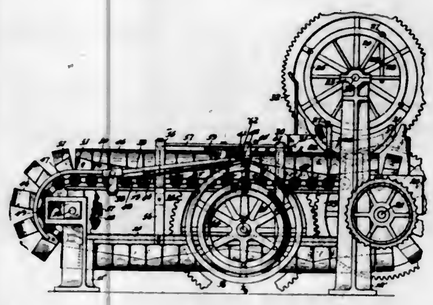
11. A berry harvesting machine having a downwardly inclined scoop pivotally supported adjacent to its upper end, said scoop having parallel longitudinally extending berry guiding channels, a conveyor extending transversely of the scoop adjacent to its upper end, a member extending from the upper edge of the scoop to a point above the conveyor, said member having parallel grooves constituting continuations of the guide channels, means for supporting a removable receptacle



at the end of the conveyor, and means for moving berries upwardly along the channels to be discharged from the ends of the grooves onto the conveyor.

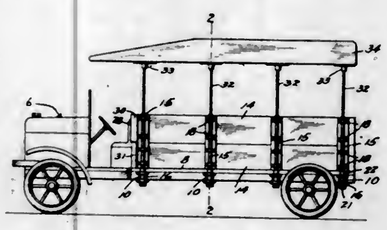
1,572,026. SNOWPLOW. LEO P. MARX, Le Mars, Iowa. Filed Apr. 16, 1925. Serial No. 23,462. 14 Claims. (Cl. 37—45.)

1. In a snow plow, an angularly disposed blade adapted to move snow with which it contacts toward one of its ends, an endless belt elevator disposed at that end adapted to receive the snow discharged from the blade, said elevator being disposed parallel to the normal path of travel of the plow, and a frame supporting said elevator and blade, said frame including a U-shaped portion disposed at the side of the elevator having parallel arms connected at their forward ends by a forward connecting beam, said arms being adapted to receive a tractor therebetween and means for hitching a tractor to the rear ends of said arms, the removal of said hitching means from engagement with the arms allowing the tractor to be removed rearwardly from the frame.



1,572,027. HAIR WAVER. WILLIAM A. MEYERS, Chicago, Ill. Filed Dec. 17, 1923. Serial No. 681,034. 11 Claims. (Cl. 132—31.)

1. A hair waving device comprising a plurality of members arranged side by side and foldably connected together, and adapted to receive hair through their centers when folded together, said members providing spaced transversely extending hair engaging portions which are adapted to receive the hair when said members are thereafter reversed in their folded position, and means for securing said members in folded position.

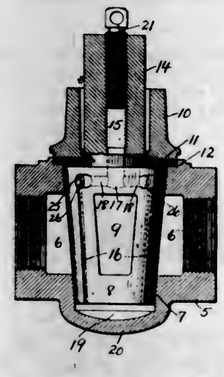


1,572,028. SHAPING AND TRIMMING ATTACHMENT FOR TILE-FORMING MACHINES. MAX MUELLER, St. Louis, Mo., assignor to Los Angeles Pressed Brick Company, Los Angeles, Calif., a Corporation. Filed Aug. 13, 1924. Serial No. 731,854. 8 Claims. (Cl. 25—104.)

1. A shaping and trimming attachment for tile forming machines, comprising a plurality of forming blocks mounted on an endless conveyor, a pressing mechanism in close proximity with the blocks, a trimming mecha-

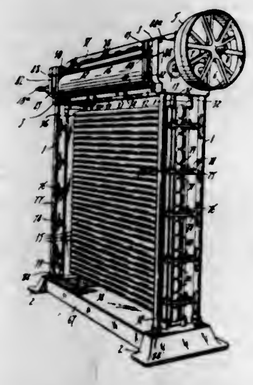
nism for trimming the bottom edges of the product, means for controlling the elevation of the trimming means, and a cutting off mechanism.

1,572,029. VEHICLE BODY. HANS P. NELSON and GEORGE DAVIES, Seattle, Wash., assignors of one-third to George E. Cook, Seattle, Wash. Filed May 17, 1923. Serial No. 639,606. 2 Claims. (Cl. 296—43.)



1. Means for detachably mounting portions of a vehicle body and a top therefor, comprising a plurality of detachable stirrups constituting retaining members carried by portions of the body and arranged to vertically align in spaced relationship in assembly clamping plates arranged on the body and aligning with the stirrups, a tubular socket member carried by the clamping plates, a tubular stringer member adapted to be trained through the respective stirrups and to be seated in the socket member whereby to maintain said portions of the body in assembly, and said stringer members being freely movable with respect to said stirrups, and a top supporting standard adapted to be mounted in the tubular stringer and seated in the socket for the purpose defined.

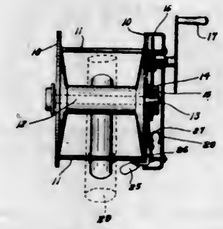
1,572,030. VALVE. SVEN JOHAN NORDSTROM, San Francisco, Calif., assignor, by direct and mesne assignments, to Merco Nordstrom Valve Company, San Francisco, Calif., a Corporation of Delaware. Filed Dec. 14, 1923. Serial No. 680,594. 4 Claims. (Cl. 251—93.)



1. A valve comprising a casing, a plug seated in the casing provided with a pair of oppositely disposed lubricating grooves, the stem of the plug being provided with a reservoir for lubricant, the stem end of the tapered portion of the plug having a transverse hole connecting the lower end of the reservoir with the upper ends of the lubricating grooves, a screw in the outer end of the stem for putting the lubricant in the reservoir

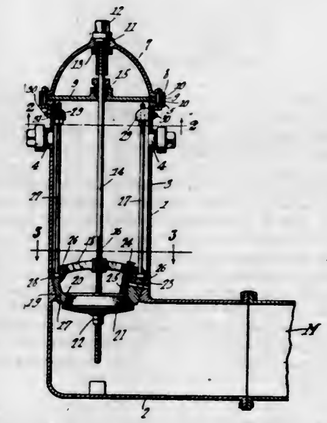
under pressure to force it into the grooves, and an outwardly opening check valve located in each outer end of the transverse hole in the plug permitting flow of

lubricant from the reservoir into the grooves, but preventing back flow of lubricant from the grooves into the reservoir.



1,572,031. PASTEURIZER FOR CREAM, MILK, OR OTHER LIQUIDS OR SEMILIQUIDS. JOSEPH O'CONNELL and HAROLD HAMILTON KERR, Kensington, Australia. Filed Jan. 28, 1924. Serial No. 689,194. 6 Claims. (257—96.)

3. A pasteurizer including bases, a plurality of standards supported by the bases, a plurality of boxes mounted upon the upper ends of the standards, shafts rotatably mounted on the boxes, heating cylinders mounted on the shafts, a rod adjustable toward and away from said cylinders, arms having forks pivotally mounted on said rod, scraping bars mounted on said arms and bearing against the cylinders and means for forcing the scraper bars toward the cylinders.

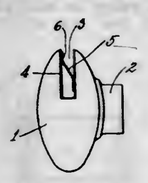


1,572,032. FISHING REEL. LOUIS A. PAGE, Providence, R. I. Filed Mar. 10, 1922. Serial No. 542,531. 2 Claims. (Cl. 242—84.5.)

2. A fishing reel comprising a pair of fixed head plates, a spool rotatably mounted between said plates and provided with a shaft bearing in said plates, a spool-driving pinion fixed to said shaft, a friction arm having one end extending beneath said pinion and its free end adjacent the periphery of said plate, a thumb-lever mounted to swing in said plate with its inner end engaging said free end of said arm to lift the

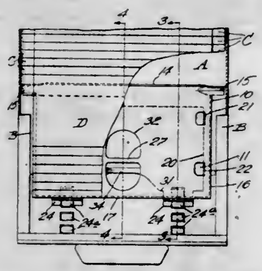
same into frictional engagement with the under side of said gear, and a spring for normally holding said arm and lever in inoperative position.

1,572,033. FIRE HYDRANT. ALONZO B. PARKER, Sylacauga, Ala. Filed June 15, 1925. Serial No. 37,301. 1 Claim. (Cl. 137—13.)



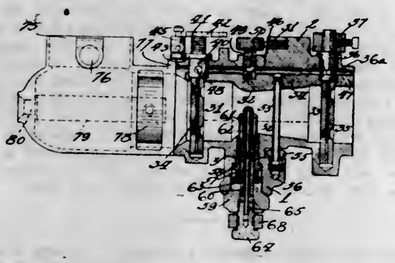
A fire hydrant comprising a substantially L-shaped casing, one arm arranged vertically and equipped at its upper end with a closure, a valve seat removably mounted at the junction of said arms and having a spider with a central angular aperture therein, a valve for engaging said valve seat and having a stem angular in cross section extending through said opening, said stem extending up into the closure, rotatable means for longitudinally moving said stem to open and close said valve, rods connected with said cage, lugs detachably mounted in the upper end of said casing and having apertures to receive said lugs, and means on the rod for forcing the cage onto its seat to provide a water tight joint.

1,572,034. DOOR HANDLE. ARTHUR L. RACE, Boston, Mass., assignor of one-half to William M. Kimball, Northampton, Mass. Filed Nov. 14, 1924. Serial No. 749,969. 1 Claim. (Cl. 40—8.)



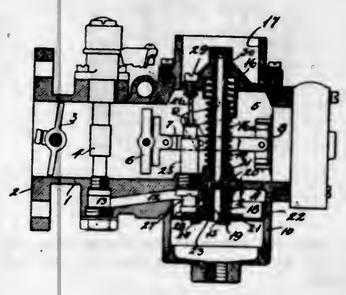
A door handle structure comprising an enlarged handle portion having a peripheral recess extending transversely

through substantially one half of such portion and adapted to hold envelopes, message papers and the like in such



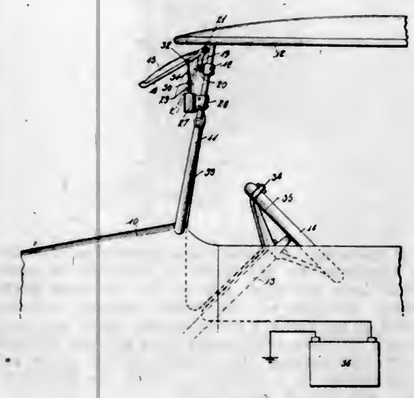
a position that one using the door handle for its normal purpose literally has the paper and the like placed in his hand.

1,572,035. CARD-INDEX DEVICE, JAMES H. RAND, Jr., Tonawanda, N. Y. Filed Feb. 2, 1924. Serial No. 690,270. 11 Claims. (Cl. 129—16.)



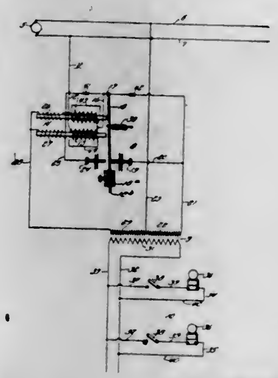
1. In a record-holding tray including a supporting part on which a series of record devices are adapted to be maintained in overlapping relation substantially parallel with said supporting part with their free edges exposed one beyond the other, the combination of a back stop on said tray against which one end of said series is adapted to abut, and a resiliently expansible and compressible member having a part for engaging the other end of said series of record devices, and a part for engaging a portion of said tray, whereby said devices are resiliently compressed and maintained on said tray against said stop, said resiliently expansible and compressible member having a part adapted to support the free ends of the adjacent record devices and maintain them in substantial alinement with the free ends of the other devices of said series.

1,572,036. CARBURETOR. CHARLES L. RAYFIELD, Chicago, Ill., assignor to Beneke Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 30, 1920. Serial No. 377,923. 5 Claims. (Cl. 261—4.)



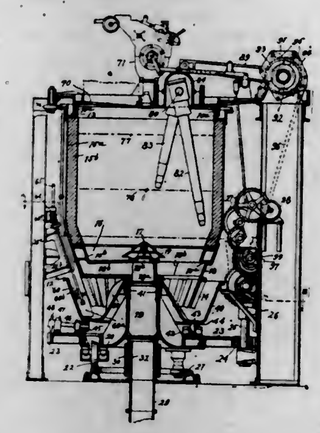
1. In a carburetor, the combination of a main mixing chamber, an auxiliary mixing passage, a fuel supply chamber, an inlet nozzle communicating with the fuel supply chamber and extending into the main mixing chamber, a second inlet nozzle communicating separately with the fuel supply chamber and opening into the auxiliary mixing passage and having an aperture opening into the main mixing chamber for introducing additional liquid fuel therein when a high vacuum is produced.

1,572,037. CARBURETOR. CHARLES L. RAYFIELD, Chicago, Ill., assignor to Beneke Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 2, 1923. Serial No. 629,334. 4 Claims. (Cl. 261—24.)



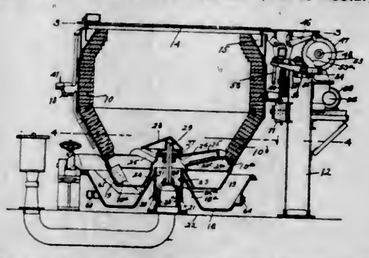
1. In a carburetor, an air valve, a dash pot, a piston in said dash pot, a tubular connection between said air valve and said dash pot piston having orifices therein above the main portion of said air valve, and means in and surrounding said tubular connection adapted to close the passage between said dash pot and said orifices after a predetermined movement of said connection.

1,572,038. ANTIGLARE SHIELD. HARRY S. REINHEIMER, Lehighton, Pa. Filed Mar. 1, 1924. Serial No. 696,223. 4 Claims. (Cl. 296—97.)



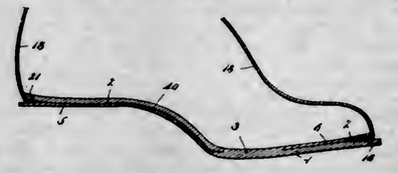
1. The combination with a vehicle, of an anti-glare shield, means for swingingly supporting said shield on said vehicle, yieldable means normally holding said shield in inoperative position, a magnet coil, means for energizing said coil, a movable core within said coil, and connecting means between said core and said shield, whereby on the energization of said coil said shield is swung into operative position.

1,572,039. ELECTRICAL APPARATUS. MARK R. RICHARD, Chicago, Ill., assignor to Charles J. Dorrance, Chicago, Ill. Filed May 5, 1920. Serial No. 379,055. 6 Claims. (Cl. 175—365.)



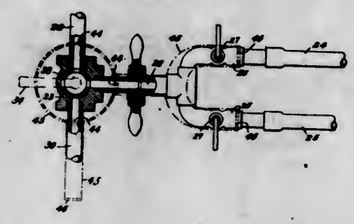
1. A current modifying system comprising a source of unidirectional current, an electro-magnetically operated vibrator having a plurality of opposed windings, means associated with the source of unidirectional currents for alternately exciting one of the opposed windings and both of the opposed windings, and means for delivering pulsations of current from the vibrator.

1,572,040. GAS PRODUCER. JOHN F. ROGERS, Cleveland Heights, Ohio, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 26, 1918. Serial No. 268,293. 30 Claims. (Cl. 48—85.1.)



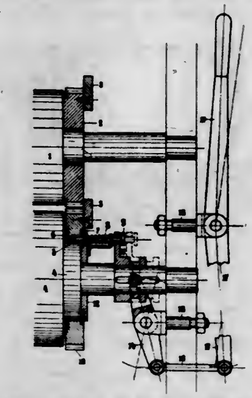
20. In a gas producer, a producer body and an ash receptacle beneath the same both rotatably mounted, and movement imparting and controlling mechanism for causing both parts to rotate when the producer is in operation and operating automatically to cause one part to make a greater number of revolutions than the other in a given time.

1,572,041. GAS PRODUCER. JOHN F. ROGERS, Cleveland Heights, Ohio, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 12, 1921, Serial No. 514,521. Renewed Mar. 31, 1924. 27 Claims. (Cl. 48—85.1.)



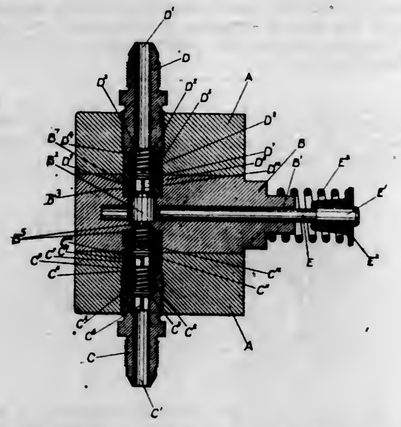
1. In a gas producer, a rotatable ash pan, means whereby the body and pan are caused to rotate, and means for automatically holding one of the parts against rotation at definite intervals.

1,572,042. METHOD OF MAKING BOOTS AND SHOES. CHARLES B. SPALSBURY, St. Louis, Mo., assignor to Johnson, Stephens & Shinkle Shoe Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 19, 1922. Serial No. 555,588. 8 Claims. (Cl. 12—142.)



6. The improved method of making shoes, consisting in providing a combined insole and outsole, having said insole and outsole separated at the heel, shank, toe, and along the margins of the forepart, lasting the upper, securing the marginal part of the lasted upper at the forepart between said insole and outsole portions, by removable fasteners, attaching the shank portion of the lasted upper by non-metallic means, removing the last, applying through and through stitching, and thereupon removing the fasteners retaining the lasted upper at each side of the forepart.

1,572,043. PORTABLE APPARATUS FOR USE IN PROCTOTHERAPY. OSCAR BOTO SCHELLBERG, New York, N. Y. Filed June 27, 1925. Serial No. 40,046. 2 Claims. (Cl. 128—227.)



1. An apparatus as characterized comprising a plurality of holding receptacle flasks; a distribution system operatively connected therewith and embodying a series of flexible pipes, and a multi-ported distributing valve, and a supporting member for said valve and parts associated therewith, said supporting member having a ring-like body with extended arms adapted to receive and hold said pipes and parts associated therewith.

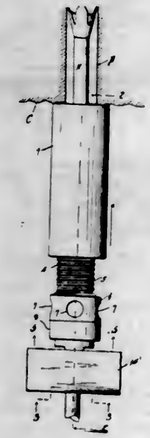
1,572,044. ROTATING PRINTING MACHINE. LEO SCHWARZ, Stendal, Germany. Filed Jan. 12, 1924. Serial No. 685,854. 2 Claims. (Cl. 101—216.)

1. A rotary printing machine, comprising in combination, a printing cylinder, an impression cylinder, means for rotating the impression cylinder intermittently so as to enable the printing cylinder to make one or more idle runs between each rotation of the impression cylinder, said means consisting of a ring of teeth provided on the printing cylinder, a second ring of teeth loosely mounted on the impression cylinder and capable of meshing with the ring of teeth on the printing cylinder, projections provided on the said cylinders for initiating the rotary movement of the impression cylinder, and means for releasably connecting the impression cylinder to the second ring of teeth, so that by disengaging said means the second ring can rotate idly during the continued rotation of the printing cylinder while the impression cylinder is stationary.

1,572,045. PUMP. PHILIP LANE SCOTT, Three Oaks, Mich., assignor to Super Diesel Tractor Corporation, La Porte, Ind., a Corporation of New York. Filed Dec. 15, 1919. Serial No. 344,883. 19 Claims. (Cl. 103—153.)

1. A pump comprising a cylinder, a plunger mounted for reciprocation therein, one of them being of softer material than the other, the clearance between them being such that travel of a liquid film between them is effectually prevented by the resistance to molecular separation of the oil film.

1,572,046. IMPRESSION-MAKING TOOL. ADAM J. SEILER, Freeport, Ill. Filed Dec. 21, 1923. Serial No. 681,975. 1 Claim. (Cl. 81—1.)

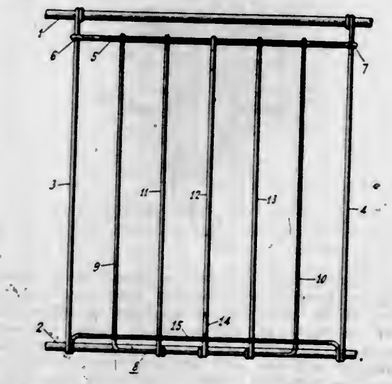


An impression making tool of the character described comprising a body composed of a front tool-holding section, and a rear handle section having a smooth rear end to be borne against by the hand in the use of the tool, a tool element reciprocable in the front section and having an anvil end inside said body, a plunger element reciprocable in the rear handle section, a compression spring between it and the rear end of said handle section arranged to be loaded when the rear end of said handle section is borne against in the direction of the tool element while the latter is engaging the work to deliver a blow of pre-determined force to said tool element, a trigger for releasing said plunger element for a blow on said tool element at a pre-determined degree of compression of said spring, and a hammer member adjustable from the rear end of said plunger element toward and away from the anvil end of said tool element, said member comprising a screw-threaded plug wholly within said handle section threading longitudinally in said plunger element and having a screw-driver slot in the rear end thereof exposed for engagement and adjustment by a screw-driver at the rear end of said plunger element.

1,572,047. INDUCTANCE COIL FOR USE IN WIRELESS TELEGRAPHY AND TELEPHONY. WALTER STEPHEN SHEPHARD, Balham, London, England. Filed Aug. 25, 1925. Serial No. 52,377. 7 Claims. (Cl. 175—359.)

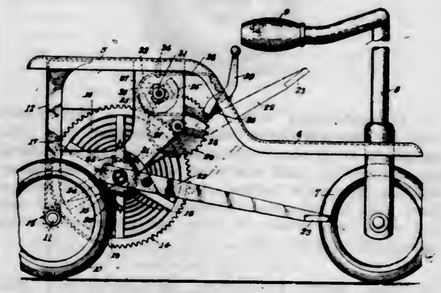
1. An inductance coil of the kind set forth, the covered wire of the winding of which passes in such a manner, in and out of the individual slots of two series of slots, one series in each end of a ring-like former of insulating material and of short axial length in comparison with its transverse dimension and having slotted ends, that said wire, at any given part of the winding, passes out through a slot in one end of the former, then across the outside of the former, then passes in through a slot in the opposite end of the former, thence for a part turn in a radial plane chord-like across the former, out through another slot in the same end of the former, then again across the outside of the former, in through a slot in the opposite end of the former, for another part turn in a radial plane chord-like across the former to another slot in the same end, and so on, never passing in any way interiorly from end to end of the former.

1,572,048. DRILL-PULLING JACK. EARNEST F. SPENCER and CHARLEY O. SPENCER, Commerce, Okla. Filed Apr. 28, 1925. Serial No. 26,559. 2 Claims. (Cl. 254—29.)



2. A drill pulling jack comprising in combination with a drill stem having lugs thereon, a tubular sleeve adapted to enclose the drill stem, an interiorly threaded head on said sleeve, a threaded tubular member engaging said interiorly threaded head, a head on said tubular member having lateral openings, a sleeve secured to said head and having an inwardly extending flange, a ring rotatably mounted within said last mentioned sleeve, anti-friction bearings between said head and ring, a jack lug engaging the drill stem and the lugs thereon, and a guide ring engaging the first mentioned ring and said jack lug.

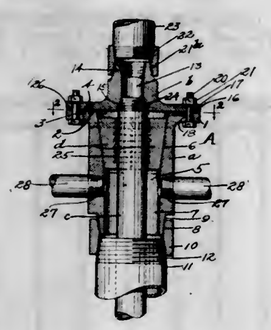
1,572,049. FILLING DEVICE FOR FILLING TANKS. WILFRED H. STEPHENSON, San Antonio, Tex. Filed Dec. 9, 1924. Serial No. 754,793. 8 Claims. (Cl. 220—86.)



1. A filling pipe for gasoline tanks, the combination with an automobile, and the gasoline tank arranged under the front seat thereof, a filling pipe communicating at its inner end with the tank, the outer end of the filling pipe extending through the side of the body of an automobile, an air outlet pipe in said filling pipe, the inner end thereof communicating with the tank, the outer end thereof terminating adjacent the outer end of the filling pipe, a guard over the outer end of the air outlet-pipe, said guard comprising a sleeve secured on said air pipe adjacent the outer end thereof and fitting snugly in the filling pipe, and a substantially triangular shaped portion associated with the sleeve and disposed over the outer end of the air outlet pipe.

1,572,050. GATE FOR POULTRY-FEEDING BATTERIES. WILLIAM J. STEWART, Clinton, Ohio. Filed June 12, 1924. Serial No. 719,461. 4 Claims. (Cl. 119—17.)

4. A gate for poultry feeding batteries, comprising a plurality of vertical rods, a top horizontal member having eyes at the end in which said rods are slidably mounted, a U-shaped member the ends of which are secured to the horizontal member, a plurality of connecting members which connect the bottom part of the U-shaped member to the horizontal member, a horizontal guide located adjacent the bottom part of the U-shaped member and spaced from the front wall of the battery, the bottom of the gate being located intermediate said guide and the front wall of the battery when the gate is closed, a coil formed in one of said connecting members which engages the guide to prevent the U-shaped member dropping down into said space beyond a predetermined point.



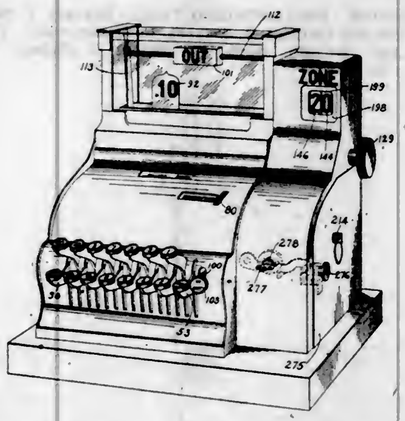
1,572,051. MOTOR VEHICLE. JOSEPH F. SULLIVAN, New York, N. Y. Filed June 13, 1925. Serial No. 36,864. 3 Claims. (Cl. 208—163.)

1. In a toy motor vehicle the combination of the following elements; a supporting frame provided with an elevated seat; means for steering the vehicle; means for propelling the vehicle comprising driving wheels and

a spring motor geared thereto; means for energizing the said spring motor comprising foot operated levers adapted to wind up the spring of the said motor; and governor means for the control of the said spring motor.

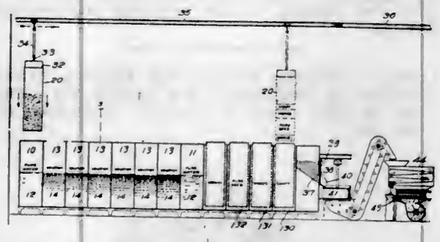
1,572,052. CASING HEAD. WILLIAM A. TROUT and CHARLES R. BUTLER, Long Beach, Calif., assignors of one-third to Chester A. Rasmussen, Long Beach, Calif. Filed Apr. 11, 1922. Serial No. 551,466. 3 Claims. (Cl. 285—22.)

1. A casing head including a vented body member having an interior bore merging into a conical bore opening at the upper end of the body, an offset flange carried by the body, and a tubing string suspension cap member having an interior bore adapted for threaded engagement with the well tubing string, and said cap member also including a flange coextensive with and engaging the flange on the body, fastenings piercing the flange of the cap and the flange of the body to prevent separation under gas pressure, and means for connecting piping to the cap member at the upper end of the bore.



1,572,053. COMPRESSED RUBBER AND AIR CUSHION FOR TIRES. RICHARD H. VILLARD, Atlanta, Ga. Filed Dec. 14, 1923. Serial No. 680,711. 2 Claims. (Cl. 152—10.)

1. In combination with a tire casing, a shoe therein with its original inner surface outermost, said shoe consisting of a body substantially of elastic material and coextensive with the inner surface of the casing, said body having an inelastic strip adjacent said original inner surface, whereby through reversal of the body said strip compresses the body and contractile means operable to close the body.

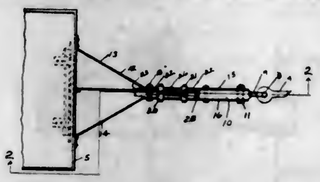


1,572,054. CASH REGISTER. EDWARD J. VON PEIN, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio. Filed May 12, 1919. Serial No. 296,603. 18 Claims. (Cl. 235—29.)

4. In a machine of the class described, the combination of a differentially adjustable element adapted to receive a step by step adjustment, printing means for printing the position of adjustment of the adjustable element, connections intermediate the adjustable element and the printing mechanism whereby the latter is adjusted upon each adjustment of the former, means normally effective to compel the adjustment of the adjustable

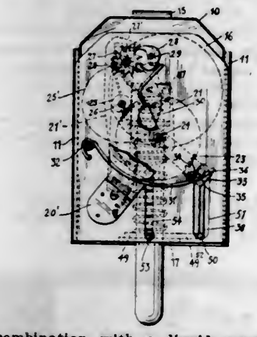
element in one direction, and means effective after a predetermined number of steps of adjustment in one direction for arresting the movement of the adjustable element in that direction and reversing the effectivity of the compelling means whereby the adjustment of the adjustable element in the reverse direction is compelled.

1,572,055. METHOD AND APPARATUS FOR CLEANING, SEPARATING, AND GRADING SEEDS AND OTHER BODIES. HARRY R. WARREN, Wabuska, Nev., assignor to Warren Seed Cleaning Company, Reno, Nev., a Corporation of Nevada. Filed May 27, 1921. Serial No. 472,974. Renewed May 14, 1925. 19 Claims. (Cl. 209—173.)



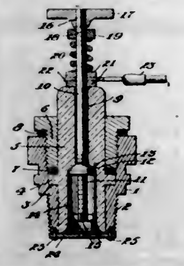
1. The method of separating mixed bodies of different specific gravity which consists in enveloping the mixture in succession in liquids of graduated density and from time to time removing the layers from one another that are produced by the action of the liquids.

1,572,056. TRAILER COUPLING. ROBERT A. WEEKS, Wisconsin Rapids, Wis. Filed Oct. 4, 1922. Serial No. 592,253. 11 Claims. (Cl. 280—33.15.)



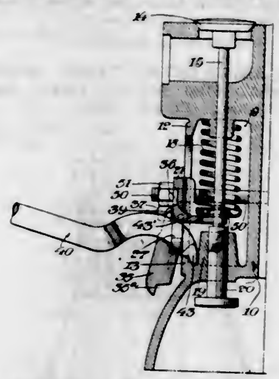
1. A trailer coupling including a pair of spaced members, a bolt connecting said members, a sleeve upon said bolt spacing said members apart, a hook-carrying element pivotally mounted upon said sleeve and provided with a notch at a point remote from said sleeve, transversely disposed means between said spaced members receivable within said notch and adapted to relieve said bolt and

sleeve of load, a detent normally urged toward said element and engageable therewith to secure said element in interlocked engagement with said means, and a



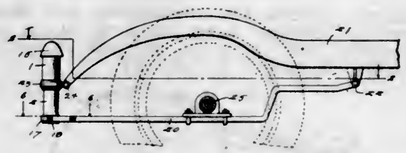
rearwardly opening hook carried by said element and arranged to be operative for coupling purposes when said element is interlocked as aforesaid.

1,572,057. AUTOMATIC DRIP-PAN ALARM. BENJAMIN WEISS, New York, N. Y. Filed May 28, 1925. Serial No. 33,391. 6 Claims. (Cl. 116—109.)



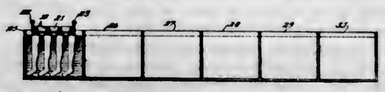
4. In combination with a liquid receptacle, like an ice box drip pan, an alarm mechanism secured to said receptacle and slidable upon a support under the action of the weight of the liquid received by said receptacle; a source of force to operate said alarm normally checked but intermittently released at predetermined relative positions of said alarm upon said support; an elastic member interposed between said alarm device and said support and influenced by their relative movement, and means connected with said elastic member to return said alarm operating force into its original normal condition ready to again operate said alarm when the liquid is removed from said receptacle and said elastic member is released.

1,572,058. SPARK PLUG. FREDERICK V. WINTERS, New York, N. Y. Filed Apr. 27, 1923. Serial No. 634,973. 4 Claims. (Cl. 123—169.)



1. In a spark plug, the combination with a stationary electrode having a plurality of radially arranged sparking points, of an axially movable and rotatable electrode having a different number of radiating sparking points for the purpose specified.

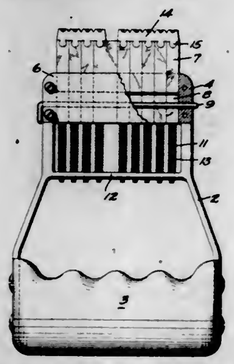
1,572,059. VALVE-SPRING-LIFTING MECHANISM. LOUIS M. WOOD, New York, N. Y., assignor to Speed-O Multiple Valve Lifter Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 15, 1922. Serial No. 601,000. 17 Claims. (Cl. 29—86.3.)



1. In a valve spring lifter, the combination of a lifting bar having means for operating against a plurality of valve springs, and an operating member supported for operation by the engine beneath said lifting bar, said bar having a curved cam portion and said member having a cam shiftable into engagement with said cam portion for elevating said lifting bar.

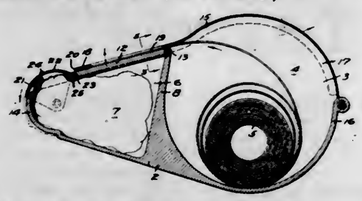
1,572,060. SHOCK-ABSORBING SPRING AND SNUBBER. WILLIAM W. YARNALL, Harrisburg, Pa. Filed Dec. 20, 1923. Serial No. 681,805. 2 Claims. (Cl. 267—34.)

1. An appliance of the class described having a plurality of barrels one telescoping into the other, a rod carried by one of the barrels and extending into the other barrel, a plunger on said rod in the last mentioned barrel, said plunger having an opening therethrough, a valve resting on the upper surface of said plunger and slidable along said rod, said rod being hollow whereby fluid may be supplied therethrough and discharged into the appliance below the plunger, a relatively weak spring surrounding said rod to urge said valve seated, springs to control the action of the shock of the appliance located on opposite sides of the plunger, said valve serving to retard the return of cushioning fluid through said opening.



1,572,061. METHOD OF FINISHING STOCKINGS. EDWARD J. ZIOCK, Rockford, Ill., assignor to Burson Knitting Company, Rockford, Ill., a Corporation of Illinois. Filed Sept. 1, 1922. Serial No. 585,828. 5 Claims. (Cl. 8—5.)

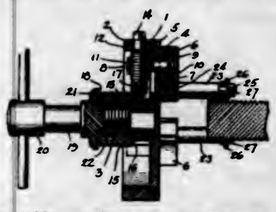
1. The method of finishing stockings, consisting in holding each stocking to a predetermined length on a substantially flat form shaped to hold the fabric under substantially uniform tension throughout its area, singe-



ing each stocking while it is on the form between opposed elements by causing relative movement between said elements and the form in a plane parallel with said flat plane of the form, subjecting the stocking to a liquid treatment uniformly applied throughout its area while it is held on the form, and drying the stocking without removing it from the form.

1,572,062. MARKING DEVICE. FRANK AHLBURG, Los Angeles, Calif. Filed May 8, 1922. Serial No. 559,171. 4 Claims. (Cl. 101—379.)

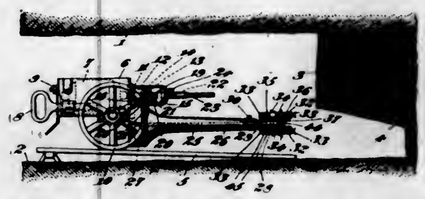
1. A marking device comprising a frame, a plurality of die bars slidably mounted in said frame, each bar being transversely recessed, a stop pin lying in said recesses and mounted in said frame, a spring for pressing each bar against said stop pin, and dies carried by said bars.



1,572,063. DEVICE FOR DISPENSING AND MOISTENING GUMMED TAPE. PAUL W. BLACK, San Francisco, Calif. Filed Apr. 29, 1924. Serial No. 709,807. 14 Claims. (Cl. 91—14.5.)

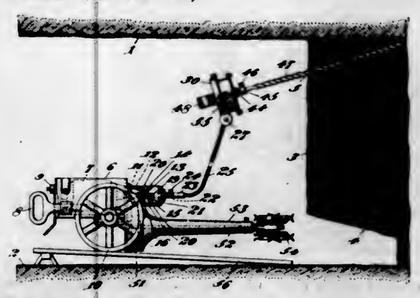
1. A device of the character described comprising a casing having a chamber therein adapted to contain a roll of gummed tape, a bed plate, a cover for the chamber having a portion extending over the bed plate and forming with the plate a passage through which the unrolled tape passes and a moistening device disposed contiguous to the end of the passage so that the tape emerging from the passage contacts with the moistening device.

1,572,064. RETHREADING TOOL. CHARLES E. BLECKSMITH, Los Angeles, Calif. Filed May 22, 1924. Serial No. 715,020. 3 Claims. (Cl. 10—1.)



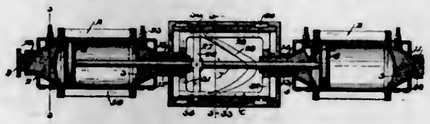
2. A rethreading tool comprising a chuck having a projecting boss, a handle fixed to the boss for turning the chuck, a rotatable member on the boss, screws held against longitudinal movement extending radially of the chuck in circumferentially spaced relation, gearing between said rotatable member and said screws for dependent turning of said screws, bolts threaded on said screws for equidistant radial adjustment of said bolts by turning anyone of said screws, elongated blocks extending radially of said chuck and adapted for mounting on said bolts adjacent one end of the blocks whereby the blocks may be reversed for inward or outward projection of the opposite end of the blocks, arms projecting from said opposite end of the blocks and cutter discs rotatably mounted on said arms and insertable in the bore or receivable over the end of a piece of work by radial adjustment of the blocks so that said cutter discs engage interior or exterior threads of the work at opposite sides of the cutter discs and at circumferentially spaced points.

1,572,065. RESINOUS COMPOSITION CONTAINING CHLORINATED RUBBER. NORRIS BOEHMER, Montclair, N. J., assignor to Chadeloid Chemical Company, a Corporation of West Virginia. Filed Oct. 11, 1923. Serial No. 667,891. 3 Claims. (Cl. 134—54.)



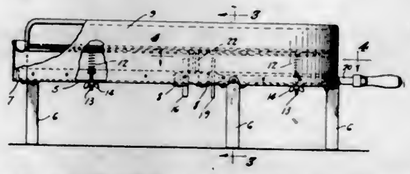
1. A coating composition comprising chlorinated rubber and at least an equal amount of cumaron resin, and a solvent for said materials.

1,572,066. MINING MACHINE. RUSSELL E. BOOKER, Windber, Pa. Filed Jan. 11, 1922. Serial No. 528,436. 4 Claims. (Cl. 262—9.)



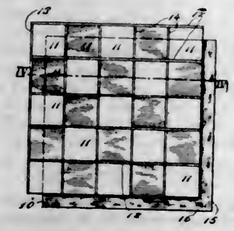
1. In a mining machine of the character described, a cutting head bracket, a short shaft secured therein, a pair of bevel gears rotatably mounted on opposite ends of said shaft, said shaft being provided with an internal oil reservoir, a closure therefor, and openings leading therefrom to the bearings of said bevel gears on said shaft.

1,572,067. MINE DRILL. RUSSELL E. BOOKER, Windber, Pa. Filed Jan. 11, 1922. Serial No. 528,437. 4 Claims. (Cl. 255—47.)



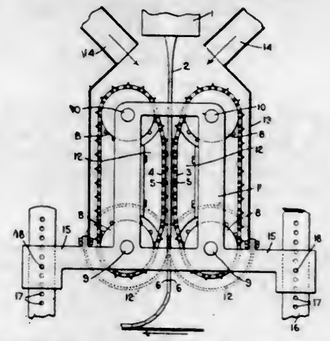
1. A mine drill, comprising a gear casing, a worm mounted therein, means for driving the same, a worm wheel mounted on a shaft and driven by said worm, reduction gears driven from said shaft, a drill shaft in substantial alignment with said worm wheel shaft and provided with a bearing therein, and a drill or auger mounted on said drill shaft.

1,572,068. ENGINE. EDWARD G. GOULD, Oakland, Calif., assignor to Advanced Engine Co. Inc., San Francisco, Calif., a Corporation of California. Filed Aug. 31, 1921. Serial No. 497,216. 7 Claims. (Cl. 123—43.)



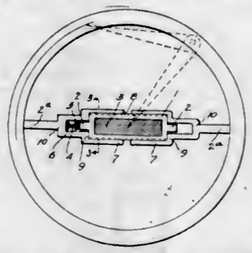
5. In an internal combustion engine of the character described, spaced longitudinally aligned cylinders rotating about a common axis and provided at their inner and outer ends with journals, inner and outer bearings receiving the journals, rotating pistons reciprocal within the cylinders, a piston rod connected to and rotating with the pistons and extending through the inner journals, a stationary cam housing located between the inner bearings and having a continuous annular cam, a rotating cross head arranged within the housing and rigidly connecting the inner journals and an arm carried by the piston rod and extending through the rotating cross head and engaging the annular cam.

1,572,069. GAME. FREDERICK KLINE, Santa Monica, Calif. Filed Apr. 9, 1925. Serial No. 21,775. 6 Claims. (Cl. 273—130.)



2. A toy comprising a horizontally disposed table which is inclined longitudinally and provided near its high end with a plurality of racer starting recesses, means for floating the table so that it may be vibrated, motor mechanism connected to said table to vibrate the latter, ovoid racers adapted for insertion within said recesses and to be discharged therefrom, and guards converging to an opening for the passage of a single racer at the low end of said table.

1,572,070. SURFACE COVERING. GUSTAVE KOLENSKI, Jamaica, N. Y. Filed Apr. 18, 1924. Serial No. 707,503. 2 Claims. (Cl. 72—18.)

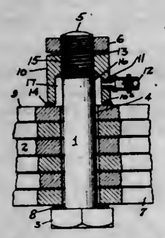


1. A composite tile-unit, comprising a rectangular, thin, flexible and non-frangible foundation-sheet, and a rectangular layer of tiles, of resilient yielding material having continuous, flat lower surfaces which are cemented to the said foundation-sheet, and the tiles being cemented together at their edges, a portion of the said sheet extending beyond each of two adjacent edges of the said layer of tiles to form lap-joints with adjoining units at said two edges of the tile layer, and the so-constructed tile-unit being flexible throughout and thus conformable to any unevenness of a surface to which the said foundation-sheet is to be cemented.

1,572,071. CANDY-CUTTING MACHINE. PHILIP B. LASKEY, Marblehead, Mass., assignor to William B. Laskey, Brooklyn, N. Y. Filed Aug. 30, 1923. Serial No. 660,243. 6 Claims. (Cl. 107—20.)

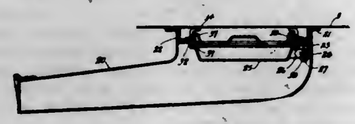
2. The combination with a candy extruding machine, of a cutting device to indent the candy strip at predetermined intervals as it issues from the extruding machine, and means to deliver an air blast on to the cutting device and also on to the candy strip before it is acted upon by said cutting device.

1,572,072. CENTER SUPPORT. JOSEPH MORENO, Los Angeles, Calif., assignor of one-half to Albert Mallner, Los Angeles, Calif. Filed May 18, 1925. Serial No. 31,047. 4 Claims. (Cl. 33—191.)



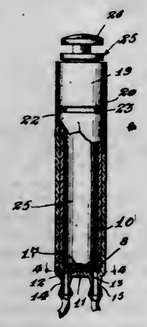
1. A device of the character described adapted to be received in a bore and comprising a supporting surface for the centers of compasses or the like, and a screw threaded in the end of the device and having an end contact plate adapted for turning of the screw relative thereto without axial displacement of the plate from the screw whereby turning of the screw will engage the contact plate and the opposite end of the device with the wall of the bore for clamping the supporting surface in the bore.

1,572,073. BOLT ADAPTER FOR LUBRICATING PURPOSES. CHARLES P. MURPHY, Cleveland, Ohio. Original application filed Sept. 25, 1922, Serial No. 590,246. Divided and this application filed Aug. 13, 1925. Serial No. 50,106. 4 Claims. (Cl. 267—50.)



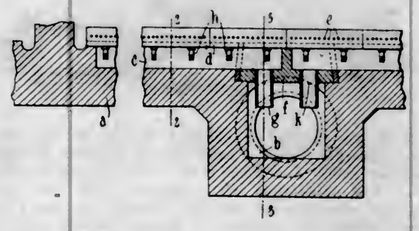
1. An apparatus of the character described, having in combination a leaf spring, a securing bolt extending

therethrough, and having a screw-threaded end projecting therebeyond, a member open at its under side to provide a lubricating receptacle and distributing space, and having a screw-threaded aperture extending centrally completely through its upper portion, and engaged upon



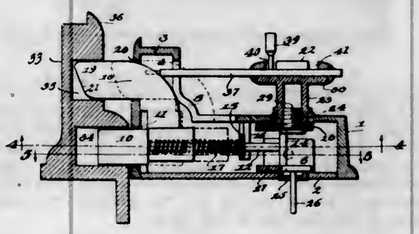
said screw-threaded end of said bolt to secure the same in position and a valved nipple seated in an opening formed in the side of said member through which lubricant may be introduced into said lubricating receptacle and distributing space and about said bolt.

1,572,074. BOAT. FRED N. NELSON, Seattle, Wash., assignor to Safety Boat Co., Seattle, Wash. Filed July 13, 1923. Serial No. 651,228. 4 Claims. (Cl. 114—182.)



1. In a boat of the character described, a scrupper tube disposed in the longitudinal direction of the boat, and opening at its forward end through the deck and at its rearward end through the hull, a float valve within the tube operable automatically to closed position to prevent an inflow of water, and locking means for retaining the valve closed.

1,572,075. SYRINGE ASPIRATOR. WILLIAM GRAHAM PAINTER, Big Stone Gap, Va., assignor of one-half to Frank H. Nickels, Big Stone Gap, Va. Filed May 10, 1924. Serial No. 712,396. 3 Claims. (Cl. 128—214.)

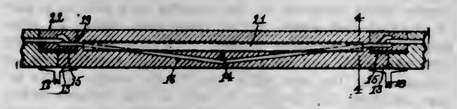


1. A syringe-aspirator comprising an outer cylindrical barrel having a plurality of ports adapted to be utilized as inlet and outlet ports, an inner cylindrical barrel rotatably and longitudinally shiftable in the outer barrel and adapted to be freely withdrawn from the outer barrel, said inner barrel having a single port selectively registrable with the ports of the outer barrel, there being a ground joint between the cylindrical inner barrel and the cylindrical outer barrel, and a piston fitted in the inner barrel.

1,572,076. FILTERING APPARATUS. WILLIAM PATERSON, London, England. Filed Feb. 4, 1925. Serial No. 6,883. 3 Claims. (Cl. 210—130.)

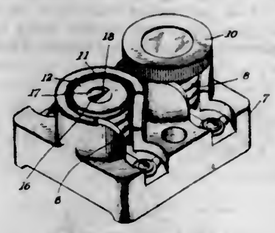
1. A filtering apparatus provided with a collecting and distributing system comprising a foundation having a series of channels therein constituting distributing and collecting headers, said foundation also having a main channel communicating with the channels of the series, collecting and distributing members secured in said channels having restricted openings in their under sides for establishing communication with the channels and perforated upon their upper and outer surfaces for securing an even distribution over the whole area of the filter bed.

1,572,077. DOUBLE LOCK. FRANCISCO HERNANDEZ Y PEREZ, Habana, Cuba. Filed Nov. 11, 1924. Serial No. 748,290. 1 Claim. (Cl. 70—46.)



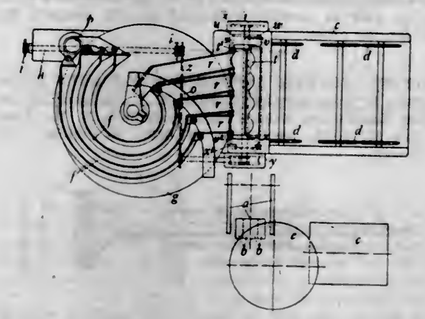
In a lock of the class described a casing, a latch bolt mounted for movement therein having a locking head and also a latching head, said latching head having a cam face, a spring to normally hold said bolt in projected position, and a keeper having a recess for engagement by the locking head, a recess for engagement by the latching head and also having a camming surface to cooperate with the cam face of the latching head, means including a knob to operate said latching bolt and a locking bolt mounted in said knob and arranged for longitudinal movement in either direction to hold said latching bolt in projected position or to permit release of the same.

1,572,078. BUILDING CONSTRUCTION. RALPH ST. L. PEVERLEY, New York, N. Y., assignor, by mesne assignments, to Structural Gypsum Corporation, New York, N. Y., a Corporation of Delaware. Filed June 27, 1921. Serial No. 480,903. 1 Claim. (Cl. 72—71.)



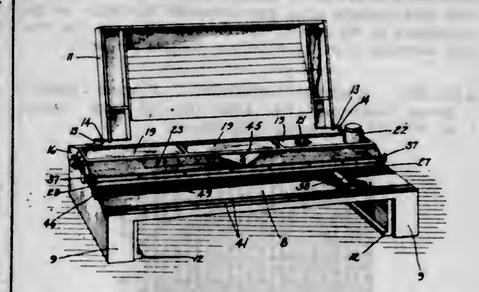
A preformed reinforced slab comprising a slab of plastic material provided with side flanges located at the bottom

of said slab, and having embedded in it a longitudinal reinforcing member inclined upwardly from near the center of the slab toward its opposite ends, and having embedded in it a longitudinal strengthening member for



the upper portion of the slab which has its opposite ends supported by the inclined portions of the reinforcing member and forms with the latter a truss within said slab.

1,572,079. ELECTRIC GROUNDING PLUG. CLARENCE D. PLATT, Bridgeport, Conn. Filed Sept. 18, 1923. Serial No. 663,324. 3 Claims. (Cl. 173—358.)

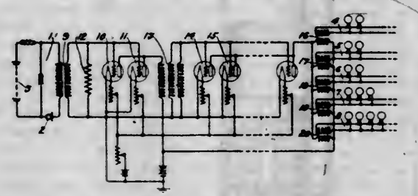


1. A plug having oppositely disposed screw driver engaging shoulders, screw driver disengaging inclines between the shoulders, and oppositely disposed key receiving recesses between the inclines.

1,572,080. DOUGH-MOLDING MACHINE. JOHN EDWARD POINTON, London, England, assignor to Baker-Perkins Company Incorporated, White Plains, N. Y. Filed Aug. 31, 1925. Serial No. 53,702. 5 Claims. (Cl. 107—9.)

2. In dough molding machines, the combination with a conical rotating table, of means whereby the movement of said table effects the simultaneous molding of the whole of the dough portions received from each discharge of a multiple box dough divider and delivers said molded portions on to a dough prover, said means comprising a plurality of spirally disposed troughs fixed above but adjacent the said table, and delivery arms between the outlet ends of said troughs and the said prover.

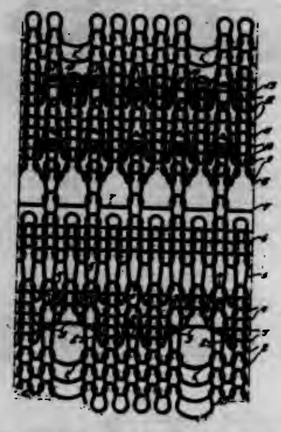
1,572,081. STENCILING APPARATUS. ADOLPH POKORNY, St. Paul, Minn. Filed Nov. 6, 1922. Serial No. 599,386. 10 Claims. (Cl. 101—126.)



1. A stenciling apparatus comprising a bed, a bracket projecting forwardly thereon, and beneath which the card to be stenciled is moved, a bar hinged on the forward portion of said bracket and having means for engaging and clamping a card upon said bed under said bracket.

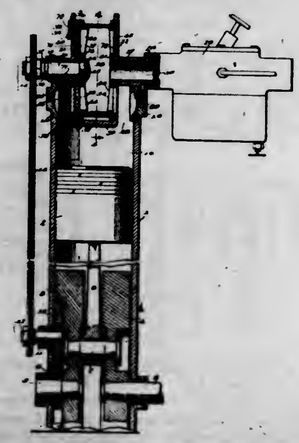
1,572,082. TEAPOT COVER. WILLIAM RAMGE, Brooklyn, N. Y., assignor to Simon W. Farber, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 3, 1925. Serial No. 20,542. 4 Claims. (Cl. 53—8.)

1. A cover having two rims, the outer rim being located on the outside of the receptacle, the inner rim being located on the inside of the receptacle, and a spring attached to the inside of the cover and adapted to abut the top of the receptacle through holes in the inner rim.



1,572,083. AMPLIFIER CIRCUITS. HARRY S. READ, Ithaca, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 27, 1920, Serial No. 376,909. Renewed Apr. 8, 1925. 12 Claims. (Cl. 179—171.)

1. An incoming line adapted to supply impulses to be amplified, a vacuum tube amplifier having a cathode, an anode and a control electrode, means connecting said control electrode and said cathode to said incoming line and maintaining the steady potential between said cathode and said control electrode at such a value that said amplifier operates on only the substantially straight part of its input voltage-anode current characteristic in repeating said impulses, the impulses supplied by said line

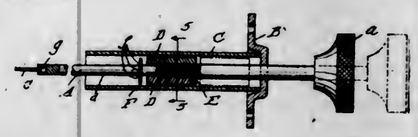


being sufficiently large to give said grid a potential which is positive with respect to the cathode, and the impedance of the line connected to said control electrode and said cathode being approximately the same as the impedance of the control electrode circuit when the control electrode is at its maximum positive potential.

1,572,084. KNITTED HOSIERY. HOWARD SEVERN REGAR, Norristown, Pa. Filed June 21, 1922. Serial No. 570,017. 1 Claim. (Cl. 66—4.)

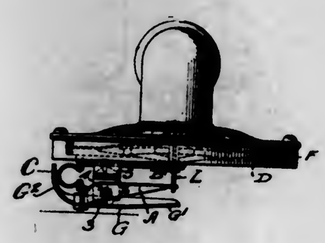
A method of making tubular fabric consisting in knitting complete courses having looped drop stitches, then a welt of two courses, the tuck stitches of which immediately follow the drop stitch courses, then complete courses having tuck stitches, then a complete loose course, then complete plain ribbed courses, then complete plain clearing courses, then a complete plain ribbed course, then a welt of two courses, then complete plain ribbed courses, then a welt of a single course, and then courses having looped drop stitches.

1,572,085. VALVE. CHARLES WILLIS RISDEN, Hollywood, Calif. Filed Nov. 22, 1923. Serial No. 676,377. 16 Claims. (Cl. 123—190.)



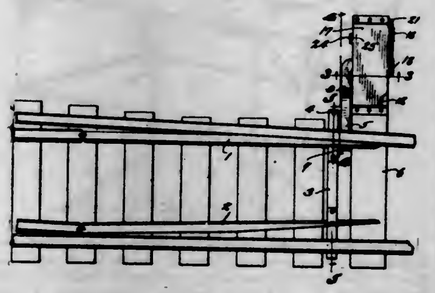
1. In an internal combustion engine, the combination of a cylinder having an integrally formed head, a valve housing formed integrally with the head and having its lower end projecting into the combustion chamber of the cylinder, an exhaust conduit in open communication with the housing, said valve housing where projected beyond the cylinder head being open to the atmosphere and provided with ports in the side walls of the housing where projecting into the combustion chamber, a rotary valve mounted in the housing and having a pair of annular side walls spaced from each other, an elongated intake chamber formed centrally and integrally with the walls and connecting the walls together, vanes connected to the side walls and to the walls of the intake chamber and located radially of the circular valve, a hollow sleeve connecting the interior of the intake chamber with the exterior of the cylinder, pairs of diametrically disposed ports through the side walls of the valve and opening into the intake chamber, and pairs of diametrically disposed exhaust ports formed in the spaced walls of the valve and located exteriorly of the intake chamber, the exhaust ports and the intake ports adapted to aline with the alined ports in the bottom of the valve housing, and a baffle plate disposed between one wall of the housing and a wall of the valve and provided with a port alined with the adjacent port in the wall of the housing, a shaft connected with one wall of the valve, and means adapted to be rotated for rotating the valve, the valve housing being open at its outer end whereby the valve is exposed directly to the atmosphere.

1,572,086. BOILER FURNACE. EDWARD T. RIBT, Oelwein, Iowa. Filed July 29, 1924. Serial No. 728,872. 4 Claims. (Cl. 110—37.)



1. In a locomotive firebox, the combination of a plurality of brick supporting members therein, bricks forming a refractory fire arch, with said bricks arranged in engaging pairs between adjacent brick supporting members, the brick of each pair having at one end a bearing surface to engage upon said supporting members and the other end of said brick of each pair having a half-round tongue on one side thereof and a quarter round groove in the other side thereof at the corner and extending entirely across the same so that the tongue of one brick may engage in the groove of the associated brick of the pair to provide a mutual leaning support, the one for the other.

1,572,087. LOCKING DEVICE FOR SLIDABLE RODS. PAUL L. ROEHMHOLDT, Buffalo, N. Y., assignor to Irving Engineering Sales Company, Buffalo, N. Y. Filed Aug. 12, 1924. Serial No. 731,683. 16 Claims. (Cl. 74—39.)



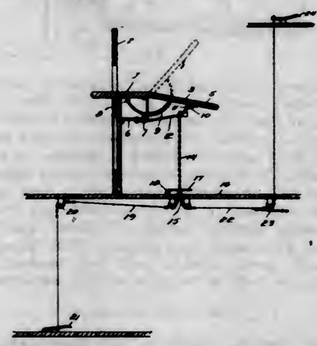
1. The combination of a member slidable in the direction of its length, a tube of non-circular cross-section into which said member extends, and an expansible member movable lengthwise in said tube and which is held against turning by the cross sectional shape of said tube, said expansible member and said slidable member having cooperating parts which expand said expansible member when said slidable member is turned, to cause said expansible member to frictionally engage said tube to hold said members against lengthwise movement.

1,572,088. GUARD FOR PHONOGRAPH REPRODUCERS. CHARLES E. SEMPLE, Jr., Youngstown, Ohio. Original application filed May 24, 1922, Serial No. 563,442. Divided and this application filed May 28, 1923. Serial No. 640,929. 5 Claims. (Cl. 274—29.)

2. In a sound reproducer of the class described, a bridge piece mounted on the reproducer frame, a stylus member pivotally mounted on said bridge piece and having a stylus point disposed at right angles to the diaphragm, and a guard member carried by the bridge piece and having an opening for permitting the stylus point to project therethrough, and said guard member paralleling the stylus member and masking the stylus member connection with the central portion of the diaphragm.

1,572,089. SAFETY DEVICE FOR RAILROAD SWITCHES. CHARLES SHAYOCK, Galena, Kans. Filed Oct. 5, 1925. Serial No. 60,534. 3 Claims. (Cl. 246—448.)

2. In a device of the class described, a switch point, a link connected to the switch point, a member wherein a part of the link slides, a lid for said member, and a shaft forming a hinge connection between the lid and said member, the shaft comprising a keeper connected to the lid and movable with the lid into and out of holding relation with respect to said part of the link.

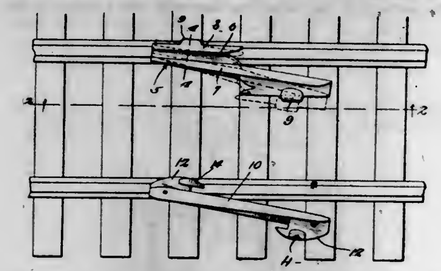


1,572,090. VENDING MACHINE. CLARENCE S. SMITH, Kansas City, Mo., assignor to The Blue Bird Products Company, Kansas City, Mo., a Corporation of Missouri. Filed Apr. 27, 1925. Serial No. 26,101. 5 Claims. (Cl. 273—138.)

1. In combination with a vending machine, a game device, comprising a casing, a panel in the casing, a pivoted tickler chute on the panel having an end in line with a slot in the top of the casing, means for moving one end of the chute about its pivot, a return chute at the bottom of the casing in line with the bottom of the

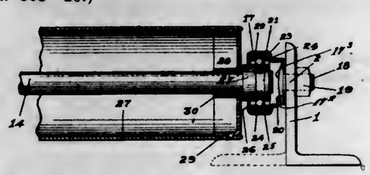
tickler chute, pins in spaced relation on the panel, and deflector members having spaces between their ends, the deflectors being inclined toward slots in the panel.

1,572,091. COUNTER GUARD. SEYBERT J. SMITH, Chadwick, Ill. Filed Jan. 28, 1925. Serial No. 5,404. 1 Claim. (Cl. 268—2.)



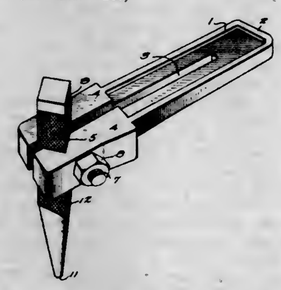
In combination with a counter, and a cashier's window above the same, an upwardly swinging lid hingedly secured to the inner edge of said counter adjacent said window, a bracket supported below the counter, a supporting arm secured at one end to said bracket and extending inwardly below said lid, a tongue secured on the bottom of the lid, a pivoted latch supported on the inner edge of said supporting arm and engaging said tongue for normally holding the lid in a position for use as a desk, foot operated means for releasing said latch from engagement, means for automatically swinging the lid upwardly to provide a protector shield for a person behind the window, said last mentioned means comprising a curved arm secured at one end to the bottom of the lid, the free end of said curved arm being disposed through an opening provided therefor in said supporting bracket, and an expansible coiled spring encircling the curved arm and disposed between said bracket and the bottom of the lid.

1,572,092. RERAILER. LAWRENCE F. SMITH, Hazard, Ky., assignor of one-half to William B. De Coursey, Hazard, Ky. Filed Aug. 20, 1925. Serial No. 51,437. 6 Claims. (Cl. 104—268.)



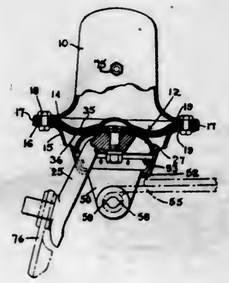
1. A rerailer including a body portion, outer and inner supporting surfaces forming a part of the body

portion, said outer and inner supporting surfaces adapted to accommodate the tread of a wheel being replaced,



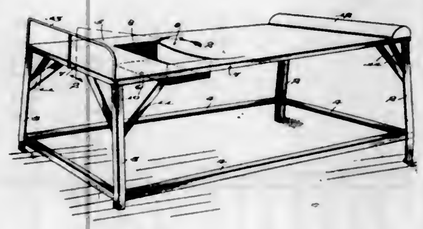
the outer flanges being of heights greater than the heights of the inner supporting surfaces, and hook members for securing the body portion to a rail.

1,572,093. BEARING. FRED STEBLER, Riverside, Calif. Filed Feb. 14, 1923. Serial No. 618,908. 1 Claim. (Cl. 308—20.)



A combined radial and thrust ball-bearing, comprising a pressed metal housing open on opposite sides, one opening being of relatively small size, securing means received in said small opening for removably securing said housing to a fixed support whereby a chamber is formed in said housing, a shouldered annular recess adjacent the open side of said housing for receiving and holding in operative alignment a portion of said ball bearing, an inner bearing member having a raceway together with means for attachment to a support, balls interposed between said parts forming said ball bearing whereby said parts are held in complete unitary alignment.

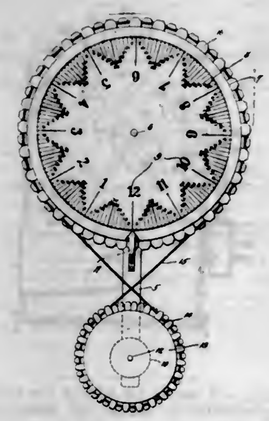
1,572,094. TOOL. WILLIAM H. TODHUNTER, Picher, Okla. Filed May 12, 1924. Serial No. 712,849. 1 Claim. (Cl. 306—40.)



In a device of the character described, a handle having a longitudinal slot extending inwardly from one end, said handle being provided with an opening adjacent its slotted end, and being further provided with a transverse bore intersecting said opening, a tool received in said opening and a clamping bolt arranged in said bore, said tool being provided with a recess adapted to receive a portion of said bolt.

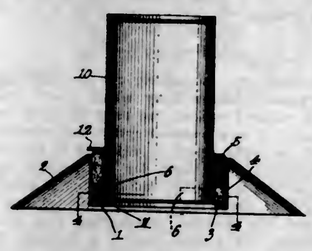
1,572,095. SHOCK ABSORBER. EDWARD VAN DER PYL, Holden, Mass. Filed Sept. 10, 1923. Serial No. 661,731. 13 Claims. (Cl. 267—65.)

1. A shock absorber for relatively movable vehicle parts comprising an open-ended casing, a diaphragm secured thereacross, means to connect the casing with one vehicle part, a support for the diaphragm connected with the other vehicle part, and a clamping device to fasten the diaphragm against said support which has a stop adapted to engage the support and prevent the diaphragm from being compressed to a detrimental extent.



1,572,096. DOUCHE TABLE. HUGH F. WAGLEY, Mineral Wells, Tex. Filed Aug. 11, 1925. Serial No. 49,625. 1 Claim. (Cl. 45—50.)

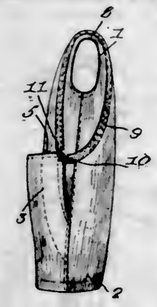
A sanitary douche table comprising a top frame, pairs of legs at the end extremities of the table of which one pair is shorter than the other, a bottom frame extending from leg to leg near the bottom of the legs, a single piece, substantially smooth table top applied to and fitted around the top frame, the head and foot portions of said top lying in the same plane, said top being provided with an opening therein near the foot thereof and a concaved depression sloping toward the foot of said table to one edge of said opening, and a drain pan having an outlet therein made integral with said top and fitted around said opening.



1,572,097. TIMEPIECE. NILS P. WALTERS, Fort Madison, Iowa. Filed Mar. 12, 1925. Serial No. 14,999. 1 Claim. (Cl. 58—126.)

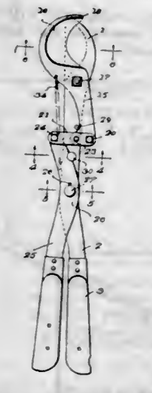
In a time piece, a dial having lines formed thereon, the lines extending inwardly from the edge thereof and terminating appreciable distances from the edge, the spaces between the lines indicating hourse of the day, said dial having lines shorter than the first mentioned lines dividing the spaces between the first mentioned lines into spaces indicating minutes, the last mentioned lines varying in length, and having their inner ends arranged in step-like relation with respect to each other and vary-

ing in lengths to lines intermediate the first mentioned lines, an indicating hand cooperating with the dial to indicate time, and means for rotating the dial.



1,572,098. FLY POISONER. FRED WIGGINS, Louisville, Ky. Filed Aug. 24, 1925. Serial No. 52,052. 2 Claims. (Cl. 43—131.)

1. A fly poisoning device comprising a double walled bowl-shaped space open at its top with an absorbent pad arranged between said walls and projecting above the upper edges thereof, peripherally spaced openings in the inner wall of said base at the lower end thereof, a recess in said pad adjacent one of said openings and a liquid container in the form of an invertible tank adapted to be inserted in said bowl at the lower end thereof fitted therein and provided with an air opening communicating with that of the base.

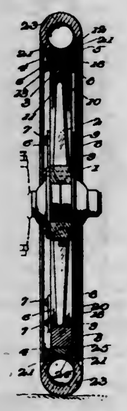


1,572,099. DROP SEAT FOR GARMENTS. JEAN-BAPTISTE CHARLES ADAM, Sault Ste. Marie, Ontario, Canada. Filed July 22, 1924. Serial No. 727,551. 2 Claims. (Cl. 2—78.)

2. A garment comprising a body portion, legs depending therefrom, a drop seat formed with said legs, pipings passed over the shoulders of said body portion, said pipings having their ends directed towards said seat, and elastic members passed through said pipings and having

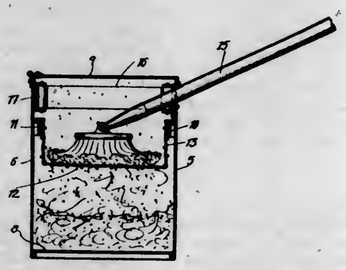
their ends secured only to the seat, whereby said members normally hold the seat in its closed position when the wearer is standing.

1,572,100. PRUNING DEVICE. FRED H. BLODGETT, Wakefield, Mass. Filed Aug. 24, 1923. Serial No. 659,228. 2 Claims. (Cl. 30—11.)



1. A pruning shears comprising a flat shank terminating in a blade, an arcuate blade having a shank arranged over and pivotally secured to the first mentioned shank, said blade having its outer end pointed and disposed at an outward angle with respect to the fixed blade, a link pivotally secured to the shank of the movable blade, a pin passing through the link and loosely received in the end of the shank for permitting a limited swinging movement of the link on the shank, an operating handle pivoted to the link and having an arcuate slot, an anti-frictional element on the first mentioned shank and passing through said slot, means limiting the swinging of the fixed blade with respect to the stationary blade, and spring means influencing the movable blade to open position.

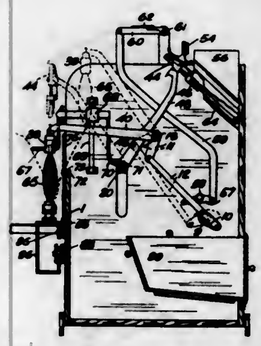
1,572,101. AUTOMOBILE WHEEL RIM. WALLACE BOWLES, Meadow Creek, W. Va., assignor, by direct and mesne assignments, of four-twentieths to John I. Scott, Meadow Creek, W. Va., and one-twentieth to James E. Decker, Sacoma, W. Va. Filed June 12, 1923. Serial No. 644,902. 5 Claims. (Cl. 152—21.)



1. The combination of a felly having a plurality of depressions, a rim section fitted on the felly and having a flange to be engaged by one side of a tire, a removable rim section having a flange to engage the opposite side of

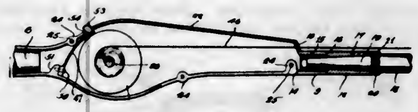
the tire, lugs on said removable rim section having threaded openings coinciding with said depressions, and screw plugs having a swiveled mounting in said de-

pressions and being engageable with said threaded openings to draw the removable rim section toward the tire and bind it in place.



1,572,102. MOP-CLEANING DEVICE. WILLIAM BRAUNSDORF, New York, N. Y. Filed Oct. 22, 1924. Serial No. 745,258. 8 Claims. (Cl. 15—142.)

2. A dust collector for mops and the like comprising a receptacle having a closure or cover and an opening in the front wall thereof for the reception of a mop handle, means for partly closing said opening while the mop handle is being manipulated within the receptacle and a foraminous member supported within the receptacle whereby the dust or dirt may be removed and fall into the bottom of said receptacle.

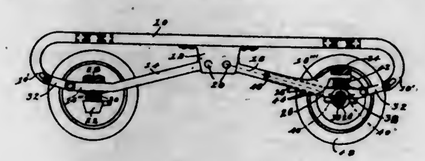


1,572,103. DOFFING APPARATUS FOR SPINNING FRAMES. ROBERT BURNETT BUCHANAN, Hamilton, Ontario, Canada. Filed June 24, 1925. Serial No. 39,378. 25 Claims. (Cl. 118—18.5.)

1. In a doffing machine for spinning frames, the combination with the spinning frame bobbin spindles, of a movable casing including a full bobbin receiving receptacle, an empty-bobbin hopper, an oscillatable shaft longitudinally slidable in the casing, arms thereon, full bobbin gripping chucks on the arms, a second oscillatable shaft, arms thereon, empty bobbin gripping chucks on the arms, means for successively swinging the shafts to bring the respective full and empty bobbin chucks into their bobbin gripping position and into the chuck releas-

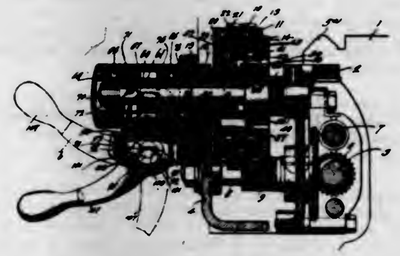
ing position, and means for sliding the full bobbin arm shaft longitudinally to escape the arms of the empty bobbin arm shaft.

1,572,104. FISHING REEL. SELDEN J. BUDD, Manhasset, N. Y., assignor of one-half to Charles W. Smith, Great Neck, N. Y. Filed Apr. 16, 1925. Serial No. 23,650. 4 Claims. (Cl. 43—20.)



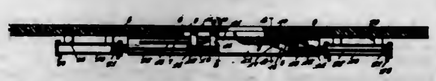
1. In a means for connecting the butt and the rod of a fishing pole, a hollow body which tapers rearwardly to form a reduced socket, the body tapering forwardly and terminating in a reduced cylindrical extension, that portion of the body which is adjacent to the inner end of the extension being open for the passage of a line, a ferrule having a reduced end defining a shoulder, the reduced end of the ferrule being threaded into the extension, and the shoulder cooperating with the end of the extension, the ferrule having a tapered bore, the major portion of which is smooth and the outer end of which is threaded, a pole having a smooth conical end received in the smooth portion of the bore of the ferrule, the pole also having a short threaded part cooperating with the threaded part of the ferrule, a butt mounted in the socket, and a reel journaled in the body.

1,572,105. GOLF-BALL TEE. EDMUND JOSEPH BYRNE, Piccadilly, London, England. Filed Nov. 28, 1921. Serial No. 517,281. 5 Claims. (Cl. 273—33.)



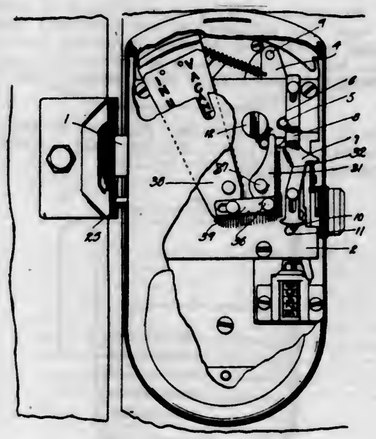
1. A golf ball tee comprising a rubber base, a reinforced ball supporting cup portion, an anchor weight for said base, and "insertion" material between said weight and the rubber of the base.

1,572,106. SPRING MOUNTING. WILLIAM CLAUSON, Boston, Mass. Filed Mar. 18, 1922. Serial No. 544,798. 8 Claims. (Cl. 267—11.)



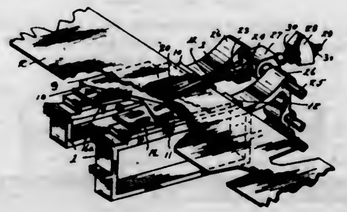
1. Mounting means for the chassis of a vehicle, comprising levers connected at one end to the running gear and at the other end fulcrumed to the chassis, whereby the relative movement of the chassis and running gear is effected; said fulcrumed ends having intermeshing segments adapted to cause simultaneous movement of the levers, whereby the chassis moves toward and away from the running gear; and spring means, coacting with the levers to oppose movement of the chassis and running gear toward each other, between each lever and the axles whereby movement of the axle ends relative to the chassis is permitted without movement of the levers.

1,572,107. APRON DISK TRANSMISSION MECHANISM. FRANCIS BEAUFORT COCKBURN, Cincinnati, Ohio, assignor to The Lodge & Shipley Machine Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 21, 1924. Serial No. 694,219. 16 Claims. (Cl. 82—22.)



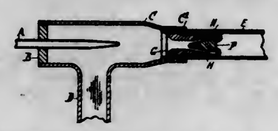
1. In a device of the class described, a rotatable and shiftable clutch member having an abutment thereon, cooperable clutch members at relatively opposite sides of said shiftable clutch member alternately engageable by said member for movement in unison therewith, expansible elements at relatively opposite sides of and engageable with said abutment, said elements acting counter to one another, and means for compressing either element while simultaneously decompressing the other, whereby said elements are alternately activated to engage said abutment and correspondingly move said shiftable clutch member, for alternate clutch engagement with said cooperable clutch members.

1,572,108. POWER-OPERATED DOOR. FELIX OSTROUT DE CARIE, Sacramento, Calif. Filed May 5, 1924. Serial No. 711,177. 3 Claims. (Cl. 268—3.)



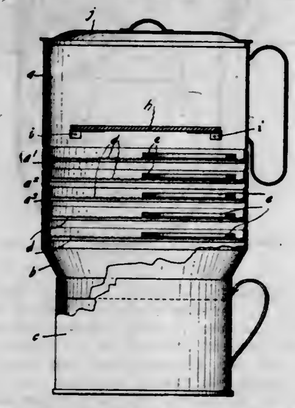
1. In a device of the character described, a floor having an opening, a trackway under the opening, a carriage adapted to move longitudinally of the trackway, pivoted link members mounted on the carriage, a door having pivotal connection with the upper ends of the link members, means for moving the carriage, and said door adapted to move upwardly to close the opening in the floor.

1,572,109. LOCK. JOSEPH R. DUMONT, Kansas City, Mo., assignor to Maude Frances Dumont, Kansas City, Mo. Filed Jan. 15, 1925. Serial No. 2,585. 7 Claims. (Cl. 292—153.)



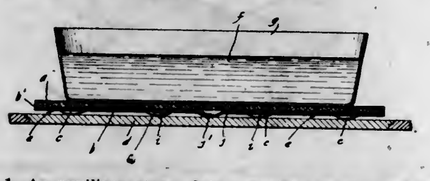
1. A lock comprising a casing, a locking bolt in the casing, means for normally urging the locking bolt into locking position, a detent having a hooked end normally urged into the path of movement of the locking bolt to prevent its retraction, a supplemental bolt for actuating the detent to retain the hooked end away from the path of movement of the locking bolt when the supplemental bolt is in projected position and to permit the hooked end to move into the path of movement of the locking bolt when the supplemental bolt is moved to retracting position, and means for normally urging the supplemental bolt out of retracting position.

1,572,110. SHEARING DEVICE FOR ENVELOPE-MAKING MACHINES AND THE LIKE. JAMES DUVALL, Camas, Wash. Filed Apr. 27, 1922. Serial No. 556,873. 7 Claims. (Cl. 164—61.)



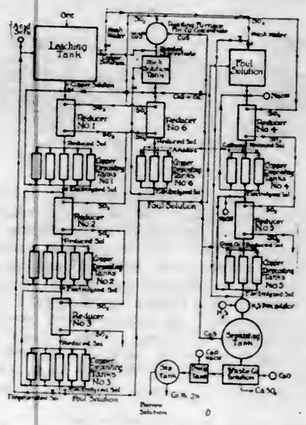
1. In a machine of the character described, shearing devices comprising a stationary shearing element and moving shearing elements, the latter located oppositely, one on each side of the path of the strip to be severed, said moving shearing elements being arranged and operated to move against, and to intersect, the plane of the stationary shearing element simultaneously at an oblique angle.

1,572,111. PREPARATION OF AERATED BEVERAGES. OWEN AUBREY ELIAS, London, England. Filed Mar. 20, 1923. Serial No. 626,436. 3 Claims. (Cl. 167—7.)



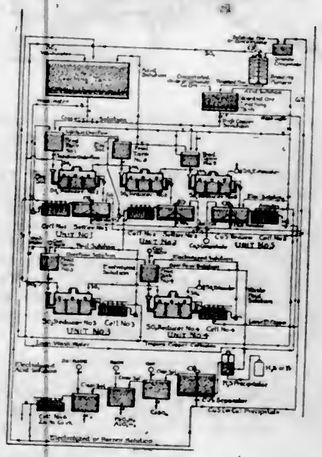
2. The treatment of liquids with helium by introducing same with carbonic acid into a diffusing chamber, through an intimately admixing device and thence into a gas holder whence the gases are extracted and introduced into the liquid in known manner.

1,572,112. FLOUR SIFTER. FLORENCE M. FORGESON, Portland, Oreg. Filed July 14, 1924. Serial No. 725,893. 2 Claims. (Cl. 209—323.)



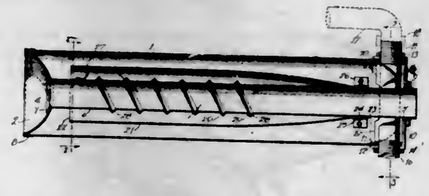
1. In a sifter of the character described, a receptacle provided with a transverse sieve, a ring-like agitator loose on said sieve, and in diameter adapted for lateral play between the walls of said receptacle on said sieve, and an imperforate shed fixed within the receptacle over the central portion of said sieve for the purpose described, said shed being relatively spaced from said sieve to permit the agitator limited free movement on the latter, at the same time operatively holding the agitator on the sieve during the shaking of the sifter, and said shed being diametrically proportioned to cover a substantial part of said agitator and sieve.

1,572,113. AUXILIARY STOVE PLATE. ELEANOR J. GOLDEN, Portland, Oreg. Filed June 3, 1925. Serial No. 34,724. 6 Claims. (Cl. 126—22.)



1. An auxiliary stove plate comprising a disc of heat resisting material, a metal covering for the under side thereof, said disc and its covering being arranged to constitute an imperforate element, said metal covering being formed with a plurality of knobs on the under side arranged to support the auxiliary plate in spaced relation to the stove plate on which it is set.

1,572,114. METALLURGICAL PROCESS. WILLIAM E. GREENAWALT, Denver, Colo. Filed Sept. 2, 1924. Serial No. 735,303. 23 Claims. (Cl. 204—15.)



1. A process comprising leaching copper ore with an acid solution to extract the copper, alternately subjecting the resulting copper solution to the action of a reducing agent and to the action of electrolysis to deposit the copper and regenerate acid and repeating the cycle of leaching, reduction, and electrolysis until the solution becomes fouled with impurities, then diverting a portion of the foul solution to a separate electrolytic circuit, reducing the acidity of the diverted foul solution, and then again alternately subjecting the diverted foul solution to the action of a reducing agent and to the action of electrolysis.

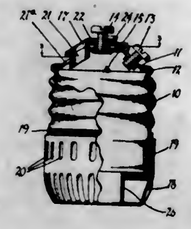
1,572,115. METALLURGICAL PROCESS. WILLIAM E. GREENAWALT, Denver, Colo. Filed Dec. 1, 1924. Serial No. 753,134. 13 Claims. (Cl. 204—15.)

1. A metallurgical process comprising leaching ores of copper with an acid solution, electrolyzing the resulting metal solution in a series of electrolytic units each comprising a feed tank a reducer and an electrolyzer, maintaining a substantially constant flow of electrolyte in a closed circuit in each of the respective units, and bypassing excess electrolyte through the feed tanks of the respective electrolytic units.

1,572,116. MUFFLER. FREDERICK JOSEPH HERDLE, Chicago, Ill. Filed Apr. 7, 1924. Serial No. 704,882. 5 Claims. (Cl. 137—160.)

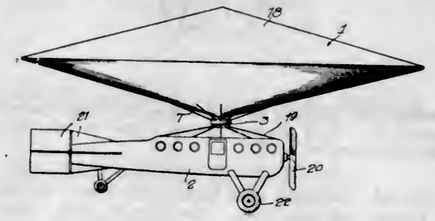
1. A muffler comprising a casing having exhaust gas inlet openings, a pipe disposed in said casing, a tube inclosing said pipe, said pipe having a helical rib therein, said rib having openings therein to permit the gases to pass from said casing through said openings and into said pipe, said gases being broken up into small streams by said openings whereby the gases are expelled in a constant stream from said pipe.

1,572,117. THERMOELECTRIC ELEMENT. OTTO HERMANN, Chicago, Ill., assignor to Thermo Electric Battery Company, Chicago, Ill., a Corporation of Illinois. Filed May 4, 1925. Serial No. 28,034. 1 Claim. (Cl. 136—5.)



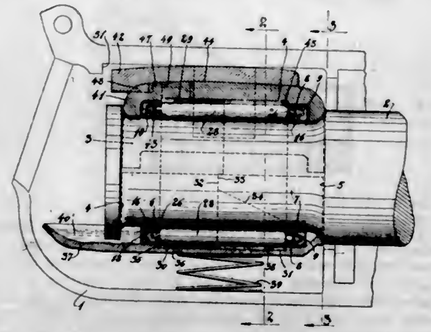
A thermo-electric element consisting of an alloy composed of substantially 81% of nickel, 17% of molybdenum, and 2% of vanadium.

1,572,118. BUMPER. FRANK J. LAHER, Portland, Oreg. Filed June 29, 1925. Serial No. 40,314. 13 Claims. (Cl. 293—55.)



1. In a bumper, in combination with a bumper-bar, an end piece fixed on each end of the bar, said ends and said pieces being provided with registering bolt holes, each of said end pieces being provided with a cavity to receive the adjacent bar-end and with a tangential projection arranged to overlie the front face of the latter.

1,572,119. ATTACHMENT PLUG. STANLEY MCCLATCHIE, Cambridge, Mass., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 20, 1920. Serial No. 425,328. 2 Claims. (Cl. 173—359.)

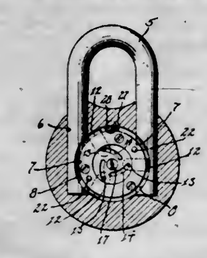


1. A swivel shell attachment plug comprising a threaded shell contact, a sheet metal cap member extending across the inner end of said threaded shell contact, and having a swivel connection therewith, a binding plate member mounted on said sheet metal cap and insulated therefrom, a binding screw threaded into said binding plate, said cap member having an opening therethrough, and an eyelet member extending through said opening for the conductor leading to said binding screw, said eyelet and said binding plate member being formed as parts of an integral sheet metal stamping.

1,572,120. FLYING MACHINE. EARL A. PARKER and CLAUDE W. MASSINGHAM, Poplar Bluff, Mo. Filed Apr. 14, 1924. Serial No. 706,585. 4 Claims. (Cl. 244—6.)

1. A flying machine comprising a lighter than air sustaining body consisting of a superstructure having the upper and lower surfaces thereof tapered, gas inflated bodies retained in spaced relation within said superstructure, a carriage, a circular swivel ring fixedly connected to the under side and central portion of the superstructure, a circular band, rollers fixedly connected in spaced relation to said band and movably received in the circular ring, and means for effecting connection between said carriage and said band.

1,572,121. JOURNAL-BOX BEARING. HUBBARD PARKER, Chicago, Ill.; Jennie C. Parker executrix of said Hubbard Parker, deceased. Filed Nov. 7, 1921. Serial No. 513,458. 16 Claims. (Cl. 308—180.)

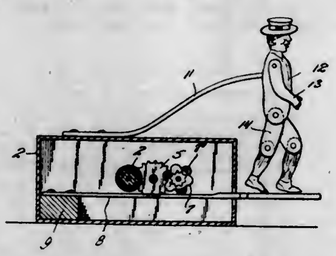


1. The combination with a railway car journal and a railway car journal box, of a roller bearing disposed over said journal, a sleeve disposed over said bearing, said sleeve being composed of two interlocking sections, and an oil pan disposed below said bearing, said bearing sleeve, and oil pan being assembled in said box without the necessity of removing said journal from the box, said sleeve engaging with said oil pan to hold the latter in place.

1,572,122. PADLOCK. JOSEPH PIETRIE, Chicago, Ill. Filed June 9, 1925. Serial No. 36,017. 7 Claims. (Cl. 70—108.)

1. A padlock of the character described comprising a body member having a bore therein, a shackle having portions arranged for projection into said body member,

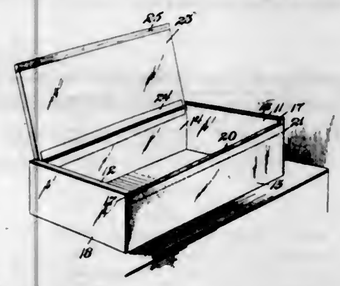
said shackle having parts thereof cut away so as to conform with the contour of the walls of said bore, a core arranged to enter said bore in said body member and



engage with the body member and with the shackle, and means for locking the core against movement relative to the body member.

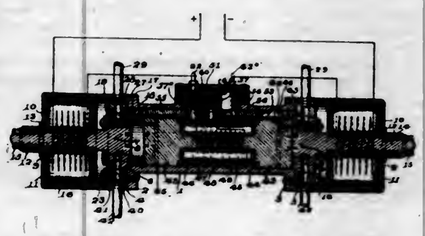
1,572,123. METHOD FOR MAKING BUTTER. BARTOL PLISIC, Whitehall, Mont. Filed Apr. 25, 1925. Serial No. 25,930. 1 Claim. (Cl. 31—89.)

A method of making butter consisting in raising the temperature of milk to substantially blood heat and maintaining such temperature while subjecting the same to a churning operation until the milk is in the form of a white light cream, then skimming off the butter, then melting the butter into a liquid state, and then cooling the same.



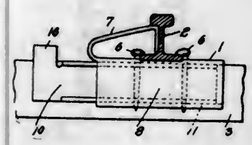
1,572,124. DANCING TOY. ALBERT G. BALDRIDGE and LOUIE D. ROBERTS, Fulton, Ky.; said Louie D. Roberts assignor to J. Alfred Hornbeak and Paul M. Hornbeak, both of Fulton, Ky. Filed Apr. 25, 1924. Serial No. 708,957. 1 Claim. (Cl. 46—40.)

A dancing toy comprising a casing, a spring board mounted therein and having an end portion extending beyond the side wall of the casing, a shaft journaled in the casing and disposed transversely across the spring board, spaced cam members mounted upon the shaft and disposed above the opposite side edge portions of the spring board, the said cam members having cam edges which are in staggered relation with respect to each other, the cam edges at one side portion of the spring board being located opposite the spaces between the cam portions at the other edge portion of the spring board, a motor housed within the casing and operatively connected with said shaft, a flexible arm mounted upon the casing, a body carried by the upper free end of said arm and having pivotally joined sections which engage the spring board beyond the side of the casing.



1,572,125. CARDBOARD BOX. LOUIS BINDER, Newark, N. J. Filed Oct. 11, 1923. Serial No. 667,854. 2 Claims. (Cl. 229—6.)

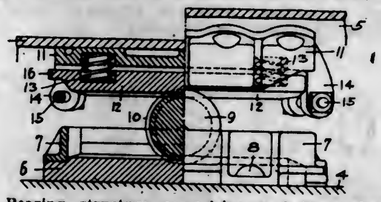
1. A box comprising a cardboard blank having side walls and end walls the end walls being higher than the side walls and having recesses at their side edges to receive the side walls and the front side wall including



a wooden strip at its top edge extending so as to be seated under the top edge of the recesses of the end walls.

1,572,126. ELECTROMAGNETIC COMPRESSOR. EMIL BOTHNER, Floral Park, N. Y. Filed Oct. 3, 1923. Serial No. 666,227. 6 Claims. (Cl. 103—53.)

1. A pump, comprising a casing, a reciprocatory member having a portion formed of magnetic metal, a winding surrounding said metallic portion and adapted to be connected in an electric circuit, an electro-magnet adjacent to each of the opposite ends of said casing and also adapted to be connected in an electric circuit, a reciprocatory commutator operative whereby the magnetism of said member and one of the end magnets draws the former in one direction, and then whereby the magnetism of said member and the other end magnet draws said member in the opposite direction, and valves controlling the passage of fluid from said casing alternately to the opposite sides of said commutator, whereby residual fluid pressure when said first member approaches the end of a stroke reciprocates said commutator into its respective magnet-controlling positions.

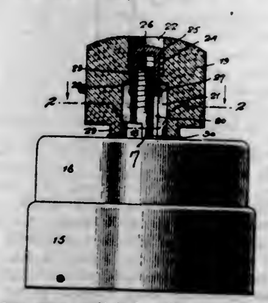


1,572,127. RAIL-SUPPORTING DEVICE. JOHN W. BREWER, Magna, Utah, assignor of one-half to M. A. Ward, Magna, Utah. Filed Sept. 3, 1925. Serial No. 54,258. 12 Claims. (Cl. 238—299.)

1. In combination with a rail and a tie extending transversely therebeneath, of a perforated tie plate between the rail and tie having flanges extending downward along the sides of the tie, one of which is inclined away from the other a tapering wedge having a driven

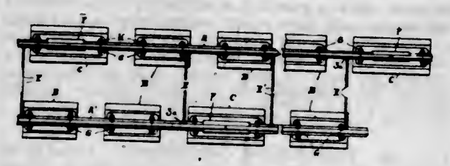
fit between, the inclined one of said flanges and the side of the tie, and spikes extending through the perforations in the tie plates and securing the base of the rail down against such plate.

1,572,128. SIDE BEARING FOR CAR TRUCKS. ANDREW CHRISTIANSON, Butler, Pa. Filed Dec. 13, 1924. Serial No. 755,752. 3 Claims. (Cl. 308—226.)



1. Bearing structure comprising a bottom plate, a roller mounted on said plate, an upper bearing plate above the roller and normally supported thereby, a housing partially enclosing said upper plate, releasable means for limiting the downward movement of said upper plate with respect to said housing when out of engagement with said roller, and means for biasing the upper plate toward its lower extremity of movement.

1,572,129. SPRING WHEEL. SHERWIN M. COAN, Allston, Mass. Filed Mar. 21, 1925. Serial No. 17,193. 3 Claims. (Cl. 152—28.)

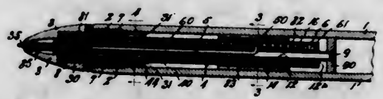


1. In a spring wheel, a front housing wall, a back housing wall provided with a central opening, a rim attached to the walls, annularly arranged transversely disposed rods fixed in the walls, helical springs surrounding the rods, a disk between the walls provided with a central opening, a laterally extending peripheral flange upon the disk, an annular shoulder upon an intermediate portion of the disk concentric with the flange, said disk being provided with openings to allow passage of the springs therethrough, means for attaching the sides of the springs to the flange and shoulder, and a hub ring surrounding the central opening of the disk.

1,572,130. SWITCH HANDLE. HENRY O. ENGSTROM, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 14, 1924. Serial No. 713,276. 6 Claims. (Cl. 200—172.)

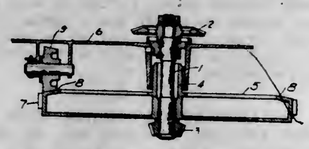
1. A rotary snap switch handle comprising an insulating button pierced to afford a way for the threaded end of the rotary switch spindle, a lateral bay opening to the spindle way means associated with the spindle and entering said way to establish drive connection between the handle and spindle, and at the outer end of the button a well of greater diameter than the spindle way and to the bottom of which the latter opens, a spindle-engaging screw ferrule secured against rotation in said well but displaceable toward the spindle, and a spring interposed between said ferrule and the bottom of the well and opposing the rectilinear displacement of the ferrule with respect to the button.

1,572,131. RAILWAY-TRACK CONSTRUCTION. HARRY ETHERIDGE, Zelienople, Pa. Filed Aug. 13, 1924. Serial No. 731,751. 6 Claims. (Cl. 238—25.)



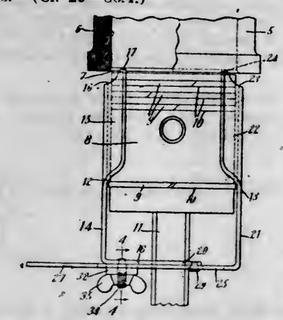
1. A railway track structure wherein the two parallel rails are mounted on individual supports extending longitudinally of the rail, the alined rails having unbonded joints and the parallel rails being bonded together by metal tie-rods having their ends welded to the rails, the supports of the parallel rails being unconnected.

1,572,132. PLANIMETER. LOUIS LARRAZABAL Y FERNANDEZ, Habana, Cuba. Filed Dec. 5, 1922. Serial No. 605,118. 2 Claims. (Cl. 33—122.)



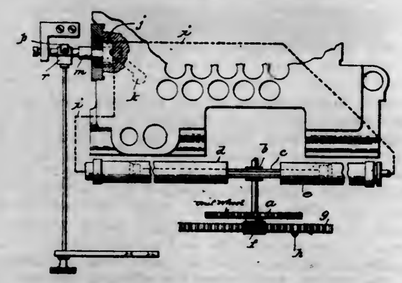
1. A planimeter comprising a needle, a horizontal ring around the same, provided with three lower equidistant heels for bearing on a plane, the said ring being concentric with the tip of the needle and being provided with a curved raised arm arranged on the longitudinal vertical plane of the planimeter and terminated in a collar which fits on the stem of the needle.

1,572,133. MAGAZINE-FED PENCIL. AMBROSE FLEMING, Washington, D. C. Filed Mar. 16, 1923. Serial No. 625,557. 12 Claims. (Cl. 120—18.)



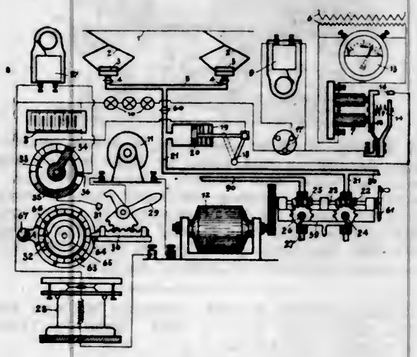
1. In a writing device of the character described, a casing having a pencil point passage, a fixedly held pencil lead receiver from which the lead is passed through the point passage, a plunger cooperative with the said receiver, a magazine within the casing having a series of independent lead carrying pockets that surround the receiver and from which the leads are individually dropped into the receiver, a closure device interposed between the receiver and the lead pockets having a passage through which a lead can pass from the pocket into the receiver and means for effecting rotation of the closure device for bringing its passage in register with the receiver and a selected one of the lead holding pockets.

1,572,134. REMOVABLE WHEEL. MITCHELL L. FYKSE, Milwaukee, Wis., assignor to Bucyrus Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed July 21, 1922. Serial No. 576,603. 9 Claims. (Cl. 212—69.)



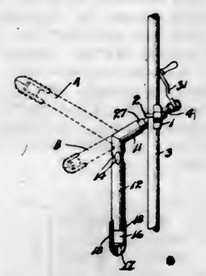
1. In a turntable, the combination of a revolving frame, a track, a plurality of rollers resting thereon and supporting said frame, said rollers being removable in a substantially axial direction, while said frame and said track are in normal relation to each other, and a bushing for each of said rollers, each bushing transmitting the end-thrust of its roller directly to said frame.

1,572,135. PISTON-RING COMPRESSOR. CHARLES R. GILLIS, Boston, Mass., assignor of one-half to George F. Taft and one-half to Norman S. Waite, both of Boston, Mass. Filed Dec. 12, 1923. Serial No. 680,243. 6 Claims. (Cl. 29—86.4.)



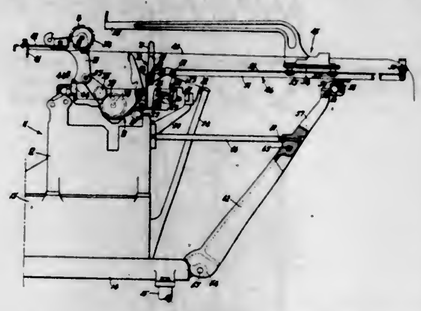
1. A piston ring compressor comprising, in combination, a pair of parallel members provided with oppositely disposed curved portions spaced apart and adapted to embrace a piston and confine the piston rings thereof within their respective grooves, means to hold said members in sliding interlocking engagement one with the other and means to clamp said members together.

1,572,136. LANSTON MONOTYPE PERFORATING MACHINE. WILLIAM J. GIBBIN, Washington, D. C. Filed Mar. 29, 1920. Serial No. 369,574. Renewed June 20, 1924. 2 Claims. (Cl. 164—112.)



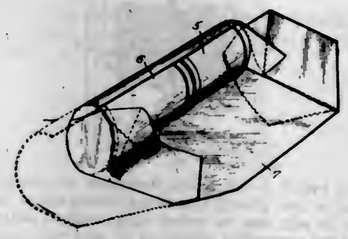
1. In a perforating machine of the Lanston pneumatic type, embodying an air-supply-conduit, a reversing valve and cylinders for driving the unit-rack, a valve inserted in the air-supply-conduit between the source of pressure and the reversing-valve, said valve being adapted to close said supply passage and to simultaneously vent the valve-chamber and the unit-rack driving cylinders, for the purpose set forth.

1,572,137. BLOCK-SIGNAL SYSTEM. FRITZ GRÜNIG, Thun, Switzerland. Filed Feb. 10, 1922. Serial No. 535,661. 4 Claims. (Cl. 246—4.)



1. A control device for electric railway locomotives comprising an electric circuit; means in said circuit for automatically sounding a general alarm signal; a clockwork switch in said circuit adapted during its normal closed position to control said means; and a platform circuit breaker which is adapted, while occupied by the engineer of the locomotive, to prevent the operation of said means and to actuate said means when unoccupied.

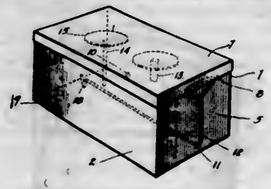
1,572,138. MOTOR-VEHICLE SIGNAL. HENRY C. HACHMUTH, Comstock Park, Mich. Filed Feb. 26, 1923. Serial No. 621,278. 8 Claims. (Cl. 116—54.)



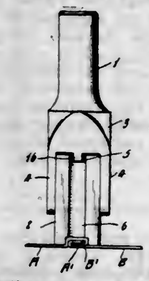
1. In a device of the class described, in combination with the body of a motor vehicle, a signal member attached thereto, said signal comprising two tubular parts located at an obtuse angle to each other, means for manually rotating said signal whereby the same may be moved to a plurality of different positions, in one of which one of the parts of the signal member lies substantially parallel and alongside of the vehicle, in another extends upwardly and outwardly at an angle thereto, in another downwardly and outwardly at an angle thereto, and in still another outwardly and forwardly at an angle thereto, substantially as described.

1,572,139. TYPEWRITING MACHINE. WILLIAM F. HELMOND, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 29, 1922. Serial No. 609,560. 8 Claims. (Cl. 197—126.)

1. In a front-strike web-typewriting machine, the combination of a revoluble platen, a carriage therefor, means at the introductory side of the platen and connected to said carriage to present a work-web to the platen, a carbon-stripper movable along the web, said platen normally far below the level of the web at the introductory side of the platen, a platen-line-space wheel upon said carriage, a pinion mounted upon said carriage and connected to the line-space wheel, said platen having upon its end a gear normally meshing with said pinion, and a platen-frame hinged upon said carriage to swing the platen and platen-gear up away from said pinion and to a position above the straightened-out web preparatory to stripping the carbons that are interleaved with the piles of web.



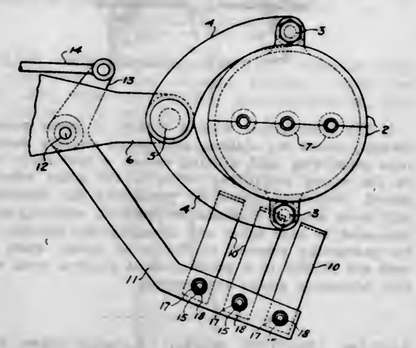
1,572,140. CONTAINER. OTTO A. HEPPES, Chicago, Ill. Filed Mar. 11, 1920. Serial No. 365,018. 1 Claim. (Cl. 206—59.)



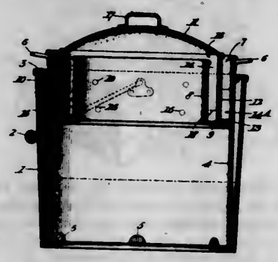
An article of merchandise, comprising a plurality of cartons, a covering strip wound upon and completely enclosing the same, the edge of the covering strip being folded in over the outside ends of the cartons and held by the body of the strip to form a package in which the cartons are held together, and a roll of strip material having its inner end only tacked to said package and wound upon said package to form a roll covering the same.

1,572,141. NOVELTY BOX AND WAGON. HAROLD HILDEBRANDT and EDWARD HILDEBRANDT, Tacoma, Wash. Filed Dec. 18, 1924. Serial No. 756,727. 1 Claim. (Cl. 46—48.)

A box of the character described having openings in its opposite side walls for receiving a wheeled supporting axle therethrough, and having an opening in its front wall, a cover for the box having a peripheral flange overlapping the walls, and a tongue extended through said front wall opening having means at its inner end adapted for disconnectable attachment with the wall when extended; said tongue also having a loop at its outer end adapted, by bending the tongue upwardly, to be tucked beneath a flange of the cover to retain the tongue within the box for the purpose set forth.

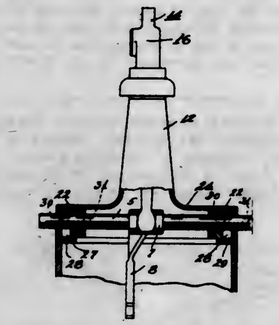


1,572,142. JOINT COMPLETING OR GROOVING TOOL. CHARLES H. HOOD, Ashland, Ky. Filed Jan. 8, 1925. Serial No. 1,276. 2 Claims. (Cl. 81—15.)



1. A joint completing or grooving tool, comprising a handle provided with lugs, a head provided with joint receiving grooves, retractible means carried by the head and engaging the lugs to secure the head to the lugs, and a rib carried by the handle and contacting with the bottom wall of one of the grooves to hold the head against rotation and movement in the direction of the handle.

1,572,143. MULTIPLE-MOLD SHEAR DEVICE FOR GLASS-WORKING MACHINES. GEORGE E. HOWARD, Butler, Pa., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Mar. 21, 1925. Serial No. 17,435. 8 Claims. (Cl. 49—14.)



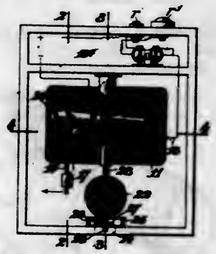
1. A multiple-mold shear device for glass-working machines, comprising a blade support and a plurality of shear blades carried by said support, the said blades being adapted individually to sever mold charges of glass adjacent to the molding cavities of a multiple mold.

1,572,144. STEAM COOKING UTENSIL. CHARLES E. JOHNSON, Denver, Colo. Filed Feb. 2, 1925. Serial No. 6,307. 5 Claims. (Cl. 53—1.)

1. In a cooking utensil of the character described, a main vessel having a contracted opening at its upper end, a bottomless inner member which fits in said contracted opening and rests upon the bottom of said main vessel, an annular wall in the upper portion of said inner member and spaced from the same, which terminates at its lower edge in a flange which is secured to the wall of the inner member above the middle portion thereof, thereby forming an annular chamber in the upper portion of the inner member, and a cover having a depending cylindrical portion of greater diameter than said annular wall, which rests upon the bottom of said annular chamber, a space being left between the upper end of said annular wall and said cover.

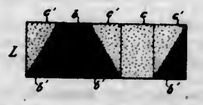
1,572,145. MEANS FOR LOCKING A TRANSMISSION-HOUSING COVER. COLVIN L. JOHNSON, St. Louis, Mo., assignor to Johnson Automobile Lock Co., a Corporation of Illinois. Filed July 13, 1922. Serial No. 574,651. 2 Claims. (Cl. 70—90.)

1. The combination with a casing, of gears mounted therein, means for shifting said gears, slidably mounted rods supporting said shifting means, a removable cover on the casing permitting access to the gears when removed, removable means for permitting the removal of said cover when said means are removed, retaining means concealed in said cover and engaging the slidable rods for preventing removal of the cover except when said rods are shifted to a predetermined position even when said removable means are removed.



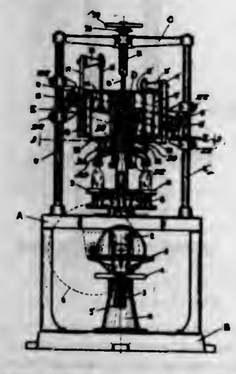
1,572,146. DIVIDER BOARD. RICHARD JONES, Parkville, Mo. Filed May 24, 1923. Serial No. 641,213. 1 Claim. (Cl. 56—314.)

In combination with a bar forming part of the cutting mechanism of a mower or the like, a support rising from one end of said bar, a divider extending rearwardly from said bar, said divider having sections yieldably connected together, a bolt passing through said support and the divider and constituting the connection of the divider, a spring on said bolt engaging said divider and urging



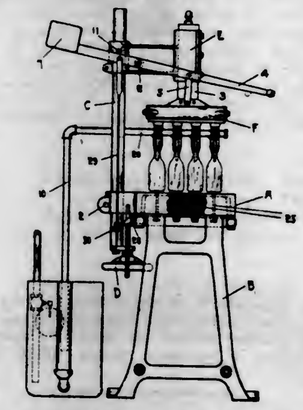
the latter toward and normally maintaining it in contact with the support, said spring and bolt being proportioned to permit movement of the divider on the bolt against the tension of the spring and in a direction away from said support.

1,572,147. CIRCUIT CLOSER FOR DIRECTION INDICATORS. HELMUT JUNGHANS, Gut Berneck, near Schramberg, Germany, and FRITZ GLOGAUER, Cincinnati, Ohio. Filed Mar. 17, 1924. Serial No. 699,818. 12 Claims. (Cl. 200—52.)



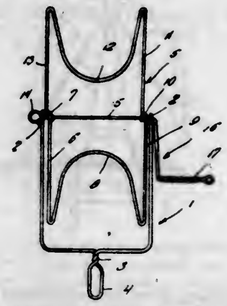
1. A switch for direction indicators for vehicles comprising a tube pivotally mounted intermediate its ends; means in said tube for actuating an electric switch; and means for preventing movement of said tube; and when influenced by centrifugal force to free said tube and then to return it to its normal position.

1,572,148. METHOD OF MANUFACTURING COLORED YARNS. WILLIAM J. KERWIN, Jr., New Bedford, Mass., assignor to Beacon Manufacturing Company, New Bedford, Mass., a Corporation of Massachusetts. Filed Aug. 29, 1924. Serial No. 734,882. 7 Claims. (Cl. 19—145.)



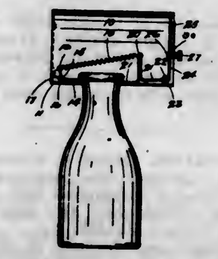
5. That method of manufacturing yarns in shaded or ombré effects which consists in employing two or more laps having their fibers dyed in different shades or colors, dividing the laps into sections of diminishing and increasing area cut to complementary shapes, arranging the sections in series with the colors alternating and with a narrowing end of the section of one shade or color matched with a gradually widening section of another shade or color, converting the lap into roving, and spinning the roving into yarn.

1,572,149. FILLING MACHINE. KARL KIEFER, Cincinnati, Ohio. Filed June 12, 1920. Serial No. 388,588. 10 Claims. (Cl. 226—96.)



1. In a filling machine, a revolvable measuring cylinder having a port, a spout and a container-carrier revolving with said cylinder, a fixed member between said cylinder and said spout, having an inlet opening to said port during part of the revolution and having an outlet opening from said port to said spout during another part of the revolution, a piston in said cylinder to actuate substance through said port, and a fixed inclined circuitous track operatively related to said piston.

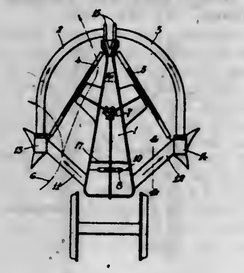
1,572,150. FILLING MACHINE. KARL KIEFER, Cincinnati, Ohio. Filed July 21, 1920. Serial No. 397,835. 5 Claims. (Cl. 226—116.)



1. In a filling machine, a fixed table having a flat top across which containers may slide, and having a transverse series of openings up and down therethrough, pins projecting up through the respective openings, a rock-shaft journaled transversely on the lower side of the table, flat springs fixed to the rock-shaft and projecting under the respective pins, an arm fixed on said rock-shaft at one side of the table, a standard on the table, a bracket on said standard, a filling head guided up and down on said bracket, a manifold on said head, filling tubes on the manifold over the respective pins, gaskets on the respective tubes to make air-tight closure with containers entered by the tubes, a telescoping exhaust connection to said manifold, a supply manifold parallel with the aforesaid manifold with connections to the respective filling tubes, check valves in the respective connections, a telescoping supply connection to the supply manifold, means mounted on said bracket and connected to said filling head for moving the head up and down, and a connection from this means to said arm on said rock-shaft.

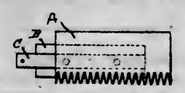
1,572,151. CLOTHESLINE REEL. BURT KNATVOLD, Albert Lea, Minn. Filed Feb. 10, 1925. Serial No. 8,300. 1 Claim. (Cl. 242—100.)

A reeling frame formed from a single strand of wire bent to provide a straight side portion having its free end looped to form an eye, its other end merging into an arcuate end portion, said arcuate portion merging into a second straight side portion disposed in parallelism with the first named straight portion and terminating in a loop forming a second eye, said loop merging into a third straight side forming portion which is in substantial alignment with the second straight portion, said third straight portion merging into a second arcuate end portion, said second arcuate portion merging into a fourth straight side portion disposed in parallelism with the second and third straight portions and in substantial alignment with the first named straight portion, said fourth straight portion merging into a shaft extending through the eyes and disposed at right angles to the four straight portions and terminating in a crank.



1,572,152. MILK-BOTTLE SUPPORT. WILLIAM JOHN LANGSTROTH, London, Ontario, Canada. Filed Dec. 31, 1923. Serial No. 683,728. Renewed Dec. 28, 1925. 2 Claims. (Cl. 232—41.)

1. A bottle support of the character described including a casing having an open end; hinged bottle clamping members in said casing, one of which is provided with a

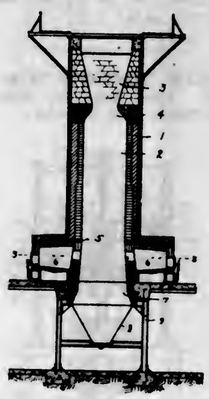


coin and ticket pocket and closure means for the open end of said casing; said hinged bottle clamping members being adapted to swing upwardly when the neck of a bottle is forced into and removed from said casing and simultaneously tilt said closure means outwardly so that access may be had to the coins and tickets in said pocket.

1,572,153. CONDENSER PLANT FOR LOCOMOTIVES. BIRGER LJUNGSTRÖM, Stockholm, and ERIK OTTO ERIKSSON and FREDRIK LJUNGSTRÖM, Lidingo-Brevik, Sweden, assignors to Aktienbolaget Ljungström Angturbin, Stockholm, Sweden, a Corporation. Filed Aug. 23, 1923. Serial No. 659,007. 8 Claims. (Cl. 257—39.)

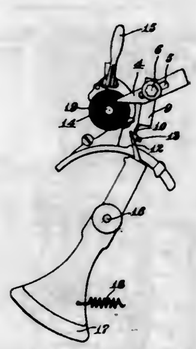
1. A condenser plant for locomotives and similar vehicles, comprising a mixing condenser of an elongated shape arranged longitudinally of the locomotive and adapted to contain cooling water, a re-cooling device, said mixing condenser reaching right up to said re-cooling device, means for moving the cooling water from said condenser through said re-cooling device and back to said condenser, and a fan for moving air necessary for cooling through said re-cooling device.

1,572,154. HAIR-CUTTING COMB AND RAZOR GUARD. OSCAR H. MCCONOUGHEY, San Francisco, Calif. Filed Mar. 26, 1921. Serial No. 455,953. 3 Claims. (Cl. 30—12.)



1. The combination of a razor blade with a comb; said comb being a rigid structure, having teeth right angle triangle in cross section and provided with a vertical slot in the hypotenuse adapted to receive and retain a razor blade with its cutting edge alined in said slot.

1,572,155. PICKLING. HENRY S. MARSH and RALF S. COCHRAN, Youngstown, Ohio, assignors to American Copperas Company, Youngstown, Ohio, a Corporation of Delaware. Filed Nov. 14, 1924. Serial No. 749,981. 4 Claims. (Cl. 148—8.)

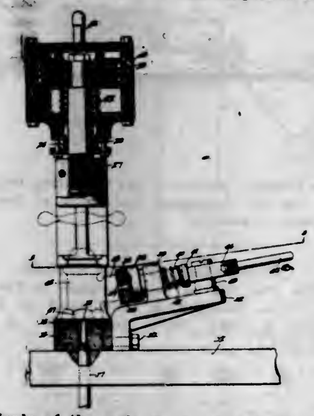


1. The method herein described of pickling metallic objects which consists in conducting the pickling operation in a pickling solution burdened with sulphuretted hydrogen.

1,572,156. LIMEKILN. HUGH MISCAMPBELL, Duluth, Minn. Filed Feb. 16, 1925. Serial No. 9,400. 1 Claim. (Cl. 222—3.)

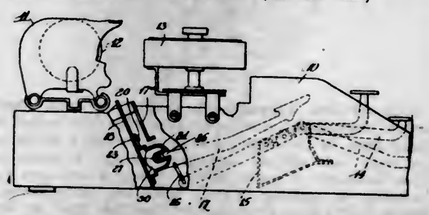
A lime kiln comprising a vertically elongated chamber and a port in the lower portion thereof for injecting heating gas thereinto, said chamber comprising two opposed parallel vertical walls and two diametrically opposite walls diverging downwardly and on the same level as said vertical walls for the purpose described.

1,572,157. YARN WINDING. MICHAEL MORRELL, Brooklyn, N. Y., assignor to Louis Malina, New York, N. Y. Filed Sept. 8, 1925. Serial No. 55,078. 6 Claims. (Cl. 242—159.)



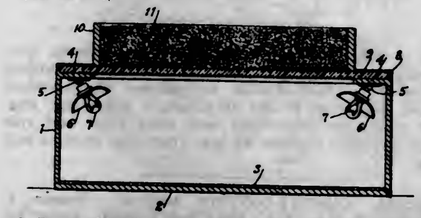
1. As a new article of manufacture, a yarn winding in which in each layer certain portions of the yarn are below the general level of the layer, the lowered portions affording a depression within which knots are placed.

1,572,158. AIR-OPERATED TESTING DEVICE. ROBERT H. MUELLER and CHESTER W. HATHAWAY, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed May 7, 1924. Serial No. 711,661. 12 Claims. (Cl. 73—51.)



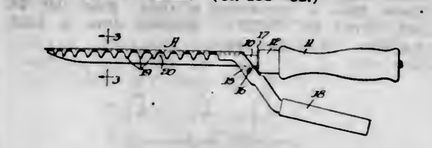
1. In apparatus for testing angle cocks and the like, the combination of a base to receive a cock nipple and

having a fluid pressure inlet, a bracket secured to the side of the base, a movable pressure head on said bracket having a fluid pressure outlet and adapted to engage the



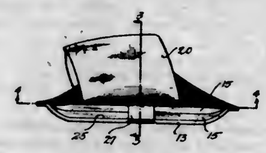
other nipple of the cock, means to normally hold said pressure head retracted, means for moving said head, and means to clamp the cock on said base.

1,572,159. TYPEWRITER CONSTRUCTION. GEORGE F. ROAS, Hyndsville, N. Y. Filed Dec. 19, 1921. Serial No. 523,317. 10 Claims. (Cl. 197—41.)



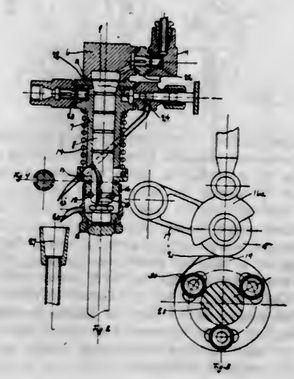
1. In a typewriting machine, the combination with a frame and a plurality of type bars, of a one-piece, sheet metal member on the frame having a portion thereof stamped up angularly to form guide means and a second portion in substantially spaced relation with said first portion stamped up to form a bearing for pivot means, with spaced guide slots cut through said guide means and bearing for the reception of said type bars, and means pivotally supporting said bars on said bearing portion.

1,572,160. STEEL-WOOL MACHINE. WILLIAM H. ROBBINS, Springfield, Ohio, assignor to The Williams Company, London, Ohio, a Corporation of Ohio. Filed June 5, 1925. Serial No. 35,156. 8 Claims. (Cl. 29—1.)



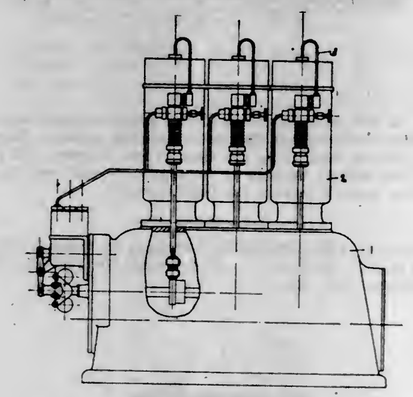
1. In combination, a casing, a top therefor adapted to pass light therethrough, a source of light within said casing to project light through the top, and a frame mounted on the top of said casing to contain steel wool.

1,572,161. HAIR-STRAIGHTENING IRON. THOMAS C. RUSSELL, Chicago, Ill. Filed Mar. 30, 1925. Serial No. 19,219. 2 Claims. (Cl. 132—32.)



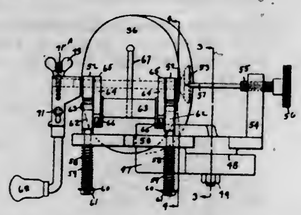
1. A hair dressing device of the class described, comprising an elongated flat hair receiving member, hair distributing teeth along the sides of said member, and a heating member adapted to be applied to said hair receiving member between the teeth thereof.

1,572,162. ARCH SUPPORT. WILLIAM M. SCHOLL, Chicago, Ill. Filed Dec. 1, 1924. Serial No. 753,829. 3 Claims. (Cl. 36—71.)



3. A foot corrective appliance comprising two yieldable plate members connected together near their ends and open between their side edges to form a pocket, a yieldable band extending through said pocket between the plates, and stitched to the upper plate by a seam extending transversely of the band and longitudinally of the plate and near the mid-portion of one of said plates, and a pad for insertion in said pocket between the plates.

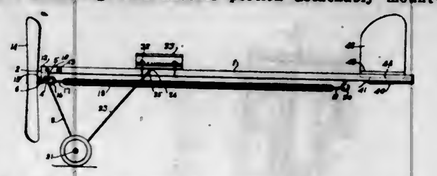
1,572,163. APPARATUS FOR DELIVERING MEASURED CHARGES OF FLUID. HAROLD F. SHEPHERD, Reno, Nev. Filed Oct. 28, 1922. Serial No. 597,510. 3 Claims. (Cl. 123—140.)



1. In a charge delivering device, the combination of a plurality of pumps; plungers in said pumps having tapered ends; seats containing the inlets to the pumps closed by said tapered ends; a measuring device common to said pumps; and a cam device actuating the plungers holding the tapered ends off its seat during the charging movement and closing the tapered ends on the seat during the charging movement of the other pumps.

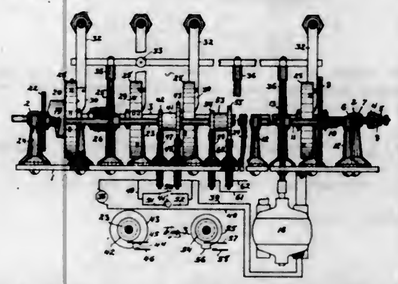
1,572,164. CHARGE-DELIVERING DEVICE FOR EXPLOSIVE ENGINES. HAROLD F. SHEPHERD, Toledo, Ohio, assignor to The Kent-Owens Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 28, 1922, Serial No. 597,511. Renewed June 8, 1925. 10 Claims. (Cl. 123—140.)

1. In a measured charge delivering device, the combination of a plurality of pumps; and measuring devices delivering measured charges to the pumps having a plurality of measuring impulse creating means operating in sequence said means having a frequency varying from the pumps whereby each means delivers to each pump.



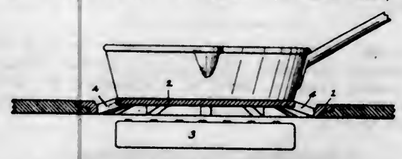
1,572,165. VALVE-FACING MACHINE. EARL G. SMITH and ALBERT B. COMBS, Portland, Oreg. Filed May 31, 1923. Serial No. 642,470. 1 Claim. (Cl. 51—106.)

The combination of a stand having a grinding wheel slidably mounted thereon with a valve facing attachment consisting of a swinging table attached to said stand; a pair of V blocks on said stand adapted to support a valve horizontally; a feed screw on said table having an extended point loosely joined to its end and adapted to engage the center of a valve; a clamp for said valve consisting of a pair of slide rods passing through said table and having springs on their lower ends and bearings on their upper ends; an eccentric shaft journaling in said bearings; and a pair of hooks mounted on said shaft adapted to clamp over the valve stem under the tension of said springs when said shaft is rotated to one of its extreme positions.



1,572,166. TOY AIRPLANE. EARL A. SMITH, Dayton, Ohio, assignor to Smith and Dwyer Manufacturing Company, a Copartnership composed of Earl A. Smith and Daniel I. Dwyer, Dayton, Ohio. Filed July 25, 1925. Serial No. 46,005. 12 Claims. (Cl. 244—14.)

1. In an airplane having a fuselage, wings, propeller and rudder, a retractable landing gear consisting of landing gear struts pivotally mounted to the landing gear axle and a portion of the struts pivotally mounted to the fuselage and another portion detachably mount-

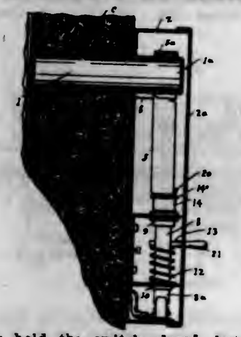


ed on the fuselage, said wing members being detachably mounted over the detachably fixed ends of the struts to hold them in position.

1,572,167. CHIMES-STRIKING MECHANISM. GEORGE L. SMITH, Fort Wayne, Ind., assignor to The Smith Chimes Clock Company, a Corporation of Indiana. Filed Nov. 23, 1921. Serial No. 517,191. 5 Claims. (Cl. 84—103.)

4. In striking apparatus for chimes, a main shaft having longitudinal and rotary movement; a series of drums fixed on the shaft, each drum having a series of projecting lugs spirally arranged thereon; a series of chime members; a series of trip hammers arranged respectively in striking relation with the corresponding chimes and actuated respectively by the lugs on the corresponding drums; electrically actuated driving means for the main shaft; and an electrical make and break device having actuated relation with the main shaft and adapted to control the driving means.

1,572,168. COOKING APPARATUS. HAROLD ELNO SMITH, Cleveland Heights, Ohio. Filed Nov. 8, 1924. Serial No. 748,591. 6 Claims. (Cl. 126—215.)

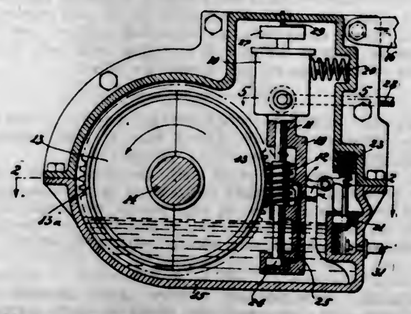


1. A stove lid for use with aluminum utensils comprising a flat circular plate of conducting material whose lower face exhibits a coefficient of absorption higher than that of the aluminum, a supporting ring, and means for supporting said plate from said ring while impeding transfer of heat from said plate to said ring.

1,572,169. CIRCUIT-CONTROL MEANS. GEORGE A. TAYLOR, Muncie, Ind. Filed May 9, 1924. Serial No. 712,109. 4 Claims. (Cl. 219—35.)

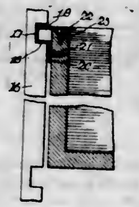
1. In fireless stoves, the combination with a closed oven provided with a vent, and electric heating means

for the oven, a chamber extending from the oven and beyond the external stove wall and having its outer end closed, a switch in the circuit, a thermostatic latch bar



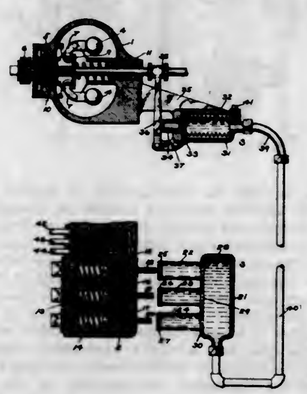
to normally hold the switch closed, but which is operable by the heat transmitted from the head portion of said chamber to move the latch bar to permit the switch to open.

1,572,170. METAL WHEEL SPOKE. JOHN R. WELCH, Muncie, Ind.; Viola M. Welch executrix of the estate of said John R. Welch, deceased, assignor to Viola M. Welch, Muncie, Ind. Filed Oct. 30, 1922. Serial No. 597,740. 6 Claims. (Cl. 301—85.)



1. A metal wheel spoke including a tubular body portion and a transversely rectangular hollow sector portion, each of two opposite sides of the sector portion having a longitudinal seamless tapered reinforcing rib integral with the inner side thereof.

1,572,171. ANTISLIPPING STARTING DEVICE FOR STEAM LOCOMOTIVES. HENRY HERMAN WESTINGHOUSE, New York, N. Y. Filed July 18, 1922. Serial No. 575,912. 24 Claims. (Cl. 105—48.)

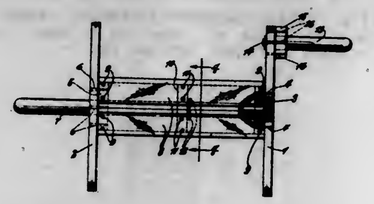


20. In a locomotive starting device, the combination with a main engine, driving wheels, and driving connections from the engine to said wheels, of a restraining mechanism carried wholly by the locomotive and acting to positively prevent a sudden increase in the rate of rotation of said driving wheels, and means operable to operatively disconnect said mechanism from the driving wheels.

1,572,172. FILING-CABINET DRAWER. PETER A. WETZEL, Springfield, Ill. Filed Apr. 5, 1923. Serial No. 629,965. 4 Claims. (Cl. 45—77.)

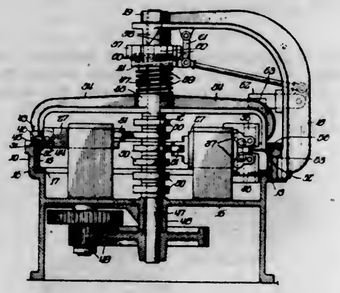
1. The combination in a filing cabinet drawer of a bottom, back and sides, a drop front pivoted to the sides, and sheet metal strips separately formed from the drawer and forming runners to slide in grooves in a cabinet, said strips comprising upper and lower walls projecting outwardly from the outer faces of the drawer sides, vertically extending connecting portions between the outer ends of said walls, and integral means lapping the drawer and secured thereto.

1,572,173. TRAIN-SPEED-CONTROL DEVICE. GEORGE W. WILDIN, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 28, 1923. Serial No. 648,267. 6 Claims. (Cl. 303—21.)



1. In a train speed control apparatus, the combination with a governor device having a member movable by the governor according to the speed of the train and a valve mechanism operable to control the speed of the train, of liquid pressure operated means for operating said valve mechanism and a movable abutment exposed to the liquid acting on said means and operated by said governor member for varying the pressure of the liquid.

1,572,174. REEL. RAYMOND WOLK, St. Louis, Mo. Filed July 27, 1926. Serial No. 46,822. 3 Claims. (Cl. 242—76.)

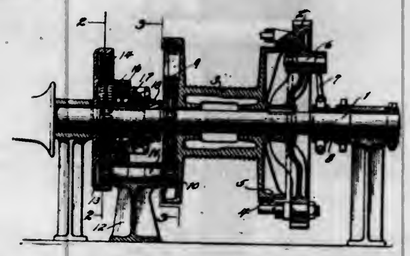


1. A reel comprising a pair of parallel ends, a block attached to the inner side of each of said ends and having a central hole therethrough, a number of bars attached to said blocks and abutting against said ends, an

intermediate block attached to said bars and having a hole therethrough in alinement with the holes through said first named blocks, an axle member extending ro-

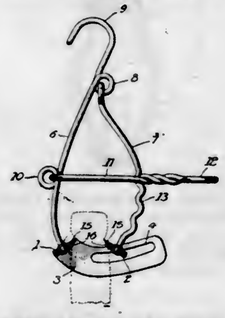
tatively through one end and through the holes in all of said blocks and abutting against the opposite one of said ends, and a handle attached to said opposite end.

1,572,175. MACHINE FOR MAKING LINKS OR SIMILAR ARTICLES. JOSEPH H. APPLETON, Port Washington, Wis., assignor to Leach Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed May 17, 1924. Serial No. 713,964. 14 Claims. (Cl. 219—3.)



1. In a machine for making links or similar articles, a generally circular frame, a number of complementary forming mechanisms fixedly mounted in a circle on the frame, an operating shaft journaled in the frame at the center of the mechanisms, cam connections between the shaft and the mechanisms for operating all of the latter once during each revolution of the shaft, a generally annular device rotatably mounted on the frame for supporting a number of lengths of stock in operative relation to the mechanisms, and a clutch connection between the shaft and the device for intermittently rotating the latter a part of one revolution corresponding to the distance between any two mechanisms during each revolution of the shaft and while all of the mechanisms are inactive to present each of the lengths of stock in operative relation to each of the mechanisms in turn.

1,572,176. PROCESS FOR THE MANUFACTURE OF CONDENSATION PRODUCTS OF COMPOUND ALIPHATIC-AROMATIC KETONES WITH POLYALCOHOLS. JEAN ALTWEGG and EDOUARD FAU CHERMETTE, Lyon, France, assignors to Societe Chimique des Usines du Rhone, Paris, France. Filed Mar. 19, 1924. Serial No. 700,376. 5 Claims. (Cl. 260—151.)

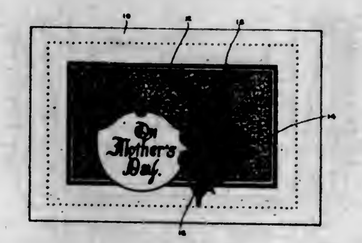


1. Process for the manufacture of condensation products of compound aliphatic-aromatic ketones with polyalcohols, by allowing compound ketones to react on polyalcohols in the presence of primary alcohols containing small quantities of mineral acids.

1,572,177. CABLE DRIVE FOR SHOVELS. RAYMOND A. BECKWITH, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed June 20, 1924. Serial No. 721,277. 9 Claims. (Cl. 254—187.)

1. In drum operating mechanism of the class described, in combination, a main operating shaft, a drum loose thereon, clutch means for directly connecting said drum to the shaft, the drum being equipped with an internal gear, a pinion meshing with said internal gear, driving means on the shaft for actuating said pinion, and other clutch means to operatively connect the last mentioned driving means with the shaft.

1,572,178. BACON HANGER. LESTER W. BERMOND, St. Paul, Minn., assignor to Swift & Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 30, 1924. Serial No. 746,887. 6 Claims. (Cl. 17—44.)



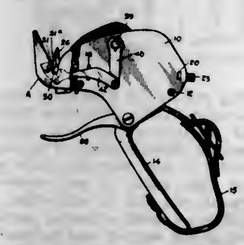
1. A bacon hanger comprising a pair of rigid jaws, the opposed edge of said jaws being serrated, a resilient support for each jaw, said supports being secured at the ends to their respective jaws and pivotally connected together at a point removed from said jaws, one of said supports being bowed away from the remaining support, and a clamping member adapted by coacting with said supports to draw one support toward the other.

1,572,179. STEEL MANUFACTURE. THOMAS J. BRAY, Jr., Youngstown, Ohio. Filed June 5, 1922. Serial No. 566,152. 6 Claims. (Cl. 75—49.)

1. In the manufacture of steel, the steps which consist in suitably deoxidising the same in the furnace, and then producing an artificial effervescence throughout the body of molten steel immediately following the pouring of the same into the mold, substantially as described.

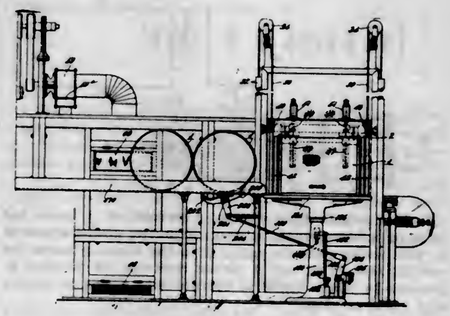
1,572,180. PARCHMENT MOTTO AND GREETING CARD AND PROCESS OF MAKING THE SAME. GEORGE E. BUZZA, Minneapolis, Minn. Filed Dec. 3, 1923. Serial No. 678,118. 2 Claims. (Cl. 101—211.)

1. The process of making parchment mottoes and greeting cards which consists in heating sheet parchment material to a predetermined temperature, printing said material in a room maintained at said predetermined temperature drying the printed sheet, applying sizing to an



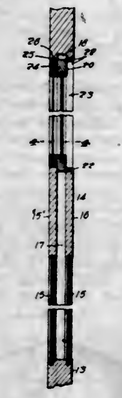
unprinted portion of said material, dusting bronze powder on said material, and brushing the applied powder to remove surplus and to polish the powder retained by said sizing.

1,572,181. KNOTTER DEVICE. BRITTON E. BYRD, Durham, N. C., assignor to Mill Devices Company, Durham, N. C., a Corporation of North Carolina. Filed Feb. 24, 1922. Serial No. 538,889. 61 Claims. (Cl. 289—3.)



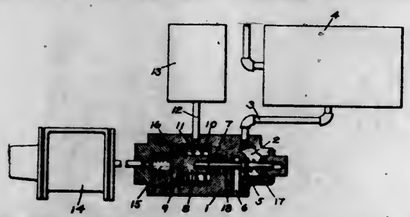
1. In a knot tying mechanism, in combination, a tying bill having thread cutting and clamping means, means for positioning a plurality of strands relative to the tying bill so that the tying bill is between the strands and the strands are crossed at a side of the tying bill and mechanism for operating the tying bill in relation to said strands.

1,572,182. KNOTTER DEVICE. BRITTON E. BYRD, Durham, N. C., assignor to Mill Devices Company, Durham, N. C., a Corporation of North Carolina. Filed May 13, 1924. Serial No. 712,922. 15 Claims. (Cl. 289—3.)



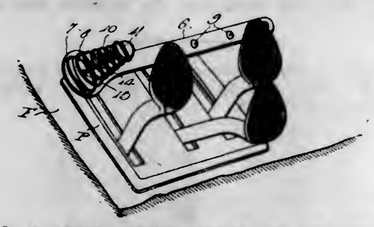
11. In a device of the class described, the combination with a tying bill, of holders for supporting a pair of strands on opposite sides of the bill, said bill between the holders, rocking members adjacent to the holders to engage a portion of one strand and move it across the other, thereby to provide points of crossing of the strands at opposite sides of the bill, said members having means to tension the strands, and a common operating means for the bill and the members.

1,572,183. DRYING MACHINE. EMIL J. CARROLL, Norwood, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 13, 1923. Serial No. 668,353. 45 Claims. (Cl. 34—12.)



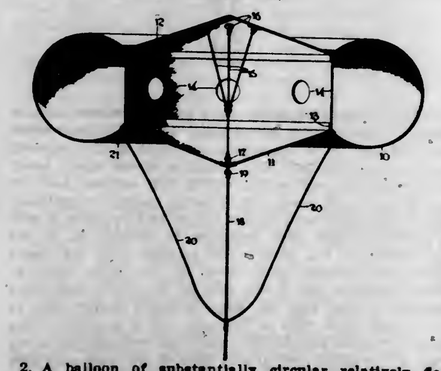
1. In an apparatus of the class described, a chamber having an inlet and an outlet opening, means for conveying materials through said chamber, and other means for automatically discharging the materials from said outlet.

1,572,184. DOOR. STEPHEN M. CASEY, San Francisco, Calif. Filed Feb. 16, 1925. Serial No. 9,504. 1 Claim. (Cl. 20—35.)



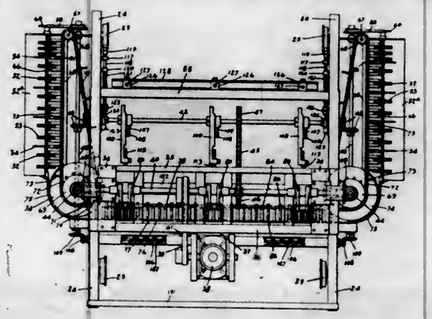
A door comprising stiles, solid top and bottom rails, a center rail made up of two similar strips with their outer surfaces flush with the similar surfaces of the top and bottom rails and their inner surfaces spaced apart, lower panels between each of the center rail sections and the bottom rail, said lower panels being spaced in continuation of the space between the center rail sections, a window-carrying sash of a thickness to slidably fit in the space between the center rail sections and the lower panels, said space being filled by the sash when in lowered positon, the lower edge of the upper rail being recessed in line with the space between center rails to receive the upper edge of the sash, and a screen-carrying frame arranged and fixedly interfitted between the lower edge of the upper rail at one side of the sash receiving recess and the upper edge of one of the center rails, the inner edge of the screen frame forming a fixed guide for the movement of the sash.

1,572,185. AUTOMATIC DRAIN VALVE. CHRISTOPHER P. CASS, Berkeley, Calif., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Sept. 27, 1923. Serial No. 665,112. 3 Claims. (Cl. 303—88.)



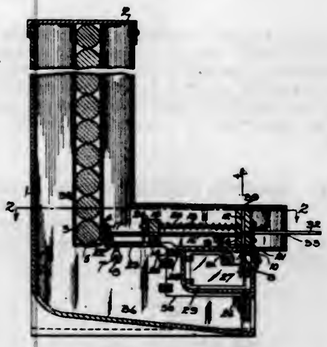
1. The combination with a reservoir, of a valve for draining said reservoir, a brake cylinder, means operated by fluid under pressure supplied to the brake cylinder for opening said valve, and a timing reservoir, an increase in pressure in which tends to operate said means to permit said valve to close.

1,572,186. NEUTRAL-POSITION DETECTOR FOR AUTOMOBILE PEDALS. GEORGE COOK, Detroit, Mich. Filed Nov. 16, 1925. Serial No. 69,473. 6 Claims. (Cl. 74—81.)



1. In a neutral position detector for the combined clutch, low and high speed pedal of an automobile; a yieldable check and means for mounting it in the forward path of the pedal in position to be struck by said pedal when in its neutral position, said check being yieldable with the pedal when the latter is forced forwardly beyond said neutral position.

1,572,187. BALLOON. JAMES F. COOPER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed Nov. 3, 1924, Serial No. 747,407. Divided and this application filed July 30, 1925. Serial No. 47,076. 5 Claims. (Cl. 244—4.)

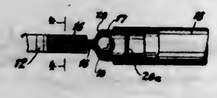


2. A balloon of substantially circular relatively flat configuration, and resilient means incorporated therein to permit relative movement of the relatively flat side portions thereof upon changes in pressure within the balloon.

1,572,188. BRICK OR BLOCK PAVING MACHINE. MELVIN E. CROWELL, Franklin, Ind. Filed Dec. 23, 1921. Serial No. 524,437. 24 Claims. (Cl. 94—47.)

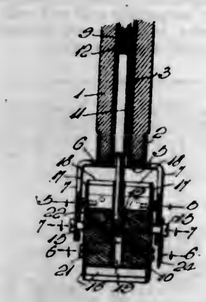
1. In a machine for laying bricks or the like for forming road or like surfaces, the combination of a brick supporting a platform, a brick engaging endless conveyor having laterally projecting brick engaging members, and a spider construction including a supporting shaft and a plurality of laterally projecting brick engaging members, arranged in spaced relation about and along said shaft for removing a plurality of bricks from the platform and depositing the same in tandem and row forming relation and into position for engagement by said endless conveyor brick engaging lateral projections.

1,572,189. VENDING MACHINE. DANIEL J. CROWLEY, Detroit, Mich. Filed May 15, 1925. Serial No. 30,400. 5 Claims. (Cl. 194—80.)



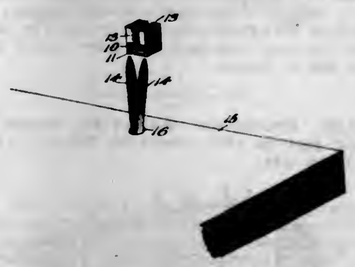
2. In a vending machine, a dispensing apparatus consisting of a carriage having a slide, a bearing and a pusher mounted thereon, a push rod secured to the pusher and supported intermediately of its length by the bearing and adapted to pass through a hole in the slide, which hole is at right angles to and substantially centrally of a vertical coin slot in said slide, guide rods secured to said slide, an apron extending rearwardly from the front portion of the carriage and integral therewith, a container from which said pusher is adapted to discharge merchandise into a chute, a cash box under the carriage, and spring means for drawing said slide back to its forward position after it has been pushed inwards.

1,572,190. FRUIT PRESERVER. WILLIAM DON, New Brunswick, N. J., assignor to Frank J. Malthaner, New Brunswick, N. J. Filed Feb. 5, 1925. Serial No. 6,950. 2 Claims. (Cl. 215—37.)



1. A packing ring comprising a thin flat annulus composed of flexible material, and of uniform thickness, a

head having a plurality of flattened tubular elements extending radially through said annulus, said tubes being open at their inner ends and merging into a cylinder at

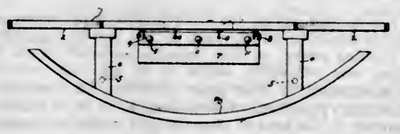


their outer ends, means for exhausting air from said head, and a rubber sphere freely movable in said cylinder to prevent air from entering said tubes.

1,572,191. BUDDING TOOL. JOHN R. DONNELLY, Austin, Tex. Filed Oct. 20, 1924. Serial No. 744,738. 2 Claims. (Cl. 47—7.)

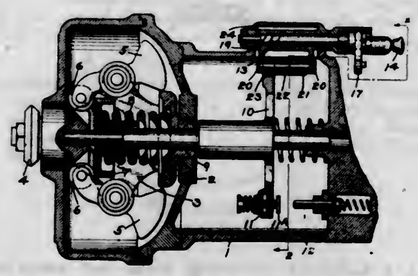
1. A budding tool comprising an elongated handle provided with a pair of laterally spaced forwardly projecting arms, a block between said arms, axially alined pivots connecting said block with said arms, bark cutting blades carried by said block, and a spring-projected manually retractable bolt carried by said handle and projecting forwardly therefrom, said block having sockets spaced around its pivotal axis to receive the front end of the bolt for holding the block in different positions.

1,572,192. PAPER FASTENER. JUSTIN A. ELIAS, Philadelphia, Pa. Filed Nov. 16, 1923, Serial No. 675,048. Renewed Dec. 19, 1925. 3 Claims. (Cl. 24—153.)



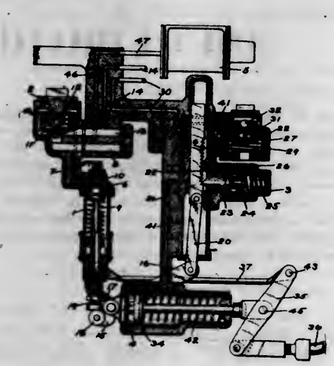
1. As an article of manufacture, a fastener for sheet binding comprising a body having a single opening for pliable binding tongue penetration, and having parallel keeper portions each of which is adapted to receive a prong of the binding tongue and capable of being folded to flat, opposed position with the prongs therein.

1,572,193. MEANS FOR TESTING MUSCULAR DEVELOPMENT. FREDERICK S. ENGEL, New York, N. Y. Filed Aug. 9, 1924. Serial No. 731,093. 2 Claims. (Cl. 33—179.)



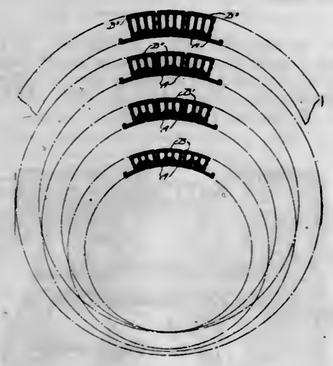
1. Means for testing muscular development comprising a breakable strip having calibrations in units of weight of a person on one side and progressing from an intermediate portion toward one end thereof, and an adhesive on the reverse side and adjacent the opposite end and adapted to secure said end to the strip in register with one of said calibrations, said strip thereby adapted to closely encircle an expansible muscular part of a body before the same is expanded.

1,572,194. ROCKING SEESAW. NILS R. ERICKSON, Vancouver, British Columbia, Canada. Filed Feb. 10, 1925. Serial No. 8,273. 2 Claims. (Cl. 272—56.)



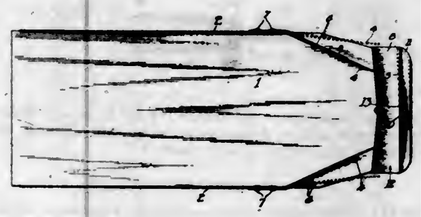
1. A rocking see-saw, comprising an uninterrupted platform arranged in one plane and having the terminals formed to provide a seat, the platform being formed with a cetral opening, supports underlying the platform immediately in advance of the formed terminals, rockers secured to the lower ends of the supports, and a flexible carrier secured to the lower surface of the platform between the supports and beyond the edge of the opening in all directions.

1,572,195. SPEED-CONTROL GOVERNOR. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 8, 1925. Serial No. 21,533. 5 Claims. (Cl. 303—21.)



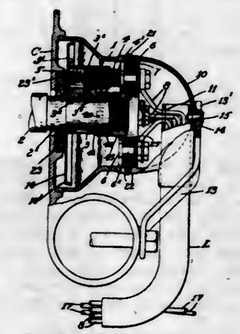
1. The combination with a speed governor provided with a longitudinally movable and rotatable crosshead, of a valve, a plurality of tappets carried by said crosshead and each adapted to engage said valve at different rotative positions of the crosshead upon longitudinal movement of the crosshead, and means for rotating said crosshead.

1,572,196. VARIABLE-LOAD BRAKE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 10, 1925. Serial No. 22,074. 9 Claims. (Cl. 303—22.)



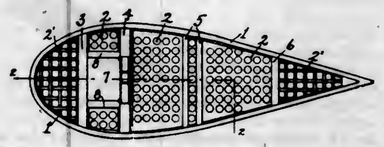
1. In a load brake, the combination with means adjustable according to the load on the car for regulating the braking power, of fluid pressure operated means for locking said adjustable means in an adjusted position, means operated by fluid under pressure for operatively connecting up said adjustable means so as to be adjusted according to the load on the car, and means for supplying fluid under pressure to said locking means upon a predetermined increase in pressure of fluid supplied to said operatively connecting means.

1,572,197. SERIES OF SEWERS OR CONDUITS. WILLIAM C. FERGUSON, St. Louis, Mo. Filed Apr. 14, 1922. Serial No. 552,579. 3 Claims. (Cl. 72—51.)



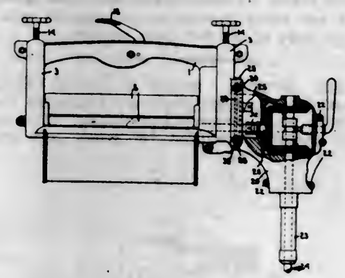
1. A method of constructing double wall sewers or conduits whose diameters vary in a certain ratio, characterized by forming the inner portions of the walls of the sewers from universal blocks of standard dimensions and forming the outer portions of said walls from outer blocks that vary in thickness according to the diameter of the sewer being constructed, and increasing the number of inner blocks and the number of outer blocks by one when a sewer of the next larger size is being constructed.

1,572,198. BACON-SKEWER BLOCK. PAUL A. FLINN, South St. Paul, Minn., assignor to Swift & Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 30, 1924. Serial No. 746,893. 5 Claims. (Cl. 17—1.)



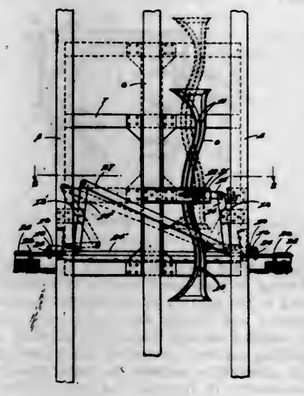
1. A skewer block of the class described, comprising a flat board having upwardly extending side walls, and an end wall, means for supporting said end wall, comprising a pivot perpendicular to the board whereby said end wall may swing around a vertical axis.

1,572,199. TIMER. EDMOND E. FOURNIER and MERTON I. VESTAL, Fall River, Mass. Filed Mar. 28, 1921. Serial No. 456,153. 14 Claims. (Cl. 200—24.)



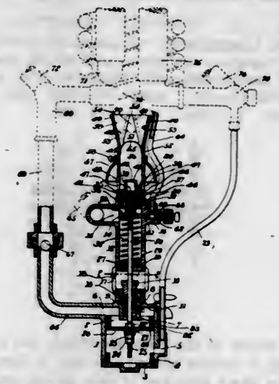
9. In a timer, a plurality of spaced stationary contacts, and a rotatable brush having a curved contact end and having an axial bearing surface inserted into said end and of a material harder than the body of the brush proper, the axis of curvature being perpendicular to but offset from the axis of rotation of the brush so that said insert will come upon each stationary contact along a single line of bearing.

1,572,200. SNOWSHOE. WILLIAM FOX, Tacoma, Wash. Filed Sept. 24, 1924. Serial No. 739,731. 3 Claims. (Cl. 208—184.)



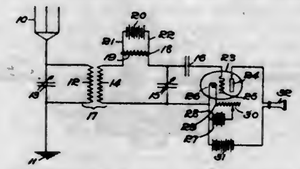
1. A snow shoe comprising a frame of light metal, a metallic webbing fixed to said frame, so as to fill the inclosure of the frame, and reinforcing cross members brazed to said frame and to said webbing.

1,572,201. WRINGER. WALTER A. FRANTS, Cleveland, Ohio. Filed Mar. 11, 1922. Serial No. 542,886. 6 Claims. (Cl. 68—32.)



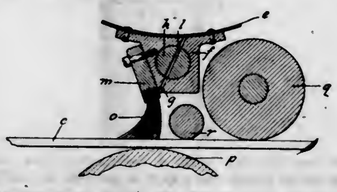
6. In a wringer, in combination, a frame, a pair of parallel roll-shafts journaled therein, a bracket for supporting said frame and having a vertically faced receiving portion adapted to engage an end member of said frame, said frame and said receiving portion having interfitting dove-tail provisions whereby they are held together.

1,572,202. AUTOMATIC SAFEGUARD. JOSEPH GOULET, Timmins, Ontario, Canada, assignor of one-half to Albert Brazeau, Timmins, Ontario, Canada. Filed June 2, 1923, Serial No. 643,122. Renewed Dec. 28, 1925. 4 Claims. (Cl. 187—98.)



3. A safety device for an open shaft, comprising an entrance platform hingedly mounted at the entrance to said open shaft; a mechanism for turning said entrance platform from its normal vertical position to a horizontal operative position and returning it to its normal position; an elevator cage adapted to reciprocably operate in said open shaft; a means carried by said cage adapted to operate said mechanism; said cage having tracks thereon; tracks up to the entrance to said shaft; suitable grooves on said platform to act as guides between said tracks when said platform is in horizontal operative position.

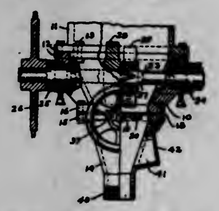
1,572,203. WATER-HEATER BURNER. ALBERT L. HALL, Los Angeles, Calif., assignor to Simplex Heater Company, Los Angeles, Calif. Filed July 15, 1924. Serial No. 726,183. 1 Claim. (Cl. 137—153.)



In a burner, a soft valve seating ring, a gas valve means for normally closing said valve under pressure, and a projection projecting into the opening of said ring to prevent closing of said opening by the pressure of the valve against the ring.

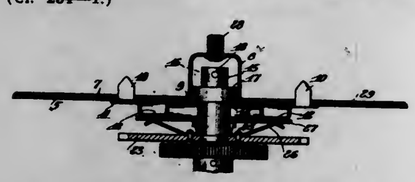
1,572,204. MEANS FOR LIMITING THE EFFECT OF STATIC OR OTHER DISTURBANCES IN WIRELESS TELEGRAPHY. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Aug. 20, 1917, Serial No. 187,060. Renewed July 24, 1923. 6 Claims. (Cl. 250—20.)

1. A receiving system for electrical impulses comprising an oscillatory circuit including a coil, a magnetisable element surrounded by said coil, a circuit including said coil and a source of electrical energy for normally magnetizing said element to such a point that the oscillatory circuit has potential characteristics to produce resonance at the transmitted frequency, and a detector controlled by said circuit, but protected thereby from the effects of excessive electromagnetic shocks.



1,572,205. COATING MACHINE. DANA E. HARDING, Danvers, Mass., assignor to Harding Engineering Company, East Boston, Mass., a Corporation of Massachusetts. Filed Apr. 11, 1922. Serial No. 551,732. 3 Claims. (Cl. 91—39.)

2. A liquid coating apparatus, comprising a source of liquid supply, an applying brush of substantial width, a plurality of conduits from the supply to the face of said

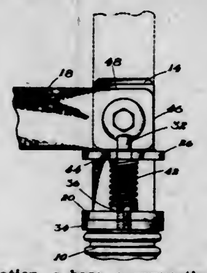


brush, in combination with a valve having a corresponding number of conduits therethrough to register with and control the passage of liquid from the supply to the brush, and means to actuate said valve.

1,572,206. FEEDER. WILLIAM HILDITCH, Cleveland, Ohio, assignor, by direct and mesne assignments, to Fuller-Lehigh Company, Fullerton, Pa., a Corporation of Pennsylvania. Filed Dec. 28, 1922. Serial No. 609,482. 1 Claim. (Cl. 221—120.)

In a device of the class described, the combination of a hopper, a bottom therefor having a discharge opening therein, a shaft arranged in said hopper above said opening, and a plurality of toothed wheels of different diameters arranged directly over said opening and adapted, when not rotating, to prevent the natural flow of material through said opening.

1,572,207. RECORDING INSTRUMENT. EDWIN HODGKINSON, Rochester, N. Y., assignor to Taylor Companies, Rochester, N. Y., a Corporation of New York. Filed Nov. 12, 1921. Serial No. 514,505. 5 Claims. (Cl. 234—1.)

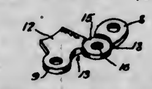


4. In a recording apparatus, the combination of a time train having a spindle, a chart supporting disk rotatably supported on the spindle, an annular frictional surface on said disk, a member rotated by the time train, and a frictional element of resilient metal fixed on said member and pressing against said annular surface to form a yieldable driving connection between said train and disk.

1,572,208. COLLAPSIBLE TUBE. WILLIAM C. HUNTOON, Jr., East Greenwich, R. I. Filed Apr. 17, 1925. Serial No. 23,850. 6 Claims. (Cl. 221—60.)

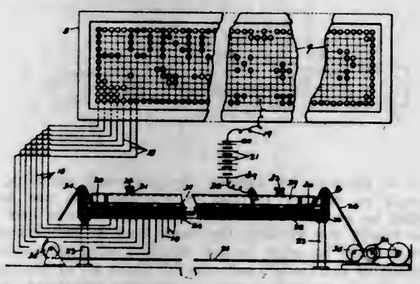
1. In combination with a collapsible tube having a neck with a flared skirt and a groove in the neck, a wire member having one end coiled about the neck and located in the groove and having its other end extended outwardly from the neck and formed with a series of coils seated on the skirt and having the extremity of said other end coiled to form an eye, a teat struck-up from the skirt and received in the eye to hold the wire member against rotation and against the skirt, a cap having a circular groove, and a second wire member having its central portion conformably received in the groove of the cap and having its ends crossed and then extended inwardly and freely received in the opposite ends of the series of coils of the first wire member.

1,572,209. SWITCH. ERNEST H. JACOBS, Chicago, Ill., assignor to Electrical Engineers Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 15, 1921. Serial No. 500,733. 5 Claims. (Cl. 200—48.)



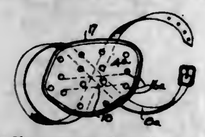
1. In combination, a base, a supporting finger on said base, a member pivoted on said finger, pins for holding said base in place, said pins extending above said base, and a follower carried by the extending portions of said pins for holding said switch member in its open and in its closed positions.

1,572,210. COMBINED VISOR AND AUTOMATIC FLASH LIGHT. JOHN A. KOLISAS, Cleveland, Ohio. Filed Jan. 14, 1925. Serial No. 2,255. 5 Claims. (Cl. 240—60.)



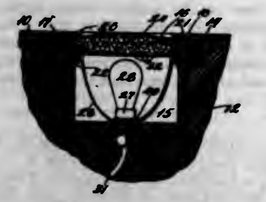
1. An article of the character described, having in combination a head covering, a visor associated with said head covering, a head band section of stiffened material conforming to the contour of the forehead carried by said head covering and rigidly associated with said visor, a flashlight carried by said head band section, and a concave reflecting surface formed on the under side of said visor and adapted to reflect the light from said flashlight downwardly in front of the user of the apparatus.

1,572,211. ELECTRIC-SWITCH TERMINAL. HENRY E. LEPPERT, New Britain, Conn., assignor to The Trumbull Electric Mfg. Company, New Britain, Conn., a Corporation of Connecticut. Filed May 31, 1921. Serial No. 473,696. 4 Claims. (Cl. 173—259.)



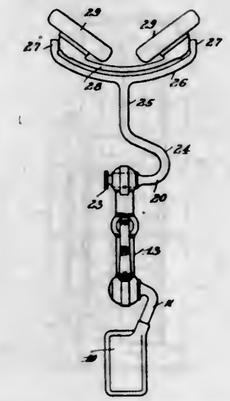
1. A switch terminal comprising a plate having anchorage lugs in one plane, a binding screw seat in a plane slightly offset therefrom providing circumferentially extending wire retaining shoulders and a binding screw in said seat with its axis substantially at right angles to the plane of said lugs said shoulders being located around the periphery of the head of said screw, said plate having a wire breaking notch in its edge adjacent the edge of the head of said screw.

1,572,212. ELECTRIC SIGN. JOHN E. LONG, Multnomah, Oreg. Filed June 7, 1923. Serial No. 643,971. 4 Claims. (Cl. 200—46.)



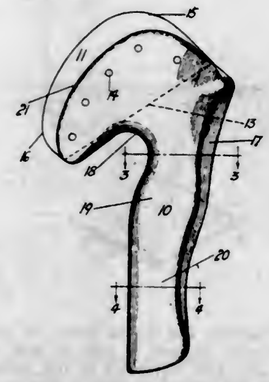
1. In an electric sign, a receptacle of insulating material having a horizontal bottom, conducting wires extending through the receptacle, their ends forming terminals flush with the inner bottom surface of the receptacle, a bath of electrically conducting liquid in the receptacle, and a tape of non-conducting material adapted to be drawn in sliding engagement over the bottom surface of the receptacle and over said wire terminals, the tape having a plurality of apertures therein arranged to allow the circuit between the wire terminals and liquid terminal to be closed as the apertures register with the wire terminals and the circuit to be broken as the apertures are drawn from registry, the apertures being arranged in a predetermined manner with relation to each other for said purpose.

1,572,213. ORTHOPEDIC SUPPORT FOR SHOES. WILBERT LUCAS, Detroit, Mich. Filed Mar. 14, 1925. Serial No. 15,439. 8 Claims. (Cl. 36—11.)



2. An orthopedic support for shoes comprising a flexible supporting member attached to the top of an insole having longitudinal slots therethrough, and straps passing under said supporting member and through said slots.

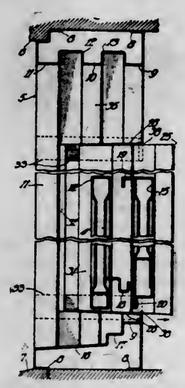
1,572,214. ROAD-SURFACE SIGNAL LAMP. LUTHER B. MCEWING and GEORGE S. CLAYTON, Chicago, Ill. Filed Jan. 21, 1924. Serial No. 687,462. 3 Claims. (Cl. 240—1.)



1. In a lamp casing for a roadway, a housing, an exterior flange on said housing spaced therefrom to form a groove between said flange and the wall of said housing, an interior flange on said housing, a ring fitting said groove, and a lens adapted to be clamped between said interior flange and said ring.

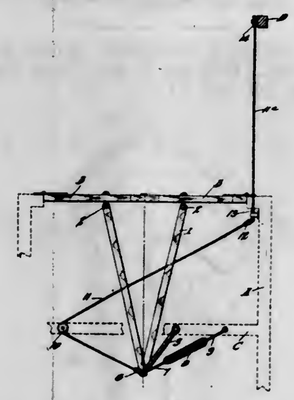
1,572,215. SUPPORTING FIXTURE. ADAM J. MAY, Rochester, N. Y., assignor to Ritter Dental Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed May 28, 1924. Serial No. 716,505. 5 Claims. (Cl. 155—177.)

1. The combination of a bracket arm, a support, an intermediate section formed with transverse bearings adjacent its ends, journals on said arm and support adjustably carried in said bearings, clamping collars encircling said journals, thrust elements extending longitudinally of said section with their inner ends contiguous and their outer ends arranged for actuating said collars, and manually operable means interposed between said contiguous element ends for simultaneously thrusting said elements outwardly and actuating said collars to clamp said journals in adjusted position.



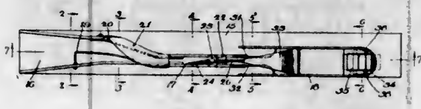
1,572,216. PADDLE STITCHER. CHARLES MELLINGER, Akron, Ohio. Filed Apr. 5, 1924. Serial No. 704,441. 1 Claim. (Cl. 154—9.)

A paddle stitcher comprising a curved blade beveled to its edge and a handle to which said blade is secured, said handle being so formed as to provide a seat for the fleshy portion of an operator's hand directly in back of the blade, and having a portion extending



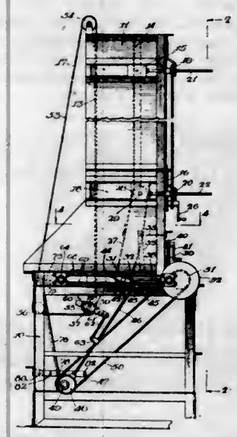
at an acute angle to the longitudinal direction of said blade so formed as to enable the workman to retain the fleshy portion of his hand in said seat by grasping said portion of the handle.

1,572,217. WINDOW CASING. SAMUEL A. MENCHER, Fort Worth, Tex. Filed June 27, 1925. Serial No. 39,927. 7 Claims. (Cl. 189—72.)



1. In a metal window, the combination of the outer casing, inner and outer sashes, and a removable jamb unit provided with guides for both sashes and detachably secured to the outer casing.

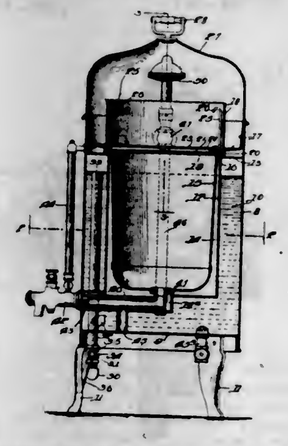
1,572,218. DOOR OPENING AND CLOSING DEVICE. FRED MEYER, Pekin, Ill. Filed Feb. 10, 1923. Serial No. 618,290. 1 Claim. (Cl. 268—9.)



In a door opening and closing device, in combination, a pivotal control member, a pair of bars, each connected to a door and converging to and connected with the swingable end of said member, a rope or cable connected to the swingable end of said member and guided by a pulley located at one side of said bars, and a spring for positioning said member, whereby its outer end and the connected ends of said bars will intersect an imaginary line at their two extreme movements, said spring adapted to expand through a partial swing of said member and to contract through the remainder of the swing of said member, when said member is swung either forward or back.

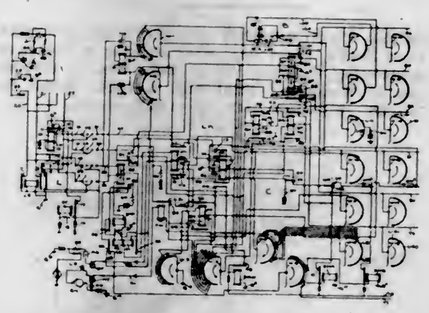
1,572,219. MACHINE FOR TURNING AND STACKING THE ENDS OF CANS. GARRETT W. MUDD, Chicago, Ill. Filed Aug. 30, 1924. Serial No. 735,091. 27 Claims. (Cl. 113—114.)

1. A machine for turning can caps and including a trough or runway through which the caps are propelled by gravity, means disposed adjacent one end of the trough for turning the caps from a substantially flat position on edge, means disposed adjacent another portion of the trough and operable upon all of the caps for turning successive caps in opposite directions, and means for controlling the direction in which the caps are to be turned.



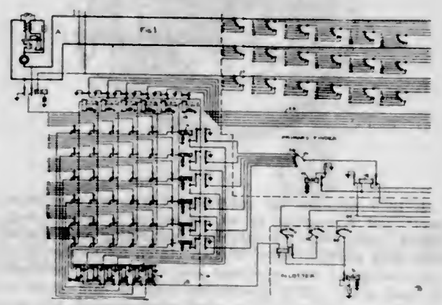
1,572,220. INTERLACING MACHINE. GARRETT W. MUDD, Chicago, Ill. Filed Nov. 24, 1924. Serial No. 752,044. 25 Claims. (Cl. 28—4.)

1. An interlacing machine including a hopper for the material, one wall of the hopper being adjustable to vary the size of the hopper, means adjacent the outlet of the hopper for compressing the material delivered therefrom, a reciprocating needle, and means for moving the said needle in the direction of feeding movement of the material after it has been inserted into the material.



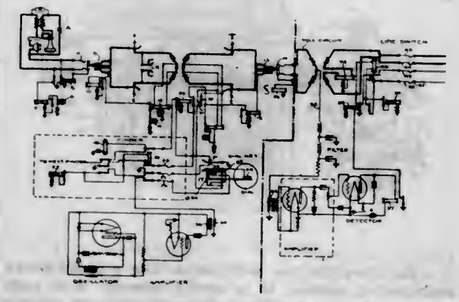
1,572,221. COFFEE URN. WILLIAM H. PETERSEN, Chicago, Ill., assignor to Albert Pick & Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 1, 1923. Serial No. 654,998. 2 Claims. (Cl. 53—3.)

1. In a coffee-urn, the combination of a receptacle having a water-chamber therein, a coffee-jar in the receptacle, a percolator comprising a siphon connection from the water-chamber to the percolator, a discharge pipe connected to the lower end of the jar, a faucet to which the outer end of said pipe is connected, and an



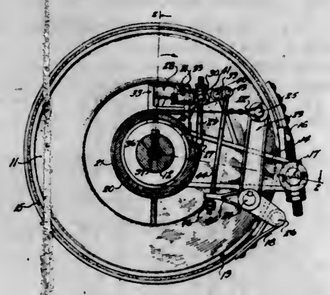
inner wall for the water-chamber spaced and separated from said pipes to permit the removal of the jar with the pipe thereon from the top of the receptacle.

1,572,222. TELEPHONE SWITCHING SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 31, 1919. Serial No. 286,359. 11 Claims. (Cl. 179—18.)



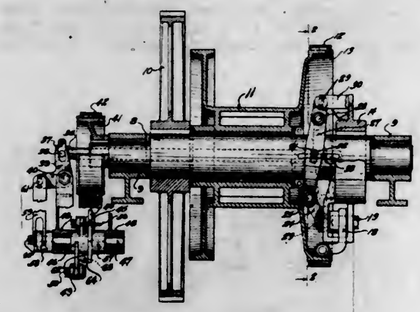
1. In an electromechanical telephone switching system, the combination with a main station trunk circuit, of a telephone line adapted to be connected thereto, of a telephone substation for the said line, a sending device at the said substation, switching mechanism for the said trunk circuit under the control of the said sending device, the said switching mechanism comprising a plurality of switches, one of the said switches being a steering switch and another of the said switches being a combined register and connector switch, means to operate the substation sender to give the said combination switch a predetermined setting in accordance with the first digit of the called line number, means responsive thereto, to cause the said steering switch to take a setting corresponding to the setting of the said combination switch, means operative after the said setting of the steering switch to cause the said combination switch to always take a second setting which is the same for every case being independent of the first position setting of the said combination switch, and means responsive to the second operation of the said substation dial to operate the said combination switch to cause it to make connection with the terminals of the desired called line.

1,572,223. AUTOMATIC TELEPHONE SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 13, 1919. Serial No. 323,581. 8 Claims. (Cl. 179—18.)



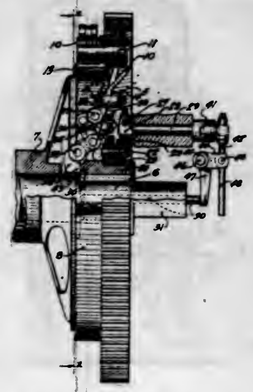
1. In a telephone system, a plurality of telephone lines, trunks, a plurality of groups of relays arranged to be variably operated during the initiation of a call, said relays being less in number than the number of said lines, and primary and secondary progressively movable finder switches operating simultaneously under the control of said groups of relays for connecting an idle trunk to the calling line.

1,572,224. LONG-DISTANCE TELEPHONE SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 2, 1921. Serial No. 457,860. 12 Claims. (Cl. 179—27.)



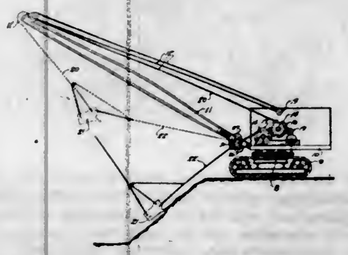
1. In a telephone system in combination with a conversational circuit having two conductors, means for transmitting impulses over said conductors in parallel, an electron discharge device having an input and an output circuit, said input circuit being connected electrically to said conductors to receive impulses thereover, and electromagnetic mechanism operated under control of said output circuit.

1,572,225. CLUTCH-OPERATING MEANS. PAUL BURKE, Green Bay, Wis., assignor to Northwest Engineering Company, Green Bay, Wis., a Corporation of Wisconsin. Filed Apr. 28, 1924. Serial No. 709,477. 14 Claims. (Cl. 192—36.)



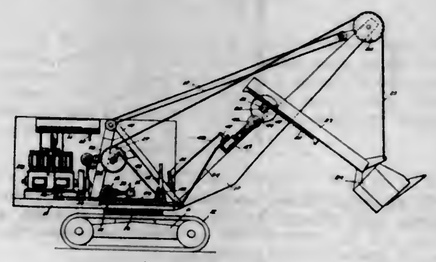
1. In a machine, the combination with a power-driven shaft and a member to be driven, of a main friction clutch mechanism for drivingly connecting said member with said shaft, a servo friction clutch mechanism under the control of the operator and operatively connected to said main clutch mechanism and to said shaft for operating said main clutch mechanism through the force applied in making an application augmented by the power which it receives from said shaft, and means associated with both of said clutch mechanisms for positively releasing the same.

1,572,226. CLUTCH-OPERATING MECHANISM. PAUL BURKE, Green Bay, Wis., assignor to Northwest Engineering Company, Green Bay, Wis., a Corporation of Wisconsin. Filed May 5, 1924. Serial No. 711,144. 15 Claims. (Cl. 192—36.)



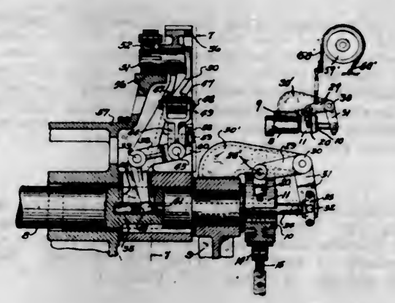
1. In a machine, the combination with a power-driven shaft and a member to be driven thereby, of a main clutch mechanism for drivingly connecting said member with said shaft including a clutch member and its mounting continuously revolving with said shaft, clutch-shifting means for said main clutch mechanism, servo-friction clutch mechanism including a continuously rotating drum, and a friction band coacting with said drum and operatively connected with said clutch-shifting means for transmitting the force impressed upon it, augmented by the force it receives from said drum, to said clutch-shifting means.

1,572,227. CLUTCH MECHANISM. PAUL BURKE, Green Bay, Wis., assignor to Northwest Engineering Company, Green Bay, Wis., a Corporation of Wisconsin. Filed Aug. 1, 1924. Serial No. 729,497. 6 Claims. (Cl. 192—36.)



1. In a clutch mechanism, the combination with a driving member and a member to be driven, of a main clutch mechanism for drivingly connecting said members together, a servo-friction clutch mechanism including a drum revolving with and rotatable relative to said driving member and operatively connected to said main clutch mechanism to move the same to clutched position, and manually-operated means for positively releasing said main clutch mechanism.

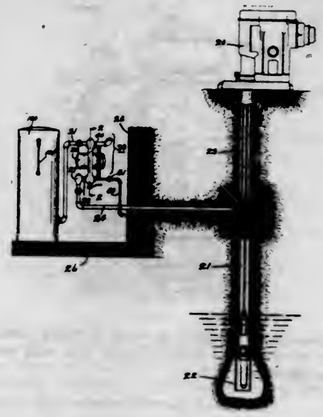
1,572,228. FAIRLEAD FOR DRAGLINE EXCAVATORS. PAUL BURKE, Green Bay, Wis., assignor to Northwest Engineering Company, Green Bay, Wis., a Corporation of Wisconsin. Filed Aug. 4, 1924. Serial No. 730,068. 6 Claims. (Cl. 37—116.)



5. In a machine, the combination with a winding drum and a line associated with said drum, of a fairlead mechanism including a reciprocating frame, a feed-screw connected with said frame, a nut on said feed-screw, a driving member having a loosely splined driving connection with said nut, said feed-screw moving said frame relative to the longitudinal axis of the drum at a rate to maintain the run of said line between said guide means and drum substantially tangent to the helix formed by the previous warp of line on said drum.

1,572,229. POWER SYSTEM. PAUL BURKE, Green Bay, Wis., assignor to Northwest Engineering Company, Green Bay, Wis., a Corporation of Wisconsin. Filed May 11, 1925. Serial No. 29,597. 8 Claims. (Cl. 214—135.)

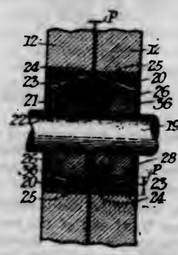
1. In an excavator, the combination with a multi-cylinder internal combustion engine constituting the main power-producing unit, of mechanism receiving power direct from said internal combustion engine, control means for said mechanism, compressor means associated with one of the cylinders of said engine whereby this cylinder may operate as a compressor, and means rendered operative when the control means renders said mechanism inoperative to cause said compressor means to function.



1,572,230. SERVO MECHANISM. PAUL BURKE, Green Bay, Wis., assignor to Northwest Engineering Company, Green Bay, Wis., a Corporation of Wisconsin. Filed July 31, 1925. Serial No. 47,332. 4 Claims. (Cl. 192—36.)

1. In servo mechanism, the combination with a power-driven shaft of a friction drum on said shaft, a friction band coacting with said drum and being stationary before and after actuation, an operator-controlled member, and an operating rod including parts slidably movable relative to each other, one part of said operating rod being operatively connected to one end of said band and to said operator-controlled member and the other part of said operating rod being operatively connected with the other end of said band and to the mechanism to be actuated.

1,572,231. PUMPING APPARATUS. GEORGE A. BUVINGER, CLARENCE WARNER, and JASPER A. SMITH, Dayton, Ohio, assignors to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 30, 1923. Serial No. 628,799. 18 Claims. (Cl. 103—6.)

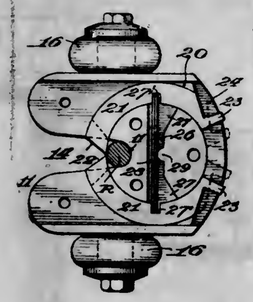


1. In a water system, the combination with a pump and a pressure storage tank; of a main duct connecting the pump and tank; a duct by-passing a portion of the main duct; and means for introducing air into the by-pass duct and for causing air to be forced by the flow of water in said main duct from the by-pass duct into the tank.

1,572,232. CELLULOSE-ACETATE FILM COMPOSITION. STEWART J. CARROLL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 22, 1925. Serial No. 25,144. 4 Claims. (Cl. 106—40.)

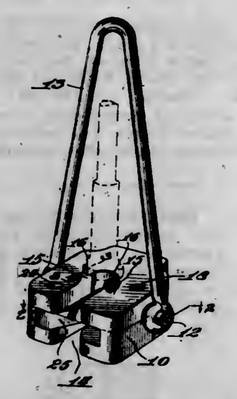
3. As an article of manufacture a transparent film comprising cellulose acetate and sufficient tributyrin to maintain flexibility therein after prolonged heating at 65° C.

1,572,233. RESILIENT-TYPE-DISK NUMBERING STAMP FOR PHOTOGRAPHIC-PRINTING MACHINES. BENJAMIN D. CHAMBERLIN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 21, 1924. Serial No. 727,118. 13 Claims. (Cl. 101—110.)



1. In a numbering stamp for photographic printing machines, the combination with a shaft, a plurality of type disks supported thereon, of individually resilient mounts for each type disk including a washer adapted to engage the shaft, said washer having resilient portions adapted to engage the disks.

1,572,234. SUCKER-ROD ELEVATOR. WESLEY F. CORNELIUS, Whittier, Calif. Filed Mar. 16, 1925. Serial No. 15,974. 7 Claims. (Cl. 294—91.)

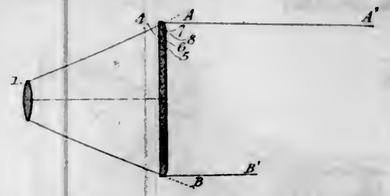


1. In a sucker rod elevator, a block provided with a vertically disposed sucker rod receiving opening, a pair

of latching members arranged for operation on said block, and a flat spring arranged so that its ends directly engage

the intermediate portions of said latching members for normally forcing their forward ends into said sucker rod-receiving opening.

1,572,235. SUCKER-ROD ELEVATOR. LEWIS F. DAVIS, Santa Ana, Calif. Filed Sept. 3, 1925. Serial No. 54,170. 6 Claims. (Cl. 294—91.)

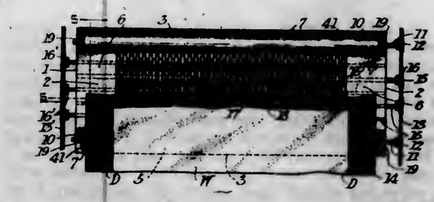


1. In a rod elevator, a block provided with a chamber and with a rod-receiving slot extending inwardly from its front face, a rod-engaging dog arranged within the chamber in said block and pivotally mounted therein to one side of the rod-receiving slot and a spring pressed dog latching member arranged within the chamber and its forward end being pivotally connected to said block to one side of the open front end of the rod-receiving slot.

5. In a rod elevator, a block provided with a rod-receiving slot that extends inwardly from its front face and rod-engaging shoulders formed on top of said block for normally forcing an engaged rod toward the rear of said slot.

1,572,236. CAMERA OBSCURA. CHARLES W. FREDERICK, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 26, 1924. Serial No. 702,127. 11 Claims. (Cl. 88—1.)

1. An optical system constituting a camera obscura and comprising a front lens and a rear light transmitting element spaced therefrom, the lens being adapted to focus an image at a surface of said rear element, the rear element having on one surface a series of prismatic corrugations having a convergent effect upon the light beam transmitted through the system.

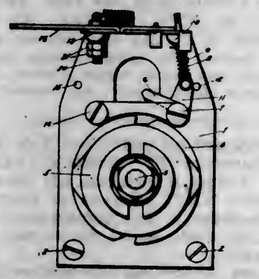


8. An optical element comprising a sheet of light transmitting and diffusing material, one surface of which is plane and the other surface of which has minute concentric prismatic corrugations.

1,572,237. SCRIBER CLAMP AND ATTACHING DEVICE. ELMER L. HUNT, Los Angeles, Calif. Filed Mar. 9, 1922. Serial No. 542,267. 3 Claims. (Cl. 33—27.)

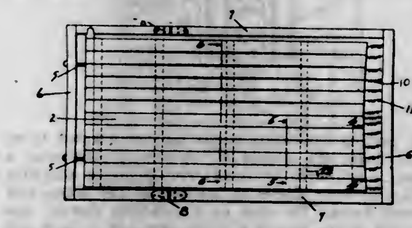
1. An instrument of the character described comprising a block, a second block disposed beneath the latter, means extending through the blocks for clamping the same to each other, one portion of the first block being split longitudinally and provided with stylus receiving openings, in the split means for constricting the openings, and a lip formed on the second block extending under the first block for the purpose described.

1,572,238. SUCTION BOX FOR PAPER-MAKING MACHINES. JOHN G. JONES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 12, 1924. Serial No. 692,430. 8 Claims. (Cl. 92—51.)



1. In a paper making machine, the combination with a wire screen, of a suction box over which the screen may be drawn, having a suction area including a plurality of overlapping rollers with interstices between the rollers, whereby the screen may be supported by the rollers as the suction acts through the interstices and screen to draw moisture from a paper web being formed on the screen.

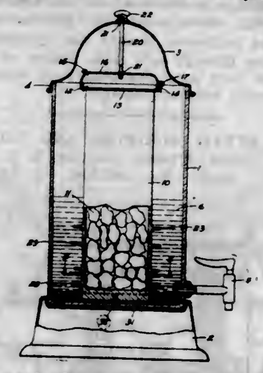
1,572,239. FILING DEVICE. DAVID W. LOW, Los Angeles, Calif. Filed Mar. 24, 1924. Serial No. 701,469. 14 Claims. (Cl. 129—20.)



1. A file comprising a cover provided with a back portion, a series of leaves secured to said back portion, and pockets mounted upon each leaf and hinged thereto, said pockets being so arranged that each pocket on a given leaf exposes a portion of each of the subjacent pockets on that leaf.

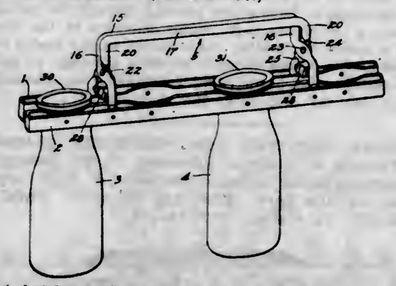
1,572,240. RESETTING DEVICE. SAMUEL C. MCKEOWN, Newark, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Dec. 21, 1920. Serial No. 432,312. 7 Claims. (Cl. 74—14.)

1. A resetting device comprising a positioning member, a stud adjacent one end of the positioning member to securely attach the resetting device to a support, prongs on the positioning member at the opposite end thereof adapted to embrace the support, a tripping member on the positioning member, means thereon adapted to engage and push a member and means to move the tripping member.



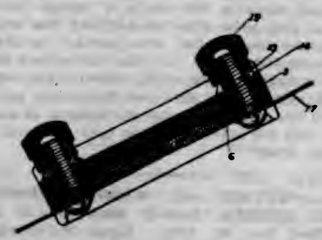
1,572,241. MATTRESS SUPPORT FOR FOLDABLE BEDS AND THE LIKE. CHARLES D. MCDONALD, Los Angeles, Calif. Filed Oct. 26, 1922. Serial No. 597,095. 2 Claims. (Cl. 5—191.)

1. A mattress support for a bed frame consisting of a set of parallel longitudinally extending flexible straps, and means along the transverse ends of the straps for attaching the same to a bed frame, the longitudinal straps being free from each other at their contiguous parallel edges, the said parallel edges slightly overlapping at the end portions and being longitudinally stitched.



1,572,242. BEVERAGE COOLER AND DISPENSER. WILLIAM MCLAUGHLIN, Los Angeles, Calif. Filed Feb. 19, 1925. Serial No. 10,308. 3 Claims. (Cl. 225—21.)

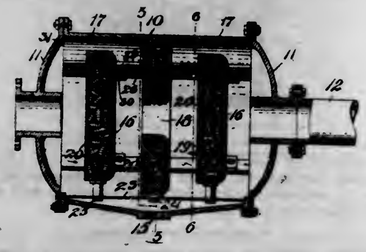
2. An ice cooler comprising in combination a jar having an open mouth to contain a beverage, a substantially cylindrical ice container insertable through the open mouth of the jar, a plate secured to the lower end of the ice container and having a series of lateral flanges and a fin at the bottom, a cover for the jar and means



extending through the cover connected to the ice container to reciprocate and rotate the container and means to withdraw the beverage from the jar.

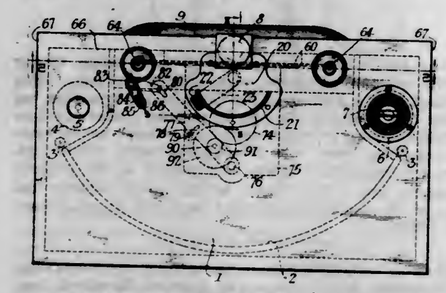
1,572,243. BOTTLE CARRIER. HAROLD H. NEWTON, Claremont, Calif. Filed Feb. 6, 1925. Serial No. 7,307. 2 Claims. (Cl. 294—87.)

1. A bottle carrier comprising in combination similar bottle gripping members, each of said members being formed from a strip of metal having a straight back, an inner face having a plurality of recesses spaced apart by straight spacing portions, a pair of U-shaped handle arms having their lower ends forming outwardly bowed legs, pivotally connected together and secured to the gripping members and a compression spring spaced between the legs of the handles to normally press the gripping members apart.



1,572,244. CONDENSER. EDWARD B. NOWOSIELSKI, Bloomfield, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Apr. 12, 1922. Serial No. 551,872. 6 Claims. (Cl. 250—41.)

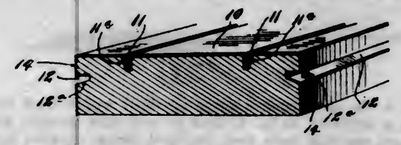
4. In a device of the class described, two similar moulded pieces of insulation having metallic inserts moulded in each end thereof, each piece of insulation



having a slight depression on one side and a rim on the other side, condenser elements positioned between said pieces in the space made by said depressions but having opposite terminals in electrical contact with said inserts, said rim having openings cut away adjacent said inserts, terminal clips positioned in said rim openings, clamping screws passing through said clips, inserts and condenser elements and lock nuts engaging said screws to hold all of the parts securely together.

1,572,245. STEAM PURIFIER AND DRIER. CORNELIUS J. QUINN, Winfield Junction, N. Y. Filed Jan. 16, 1924. Serial No. 686,504. 2 Claims. (Cl. 183—112.)

1. A steam purifier and drier comprising a casing having ports at its ends, transversely arranged basins having openings to force steam passing through the casing to pursue a circuitous path, metal shavings in the basins, and a screen for holding the shavings in the basins so as to present a broad expanse of such shavings to steam, the casings and basin being constructed to provide an outlet for the drip from the shavings.



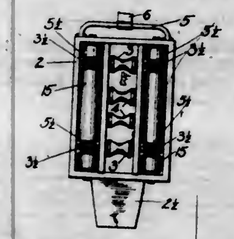
1,572,246. SHUTTER FOR PANORAMIC CAMERAS. WILLIAM A. RIDDELL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 15, 1925. Serial No. 23,425. 13 Claims. (Cl. 95—16.)

1. In a panoramic camera, the combination with a swinging lens holder having a pinion, of a pivoted lever having teeth engaging the pinion, a spring for moving the pinion, stop pins mounted adjacent the lever and spring pressed toward the lever, detents in the lever adapted to be engaged by the pins, and means for moving the pins against their spring pressure whereby when one pin is moved from the lever detent the lever may swing until the other pin, under the impulse of its spring will snap into the other detent to hold the lever at the end of its stroke.

1,572,247. METHOD OF MANUFACTURING VENEERED LUMBER. BYRD C. ROCKWELL, St. Joseph, Mo. Filed Jan. 30, 1924. Serial No. 689,508. 8 Claims. (Cl. 144—309.)

1. The method of manufacturing veneered lumber consisting of forming longitudinally disposed grooves in a core body of low grade lumber, gluing finishing veneer strips in said grooves to form the exposed edges of the veneered lumber, and applying a face veneer section to

the face of said core body with the side edges of said face veneer section flush with the outer faces of said veneer strips.

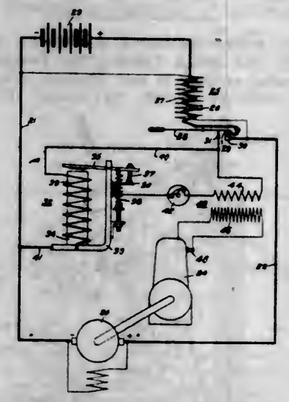


1,572,248. PROCESS OF REDUCING THE VISCOSITY CHARACTERISTICS OF NITROCELLULOSE. SAMUEL E. SHEPPARD and LEON W. EBERLIN, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 15, 1925. Serial No. 37,404. 5 Claims. (Cl. 260—148.)

1. The process of treating nitrocellulose which comprises acting thereon with a substantially non-nitrating gaseous mixture containing higher oxides of nitrogen until its viscosity characteristics are lowered.

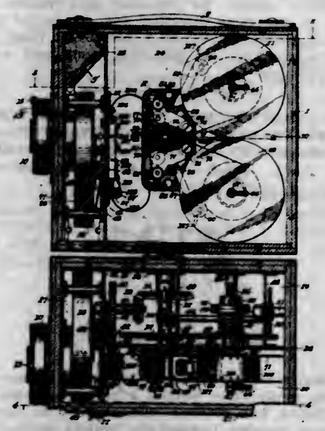
1,572,249. PROCESS OF REDUCING THE VISCOSITY CHARACTERISTICS OF NITROCELLULOSIC MATERIALS. SAMUEL E. SHEPPARD and LEON W. EBERLIN, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 15, 1925. Serial No. 37,405. 7 Claims. (Cl. 260—148.)

1. The process of treating nitrocellulose which comprises acting thereon with a bath of a peroxide, until its viscosity characteristics are lowered.



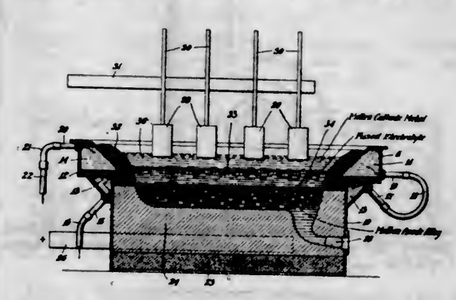
1,572,250. AUTO PARKING DEVICE. EDGAR L. SMITH, Los Angeles, Calif. Filed July 14, 1922. Serial No. 574,888. 2 Claims. (Cl. 180—1.)

1. A parking device for motor vehicles adapted to be adjusted under the wheels of the vehicle comprising a carriage, a plurality of transverse drums, a plurality of rollers at right angles to the axes of the drums and positioned beyond the ends on the outside thereof, one of the end drums having a worm attached to each end of its axle and driving a worm on each of the rollers, a ratchet on one of the rollers, a dog engaging the ratchet, and a connection from the dog to the driver's seat whereby the dog may be operated to engage the ratchet and stop the rotation of the drum, hence stopping the lateral movement of the vehicle.



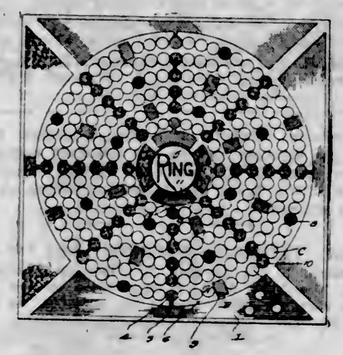
1,572,251. BATTERY-CHARGING SYSTEM. FRANK F. STARR, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 13, 1922. Serial No. 543,135. 9 Claims. (Cl. 290—41.)

1. In a battery charging system, the combination with an internal-combustion engine and a generator driven thereby; of a storage battery; and means for automatically disconnecting the storage battery from the generator when a certain battery voltage has been attained,



said means including temperature responsive means permitting the battery voltage to reach relatively higher values as the temperature decreases.

1,572,252. MOTION-PICTURE APPARATUS. JULIEN TESSIER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 3, 1920. Serial No. 378,616. 3 Claims. (Cl. 88—17.)

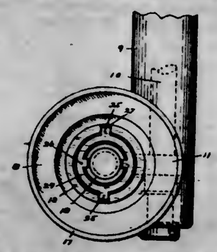


1. In apparatus of the type described, a casing, a door in one side of the casing, mechanism for advancing film past and holding it in an exposure position, said mechanism including a gate and a member for pressing film against said gate, a recessed lug parallel to the gate with a free end toward said door, the pressure member being pivotally mounted on said lug and a spring on said pressure member and engaging a recess in said lug whereby the member is normally held in place but permitting the ready removal thereof, a latch for holding the pressure member in film pressing position, said latch being on the side toward the door so as to be readily accessible therefrom, said pressure member when swung on the pivot being entirely free from said gate and leaving therebetween a space open toward said door into which film may be inserted in an edgewise direction.

1,572,253. METHOD OF STARTING ELECTROLYTIC CELLS. DONALD HEATH TILSON, Badin, N. C., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 30, 1923. Serial No. 677,587. 17 Claims. (Cl. 204—19.)

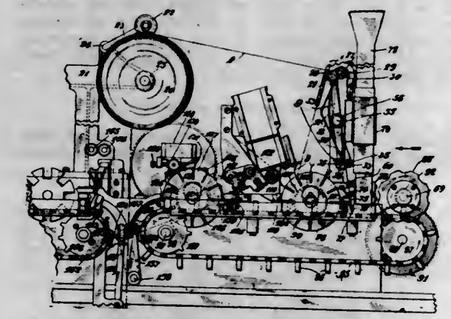
1. The process of putting an electrolytic cell in condition for electrolytic refining of metal, comprising establishing in the cell a layer of molten electrolyte and thereafter two layers of molten metal in succession, differing in density from each other and from the electrolyte; freezing on the sides of the cell from the electrolyte layer a crust adapted to form part of a side-lining, before the second metal layer is established; and thereafter completing the side-lining.

1,572,254. GAME. JOAQUIN R. TORNÉS, Ada, Ohio. Filed Apr. 17, 1925. Serial No. 23,885. 3 Claims. (Cl. 273—134.)



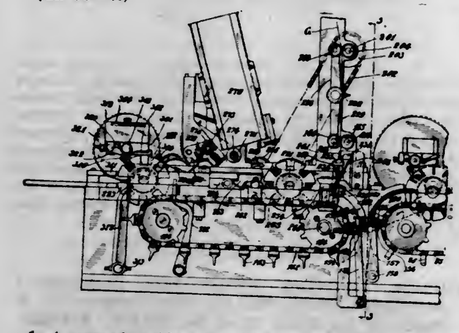
1. In a game of the class described, a playing board having its surface designed to provide a central isolated goal surrounded in spaced relation by individual starting fields adapted for reception of individual playing pieces, a plurality of endless paths adapted to be traversed by said playing pieces, said paths being located between the starting fields and said goal and being separated from each other, and bridges joining adjacent paths for permitting a playing piece to be legitimately moved from an outer to an inner path.

1,572,255. DRIVING MEANS FOR ELECTRICAL IGNITERS. HENRY WILLIAM UHL, Freeport, N. Y. Filed July 14, 1924. Serial No. 726,035. 6 Claims. (Cl. 64—91.)



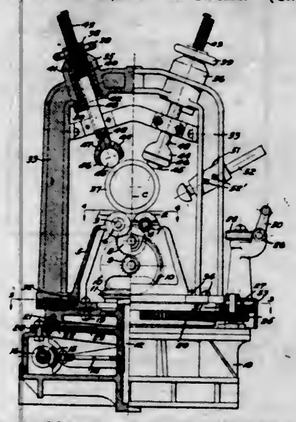
1. A driving means for ignition devices, comprising in combination with the engine cam shaft and an ignition device mounted upon the engine, of a driving gear

rotatably mounted in said ignition device and formed with aligned slots in its rear end, a sleeve secured on said cam shaft, and a floating driving means mounted



between said gear and said sleeve and means carried thereby for engaging said gear and said sleeve to form a flexible coupling therebetween.

1,572,256. WRAPPING MACHINE. JOHN VAN BUREN, Brooklyn, N. Y., assignor to American Chicle Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 26, 1920. Serial No. 426,565. 20 Claims. (Cl. 93—7.)



1. Abutment members for holding a wrapper therebetween, the distance between the abutment members being less than the length of the wrapper whereby the wrapper will be flexed, and means for feeding an object to said wrapper.

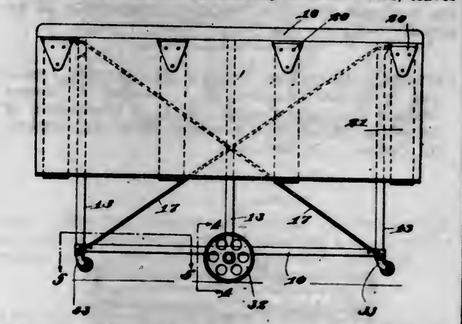
1,572,257. PACKAGING MACHINE. JOHN VAN BUREN, Brooklyn, N. Y., assignor to American Chicle Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 26, 1920. Serial No. 426,566. 34 Claims. (Cl. 93—7.)

1. A curved guide, a resiliently supported platform beyond and transverse to the guide, means for feeding a stream of articles through the guide onto the platform, means for shifting the position of the articles on the platform, an oppositely curved guide, and means for lifting a predetermined number of articles from the platform into said oppositely curved guide.

1,572,258. PIPE-WRAPPING MACHINE. CHARLES F. WIELAND and EMILE JANSEN, San Francisco, Calif.; said Jansen assignor to said Wieland. Filed June 15, 1925. Serial No. 37,146. 13 Claims. (Cl. 242—11.)

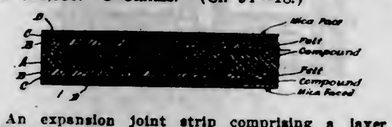
1. In a machine for wrapping pipes and the like, rollers having parallel axes adapted to support and engage a pipe, means rotatably supporting said rollers in a fixed horizontal plane whereby pipes of various sizes are supported with their lower arcs in the same horizontal plane, means for rotating said rollers simultaneously in the same direction and means for traversing said supporting means in a horizontal plane whereby said rollers may be angularly positioned with respect to the pipe.

1,572,259. DEVICE FOR FEEDING MOISTURE TO BANANA STALKS. LORENZO D. WOODS, Cambridge, Iowa, assignor of one-half to John A. Woods, Cambridge, Iowa. Filed June 10, 1924. Serial No. 719,122. 2 Claims. (Cl. 99—2.)



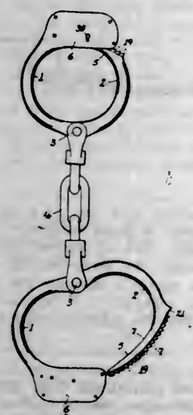
1. A device for supplying moisture to banana stalks, comprising a container having a bottom member and a conical shaped wall member truncated at its upper end, said bottom member having the central portion of its inner face provided with an upwardly extending screw threaded member.

1,572,260. HIDE-CARRYING HORSE AND TRUCK. WALLACE C. WRIGHT, Brookfield, N. H., and DANA H. HARDING, Arlington, Mass., assignors to Harding Engineering Company, East Boston, Mass., a Corporation of Massachusetts. Filed Apr. 16, 1924. Serial No. 706,838. 1 Claim. (Cl. 280—49.)



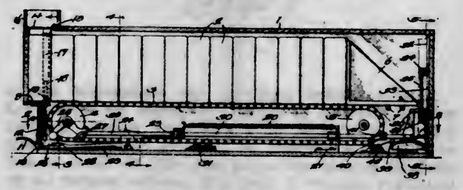
In a combined portable horse and worktable, the combination with a rectangular frame, an axle secured to the under side thereof, centrally located with respect thereto, and extending transversely of the frame, wheels rotatably mounted on said axle, swivel castors centrally mounted on said frame and secured at the ends thereof and normally out of engagement with the floor or ground

when the frame is in horisontal position, upwardly extending supports secured to the top of said frame, a horizontal table secured to the upper ends of said supports and extending longitudinally of said frame, leaves



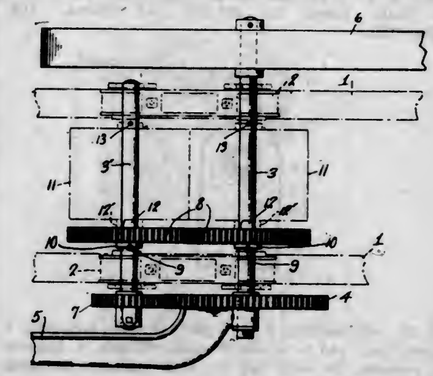
less in thickness than the table hingedly secured to the sides of said table and with the top surfaces thereof lying below the top surface of the table, when the same are in horisontal position, and means for adjustably holding the leaves in any desired angular position relative to the table.

1,572,261. EXPANSION-JOINT STRIP. EDWARD J. YETTER, Denver, Colo. Filed Oct. 31, 1921. Serial No. 511,850. 3 Claims. (Cl. 94—18.)



1. An expansion joint strip comprising a layer of impregnated felt, a relatively thick layer of asphaltic material upon one side of said felt, a relatively thin layer of asphaltic material upon the opposite side of said felt, a second layer of impregnated felt contacting with said thicker layer of asphaltic material, and a coating of finely divided non-adhesive material on the outer face of said thin layer of asphaltic material.

1,572,262. HANDCUFF. ALFRED D. ARBENZELLER, Boston, Mass., assignor to Harrington & Richardson Arms Co., Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 14, 1923. Serial No. 657,316. 10 Claims. (Cl. 70—24.)



1. A hand cuff comprising two pivotally united members, one adapted to be introduced into the other, means for automatically locking them together when the two members are brought near enough together to span a human wrist, and means for automatically unlocking them when brought slightly nearer together than said span, whereby they can be drawn apart in the opposite direction without interference from the lock.

1,572,263. OBJECT-DISPENSING MACHINE. MARSELLUS T. ASH, Chicago, Ill. Filed Mar. 7, 1922. Serial No. 541,728. 2 Claims. (Cl. 211—8.)

1. In a dispensing machine, the combination with a container; of an endless belt in said container and having an upper stretch which serves to support a row of objects that are to be dispensed; an ejector at the discharge end of the belt and positioned to receive objects carried thereto by the belt, said ejector being movable transversely of the belt toward an opening which is formed in the top of the container in line with said ejector; a pawl in actuating relation with the belt and serving to move the belt in a direction to move the objects toward the ejector; a connection between the pawl and ejector serving to move the pawl in an escaping direction when the ejector is operated to eject an object; and a spring connected with the pawl to oppose the escaping movement of the pawl, and, when released, to operate the pawl to move the belt.

1,572,264. POWER-TRANSMISSION MECHANISM. ARLIE BARTLEMAY, Bluffton, Ind., assignor to The Red Cross Manufacturing Co., Bluffton, Ind. Filed Sept. 1, 1921. Serial No. 497,684. 1 Claim. (Cl. 74—7.)

In combination, a pair of spaced bearings arranged in parallelism, a pair of shafts each having apertures disposed to one side of its medial portion with certain ends thereof extending beyond the bearings, pins projecting through the apertures of the shafts, intermeshing gears disposed on the shafts, collars having aligned grooves engaging the pins from one side of the gears, lugs on the opposite sides of the gears in the region of the shafts, other intermeshing gears carried by the shafts on the opposite side of those bearings adjacent the first mentioned gears, a balance wheel secured at the extremity of one of the shafts exteriorly of the adjacent bearing, and means including other pins fixed to the shafts for retaining the first mentioned gears against the adjacent pins thereof.

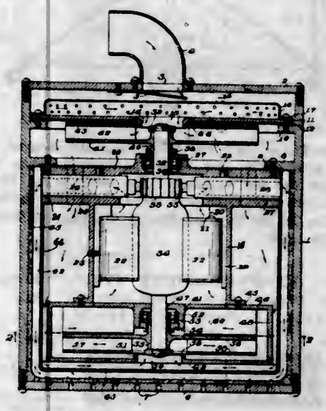
1,572,265. WINDOW REGULATOR. ROBERT W. BOSTWICK and GRANT W. BOSTWICK, Detroit, Mich. Filed Oct. 3, 1924. Serial No. 741,453. 7 Claims. (Cl. 192—8.)

1. In a window regulator, the combination with a member rotatable in opposite directions for raising and lowering a window, of a stationary member provided with teeth, a plurality of members connected to said rotatable member and engageable with the teeth of said stationary member to hold said movable member on opposite sides of its axis from rotation in either direction, and means for releasing said holding members and subsequently rotating said rotatable member in either direction.

1,572,266. PROCESS FOR REDUCING THE VISCOSITY CHARACTERISTICS OF NITROCELLULOSE. LEONARD E. BRANCHEN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 13, 1925. Serial No. 30,082. 11 Claims. (Cl. 260—148.)

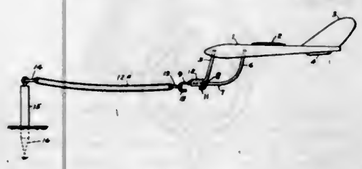
1. The process of treating nitrocellulose, which comprises first softening it with a penetrant liquid, and thereafter acting on it separately with an aqueous solution of an alkali until the viscosity characteristics of the nitrocellulose are reduced.

1,572,267. CAMERA HANDLE AND LATCH. FREDERICK W. BERHM and GEORGE W. ADAMS, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y. a Corporation of New York. Filed Mar. 5, 1924. Serial No. 697,139. 13 Claims. (Cl. 292—152.)



1. In combination, a two part camera including a camera body and a removable back therefor, a fastener for securing the body and the back together, including a movable retaining member on one part adapted to engage a catch on the other part, and a handle mounted upon one of said parts and adapted to be used for operating the retaining member and for carrying the camera.

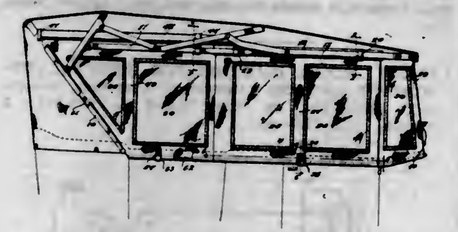
1,572,268. PROCESS OF TREATING MIXED LEAD-ZINC SULPHIDE ORES. NIELS C. CHRISTENSEN, Salt Lake City, Utah. Filed Dec. 31, 1923. Serial No. 683,823. 4 Claims. (Cl. 75—18.)



1. The process of treating lead-zinc ores and the like which consists in mixing said finely ground ores with an acid concentrated brine and thereby dissolving the lead and some of the zinc as chlorides in said brine and driving off the sulphur combined with said metals as H_2S and treating said H_2S with lime to form calcium sulph-hydrate and using said calcium sulph-hydrate to precipitate from said brine solution as sulphides first the lead, and thereafter the zinc, substantially as described.

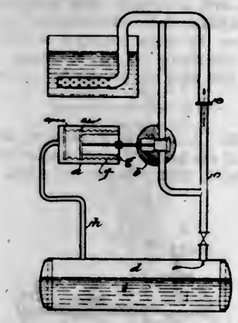
1,572,269. PNEUMATIC POWER GENERATOR. STANLEY S. CRAMER, Camden, N. J., assignor to Motora Holding Company, Camden, N. J., a Corporation of Delaware. Filed June 5, 1920. Serial No. 386,872. 12 Claims. (Cl. 230—11.)

1. A pneumatic power producing device, comprising an outer shell, an inner casing, and a combined motor and fan unit within said casing and operative to cause a jacket of fluid to flow continuously between said shell and said casing throughout the longitudinal extent of said casing while said unit is in operation.



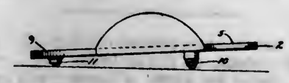
1,572,270. TOY AIRPLANE. DANIEL I. DWYER, Dayton, Ohio, assignor of one-half to Earl A. Smith, Dayton, Ohio. Filed Feb. 2, 1925. Serial No. 6,211. 8 Claims. (Cl. 244—12.)

1. In combination in a toy, of a toy airplane having a fuselage member, a plane surface, a rudder surface, a stabilizer surface, and a landing skid, means of detachably connecting the plane landing skid to an elastic catapult, and a catapult, whereby the plane may be projected over the catapult and detached therefrom upon being released and the catapult being allowed to actuate the plane.



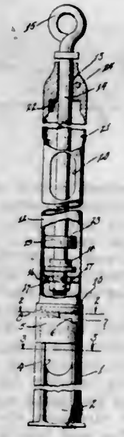
1,572,271. SIDE CLOSURE FOR MOTOR VEHICLES. BERNHARD EDWARDS, Sanford, Fla. Filed Jan. 16, 1924. Serial No. 686,652. 3 Claims. (Cl. 296—143.)

1. In a side closure for motor vehicles, a casing having end plates, a roller mounted upon said end plates to extend within the casing, and a curtain carried by the roller to be withdrawn from the casing and provided



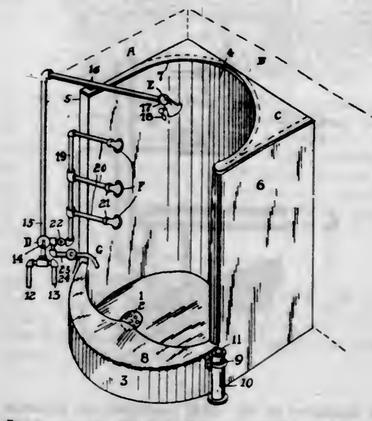
with a front flap adapted to be extended forwardly from the curtain, one end plate of the casing being provided with a slot to accommodate the flap when extended.

1,572,272. AUTOMATIC MEANS FOR LETTING OFF STEAM FROM A CONTAINER HAVING IN IT A BOILING LIQUID. OTTO EINSLER, Leverkusen, near Cologne, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Nov. 25, 1924. Serial No. 752,263. 1 Claim. (Cl. 50—10.)



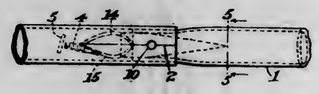
In combination with a vessel for containing boiling liquid, a main conduit connected with the top of the vessel for withdrawing steam therefrom, means in the said conduit a distance from the vessel, defining a permanent throttle, a by-pass connected to said conduit on opposite sides of the throttle and means responsive to the pressure within the vessel for controlling the flow of steam through the by-pass, said means being constructed and arranged to prevent flow of steam through the by-pass while the pressure within the vessel exceeds a critical limit, to allow unimpeded flow of steam through the by-pass when the pressure within the vessel drops below a lower critical limit and to vary the resistance to the flow of steam through the by-pass for pressures in the vessel, between said critical limits.

1,572,273. BABY CRAWLER. NINA MAY ELTON, Los Angeles, Calif. Filed June 6, 1925. Serial No. 35,381. 4 Claims. (Cl. 208—182.)



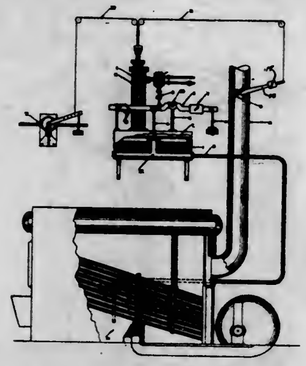
1. A baby crawler comprising a bottom member having upright side guards to keep a baby in place on its stomach; the front and the rear ends of the said member being sharply inwardly recessed at the margin to form arm and leg spaces at the ends of the guards to enable foot and hand propulsion.

1,572,274. COMBINATION SAND PUMP AND DRILL. SAMUEL ROSCOE EVANS and SAMUEL WILSON COLLINS, Tulsa, Okla. Filed Aug. 18, 1924. Serial No. 732,817. 5 Claims. (Cl. 166—19.)



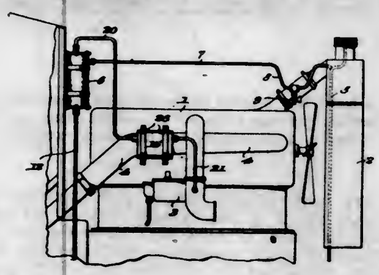
1. A device of the character described, comprising a well drill, a pump having a cylinder and a piston above said drill and a piston rod for said piston extending out of said cylinder and arranged for engagement with a line, said cylinder having an enlarged portion at the upper end thereof greater in diameter than the diameter of said piston.

1,572,275. COMBINATION BATHING FIXTURE. EDWIN J. EWING, Coraopolis Borough, Pa., assignor of one-half to John Evans, Westwood, Pa. Filed Mar. 29, 1924. Serial No. 702,764. 3 Claims. (Cl. 4—148.)



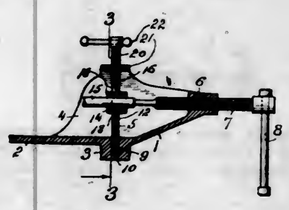
1. In a corner bathing fixture of the character described, the combination in one structure of a bath tub and a shower bath and comprising a base of flattened oval shape having a low front wall to form a shallow tub adapted for foot and baby bathing purposes, and the side and rear walls being extended upwardly to form a shower bath enclosure, one of the side walls of the fixture extending along one wall of the room while the rounded rear end of the fixture abuts against the other wall of the room, and a wing wall for the fixture connected at its front to the front edge of the outer side wall of the fixture and extending rearwardly, parallel to the longitudinal axis of the fixture to the room wall.

1,572,276. METHOD OF SPLICING UNVULCANIZED RUBBER TUBES FOR AUTOMOBILE TIRES AND THE LIKE. WALTER L. FAIRCHILD, New York, N. Y. Filed Feb. 24, 1925. Serial No. 11,006. 3 Claims. (Cl. 154—14.)



1. The herein described method of forming a pneumatic tube of unvulcanized rubber which consists of providing a section of said tubing of suitable length, providing a slit in one end of said section, mounting a mandrel in the other end of said section, bringing said ends together in lapped relation, kneading together the lapped portions of said tube so that the lapped portions thereof are united by cohesion using said mandrel as a base, cutting an aperture through the lapped ends of the tube using said mandrel as a base, removing the mandrel through said slit, inserting a valve stem through said aperture, bringing together the edges of said slit, mounting an apertured base patch upon said tube so that the aperture thereof surrounds the neck of the valve stem, and then kneading said tube in the vicinity of said valve stem and slit so that contacting surfaces of the wall of the tube are united by cohesion.

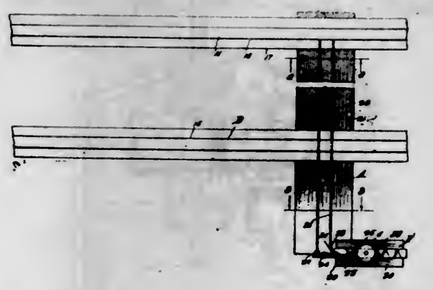
1,572,277. AUTOMATIC DRAFT REGULATOR FOR FURNACES. LOUIS P. FESSENDEN and HARRY B. ELLIS, Sheboygan, Wis., assignors to The Fessenden-Ellis Company, Sheboygan, Wis., a Corporation of Wisconsin. Filed Aug. 8, 1921. Serial No. 490,631. 1 Claim. (Cl. 236—15.)



In a regulator of the class described, an inverted cup piston, a liquid sealed cylinder for the same said piston having an open connection for connection to the furnace to be controlled, a fulcrumed beam, means connecting the piston to one side of the beam, an adjustable counter weight connected to the other side of the beam, a hydraulic working cylinder for operating a furnace control member, a pilot valve for said operating cylinder, said valve being reversible and having a neutral position, said beam being normally balanced when a predetermined gas pressure acts upon said cup piston, said pilot valve being connected to said beam and being in neutral position when the beam is normally balanced, and spring means for said beam to afford increasing resistance for increasing deflection of the beam either way from normally balanced position, said liquid sealed cup piston serving as a dashpot to steady the weighted beam against vibration.

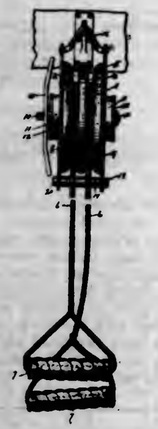
1,572,278. STEAM INJECTOR FOR INTERNAL-COMBUSTION ENGINES. HUBERT G. FLETCHER, Lonoke, Ark. Filed Feb. 26, 1924. Serial No. 695,282. 3 Claims. (Cl. 123—25.)

1. In a steam injector for internal combustion engines, the combination with a vacuum tank independent of the usual gasoline vacuum tank, of means for supplying vapor or steam from the engine radiator to said tank, and a conduit for delivering vapor or steam from said vacuum tank to mix with the charge for the engine.



1,572,279. VISE. ALBERT F. FLORENCE, Kansas City, Mo., assignor of one-half to Leo G. Becker, Kansas City, Mo. Filed Feb. 3, 1925. Serial No. 6,525. 4 Claims. (Cl. 29—85.)

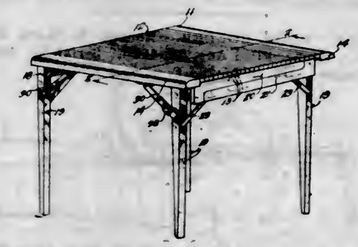
1. In a vise of the kind described, a base adapted to be mounted on a suitable support and having oppositely disposed vertical guides, and provided with a longitudinal threaded hole and a transverse guide, a screw fitted in said threaded hole, a supporting plate slidably mounted in said vertical guides and adapted to support a shaft in end alinement with said screw and to engage and hold a ring or a bearing tightly fitted on said shaft, when the latter is forced endwise by the screw, said plate having an inclined lower edge, and a wedge mounted in said transverse guide and having an inclined surface for slidable engagement with the inclined edge of said plate, by which the latter is forced upwardly, when the wedge is driven in the proper direction.



1,572,280. RAILROAD-CROSSING SIGNAL. LEE FRASIER and CONNELL C. HINER, Waco, Tex. Filed Jan. 26, 1925. Serial No. 4,867. 5 Claims. (Cl. 246—294.)

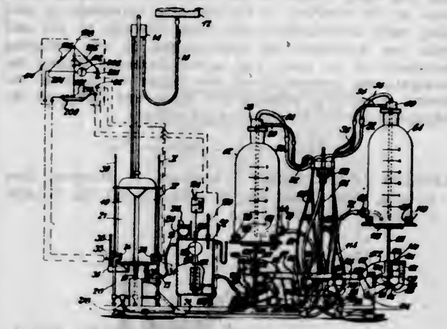
1. In a warning device for railroad crossings, a signal disposed adjacent to the crossing, a pull link for the signal, a rock shaft extending transversely of the track, means operatively connecting the rock shaft with the pull link, a pull rod operatively connected to the crank shaft for causing movement of the shaft upon longitudinal movement of the pull rod, a triangular shaped plate rockably associated with one of the rails of a railroad track at a point remote from the crossing, means

for operatively connecting the plate with the pull rod, and a track trip carried by the plate at a point spaced from the pivot of the plate and normally disposed in the path of the flanges of the car train wheels.



1,572,281. EXERCISER. BYRON G. FAY, Glendale, Calif. Filed July 23, 1923. Serial No. 653,149. 2 Claims. (Cl. 272—79.)

2. An exerciser comprising in combination a duplex pulley-like member having two cable channels, a cable wound around said member with its opposite ends extended therefrom and provided with gripping means, side plates for supporting said member, yielding friction means for creating friction on said member to regulate the ease with which it can be turned, means for regulating said friction, and means for supporting said exerciser whereby said gripping means on said cable ends can be alternately pulled and released, substantially as described.



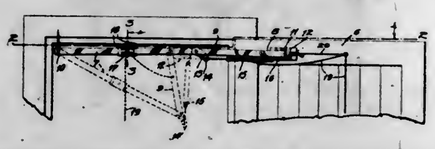
1,572,282. FOLDABLE TABLE. EPHRAIM P. GRIGNON, Appleton, Wis. Filed May 28, 1923. Serial No. 641,955. 7 Claims. (Cl. 45—11.)

2. In a collapsible table a top comprising a plurality of parallel disposed slats hingedly secured together; legs hingedly secured to said top adapted to fold in positions parallel and adjacent to said slats; and a supporting member hingedly carried by each of said legs for movement in a horizontal plane whereby they may be folded to occupy positions parallel to said slats and opened to extend transversely of said slats and to support the same, each of said supporting members being of a length

approximately equal to the length of the table top whereby they may be positioned in superposed vertical pairs when the table is in open position.

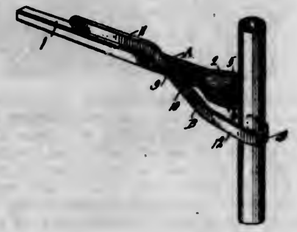
1,572,283. GAS CALORIMETER. ROBERT G. GRISWOLD, Westfield, N. J., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed July 3, 1922. Serial No. 572,554. 19 Claims. (Cl. 73—184.)

1. A method of non-intermittently determining the caloric value of a gas which comprises burning the gas in heat interchanging relation with a volume of water proportionate to the volume of gas burned, continuously feeding the gas to be burned by displacing the gas from a container with the water being heated, and registering the rise in temperature of the water due to the combustion of the said gas in units corresponding to the heat value of the gas.



1,572,284. WINDOW CHANNEL. ERNEST M. GUILLAUME, Worcester, Mass., assignor to The Felters Company, Inc., Boston, Mass., a Corporation of Massachusetts. Filed July 22, 1922. Serial No. 576,834. 2 Claims. (Cl. 296—44.5.)

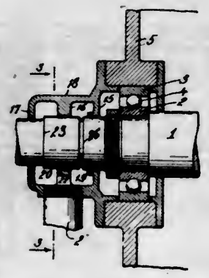
2. A window channel comprising a backing strip and side strips secured thereto forming a substantially U shaped channel, and stitching extending through and



substantially across the width of the side strips and into the backing strip for stiffening and holding the side strips in proper position.

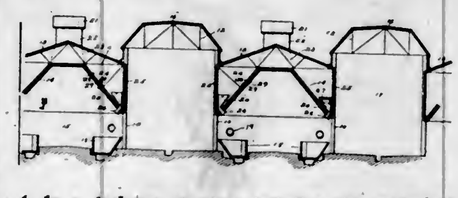
1,572,285. DOOR HOLDER. ROBERT R. HAGE, Minneapolis, Minn. Filed Aug. 24, 1923. Serial No. 659,109. 9 Claims. (Cl. 292—263.)

1. A swinging door holder comprising a toggle having inner and outer end links, an intermediate link, an offset bracket, said inner end link having means for attaching the same to a door frame, to which a swinging door is hinged, for compound swinging movement both in the direction of the swinging movement of said door and at right angles to such movement, said bracket having means for attaching the same to said door, the outer end link being hinged to the bracket for swinging movement in the direction of the swinging movement of said door, said intermediate link being pivoted to the end links for movement at right angles to the swinging movement of the door, and a stop arranged during the straightening movement of the toggle to position the pivotal connection between the inner end link and the intermediate link beyond a dead center.



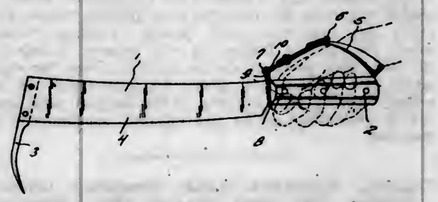
1,572,286. PIPE HOIST. LYNDALL O. HANSON, New Auburn, Wis. Filed May 6, 1924. Serial No. 711,420. 1 Claim. (Cl. 294—104.)

An implement of the class described including in combination a bar and a lever pivoted intermediate its ends to an intermediate portion of the bar, said bar including an elongafed shank, a head formed on one end of the shank, a jaw associated with the head, said lever including an intermediate portion, a handle extending from one end of the intermediate portion at an angle thereto, an arm extending from the other end of the intermediate portion and terminating in a hook extension having interior corrugations.



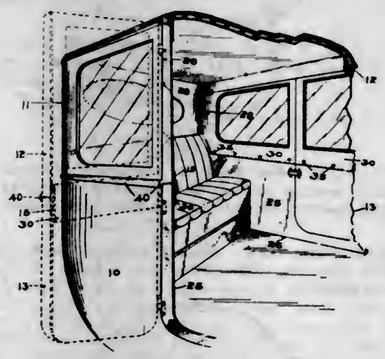
1,572,287. BEARING CAP. EDWARD HEITMAN, Jersey City, and JOHN F. TRUDEAU, Bayonne, N. J., assignors to Electro Dynamic Company, Bayonne, N. J., a Corporation of New Jersey. Filed Aug. 23, 1921. Serial No. 494,619. 4 Claims. (Cl. 308—134.)

1. In a device for excluding water from shaft bearings, a bearing cap recessed to form with the shaft an annular chamber and having an end wall closely surrounding but spaced from the shaft so as to admit a relatively thin annular stream of water into the chamber when the bearing is submerged, a water-deflecting element surrounding the shaft within said annular chamber in the path of the annular stream for acting to



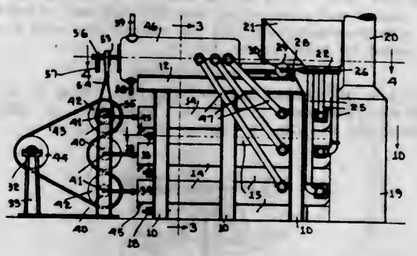
direct the stream away from the shaft and onto the walls of the chamber, and means for providing an unrestricted flow of said water from said annular chamber.

1,572,288. MEANS FOR ELIMINATING VAPOR AND PREVENTING CONDENSATION AND FOR VENTILATION. CHARLES J. HEUSER, Paterson, N. J. Filed Oct. 4, 1921. Serial No. 505,427. 2 Claims. (Cl. 98—27.)



1. In a dyehouse structure including side walls and a series of vats positioned adjacent each side wall, a pyramidal insulated ceiling section supported by the side walls, the sides of said section converging upwardly to form with said structure an insulated air space above said section, said section being truncated, an outlet duct at the truncated portion through said air space, said vats being coincident with the lower edges of the section, means for heating said insulated air space, said means having a plurality of outlets for directing a stream of heated air to each vat.

1,572,289. HOLDER FOR BEET-TOPPERS' KNIVES. WILLIAM HOGAN, Fillmore, Utah. Filed July 21, 1924. Serial No. 727,260. 2 Claims. (Cl. 224—28.)



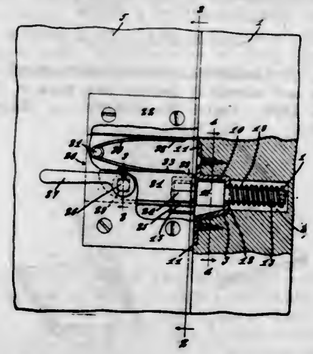
1. In combination with a lifting element and the handle therefor, a sling, a hook carried by the sling, a strand of wire clamped back upon itself and extending around the lifting element adjacent the handle, the free ends of the wire having loops formed therein, said looped ends overlapping each other and registering to receive said hook.

1,572,290. JOINT-MASKING MEANS FOR DEMOUNTABLE AUTOMOBILE TOPS. MATTHEW R. HULL, Connersville, Ind., assignor to Rex Manufacturing Company, Connersville, Ind., a Corporation of Indiana. Filed Jan. 2, 1920. Serial No. 349,015. 5 Claims. (Cl. 296—103.)

1. The combination with the lower open section of an automobile body, of a detachable top and upper side section having a bottom rim conforming to the top rim of said lower section, said top section having an external depending flange in the form of an ornamental bead masking the joint between the upper and lower sections externally and a lining for said upper section having a depending apron masking the joint between the upper and lower sections internally.

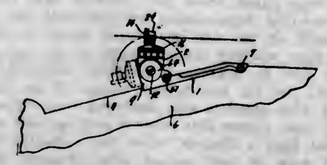
1,572,291. CONTINUOUS ORE-TREATING FURNACE. WILLIAM P. JOSSON, Philadelphia, Pa., assignor to Harvey S. Souder, Souderton, Pa. Filed Aug. 15, 1924. Serial No. 732,243. 4 Claims. (Cl. 266—16.)

1. A device of the kind described, a retort, means for heating said retort, means for intermittently supplying ore to the said retort, means for intermittently moving the ore longitudinally of the retort, means for drawing off fumes from the retort, and means for washing the draw-off fumes and precipitating the solid matter therein.



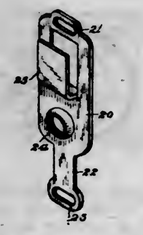
1,572,292. CONTROLLING DEVICE FOR TWO-CYCLE EXPLOSIVE ENGINES. JOHN JOHNSON, Percival, Saskatchewan, Canada. Filed May 1, 1923. Serial No. 636,006. 6 Claims. (Cl. 123—41.)

1. In an automatic spark controlling device for a two cycle explosive engine, the combination with the crank shaft thereof, of a counter shaft driven by the crank shaft, a commutator rotatably mounted on the shaft and provided with a pair of spaced insulated contact plates, shiftable brushes riding the face of the commutator and engageable with the plates, means for effecting an electrical circuit with one or other of the brushes in the shifting thereof, a rotary plate permanently secured to the counter shaft, pairs of opposing contacts carried by the plate and the commutator, said commutator contacts



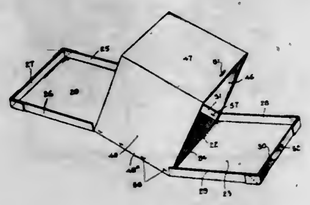
being in electrical connection with the plates of the commutator and those of the rotary plate being grounded, and the said pairs of contacts forming switches which open and close, depending on the direction of rotation of the counter shaft.

1,572,293. DOOR LATCH. MICHAEL H. JUDGE, Greeley, Nebr. Filed Oct. 11, 1923. Serial No. 667,962. 4 Claims. (Cl. 292—140.)



1. The combination of a pivotally mounted catch member having a head, and a latch member having a hollow head to fit over said catch head, said latch being pivoted to swing into and out of engagement with said catch.

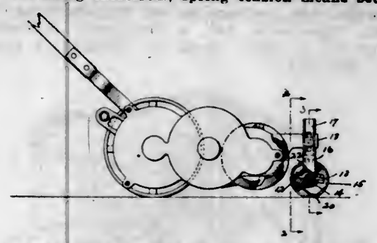
1,572,294. GUN SIGHT. DEAN W. KING, San Francisco, Calif. Filed June 25, 1923. Serial No. 647,588. 3 Claims. (Cl. 33—57.)



3. A gun sight of the character described comprising a base having parallel lips projecting therefrom, a block pivoted between the lips having a sight element disposed therein with freedom of longitudinal adjustability and a nut revolubly secured to the block and threaded on the sight element for effecting such adjustment, a cam mounted in a lateral recess in the block having a projection extending into a recess in the nut for locking the same, and a stationary pin extending through one of the lips into the recess in the block so as to ride on the cam and cause the same to withdraw the projection from the recess in the nut when the block is swung on its pivot.

1,572,295. **BRACKET.** HENRY M. KOPSKY, Philadelphia, Pa. Filed June 20, 1924, Serial No. 721,313. Renewed Aug. 13, 1925. 6 Claims. (Cl. 240—73.)

1. A bracket of the character described having a body portion with apertures adjacent its ends, a hook spaced from the body portion of said bracket between said apertures, and also a threaded aperture between said first-named apertures; said hook being adapted either with or independently of said last named aperture to receive and support a part of a fixture.

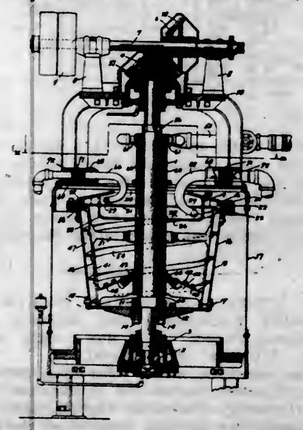


1,572,296. **COLLAPSIBLE MILLINERY BOX.** JOSEPH KRAMER and ALBERT H. ISRAEL, New York, N. Y. Filed July 9, 1924. Serial No. 725,073. 1 Claim. (Cl. 229—23.)

A collapsible box made from two blanks, the first blank forming the two opposite side panels and the front panel of the box with score lines located between said side panels and said front panel; the second blank forming the top and bottom covers and the rear panel of the box, score lines between said top and bottom covers and said rear panel connecting flaps at the opposite sides of said rear panel, score lines between said rear panel and connecting flaps, means for attaching the opposite side panels of the first mentioned blank to said connecting flaps whereby the side walls of the box will fold laterally and in uncreased condition when the box is collapsed; the top and bottom covers of the box being provided with opposite side flaps and front flaps defined by score lines, corner slits between said opposite side flaps and front flaps, a diagonal score line radiating from the base of each of said corner slits whereby when the slitted extremities of the end flaps are secured to the adjacent front flaps the corners of said top and bottom covers may be collapsed along said diagonal score lines, said flaps being arranged to engage the outer walls of the body of the box when in set up position.

1,572,297. **LAWN-MOWER ATTACHMENT.** ARTHUR LAVER, Bayside, N. Y. Filed Apr. 9, 1923. Serial No. 630,718. 2 Claims. (Cl. 56—249.)

1. The combination with a lawn mower having a frame and a cutting mechanism of a comb mounted on the mower in advance of the cutting mechanism thereof, said comb comprising a weighted back and forwardly advanced tines extending therefrom, spring tension means between

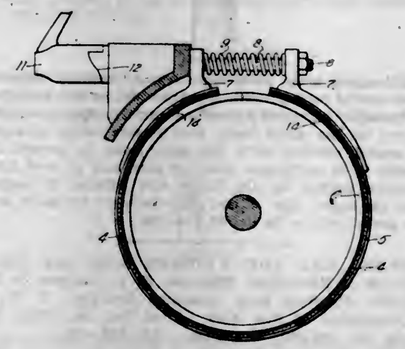


said back and mower frame for resiliently retaining said comb in working position, and means for adjusting the working position of said comb relative to the mower.

1,572,298. **RIM TOOL.** ALMA J. LUNDAHL, Logan, Utah. Filed June 23, 1922. Serial No. 570,346. 2 Claims. (Cl. 157—1.)

1. A rim tool including a lever provided at its forward end with a cam head, links pivotally connected with the forward end portion of the lever in the rear of the head, and rim gripping elements carried by said links and engageable with the ends of a split rim to support said lever in a position having said cam head disposed to act against and press one of said rim ends out of register with the other end of the rim whereby the lever may be rocked for breaking the rim.

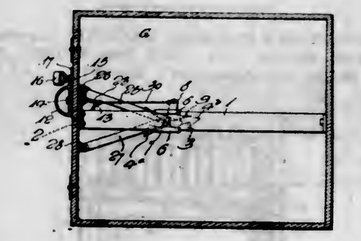
1,572,299. **CENTRIFUGAL SEPARATOR.** FRED W. MCENTIRE, Salt Lake City, Utah. Filed June 18, 1923. Serial No. 646,170. 5 Claims. (Cl. 233—7.)



1. In a separator of the character described, a basket, a basket frame rotatably mounted therein, means for rotating the basket and the basket frame at slightly different speeds and means for feeding material to be separated into the basket whereby the heavier particles are forced into the space between the basket and the basket frame, the latter frame consisting of a plurality of upright members presenting streamlined inner faces so as to present a minimum resistance to the flow of the material.

1,572,300. **HEATING DEVICE.** MARY R. MAX, Pittsburgh, Pa. Filed July 19, 1924. Serial No. 727,029. 1 Claim. (Cl. 219—19.)

A heating device for liquids used in enteroclysis and protoclysis which consists of an inner glass tube for receiving the liquid to be heated, a porcelain tube surrounding the said glass tube to protect the same, a ribbon conductor wound on the said porcelain tube, and an insulating cover about said coil of wire, and means for attaching the coil of wire to a source of electric current, a valve for feeding the liquid to be heated to the glass tube at the rate of from 40 to 60 drops per minute, the relation between the heating and conducting surfaces of the device being such that the temperature of the liquid passing through the apparatus at the rate set forth will not vary from the limits of 103° to 108° F.

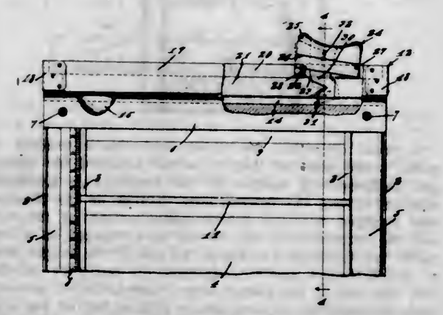


1,572,301. **LINING FOR TRANSMISSION AND BRAKE BANDS.** HARRY J. MEAD, Philadelphia, Pa. Filed Dec. 4, 1924. Serial No. 753,786. 8 Claims. (Cl. 188—259.)

5. A compound for treating the ends of transmission or brake bands composed of starch, gelatine and flake graphite in substantially the proportions described.

1,572,302. **MANUALLY-OPERATED MECHANISM FOR OPERATING AND SECURING SWINGING DOORS.** ANTHONY F. MIMONNE, Polonia, Wis. Filed June 5, 1924. Serial No. 718,124. 2 Claims. (Cl. 292—137.)

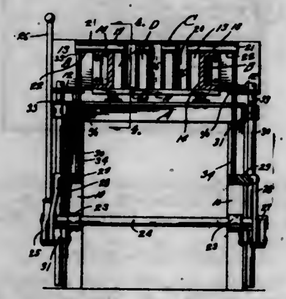
1. A mechanism of the character described comprising a suitably mounted track bar, lugs projecting therefrom, a carriage slidably mounted on said track bar, a latch pivotally mounted on said carriage, said latch comprising oppositely extending catch arms and a laterally projecting crank arm, draw-bars pivotally connected at their inner ends with said carriage and at their outer ends with a pair of doors, operatively connected handles disposed no opposite sides of one of said doors, and a latch releasing mechanism connected with one of said



handles and with the crank arm of said latch, whereby the turning of said handle will actuate the latch for disengaging the catch arms thereof from the lugs on said track bar.

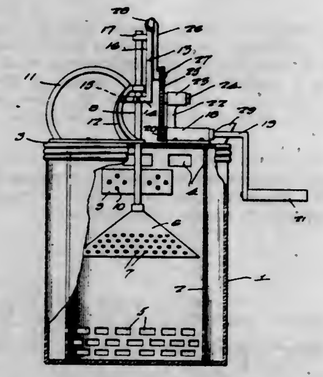
1,572,303. **METHOD OF FORMING INTERNAL KEYS ON TUBES.** WILLIAM H. MILLSPAUGH, Sandusky, Ohio, assignor to The Paper & Textile Machinery Co., Sandusky, Ohio, a Corporation of Ohio. Filed June 22, 1923. Serial No. 647,099. 3 Claims. (Cl. 29—156.)

1. A method of forming internal keys on tubes which consists in forming the tube with a longitudinal projection on its outer surface providing excess metal thereon, inserting a member in the tube having a longitudinal keyway disposed in alinement with the excess metal and pressing the metal of the tube into said keyway.



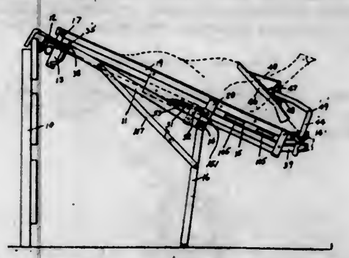
1,572,304. **OILCLOTH FIXTURE.** WILLIAM BUNTING MORTON, Beatrice, Nebr. Filed Nov. 24, 1922. Serial No. 603,042. 2 Claims. (Cl. 164—84.)

1. In a device of the class described, a cabinet provided in its top with a compartment for the reception of a roll of material, and including a member over which the material may be extended from the roll, a frame hinged to the cabinet and cooperating with said member to hold the material thereon, a carriage movable along



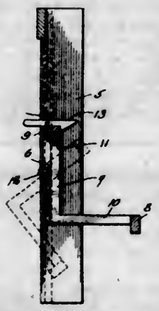
the frame, and a cutter movable on the carriage, said member having a groove which receives the cutter when the cutter is moved on the carriage and when the carriage is moved on the frame.

1,572,305. BLOCK-MOLDING MACHINE. ANDERS P. NELSON, Spencer, Iowa. Filed June 8, 1925. Serial No. 35,702. 11 Claims. (Cl. 25—41.)



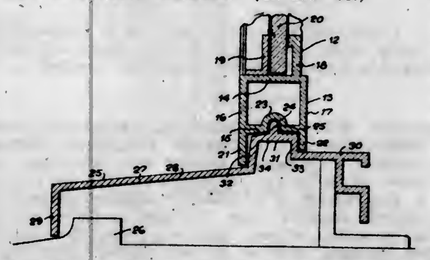
1. A block molding machine comprising a frame for supporting the pallet, a mold box supported on said pallet comprising side and end members, hollow cores resting on said pallet within said mold box, a hollow bar connecting said cores, the hollow space in said cores being in communication with the hollow space in said bar.

1,572,306. CHURN. FLORENCE NORTHCUTT, Caldwell, Kans. Filed Nov. 13, 1924. Serial No. 749,650. 1 Claim. (Cl. 259—61.)



A churn operating mechanism including a bracket, a spiral track mounted thereon, a rod mounted for rotary and reciprocatory motion in the bracket, an L-shaped member having the intermediate portion of the shorter arm engaged with an intermediate portion of the rod and the extremity of the shorter arm engaged with the spiral track, means for fixing the end of the longer arm of the L-shaped member adjacent an extremity of the rod, said end of the longer arm of the L-shaped member being in the form of a socket, a pitman having one end in the form of a pawl receivable in the socket, a rotatably mounted wheel, means for rotating the wheel, and means for eccentrically connecting the pitman to the wheel, whereby the rotation of the wheel will cause a rotary and reciprocatory motion to be imparted to the rod through the intermediacy of the L-shaped member and its engagement with the spiral track.

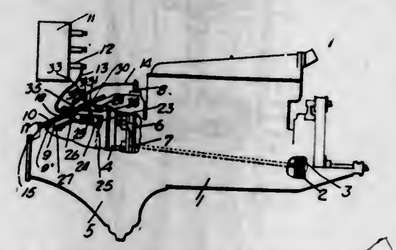
1,572,307. DEVICE FOR HOLDING PIGS AND LIKE ANIMALS. WILLIAM D. NOTTINGHAM, Fowlerton, Ind. Filed Dec. 23, 1924. Serial No. 757,643. 3 Claims. (Cl. 119—103.)



1. In an animal retainer of the character described the combination of a support, a pair of leg clamping members pivotally supported thereby, and a single means for moving simultaneously said leg clamping members into clamping relation with and adjacent the support.

1,572,308. GRATE. WILLIAM ARNOLD OWEN, Salisbury, N. C. Filed May 22, 1925. Serial No. 32,177. 1 Claim. (Cl. 126—164.)

A dumping grate including a frame, inwardly extended pins secured to the frame, a grate body portion including an inwardly extended supporting surface, fingers forming a part of the grate body, said fingers being arranged in spaced relation with the grate body to permit the fingers to be positioned over the pins, and pivoted latch members carried by the frame and adapted to engage over the upper edge of the grate body to normally hold the grate body in its active position.



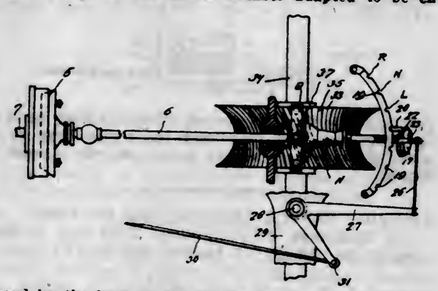
1,572,309. SILL FOR WINDOWS AND THE LIKE. JACOB A. RAPPAPORT, Brooklyn, N. Y., assignor to Reliance Fireproof Door Company, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 26, 1922. Serial No. 596,990. 6 Claims. (Cl. 189—75.)

1. In a metal window frame, a sash rail having a pendant flange at each side projecting beyond the lower face of the rail and defining a channel, the bottom wall

of which is defined by said lower face, said lower face having a longitudinally extending groove intermediate its side edges.

1,572,310. OIL-SUPPLY-INDICATING DEVICE FOR AUTOMOBILE ENGINES. ALFRED CALIXTE RIOUX, Claresholm, Alberta, Canada. Filed Feb. 16, 1924. Serial No. 693,355. 1 Claim. (Cl. 123—146.5.)

In an automobile engine, the combination with the transmission casing having the usual opening set in an incline and a cover for such opening, of a pan adapted to receive the oil thrown up by the fly wheel and having an orifice in the bottom thereof through which such received oil is adapted to leak, and a counterweight lever secured to the pan forming with the pan generally an obtuse angle, a pivot mounting for the pan carried by the cover adjacent the apex of the aforesaid angle, an arc shaped rod pivotally mounted at its lower end to the pan bottom within the pan and extending outward freely through the cover and insulated therefrom, a contact finger carried by the outer end of the rod, and a stationary contact carried by the cover and insulated therefrom, such contact finger forming the terminals of an ignition circuit, such contacts being held in engagement by the weight of the oil within the pan and adapted to break contacts as the oil leaks out of the pan through the aforesaid orifice.

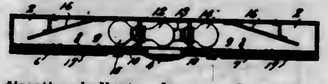


1,572,311. AUXILIARY AIR INLET. FREDERICK WILLIAM ROMERIL, Raymond, Alberta, Canada. Filed Oct. 22, 1921. Serial No. 509,588. 1 Claim. (Cl. 48—180.)

An auxiliary air inlet for internal combustion engines comprising a central orificed plate secured between the carburetor outlet flange and the lower intake manifold flange, an imperforate hollow conical member inserted into the orifice in the plate with its smaller end directed towards the intake manifold, said plate having an auxiliary air inlet extending transversely therethrough and opening into the central orifice intermediately of the length of the truncated conical member, said inlet disposed substantially tangentially to the central orifice.

1,572,312. TRANSMISSION. WILLIAM J. RYAN, Gary, Ind. Filed July 1, 1925. Serial No. 40,860. 3 Claims. (Cl. 74—36.)

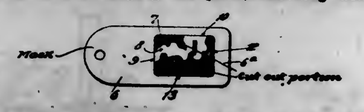
1. A transmission mechanism of the class described including a driving shaft, a driving member, a universal joint between the driving shaft and the driving member, means for disposing the driving member at different angles to the driving shaft, lugs on the driving member, a driven member, lugs on the driven member adapted to be engaged by the lugs on the driving member, a housing extending from the driving member, a shifting member in the housing, and means for actuating the shifting member.



1,572,313. HOSIERY PROTECTOR. JOSEPH SARAR, St. Louis, Mo. Filed Nov. 28, 1924. Serial No. 752,558. 4 Claims. (Cl. 36—1.5.)

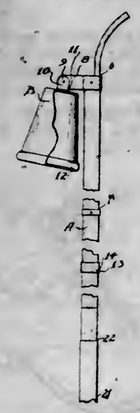
1. A hosiery protector comprising an ankle-embracing portion having an outer facing of soft leather material and the general form of a gaiter, said ankle-embracing portion being adapted to embrace the ankle of the wearer with its lower edge above the top of the shoe, and a celluloid strip depending from the said lower edge of the ankle-embracing portion and adapted to extend below the top of the shoe on the inside thereof.

1,572,314. DIRECTION INDICATOR. EMERY N. SARBER, Brighouse, Lulu Island, British Columbia, Canada. Filed Mar. 30, 1923. Serial No. 628,829. 3 Claims. (Cl. 177—329.)



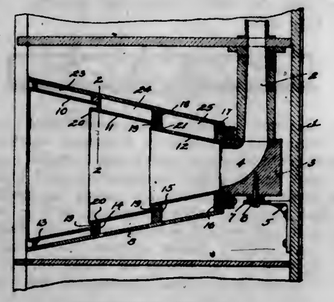
1. A direction indicator for a road vehicle, said indicator comprising a relatively elongated shallow casing the outer plate of which casing has a medial portion removed and has a glazed aperture on each side of the medial space, a plate removably closing the medial space, said plate having a glazed aperture with a wall surrounding it and extending backward to the back of the casing, incandescent lamps secured to the backwardly projecting wall of the medial plate and adapted to separately illumine each glazed aperture of the casing.

1,572,315. MASK SET FOR MULTIPLE EXPOSURES IN MOVING-PICTURE CAMERAS AND PROCESS OF MAKING THE SAME. EDWARD SCHOLL, New York, N. Y., assignor to D. W. Griffith, Incorporated, New York, N. Y., a Corporation of Maryland. Filed Feb. 21, 1923. Serial No. 620,462. 4 Claims. (Cl. 95—79.)



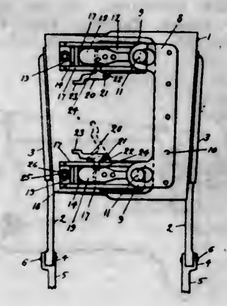
1. A process of making a plate of a mask set for multiple exposures in a moving picture camera which consists

in exposing a sensitised plate so that an image is thrown directly upon it in the place where the mask is to be used and then developing the plate, outlining with an



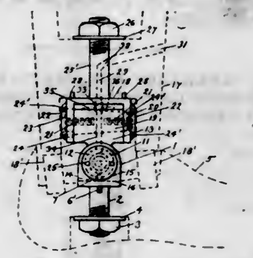
etching needle the form desired, protecting other parts of the plate and then permitting the etched lines to be eaten by an acid or similar means, whereby a mask is formed.

1,572,316. CANDLE LIGHTER AND SNUFFER. ANTON SCHROEDER, St. Paul, Minn. Filed Sept. 8, 1924. Serial No. 736,486. 2 Claims. (Cl. 67—6.)



1. A combined candle lighter and snuffer, comprising a handle, a cup-shaped extinguishing member pivotally connected thereto, a tubular taper holder fixedly connected to the handle, a rod slidably mounted on the handle, and spring jaws connected to the rod to enter said tubular taper holder to be compressed thereby to grip a taper.

1,572,317. SOUND AMPLIFIER. CARL SCRABIC, Urbana, Ohio. Filed June 6, 1923. Serial No. 643,770. 2 Claims. (Cl. 181—27.)

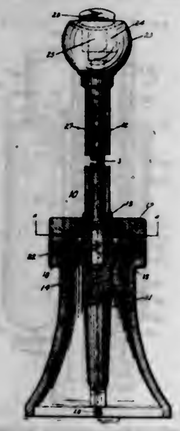


1. An amplifier for talking machines comprising a main amplifier, auxiliary amplifiers located therein and being of hollow frusto conical formation, rings interposed between the walls of the main amplifier and the auxiliary amplifiers, said rings having sound passages and resonant bridge pieces, the latter engaging the auxiliary amplifier to hold the same in spaced relation from each other and from the wall of the main amplifier.

1,572,318. MECHANICAL THIGH-CORSET-LOCKING DEVICE FOR ARTIFICIAL LIMBS. ALEXANDER D. SCULLY, New York, N. Y. Filed July 8, 1925. Serial No. 42,196. 4 Claims. (Cl. 3—2.)

1. In a mechanical thigh corset locking device for artificial limbs, the combination with a corset, a plurality of plates attached to one side of said corset, transverse slots in said plates, slidably mounted members on said plates, lugs on said members adapted to engage said slots, handles on said members for manually disengaging said lugs from said slots, hooks on said members, and eye clasps attached to the other side of said corset adapted to engage said hooks.

1,572,319. MECHANICAL ANKLE-MOVEMENT DEVICE for ARTIFICIAL LIMBS. ALEXANDER D. SCULLY, New York, N. Y. Filed July 8, 1925. Serial No. 42,197. 1 Claim. (Cl. 3—6.)

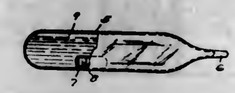


In a mechanical ankle movement device, the combination with a lower clevis, a threaded extension on said clevis adapted to be attached to an artificial foot, an upper clevis, a threaded extension on said upper clevis adapted to be attached to an artificial calf, a connecting block slidably fitted into said clevises, tapered pins forming pivoted connections between said clevises and said connecting block, means to prevent said clevises from rotation in said artificial foot and calf, and a plurality of resilient members wedged between said artificial foot and said calf.

1,572,320. LOCK FOR GEAR-SHIFT LEVERS AND THE LIKE. JOHN H. SHAW, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn., a Corporation of Connecticut. Filed Dec. 1, 1919. Serial No. 341,618. 16 Claims. (Cl. 70—128.)

1. In combination with a gear shift lever, a bracket swingingly supporting the same, supporting trunnions

for said lever extending at right angles to each other, one pair of trunnions movable axially, and key operable



means for sliding said trunnions into locking engagement with said bracket to lock said lever.

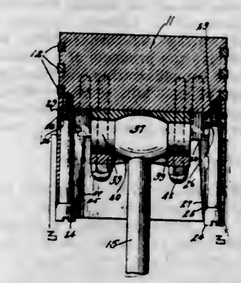
1,572,321. DOLL'S HEAD. MABEL H. SLATER, New York, N. Y. Filed Apr. 12, 1924. Serial No. 706,116. 5 Claims. (Cl. 46—40.)

1. A doll's head, a hat, cap, or the like, positioned upon said head, and a flexible member within and secured to the hat and attaching the same loosely to the top of the head, whereby the hat may assume different positions on the head when the latter is tipped, while preventing the hat from becoming accidentally detached from the head.

1,572,322. METHOD OF AND MEANS FOR PREPARING MEDICINAL AND ANÆSTHETIC SOLUTIONS. ARTHUR E. SMITH, Pittsburg, Kans., assignor to Claude A. Smith, Pittsburg, Kans. Filed Dec. 16, 1922. Serial No. 607,391. 18 Claims. (Cl. 128—272.)

1. The herein described method of putting up the ingredients of an anæsthetic solution which consists of placing in a container liquid and non-liquid constituents, and separating them by a wall, fusible at a point materially below the fusion point of the material of the container.

1,572,323. MEDICINAL AND ANÆSTHETIC PACKAGE. ARTHUR E. SMITH, Pittsburg, Kans., assignor to Claude A. Smith, Pittsburg, Kans. Filed Dec. 16, 1922. Serial No. 607,392. 10 Claims. (Cl. 128—272.)



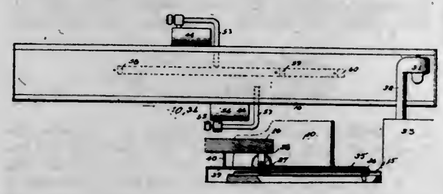
10. A sealed glass ampule comprising two compartments containing, respectively, two substances of which the mixture is unstable in composition, and a wall of material fusible at a temperature between 45 and 100 degrees centigrade, separating said compartments.

1,572,324. MEDICINAL AND ANÆSTHETIC PACKAGE. ARTHUR E. SMITH, Pittsburg, Kans., assignor to Claude A. Smith, Pittsburg, Kans. Filed Dec. 16, 1922. Serial No. 607,393. 4 Claims. (Cl. 128—272.)

1. A medicinal package comprising a container for two bodies of liquid and a fusible wall separating the two bodies of liquid which fusible wall is non-miscible with both of said bodies of liquid said wall being meltable at a temperature above normal but materially below the melting point of the material of the container.

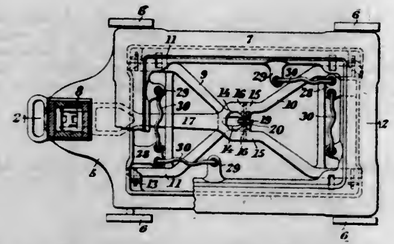
1,572,325. PISTON. WILLIAM E. SMITH, Jackson, Miss. Filed Sept. 15, 1925. Serial No. 56,522. 7 Claims. (Cl. 74—108.)

1. A piston comprising a head, a pair of skirt sections detachably mounted on the head, means for locking said skirt sections together against vertical movement at their abutting edges, and a pair of expanding bolts adapted to extend through said skirt sections at the abutting edges thereof.



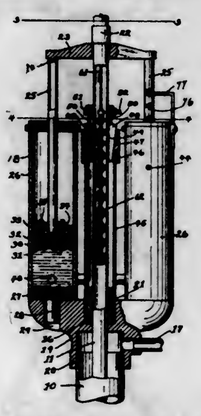
1,572,326. DRIER KILN. HALVER R. STRAIGHT, Adel, Iowa. Filed Feb. 7, 1924. Serial No. 691,198. 18 Claims. (Cl. 34—12.)

6. A drier comprising substantially a tunnel designed to receive plastic ware, the tunnel being provided with a series of upper and lower compartments, means for moving a current of air through the tunnel from one



end to the other, the roof of each of the upper compartments being provided with a horizontal portion, and a portion being formed on a line of a curve which approaches parallelism to the line of travel of the ware as it nears the final air delivery end and which curved ceiling forces the air downwardly through the ware, the lower compartments being arranged in staggered relation with the upper compartments and provided with portions of its floor formed horizontally and a portion being formed on a line of a curve which approaches parallelism to the line of travel of the ware as it nears the final air delivery end, and which curved floor forces the air upwardly through the ware.

1,572,327. CONTINUOUS KILN. HALVER R. STRAIGHT, Adel, Iowa. Filed Mar. 17, 1924. Serial No. 699,754. 18 Claims. (Cl. 25—142.)

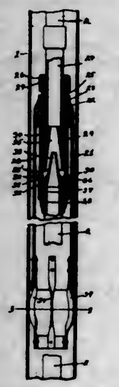


1. In a continuous kiln comprising a tunnel designed to receive a series of movable ware bearing cars, means for sealing the space between the cars and the walls of said tunnel so as to divide the tunnel into an upper and lower compartment at the floor line of the car, means for sealing the intake end of said kiln of both upper and lower compartments, means for sealing the outlet end of said lower compartment, a furnace between its ends, means for communicating the furnace with said upper compartment to receive the products of combustion therefrom, and means for communicating the furnace with the lower compartment of said kiln so as to supply the air for the initial combustion, and means for mechanically circulating air through the last conducting means.

1,572,328. PLATFORM SCALE. WILLIAM H. TAYLOR, St. Johnsbury, Vt., assignor to E. & T. Fairbanks and Company, St. Johnsbury, Vt., a Corporation of Vermont. Filed June 11, 1924. Serial No. 719,232. 5 Claims. (Cl. 265—71.)

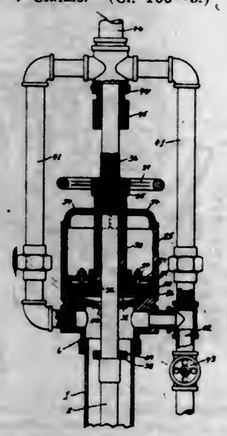
1. In a scale, in combination, a base frame, scale levers suspended from said frame at spaced parts thereof extending toward each other, and each having spaced walls, a center connection for said levers, said center connection including pivotal bearings supported at opposite ends in said spaced walls and a connecting link having an opening therein and a passageway leading thereto, said link having bearing plates cooperating with said pivotal bearings, and a plate adapted to span said passageway and interlock with said link to lock it in position.

1,572,329. PUMPING APPARATUS. JAMES W. TAYLOR, San Antonio, Tex. Filed Mar. 16, 1925. Serial No. 15,756. 11 Claims. (Cl. 103—233.)



1. In oil well apparatus, a casing, a flow line vertically shiftable within the casing, means operated by vertical shifting of the flow line for successively placing spaced points within the flow line in communication with the casing, the casing being in communication with a source of fluid pressure, a means for vertically shifting the flow line, said means consisting of a cross member mounted on said flow line above said casing, piston rods depending from said cross member, pistons carried by the lower ends of said rods, spaced cylinders disposed on opposite sides of said flow line and in which said pistons are mounted for reciprocation, and means operating to apply or remove fluid pressure to and from the pistons in said cylinders to raise and lower said flow line.

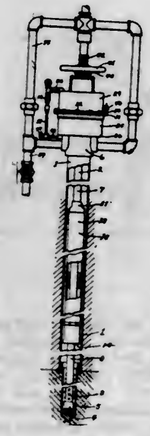
1,572,330. PUMPING APPARATUS. JAMES W. TAYLOR, San Antonio, Tex. Filed Mar. 16, 1925. Serial No. 15,758. 5 Claims. (Cl. 166—3.)



1. A flowing hood for oil wells comprising a casing open at its lower end and closed adjacent to the upper end thereof, a coupling connection between said casing and an associated flow line, and a double acting valve mounted in said coupling and situated to govern the flow of a fluid from the closed portion of said hood into said flow line.

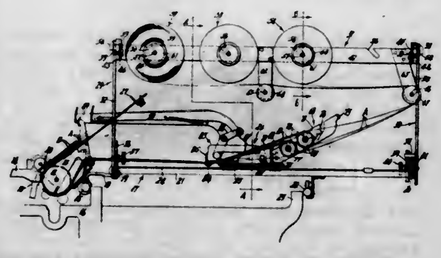
1,572,331. PUMPING APPARATUS. JAMES W. TAYLOR, San Antonio, Tex. Filed Mar. 16, 1925. Serial No. 15,760. 6 Claims. (Cl. 166—3.)

1. In oil well pumping apparatus, a casing, a flow line in said casing, a gas collecting hood around the flow line, said hood including a passage between the upper portion thereof and said flow line, and a vertically adjustable valve for governing fluid flow through said passage.



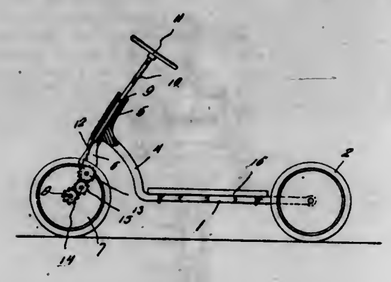
1,572,332. PUMPING APPARATUS. JAMES W. TAYLOR, San Antonio, Tex. Filed Mar. 16, 1925. Serial No. 15,761. 7 Claims. (Cl. 166—3.)

1. In oil well pumping apparatus, a casing, a flow line in said casing, a hood surrounding said flow line open at its lower end and normally closed at its upper end, a valve mechanism establishing communication between the closed portion of said hood and said flow line, and means operated automatically by natural gas pressure stored within said casing for effecting the operation of said valve mechanism.



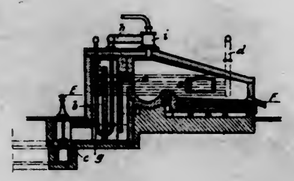
1,572,333. PUMPING APPARATUS. JAMES W. TAYLOR, San Antonio, Tex. Filed Mar. 16, 1925. Serial No. 15,762. 7 Claims. (Cl. 166—3.)

1. In an oil well apparatus, a casing, a flow line vertically shiftable within said casing, a normally closed head provided on the upper end of said casing and including a cylinder surrounding said flow line, a piston within said cylinder connected with said flow line, a valve structure in said flow line and capable of being opened and lowered by a movement of the flow line to establish communication between the casing and said



flow line, and means for confining gas in the upper end of said casing and permitting the application of the same to one or both sides of said piston to govern the raising and lowering of the flow line and the operating positions of the valve structure therein.

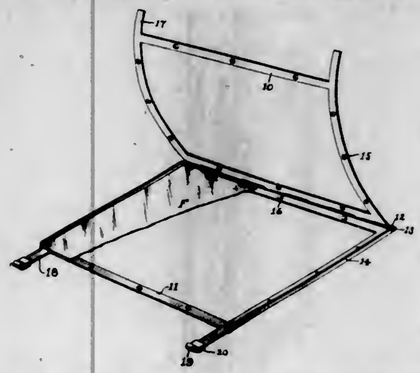
1,572,334. TYPEWRITING MACHINE. MAX R. URBAN, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 28, 1923. Serial No. 677,363. 22 Claims. (Cl. 197—126.)



1. In a continuous billing typewriting machine, a traveling carriage, a revolvible platen journaled therein, a rear carriage extension, a carbon-carrier on the carriage extension movable with the carriage and also reciprocable toward and from the platen, a plurality of work-web-supplying rolls mounted on the carriage extension above the carbon-carrier and over said carriage extension, means for guiding the work-webs from the web rolls to the rear beyond the rear limit of the carbon-carrier's travel, a clamp on the carbon-carrier for drawing the work-webs from the rolls to create a slack between the rear guiding means and the carbon-carrier to prevent interference with the line-feeding of the work due to the inertia of the web-supplying rolls, and means on the carriage extension to prevent the fouling of the web slack thus created.

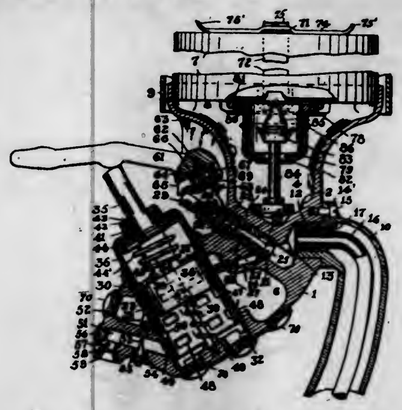
1,572,335. TOY VEHICLE. FREEMAN VAN VALKENBURG, Kingston, N. Y. Filed Feb. 5, 1925. Serial No. 7,963. 1 Claim. (Cl. 208—37.)

A toy vehicle of the class described comprising a base upon which the operator is adapted to be supported, a frame upon which said base is mounted, a plurality of wheels for supporting said frame, one of said wheels being located at the forward end of the frame, and functioning as a combined drive and steering wheel, a fork, the arms of which straddle said combined drive and steering wheel, a tube on the forward end of the frame, a bushing rotatably mounted in the tube and connected with the fork, said bushing having a polygonal bore, a reciprocable rod of polygonal cross section slidable through the bushing, a wheel at one end of the rod, the other end of the rod being resilient and having ratchet teeth, gearing engageable by said ratchet teeth and operatively associated with the combined drive and steering wheels.



1,572,336. SMELTING OR HEATING FURNACE WITH FIRING OF COAL DUST. ELICH VOOT and LUDWIG KIRCHHOF, Bergisch-Gladbach, Germany. Filed Mar. 26, 1925. Serial No. 18,566. 1 Claim. (Cl. 263—17.)

A smelting or heating furnace embodying two furnaces contiguously disposed and constructed to serve alternately as the main hearth and the preheating hearth with means for conducting the hot gases alternately in opposite directions, each oven having a dust-combustion chamber and a recuperator for the preliminary heating of the secondary air and the heating gases of the one oven acting for preliminary heating air through the recuperator of said oven.



1,572,337. FILM HOLDER. JOSEF THEODORE WACHTER, West Hoboken, N. J. Filed Feb. 21, 1925. Serial No. 10,965. 8 Claims. (Cl. 95—100.)

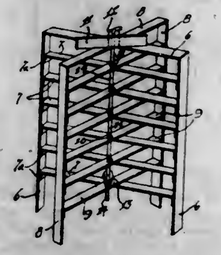
1. A film holder comprising a pair of frame members, means for pivotally connecting said frame members and means to hold said frame members in clamped engagement with a film, one of said frame members being provided with spaced projections and the other with similarly spaced recesses adapted to be brought into co-operating alignment to produce slight distortions at

spaced intervals along said film adjacent to the side edges thereof when said frame members are clamped together.

1,572,338. LIQUID DISPENSER. LORENZO E. WAITE, Toledo, Ohio, assignor to The Toledo Milling Machine Company, Toledo, Ohio, a Corporation of Delaware. Filed July 28, 1924. Serial No. 728,618. 15 Claims. (Cl. 226—26.)

1. In a liquid-dispensing machine, a hollow fluid-containing casing, a mixing chamber therein, a measuring chamber having an inlet from the hollow of the casing and an outlet to the mixing chamber, a valve for causing the inlet to be open or closed when the outlet is closed or open, respectively, means for forcing fluid from the measuring chamber into the mixing chamber, means for conveying a second fluid to the mixing chamber, and means for operating the forcing means and for initially operating the valve to close the inlet and open the outlet.

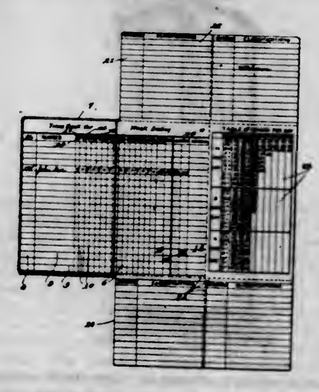
11. In a liquid-dispensing machine, a fluid supply chamber, a mixing chamber adapted to receive fluid from the supply chamber, an outlet passage from the mixing chamber, a passage for a second fluid, opening into the mixing chamber, and a tapered pin arranged in the mixing chamber and in alinement with the outlet of the second passage.



12. In a liquid-dispensing machine, separate elements controlling the travel of two liquids, a device actuating one of the elements, a second device actuating simultaneously both of the elements, and means whereby the second device is released from one of the said elements when the second device has moved a certain distance.

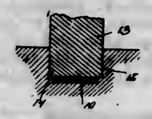
1,572,339. TRUCK FOR TRAMWAY VEHICLES. EDWARD YATES WALSH and EDWARD ANCHOR WALSH, Eccles, England. Filed Feb. 12, 1924. Serial No. 692,385. 1 Claim. (Cl. 105—214.)

In a truck for tramway vehicles the combination with the side frames A and rocking cantilever B of channel form, of cups b springs C C' fitted therein between the chords F affixed to the underside of the vehicle body, springs at both sides of the axle boxes interposed between the body of the vehicle and the frame A and springs below the frame A at both sides of axle boxes interposed between it and straps passed round the axle boxes.



1,572,340. BRAKE-LINING RACK. ERNEST WARREN, Peoria, Ill. Filed Feb. 24, 1925. Serial No. 11,290. 2 Claims. (Cl. 211—14.)

1. A rack comprising a plurality of vertically disposed frame members, shelves carried by certain of said frame members, other shelves pivotally secured to the first named shelves, the pivots of the shelves being in a common axial line, and a removable rod carried by certain of said frame members and certain of said shelves, said rod being parallel to said axial pivotal line and being spaced therefrom.

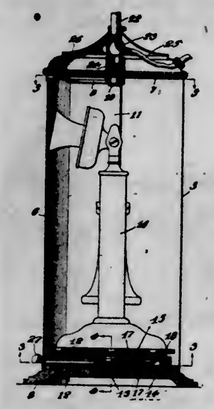


1,572,341. TIME BOOK. ARTHUR LYMAN WILLCOX, Savannah, Ga. Filed May 4, 1923. Serial No. 636,688. 1 Claim. (Cl. 283—66.)

A time book provided with a plurality of account sheets, the adjacent surfaces of each pair of sheets being ruled to conjointly provide a series of vertical columns including a number column, a name column, a series of double daily entry columns, a total time column, a wage rate column, a total wage or amount column, each of said double daily entry columns being subdivided to provide two rows of vertical spaces, the spaces of one of said rows being adapted for the reception of symbol indicia representative of particular kinds of work and the spaces of the remaining row being adapted for the reception of indicia indicating hours of labor performed, one of said sheets being made larger than the remaining sheets so as to project at its free marginal edges beyond the corresponding marginal edges of the remaining sheets, parts of the projecting portions of said larger sheet being ruled to provide a plurality of symbol columns adapted to contain an index of symbols to be entered on the account sheets and a plurality of classification columns each located alongside one of said symbol columns and adapted to contain an index of the entry information represented by said symbols, other parts of the projecting portions of said larger sheet being provided with

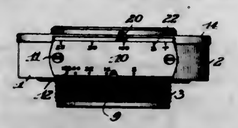
a plurality of wage rate tables covering varying periods of time, said larger sheet being foldable along lines coinciding with the free marginal edges of the remaining sheets whereby said larger sheet may be conveniently reduced to the size of said remaining sheets for concealment between the covers of the book.

1,572,342. METHOD FOR MAKING PIPE FILTERS. CHARLES E. WILTSEY, East Orange, N. J. Filed Mar. 22, 1921. Serial No. 454,354. 1 Claim. (Cl. 131—12.)



A method of making a filter or screen for smokers' pipe consisting of rolling a quantity of fibrous fire proof material into oval formation, whereby the strands will be interwoven to provide a homogeneous mass, then placing the same within a mould and subjecting the material to end pressure to force the ends of the strands into the mass and provide a disk having a substantially smooth surface.

1,572,343. DIE-ROLLED BLANK AND METHOD AND APPARATUS FOR MAKING THE SAME. WILLIAM P. WITHEROW, Pittsburgh, Pa., assignor to Witherow Steel Company, a Corporation of Pennsylvania. Filed Jan. 5, 1922. Serial No. 527,202. 11 Claims. (Cl. 80—60.)



11. The method of forming metal articles, comprising passing a leader between die rolls adapted to form a string of connected blanks, forming accurately spaced portions along the string adapted for reworking, permitting excess metal to flow sidewise in a substantially unrestricted manner to form flash integral with the blanks, separating the blanks and trimming the flash, and thereafter reworking at least certain portions of the blanks.

1,572,344. FIXTURE STAND. EDWIN C. WOLFF, Philadelphia, Pa. Filed July 29, 1924. Serial No. 728,823. 7 Claims. (Cl. 211—7.)

1. A fixture stand including an open-ended casing having an entrance opening; a plate closing the upper end of the casing; a plate closing the lower end of the casing; arms pivoted on the plates; doors mounted on the arms and adapted to swing into position to close the opening; a guide secured to the lower plate; a platform slidable on to the guide; extensions on the arms, and lugs on the platform adapted to be engaged by the extensions to cause the platform to move outwardly when the doors are swung into open position.

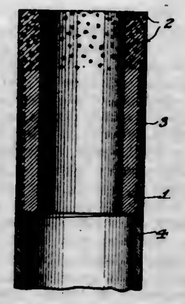
1,572,345. PHOTOGRAPHIC SHUTTER. ANDREW WOLLENSAK, Rochester, N. Y., assignor to Wollensak Optical Company, Rochester, N. Y., a Corporation of New York. Original application filed July 29, 1920, Serial No. 399,939. Divided and this application filed Mar. 28, 1924. Serial No. 702,678. 3 Claims. (Cl. 95—63.)

1. A photographic shutter comprising shutter blades, blade operating mechanism, controlling means for the blade operating mechanism to obtain different speeds, said controlling means having an index, an iris diaphragm adjustable to obtain different openings and having an index, and two separate indicating means arranged in proximity to each other on the top edge of the shutter casing, one of said indicating means cooperating with the index of the blade controlling means and the other of such indicating means cooperating with the index of the diaphragm.

1,572,346. DRAWING BOARD. JOHN O. ADSIT, New York, N. Y. Filed Aug. 12, 1924. Serial No. 731,652. 3 Claims. (Cl. 45—131.)

1. Connecting means for a drawing board and a mount therefor, said drawing board having a socket recessed in an edge thereof, said connecting means comprising a hinge composed of pivotal parts, one of said parts being rigidly secured to said mount and the other part seating in said socket and adapted for removable engagement therewith.

1,572,347. HOOK. JOSEPH BECK, Two Harbors, Minn. Filed July 17, 1925. Serial No. 44,224. 2 Claims. (Cl. 24—237.)

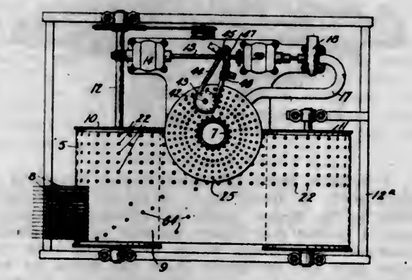


1. The combination with a sister hook for the terminal of a line, said hook having an elongated hub portion parallel with the axis of the hook and spaced therefrom, and means within said hub portion for permanently engaging the line.

1,572,348. METHOD OF ORNAMENTATION. JOHN J. CAROW, Washington, D. C. Filed May 29, 1923. Serial No. 642,205. 1 Claim. (Cl. 41—22.)

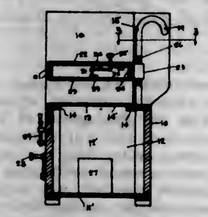
The method of forming a mosaic consisting in coating a body with a pattern color medium, applying another closely fitting body thereto and separating the two to cause a configuration of the color medium, then separating the body into segments, applying different ground colors to respective segments, then assembling the segments in their original relation to form a continuous surface.

1,572,349. ROTARY-CORE DRILL BIT. JOHN R. CHAMBERLIN, Bronxville, N. Y. Filed June 19, 1922. Serial No. 569,356. 2 Claims. (Cl. 255—72.)



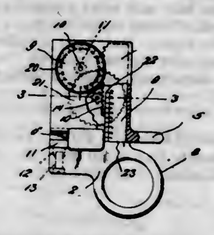
1. A rotary core drill bit comprising an aluminum tube and cutting crystals incorporated only in one end thereof.

1,572,350. REPEATING GUN FOR SHOOTING ELASTIC BANDS. FRED C. ECKER, Topeka, Kans. Filed Oct. 30, 1925. Serial No. 65,801. 5 Claims. (Cl. 124—14.)



1. In a repeating gun for shooting elastic bands, a gun comprising a grip and a barrel, a spurred disc rotatably mounted near the grip of said gun, elastic bands engaging on the spurs of said disc and the muzzle of the gun, a spring engaging on the spurs of said disc functioning as a resistance for said elastic bands and to create a report on the stock of said gun simultaneous with the discharge of said bands.

1,572,351. AUTOMATIC FEEDING APPARATUS FOR SEWING MACHINES. LOUIS J. ELSAS, Atlanta, Ga. Filed Jan. 27, 1923. Serial No. 615,244. 7 Claims. (Cl. 112—86.)

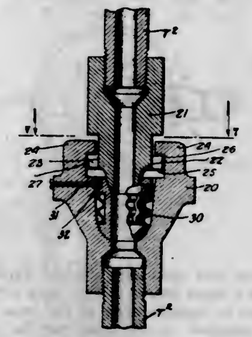


1. In feeding apparatus for sewing machines, a conveyor belt for carrying material through the stitching position, said belt containing perforations, suction nozzles cooperating with the perforations in the belt to hold the material in engagement therewith, means for relatively shifting the position of the material on the belt, and means for governing the suction to the nozzles during the relative shifting movement.

1,572,352. PAPER-SEASONING MACHINE. HARRY EDWARD EWALT, Chicago, Ill. Filed Feb. 9, 1925. Serial No. 8,072. 24 Claims. (Cl. 34—26.)

1. A device of the class described including a member through which a high frequency current is adapted to pass, said member being adapted to support a stack of paper, a second member in spaced relation with said first member, and means for inducing the current passing through said first member to traverse the space between said members.

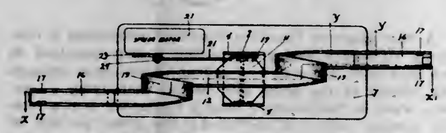
1,572,353. WIRE GAUGE. ALFRED L. GODWIN and PAUL ANDERSON, Ellwood City, Pa. Filed Mar. 25, 1924. Serial No. 701,763. 1 Claim. (Cl. 33—147.)



A wire gauge of the class described comprising a relatively stationary casing comprising a body provided in one face with a recess, one end of which opens through the bottom of the body, said bottom embodying a portion which is fashioned to form a stationary jaw, a handle forming extension carried by the lower portion of the body, a removable cover plate for said recess, a relatively movable member comprising a rack bar extending through the opening in the bottom of the body and into the recess, said movable member being provided with a jaw disposed at right angles to said rack bar and arranged opposite and cooperating with the first named jaw and being further provided with a ring like handle opposed to said first named handle, said rack bar being provided with graduations concealed in said casing when the jaws are closed, a graduated dial mounted for rotation upon the exterior of the body, and cooperating gearing arranged in said recess and coacting with said rack bar and dial for moving the dial when the rack bar is operated.

1,572,354. RUSTPROOFING BATH FOR IRON AND STEEL. JAMES H. GRAVELL, Elkins Park, Pa. Filed May 9, 1922, Serial No. 559,590. Renewed Nov. 3, 1925. 2 Claims. (Cl. 148—6.)

1. A bath for rust proofing comprising water, free phosphoric acid and mono-sodium phosphate which combining with pickling and foreign acids opposes the formation of a sludge.

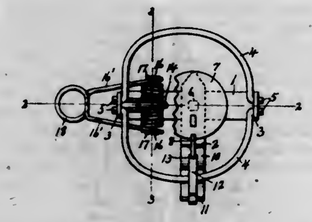


1,572,355. COUPLING DEVICE. WALTHER H. GROTE, Brooklyn, N. Y., assignor to C. Kenyon Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 2, 1925. Serial No. 20,043. 3 Claims. (Cl. 285—175.)

1. In a coupling device, the subcombination of an outer nipple, a seating member located within said outer nipple, means adapted to movably connect said seating member to said nipple so as to permit a limited movement of said seating member, resilient means connected

to said seating member and adapted to restrain the movement thereof from a predetermined position, an inner nipple adapted to enter said seating member, said seating member and said inner nipple having corresponding surfaces, said outer nipple having a projecting portion adapted to engage said inner nipple with respect to said seating member forced inwardly into said seating member when said inner nipple is turned.

1,572,356. MECHANICAL TOY. LESTER S. GUNDERMAN, Pittsburgh, Pa. Filed Mar. 25, 1925. Serial No. 18,111. 8 Claims. (Cl. 104—55.)

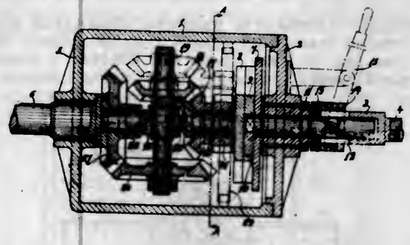


4. A toy comprising a base, a pair of uprights mounted on the said base, a tilting track pivotally mounted therebeneath on the said uprights, a pair of loops each spaced equal distance from the said pivot support, means for positively tilting the track to alternately elevate the ends and an object adapted to travel on the track by gravity, the ends of the said track being so arranged that the object will be elevated from a lower level to a higher level, to gravitate to the opposite end of the track.

1,572,357. ALLOY. RODERICK L. JOHNSTON, Plainfield, N. J., assignor to Aluminum Die-Casting Corporation, a Corporation of New Jersey. Filed Dec. 26, 1922. Serial No. 609,102. 7 Claims. (Cl. 75—1.)

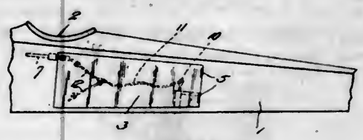
1. An aluminum base alloy containing about 5% to about 10% of tin, a substantial amount of silicon, and the balance aluminum.

1,572,358. ANIMAL TRAP. JEREMIAH O'NEIL, Oneida, N. Y., assignor, by mesne assignments, to Animal Trap Company of America, Lititz, Pa., a Corporation of Pennsylvania. Filed Dec. 10, 1923. Serial No. 679,752. 3 Claims. (Cl. 43—88.)



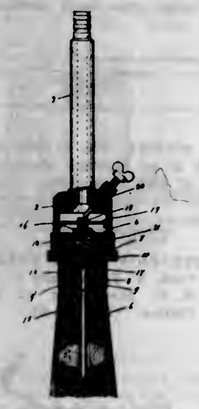
1. An animal trap comprising a frame having a lengthwise bar and a cross bar, a pair of jaws pivoted to the lengthwise bar at opposite sides of the cross bar, releasable means mounted on the cross bar for holding the jaws open, coaxial spring coils having adjacent ends engaged with the length-wise frame bar between the cross bar and one end of the jaws and extended beyond opposite sides of the lengthwise bar, the outer ends of said coils being extended across the outer edges of one end of the jaws in outwardly converging lines.

1,572,359. METHOD OF CANE-SUGAR PRODUCTION. HOWARD S. PAINE, Chevy Chase, Md., CHARLES F. WALTON, Jr., Washington, D. C., and VICTOR BIRCKNER, Oxon Hill, Md., dedicated, by mesne assignments, to the Citizens of the United States of America. Filed Feb. 8, 1924. Serial No. 691,468. 2 Claims. (Cl. 127—35.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



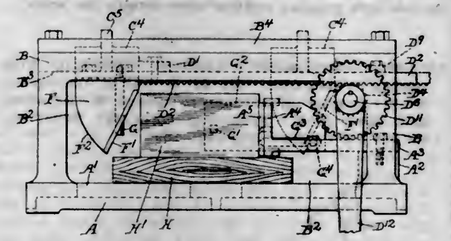
1. The process of recovering sucrose from molasses, which consists of the removal of the invert sugar contained in the molasses, by selective fermentation, the precipitation of the residual sucrose as saccharate, the decomposition of the saccharate to obtain sucrose in solution, filtration of the sucrose solution and the subsequent crystallization of sucrose.

1,572,360. VARIABLE POWER-TRANSMISSION GEAR BETWEEN ROTARY SHAFTS. ERNFRID JULIUS PETERSSON, Stockholm, Sweden. Filed Sept. 15, 1924. Serial No. 737,921. 8 Claims. (Cl. 74—53.)



1. A variable power transmission gear comprising a driving shaft, a driven shaft, a spindle eccentrically carried by the former, means for adjusting the eccentricity, a beveled gear loosely mounted on the spindle, beveled-gear transmission means cooperating with the beveled gear and the driven shaft and driven by the spindle, and means for causing the beveled gear to rotate upon the spindle at a speed directly proportional to the eccentricity of the latter.

1,572,361. AEROPLANE BRAKE. RUDOLPH J. PICK, Jr., Chicago, Ill. Filed May 26, 1925. Serial No. 32,998. 2 Claims. (Cl. 244—29.)

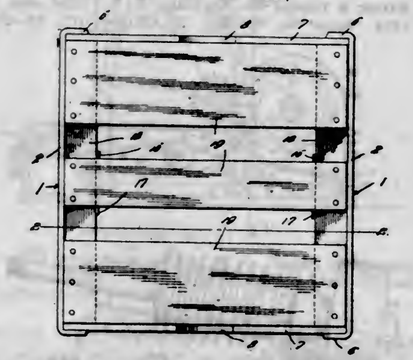


1. A brake mechanism for aeroplanes comprising a pair of drag fins hingedly supported at their rear ends on opposite sides of the fuselage of an aeroplane, the fuselage being provided with cut out portions in the sides for the reception of the drag fins when the latter are in a closed position, means for holding the drag fins in a closed inoperative position, said means comprising a pair of keepers arranged on the inner sides of the respective drag fins adjacent the forward free ends thereof, a curved spring wire latch member, the free ends thereof adapted to extend into the keepers, said latch member adapted to be moved forwardly whereby the free ends thereof are disengaged from the keeper to permit the outward swinging movement of the drag fins to an operative position, and means for limiting the outward swinging movement of the drag fins.

1,572,362. BRUSH. ALFIO RAPISARDI, Boston, Mass. Filed Feb. 6, 1924. Serial No. 690,978. 8 Claims. (Cl. 15—128.)

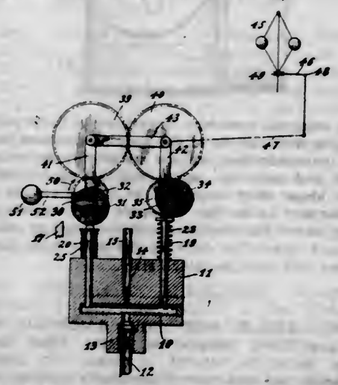
1. In a fountain brush, the combination of a hollow head, a handle extending from one end of said head, a valve block supported in said head, a brush body independent of said block but having one end thereof abutting against said block, said body and block having flanges overlying the outer end of said head, and a collar arranged to clamp the flanges of said body and block against the end of said head, said block having a passage therethrough for conducting liquid from said head into said brush body.

1,572,363. ICE-CREAM CUTTER. HUGO REICHEL and WILLIAM L. NIES, Chicago, Ill. Filed Apr. 5, 1922. Serial No. 549,788. 17 Claims. (Cl. 107—21.)



2. A machine for cutting masses of plastic material, comprising a material-supporting base, a material-engaging element aligned along one side thereof, a plurality of cutting elements and means for drawing them across said base and into said material-engaging element, said element being recessed to a depth sufficient to admit the entire length of said cutting elements, a terminal stop adapted to engage the material to be cut and means for withdrawing it in unison with the cutting excursion of the cutting elements.

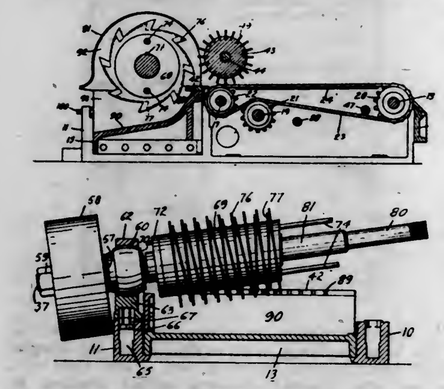
12. A machine for cutting masses of plastic material, comprising a supporting base, a stop along one side thereof, a stop across the end thereof, a plurality of cutting elements adapted to be drawn across said base, and means for withdrawing said end stop in response to the movement of said cutting elements, the bottoms of said stops being spaced substantially above the supporting base.



17. An ice cream cutting machine comprising a fixed supporting base, a supporting element adapted to be positioned thereupon, a cream engaging stop along one side of said supporting base, a plurality of downwardly projecting, spaced blades positioned above the fixed supporting base and adapted to clear the movable supporting base, and means for drawing them in unison through the ice cream, the stop being slotted to permit their passage therethrough, the height of the stop above the fixed base being sufficient to permit the movable base to be inserted therebeneath.

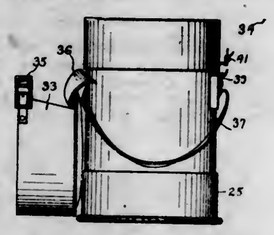
1,572,364. NAILING FRAME. ERNEST M. ROSE, Dulce, N. Mex., assignor of one-half to Charles H. McCormick, Dulce, N. Mex. Filed Mar. 11, 1924. Serial No. 698,483. 2 Claims. (Cl. 144—288.)

1. A nailing frame for crates, including a pair of angle members formed with vertical walls, and integral angle walls extending therefrom, each of said walls being formed with laterally extending flanges arranged in spaced parallel relation, side members having the end portions inserted between the spaced flanges of said angle member and secured thereto, for holding said angle members in spaced parallel relation, a central spacing bar secured to the angle wall of said angle member, and a plurality of spacing members removably and adjustably mounted on the angular walls of said angle member adapted for positioning end pieces in spaced relation on said frame, said angle members being adapted to receive corner posts of substantially triangular cross section for positioning corresponding faces thereof in position to receive end pieces to be nailed thereto.



1,572,365. INTERNAL-COMBUSTION ENGINE. MAX ROTTER, Milwaukee, Wis., assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 18, 1921. Serial No. 438,116. 5 Claims. (Cl. 123—140.)

1. The combination with a combustion engine, of a fuel pump mechanism comprising a plurality of plungers, an epicyclic gearing interconnecting the plungers and



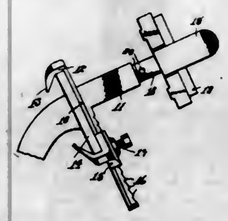
having an element tending to move toward a position in which the plungers work in opposition, and means to normally hold said element in a position in which the plungers work other than in opposition, whereby the pump delivery is reduced upon the occurrence of an accident releasing said element from the effect of said means.

1,572,366. MATERIAL-SHREDDING MACHINE. GEORGE D. RYTHER, Carthage, N. Y., assignor to Ryther & Pringle Co., Carthage, N. Y. Filed Sept. 2, 1924. Serial No. 735,820. 16 Claims. (Cl. 92—20.)

1. In a material shredding machine, a rotatable saw arbor, a plurality of circular saws mounted on said arbor, bearings rotatably supporting each end of said saw arbor, means for changing the angular position of the axis of said arbor about one of said bearings for disassembly of said saws, and means for feeding the material to be shredded into said saws.

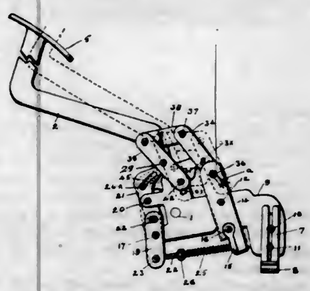
1,572,367. SHIPPING CONTAINER. ALLEN C. SCOTT, Omaha, Nebr. Filed May 8, 1925. Serial No. 28,785. 2 Claims. (Cl. 150—52.)

1. A shipping container comprising a body portion, a cap fitting over the top of the body portion and including a heat nonconducting cushion adapted to be compressed against and into the upper end of the container, a flexible hinge strip connected at opposite ends to the container and to the cap, a flexible skirt depending from the cap about the container and overlapping said hinge strip, and means for drawing the skirt taut about the container and over the hinge strip.



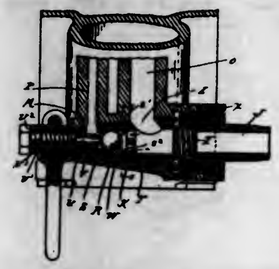
1,572,368. ANGLE BAR FOR RAILROAD RAILS. THOMAS SEITZ, Morganville, Kans. Filed Sept. 29, 1924. Serial No. 740,653. 1 Claim. (Cl. 238—249.)

An angle bar structure comprising a pair of sections abutting in end to end relation so as to be disposed in alinement with each other and provided with flanges at the abutting ends, a bolt extending through said flanges, a spring on the bolt tending to urge said flanges toward each other so as to be normally disposed in abutting relation with each other, said sections being recessed



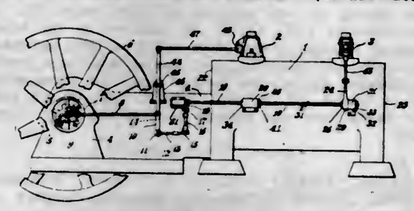
adjacent their abutting ends, a plate seated in said recesses adapted to be disposed alongside the web of a rail, the ends of said plate being notched for receiving bolts connecting the sections to the web of the rail.

1,572,369. EXTENSION PEDAL TREAD. DANIEL SINCLAIR, New York, N. Y., assignor to Jessie J. Sinclair, New York, N. Y. Filed Sept. 12, 1923. Serial No. 662,263. 3 Claims. (Cl. 74—81.)



1. In a pedal attachment, the combination with a base having a tubular projection for the reception of the stem of a supplemental tread, of a stationary pedal tread engaging jaw, a movable jaw on the base, a clamping screw carried by the movable jaw, and means on the base for engagement by the screw for advancement of the jaw into gripping position upon turning the screw.

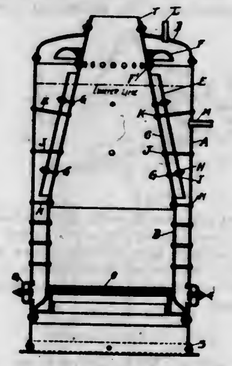
1,572,370. AUTOMATIC CLUTCH CONTROL FOR MOTOR VEHICLES. HENRY I. SMITH, Gainesville, N. Y., assignor of one-half to George W. Reynolds, Rock Glen, N. Y. Filed Aug. 25, 1924. Serial No. 733,980. 6 Claims. (Cl. 192—109.)



2. In a clutch control device, the combination of a swinging plate adapted to be fastened to and move with the clutch lever, a second swinging plate having a guide slot therein concentric with the pivot of the clutch lever, a third swinging plate having a cam slot therein, a stationary plate having a guide slot therein, bolts movable with said first named swinging plate and engaging in said slots, and means for causing a friction between the cam slot and the bolt moving therein to retard the movement of the first named plate.

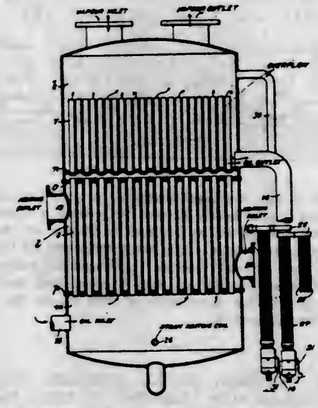
1,572,371. COMBINED THROTTLE AND GOVERNOR FOR PNEUMATIC TOOLS. WILLIAM A. SMITH, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed July 25, 1921. Serial No. 487,375. 15 Claims. (Cl. 121—7.)

1. The combination with a percussive and a rotary motor, of a throttle valve for supplying fluid to each of said motors, and an automatic governing valve for the rotary motor within said throttle valve.



1,572,372. STEAM-ENGINE-VALVE GEAR. EVERETT W. SWARTWOUT, White Plains, N. Y. Filed Sept. 25, 1920. Serial No. 412,745. 5 Claims. (Cl. 121—165.)

1. The combination with an engine provided with a cylinder, a plurality of inlet valves for said cylinder, a frame, a crank-shaft carried by said frame and a governor mounted on said crank-shaft, one of said valves being disposed adjacent said frame and the other of said valves disposed remotely from said frame, of oscillating means operated by said governor, means directly connecting said oscillating means with said one valve, an arm for oscillating said other valve and separate connecting means connecting said oscillating means with said arm, said other valve, and means for mounting said separate connecting means on said cylinder and for operatively connecting said arm relative to said separate connecting means for maintaining the angular operation of said separate connecting means relative to said arm independently of the variations of the length of the cylinder due to variations of temperature and the consequent variation of displacement of said one inlet valve relative to said other inlet valve.

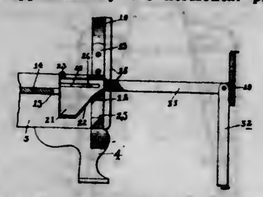


1,572,373. VERTICAL STEAM BOILER AND WATER HEATER. HENRY E. WALLIS, Chicago, Ill., assignor of one-third to A. G. Bush, Davenport, Iowa. Filed July 16, 1921. Serial No. 485,150. 4 Claims. (Cl. 122—159.)

1. A steam boiler comprising a cylindrical outer shell, an inner shell having a cylindrical lower section with a conical upper section secured thereto and extending some distance above the normal water line, an annular dome plate having its inner edge secured to the upper end of the conical section and its outer edge secured to the upper end of the outer shell, and a conical skirt sheet secured to and around the conical inner shell at a uniform distance therefrom and open at its top and bottom, with its upper end terminating above the normal

water line and below the top of the conical section and its lower end of a diameter exceeding that of said cylindrical lower section.

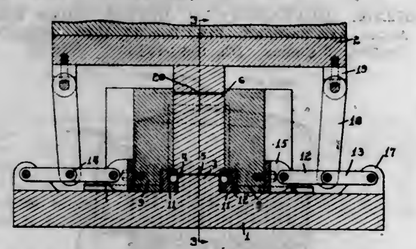
1,572,374. HEAT-EXCHANGE DEVICE. HUGH LOGIE ALLAN, Ayr, Scotland. Filed Dec. 15, 1919. Serial No. 344,791. 3 Claims. (Cl. 196—138.)



1. A heat exchange device for fractionating hydrocarbons comprising a vessel having partitions spaced apart to provide three superposed compartments, the upper partition consisting of two tube plates situated relatively closely together, a hydrocarbon inlet to the lowermost compartment, a series of tubes connecting said lowermost compartment to the space between the tube plates, a second series of tubes extending partially into the uppermost compartment from the said space, a liquid outlet near the bottom of said uppermost compartment, a vapour outlet in the top of the uppermost compartment and means for circulating a heating-medium around the first-mentioned series of tubes

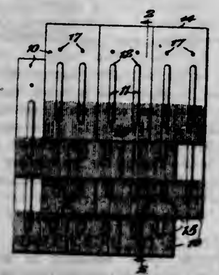
---

1,572,375. ARTICLE OF FURNITURE. ALBERT W. ALLEMEIER, Toledo, Ohio, assignor to The Woodcraft Company, Toledo, Ohio, a Corporation of Ohio. Filed May 2, 1925. Serial No. 27,388. 6 Claims. (Cl. 5—21.)



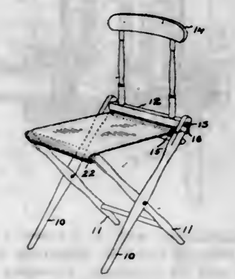
1. An article of furniture having a base portion provided with a guideway, a supporting surface above said guideway, a supplemental support slidable on said guide-

way, said guideway having slots, cam elements on said support depending into said slots whereby when said support is moved outwardly on said guideway the cam elements engage one end of the slots and elevate said support to approximately the horizontal plane of said



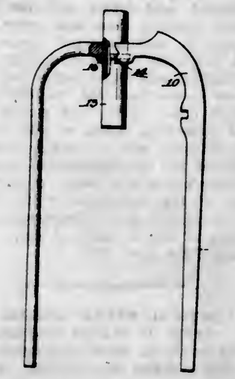
surface in spaced relation thereto, and means for engaging said support for holding one side thereof in position, the connection between said holding means and support permitting relative movement therebetween whereby said support may be moved into close juxtaposition to said supporting surface.

1,572,376. SHEET-METAL-WORKING MACHINE. JEREMIAH BINGHAM, Toledo, Ohio, assignor to The American-National Company, Toledo, Ohio, a Corporation of Ohio. Filed May 6, 1925. Serial No. 28,294. 3 Claims. (Cl. 153—49.)



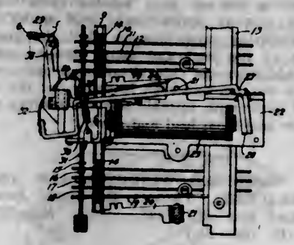
1. In a metal working machine, a pair of clamping blocks, said blocks being shaped to receive a sheet metal strip therebetween with the end portions of the strip bent to form an obtuse angle with the body of the strip, means on one of said blocks and movable transversely of said strip for curling an edge thereof, and mechanism actuated by relative movement of said blocks for operating said curling means.

1,572,377. ENAMEL METAL SHINGLE. FRANK M. BLAIR, Newark, Ohio. Filed Mar. 20, 1925. Serial No. 17,067. 5 Claims. (Cl. 108—17.)



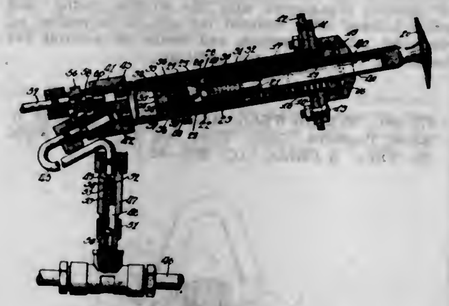
1. A roof composed of a series of shingles, each with two longitudinal ribs and with a right angular downturned base flange extending below the body of the shingle and having therein two notches, one of said notches receiving the rib of a shingle to the right and the other notch receiving the rib of a shingle to the left, said shingle to the right and said shingle to the left being held in contact with one another by said engagement.

1,572,378. CHAIR SEAT. EDWARD T. BREEN, New Haven, Conn. Filed Feb. 2, 1925. Serial No. 6,312. 3 Claims. (Cl. 155—147.)



1. In a folding chair, a frame having sides and having a front rung, a seat frame having a front part removably engaged with the rung and having sides formed with eyes at their rear ends, a rod extended through the eyes and having its end portions extended rearwardly at approximately right angles and disposed on the inner faces of the chair frame sides and then being extended outwardly and upwardly, and formed with eyes which are disposed on the outer faces of said chair frame sides, and a second rod extended through each of the said last named eyes and through each of the chair frame sides.

1,572,379. FLIER. HJALMAR G. CARLSON, Worcester, Mass., assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass., a Corporation of Massachusetts. Filed July 25, 1924. Serial No. 728,273. 1 Claim. (Cl. 118—57.)



As an article of manufacture, a flier having its crown provided with a perforation all the way through it, a hollow cylindrical bearing member extending through said perforation and having an integral ring around it, said ring being embedded in the metal of the crown and firmly and accurately anchored therein.

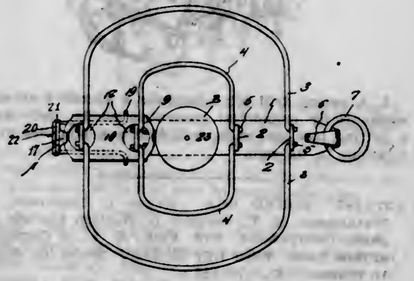
1,572,380. TELEPHONE SWITCH. EDGAR H. CLARK, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 12, 1923. Serial No. 680,173. 4 Claims. (Cl. 179—27.5.)

1. In a switching mechanism, the combination of sets of disengaged contacts, a rotatable bar, an operating magnet for said bar, an armature responsive to the energization of said magnet for operating said bar, an arm fixedly attached to said bar, a lifting bar fixedly attached to said armature, a longitudinally movable member arranged in engageable relation with said arm and said lifting bar, and means cooperating with said longitudinally movable member for retaining said rotatable bar in operated position for holding said contacts in engagement when said magnet is deenergized.

1,572,381. AUXILIARY CHARGE-FORMING DEVICE FOR AUTOMOBILES. IRVING COWLES, Chicago, Ill. Filed Apr. 5, 1922. Serial No. 549,941. 18 Claims. (Cl. 123—180.)

1. In an auxiliary charge forming device of the character described, the combination of a pump, a suction line connecting said pump to a source of liquid fuel supply, means external to said pump for establishing the charge of fuel induced by the suction stroke of said pump at a predetermined measured amount, means for admitting air to the cylinder of said pump in the presence of the fuel, and a valve-controlled discharge line from said pump.

1,572,382. METALLIC ALLOY. ERNEST RAYMOND CROSBY, Cleveland, Ohio, assignor to Aluminum Manufacturers, Incorporated, Cleveland, Ohio, a Corporation of Delaware. Filed July 7, 1921. Serial No. 482,936. 6 Claims. (Cl. 75—1.)

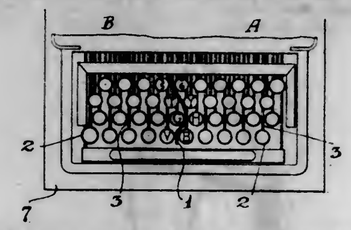


1. A metallic alloy containing aluminum in a preponderating amount, silicon from about 3% to about 8% tin and from an appreciable amount up to about 5%.

1,572,383. BALL CARRIER. FREDERICK ONSLOW BROOKE DENNYS, Lexham Gardens, London, England. Filed Nov. 7, 1924. Serial No. 748,340. 6 Claims. (Cl. 224—45.)

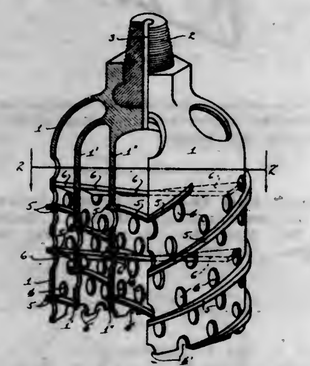
3. A ball carrier comprising in combination a perforated plate-like member and an endless elastic band disposed around said member.

1,572,384. GAME TRAP. SYLVESTER DUFRENE, Lockport, La., assignor of one-half to C. A. Buchler, Westwego, La. Filed Mar. 18, 1925. Serial No. 16,454. 2 Claims. (Cl. 43—88.)



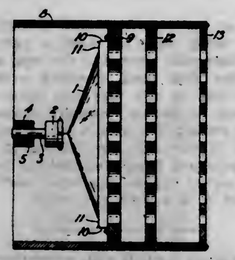
2. A trap of the class described including a base, a pair of lugs rising from the base, a pair of U-shaped jaws having their ends pivoted to the lugs, a plate having depending sides, said plate provided with an opening for receiving one of the lugs and sides of the jaws pivoted thereto, a spring normally urging said plate upwardly for closing the jaws, a bait trigger engageable with one end of the plate for holding it in a lowered position, an auxiliary trigger operatively connected with the plate so as to engage the other end of the plate when the plate is in a lowered position.

1,572,385. FINGER GUIDE FOR TYPEWRITERS. BENJAMIN F. ELLSWORTH, Brooklyn, N. Y. Filed Jan. 17, 1925. Serial No. 3,206. 4 Claims. (Cl. 197—101.)



1. A finger guide for keyboard machines consisting of a single piece of rigid sheet material adapted to be inserted between the keys and key levers operated by the right hand and the keys and key levers operated by

the left hand, the upper edge of the guide being shaped to follow the downward slope of the keyboard at a suitable level above the keys, and the lower edge of the

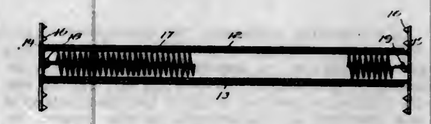


guide providing the sole vertical support for same when in use, by resting on any convenient stationary surface below the keyboard.

1,572,386. ROTARY DRILL BIT. LEROY G. GATES, Bakersfield, Calif. Filed July 16, 1923. Serial No. 651,758. 6 Claims. (Cl. 255—61.)

1. A rotary drill bit comprising a plurality of spaced substantially cylindrical concentric shells, each having a cutting face and each shell having a plurality of perforations in its wall.

1,572,387. SOUND BOX. HENRY C. HARRISON, Port Washington, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 20, 1923. Serial No. 652,748. 10 Claims. (Cl. 274—27.)



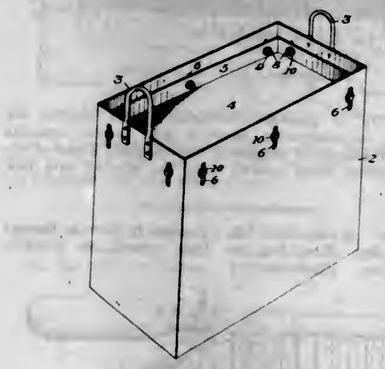
1. A large direct acting diaphragm, and a sound box therefor comprising a plurality of spaced apertured partitions across said sound box in the path of the sound waves from said diaphragm, said partitions and apertures therein being arranged to provide a gradual transformation of impedance from the diaphragm to the outside air.

1,572,388. RECOVERY OF LEAD AND SILVER FROM SULPHIDE ORES AND METALLURGICAL PRODUCTS. HARRY HEY, Melbourne, Victoria, Australia. Filed Jan. 20, 1921. Serial No. 438,775. 4 Claims. (Cl. 75—18.)

1. In the recovery of lead and silver from sulphide ores, subjecting the ore to a heating operation in the presence of gaseous hydrochloric acid under substantially non-oxidizing conditions to effect the preferential chloridizing of the lead and silver present while substantially inhibiting the chloridization of other sulphides contained in the ore, and then leaching out the chlorides of lead and silver with suitable solvents leaving a residue substantially free from lead and silver.

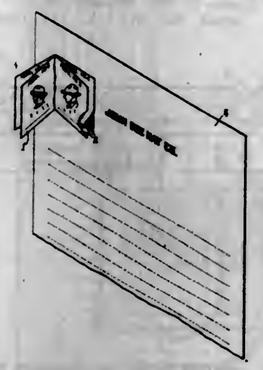
1,572,389. COMBINED WINDOW-SHADE AND CURTAIN BRACKET. THOMAS F. HUNT, Jacksonville, Fla. Filed May 23, 1925. Serial No. 32,384. 1 Claim. (Cl. 156—24.)

A device of the class described comprising a shade bracket, means for detachably supporting the same on the facing strip of a window casing comprising a pair of telescopic outer and inner tubular members, plates providing closures for the outer ends of said tubular members, inwardly disposed teeth on the inner ends of each plate adapted for clamping engagement with the sides of the window casing, a hook struck out from the intermediate portion of each plate and disposed within the ends of the respective tubular members, a coil spring within the tubular members and having the ends thereof attached to the respective hooks for holding the teeth in clamped engagement with the window casing, said shade bracket being adapted for slidable movement on the outer tubular members, and means for securing the bracket in various adjusted positions.



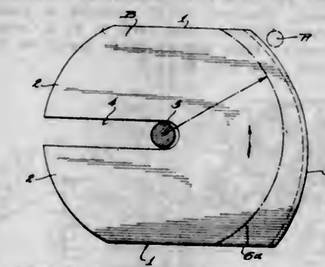
1,572,390. SPRING-WELL-CASING HOOK. LESTER H. KEIM, Pasadena, Calif. Filed Feb. 18, 1925. Serial No. 9,971. 6 Claims. (Cl. 294—82.)

1. A well casing hook comprising a hook member, a body, a spring mounting the hook member on the body, a rotary bearing between the hook member and spring,



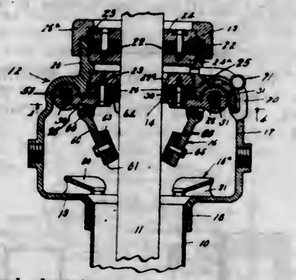
and releasable means for locking the hook member from rotation relative to the body without confining the rectilinear movement of said hook member.

1,572,391. CONTAINER FOR TESTING COAL AND METHOD OF TESTING. WALTER J. KLAISER, Chicago, Ill., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 12, 1923. Serial No. 662,229. 6 Claims. (Cl. 73—51.)



1. In a method of testing coal or similar material, the steps consisting in embedding a relatively small quantity of said coal in the mass of coal in a coking chamber of a coke oven, and converting said embedded coal into coke along with the surrounding coal while protecting it against contamination by but subjecting it to the pressure of at least a portion of the latter, substantially as described.

1,572,392. BOOK STAMP. MATHIAS G. KOSHEMAN, Toledo, Ohio, assignor to The Roberts Printing Company, Toledo, Ohio, a Corporation of Ohio. Filed May 15, 1925. Serial No. 30,481. 2 Claims. (Cl. 283—56.)



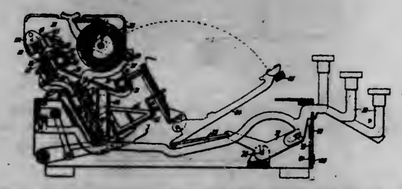
1. A book stamp of relatively small proportions consisting of a plurality of leaves attached together, and means on one of said leaves for adhesively attaching said books to a letter, said leaves having suitable inscription and indicia thereon for advertising any desired commodity.

1,572,393. CUT-OFF KNIFE FOR CIGARETTE MACHINES. EWALD KOEBNER, Dresden, Germany, assignor to United Cigarette Machine Co., Inc., Lynchburg, Va., a Corporation of Virginia. Filed Aug. 26, 1925. Serial No. 52,537. 2 Claims. (Cl. 131—37.)

1. A cut-off knife for cigarette machines and similar purposes, comprising a thin metal blade having an eccentric cutting edge, and also having a slot extending from approximately the normal center of the blade to an edge substantially opposite the cutting edge.

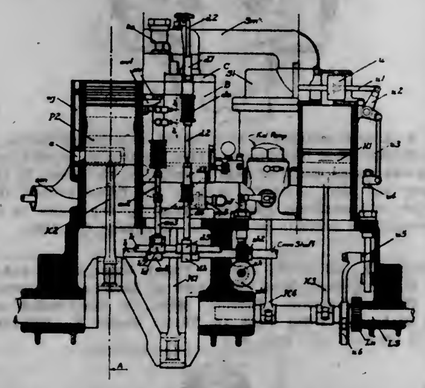
1,572,394. CASING HEAD. NICOLAY PETER KREBS, Brea, Calif. Filed Apr. 24, 1923. Serial No. 634,259. 18 Claims. (Cl. 166—15.)

1. A head adapted to be mounted on a casing having a drill pipe in it including a frame adapted to be mounted on the casing, packing means carried by the frame to engage the pipe, a tapered seat in the frame around the pipe, and auxiliary packing carried by the frame to be operable to position in the seat to engage the pipe.



1,572,395. HEATING UNIT. FRANK KUHN and JAY A. HAND, Detroit, Mich., assignors to American Electrical Heater Company, Detroit, Mich., a Corporation of Michigan. Filed June 15, 1918. Serial No. 240,150. 3 Claims. (Cl. 219—34.)

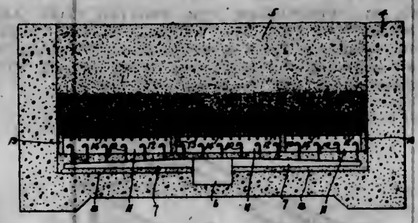
3. An electric heating unit comprising an insulating core, a resistor wound upon said core, a metallic support for said core passing through the same, a mounting en-



gaged by one end of said support, the other end thereof being electrically connected to the corresponding end of said resistor.

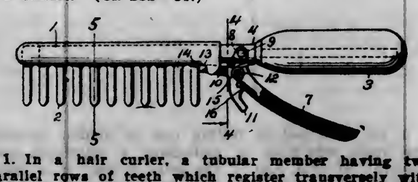
1,572,396. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 22, 1924. Serial No. 715,026. 26 Claims. (Cl. 197—63.)

1. In a typewriting machine, the combination with a rack-bar, of a pair of marginal stops, each comprising a slide shaped from a single piece of sheet metal to engage on three sides of the bar, the fourth side flaring outwardly presenting a wedge-shaped pocket adjacent one edge of the bar, an inreaching detent on the opposite side, and a transverse abutment on the lower side, said abutments extending equally below the bar and in opposite directions from the center thereof, and a spring in each pocket normally maintaining the detents in the tooth spaces of said rack-bar.



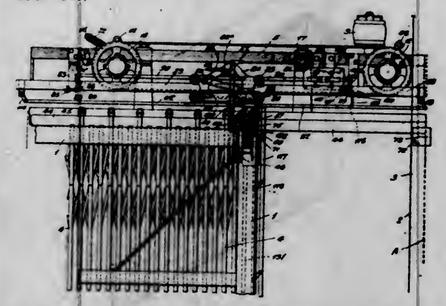
1,572,397. INTERNAL-COMBUSTION ENGINE. PAUL ANDREW LAWRENCE, Grand Island, Nebr. Filed Mar. 29, 1921. Serial No. 456,702. 11 Claims. (Cl. 123—33.)

1. In an internal combustion engine comprising a cylinder, a piston, an air chamber forming a clearance for the air compressed by the piston, a valve to control the flow of air between the cylinder and air chamber, and a combustion port forming a passage for the air between the cylinder and air chamber; the combination of a pump comprising means for pumping fuel from an ordinary source of supply and air from the said air chamber; a valve for receiving said fuel and air and injecting said mixture into the combustion port; and means for opening said air chamber valve during the said injection period.



1,572,398. FILTERING APPARATUS. FREDERICK B. LEOPOLD, Pittsburgh, Pa. Filed May 12, 1924. Serial No. 712,625. 8 Claims. (210—130.)

1. The combination with a filter bed, of a water distribution system therefor comprising a main conduit beneath said bed, lateral conduits leading from said main conduit, and a chamber disposed above each of said lateral conduits and having openings communicating with the bottom of the filter bed, the lateral conduits being of decreasing area from said main conduit and provided with

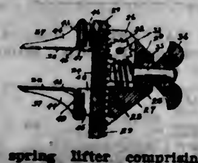


a plurality of passages throughout their lengths for effecting communication between said lateral conduits and their associated chambers, the combined areas of the said openings being greater than the area of said passages.

1,572,399. HAIR CURLER. JOSEPH R. LEWIS, Kansas City, Mo. Filed Aug. 25, 1924. Serial No. 733,888. 4 Claims. (Cl. 132—31.)

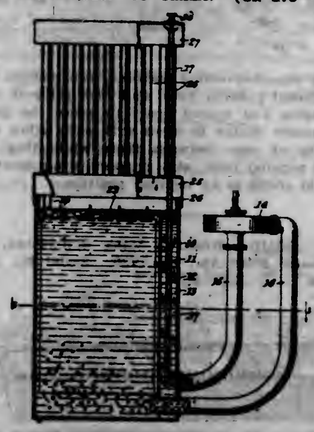
1. In a hair curler, a tubular member having two parallel rows of teeth which register transversely with each other, a handle member having a shank adapted for insertion into said tubular member and provided with a row of teeth between and parallel with said two rows of teeth, the handle member having a handle mounted on said shank, a lever pivoted to said shank, and means connecting said lever with said tubular member by which the latter may be moved on said shank to bring the teeth of the shank into and out of register with said teeth of said two rows.

1,572,400. ELEVATOR. NILS O. LINDSTROM, Nutley, and CARL F. E. OLOFSON, West Orange, N. J., assignors to Alonzo B. See, Brooklyn, N. Y. Filed Jan. 10, 1923. Serial No. 611,782. 48 Claims. (Cl. 187—52.)



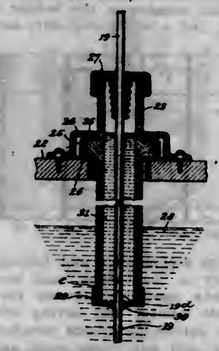
9. A door operating device for elevators and the like comprising a pair of pulleys spaced apart in the direction of travel of the door to be operated, a cable running between and guided by the pulleys, power actuated means for causing linear movement of the cable, a track, a carriage running on the track and mechanically connected to the door to operate the same, a connection between the carriage and the cable whereby as the point of connection between the cable and carriage travels in the stretch between the pulleys, the carriage and door may be rapidly driven therefrom, and as the point of connection reaches and passes around with one of the pulleys, the carriage and door will be stopped without impact, and a limit device for rendering the power actuated means ineffective to drive the cable shortly before the travel of the door is completed.

1,572,401. GAME APPARATUS. PATRICK J. MCGRATH, Brooklyn, N. Y. Filed May 13, 1924. Serial No. 712,929. 3 Claims. (Cl. 273—101.)



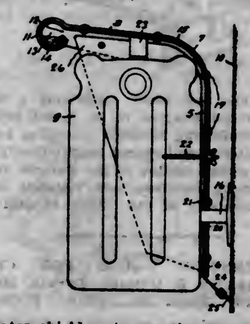
1. A game apparatus embodying a ring throwing lever, and a pin on said lever movable therewith and adapted to intercept the ring when thrown.

1,572,402. VALVE LIFTER. ALBERT L. MATHWIG, South Sioux City, Nebr. Filed May 28, 1923. Serial No. 641,857. 8 Claims. (Cl. 29—963.)



1. A valve spring lifter comprising two members slidably mounted relative to each other, socket members on the respective slidably mounted members, lateral supporting members removably mounted in the sockets, and operating means for moving the said slidably mounted members relative to each other.

1,572,403. ELECTROLYTIC APPARATUS AND METHOD OF OPERATING THE SAME. RALPH D. MERSHON, New York, N. Y. Filed Sept. 18, 1919. Serial No. 324,518. 18 Claims. (Cl. 175—315.)

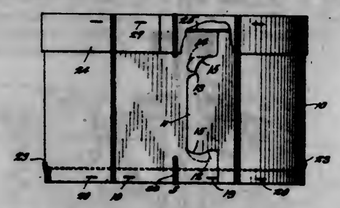


2. The method of operating electrolytic apparatus of the kind described, having an electrolyte and electrodes immersed therein, comprising permitting heat liberated by internal electrical losses to accumulate and thereby cause boiling of the electrolyte whereby active movement of the latter is produced.

1,572,404. PROTECTING CONDENSER PARTS AGAINST CORROSION. RALPH D. MERSHON, New York, N. Y. Filed Sept. 27, 1921. Serial No. 503,630. 9 Claims. (Cl. 175—315.)

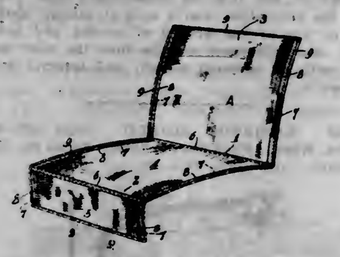
1. In an electrolytic apparatus of the kind described, the combination with a tank, an electrolyte therein, and filmed anodes immersed in the electrolyte and electrically connected in groups, of a porcelain tube extending through a wall of the tank into the electrolyte, a submerged closure composed of filming metal cast on the inner end of the tube to hermetically seal the same against the electrolyte, and a lead of filming metal, connected to one of the groups of anodes and extending through said submerged closure into the tube for connection with an external circuit, and integral with the said closure

1,572,405. RADIATOR SHIELD. JOHN M. MORAN, Seattle, Wash. Filed Dec. 4, 1924. Serial No. 753,770. 1 Claim. (Cl. 237—79.)



In a radiator shield, a top portion arranged to extend over the top of a radiator, a back portion arranged to extend downwardly behind a radiator, said back portion being formed of an upper section and a lower detachable section arranged to overlap said upper section and having notches affording passageways through which radiator supports may extend and a flexible wall engaging deflector member extending outwardly and downwardly from the bottom edge of said lower detachable section.

1,572,406. COLLAPSIBLE FOLDING BOX. EDWARD K. MORRIS, Baltimore, Md. Filed Feb. 18, 1925. Serial No. 8,864. 2 Claims. (Cl. 229—16.)



1. In a box of the class described, a body including a side member of bendable material having a main portion of rectangular shape and provided with a tongue projecting from one end, said tongue having a hook shaped tab at its lower end and a small tongue at its upper end, the remaining end of the side member being provided with slits to receive the tab and small tongue, a

bottom fitting closely within said side member when set up and resting below the hook shaped tab, said bottom having a rectangular strip at one side defined from the main portion of the bottom by a fold line and secured to the side member at the bottom edge of the slit provided end, and a reinforcing strip secured to the

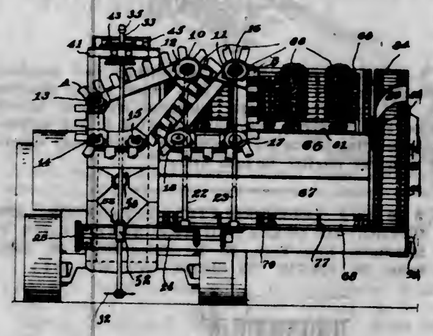
side member at its bottom edge and forming a rest for the free periphery of the bottom, said bottom further having spaced tabs insertable between the reinforcing strip and the side member and having other tabs upturned from the bottom, said side member having U-shaped slits near said reinforcing strip and positioned to receive the last mentioned tabs.

1,572,407. SEAT COVER. EDWIN B. NATHAN, Yonkers, N. Y. Filed Nov. 15, 1923. Serial No. 674,816. 7 Claims. (Cl. 155—182.)

1. A collapsible seat cover comprising a single strip of flexible material adapted to be folded into sections, and resilient reinforcing members extending longitudinally over said material and spaced longitudinally from each other so as to permit folding of the material transversely of said reinforcing members said material being yieldably stiff transversely of the length of said strip.

1,572,408. TENSION GAUGE FOR CHECKROW WIRES. JERMIAH D. O'BRIEN, Darwin, Minn. Filed June 4, 1925. Serial No. 34,919. 4 Claims. (Cl. 111—49.)

1. A tension regulator and gauge for check row wires comprising a frame adapted to be anchored in the ground, a pivotally mounted counterbalance carried by said frame, and means for exerting an endwise thrust upon said counterbalance for actuating it, said means being adapted for connection with the check row wire.

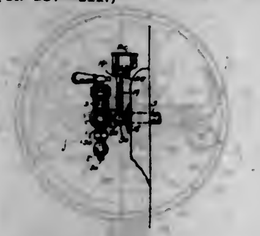


1,572,409. SMOKING FIGURE. FRANK OLDHAM, Dallas, Tex. Filed Jan. 17, 1924. Serial No. 686,718. 1 Claim. (Cl. 46—40.)

In a smoking figure, the combination with a figure having a socket in its mouth for receiving a smoking medium, of a housing embedded in the figure, a bulb suspended in the housing, a pair of conductors leading from the bulb to the mouth of the figure, one of said conductors being connected with the socket, check valves in the

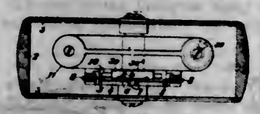
conductors, a lever pivoted in the housing and having one end in engagement with the bulb, the figure having a slot through which the other end of the lever extends, an operating member on the outer end of the lever, and a spring in the housing connected with the lever.

1,572,410. CANE HARVESTER. JOHN A. PAINE, Richmond, Va. Filed June 11, 1919. Serial No. 303,328. 30 Claims. (Cl. 56—17.)



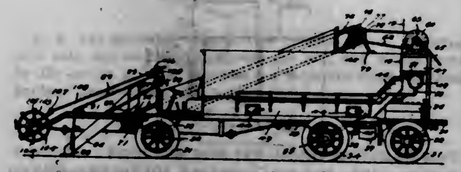
26. In a cane harvesting machine, two endless chains having adjacent parallel runs, and cane grippers carried by said chains and spaced apart to cause the grippers on the opposite chains to mesh with each other and to grasp stalks of cane between them while they travel along said parallel runs, said grippers being constructed to hold said stalks in an inclined position.

1,572,411. COMB. BERNARD MARX SCHWEIZER, Nashville, Tenn. Filed Apr. 15, 1925. Serial No. 23,346. 3 Claims. (Cl. 132—11.)



1. A comb of the class described having a back provided with a chamber communicating with the space between the teeth, and a removable member in said chamber to normally close it and reinforce the back.

1,572,412. ATTACHMENT FOR SINK FAUCETS. ORVIS W. VALLIER, Watertown, N. Y., assignor to J. B. Wise Incorporated, Watertown, N. Y., a Corporation of New York. Filed Feb. 12, 1925. Serial No. 8,783. 3 Claims. (Cl. 137—111.)

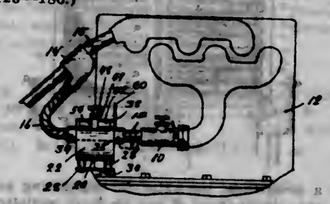


1. The combination of a casing, hot and cold water supply pipes, valve means regulating the flow through said pipes, a handle for operating said valve means, and a soap holder mounted on the rear side of the casing and extending above the handle in back thereof.

1,572,413. DIRECTION INDICATOR FOR MOTOR VEHICLES. WILHELM VOGT, Melide, Switzerland. Filed Jan. 6, 1925. Serial No. 981. 6 Claims. (Cl. 116—30.)

1. A direction indicator for motor vehicles, comprising a casing, two rotary transparent circular signal discs within this casing, an illuminating device between said signal discs, a shifting toothed member connected to the latter, a movable catch pawl arranged to catch said shifting member, means to release said pawl from the shifting member, one single automatically reciprocatable control member to which said catch pawl is connected and which, as well as the shifting member and the catch pawl, are located between the signal discs, means to retain the latter in their position, actuating means to automatically produce a reciprocating movement of said control member, and driver's operating means on the outside of said casing to control said actuating means.

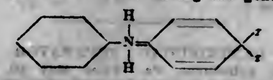
1,572,414. SNOW SCOOPING AND MELTING APPARATUS. HARRY R. WILBERT, Harrisburg, Pa. Filed Mar. 17, 1925. Serial No. 16,219. 4 Claims. (Cl. 37—12.)



1. In a snow scooping and melting apparatus, a truck having a tank thereon, a housing extending through the front end of the tank and supported in an inclined position in said tank, a conveyer mounted for operation through the housing, means for heating the tank, and means for operating the conveyer for carrying snow to the tank.

1,572,415. GREASE CUP. JOHN L. WILLIAMS and FRANK L. WILLIAMS, Wakita, Okla. Filed Mar. 26, 1925. Serial No. 18,474. 2 Claims. (Cl. 184—45.)

1. In a device of the type described, a grease cup comprising a body formed at one end with an outlet and provided at its opposite end with a cap, a plunger within the body, a spring between the cap and plunger urging the plunger toward the outlet end of the body, the outlet of the body having a bore decreasing in size as it approaches the body, means supported from the plunger and extending into such bore to thereby vary the effective area of the bore in proportion to the force exerted by the spring, and means for introducing grease under pressure to the body between the plunger and outlet end of the body and providing a guide for the plunger, comprising a grease gun nipple carried by the cap, a tube supported from the nipple and communicating with the bore thereof and having its lower end arranged adjacent the outlet end of the body, said tube being directed through said plunger, the support for said member comprising a perforated tube surrounding the first named tube.



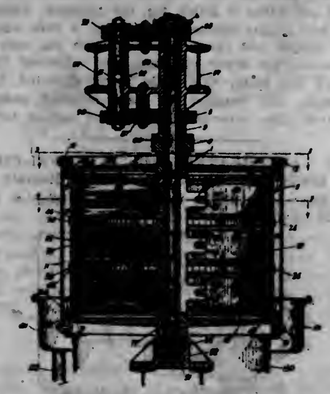
1,572,416. AIR HEATER FOR INTERNAL-COMBUSTION ENGINES. FRANK W. YOUNG, Everett, Mass. Filed Jan. 10, 1925. Serial No. 1,712. 8 Claims. (Cl. 123—180.)

1. An air heater comprising a receptacle open only at the top and adapted to contain a supply of fuel in the closed bottom thereof, an air conduit extended through said receptacle and spaced from the bottom and sides of the receptacle and having exposed inlet and outlet openings, and a removable closure for the open top of said receptacle.

1,572,417. DYESTUFFS AND PROCESS OF MAKING SAME. WILLIAM PARNELL BATES, Kempton, N. Dak. Filed Aug. 25, 1924. Serial No. 734,085. 6 Claims. (Cl. 260—56.)

1. A group of new bodies having the general formula

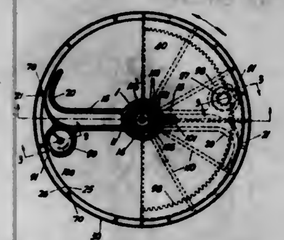
in which σ is a monovalent element or group.



4. A process which comprises adding a diazonium compound to an aromatic amine in the presence of water while maintaining the reaction mixture hot.

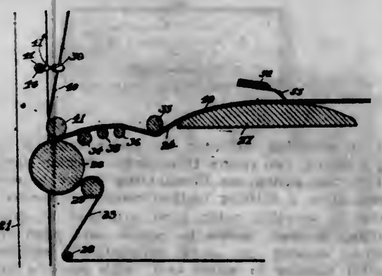
1,572,418. MUSICAL INSTRUMENT. FREDERICK C. BENNER, Hempstead, N. Y. Filed Feb. 14, 1924. Serial No. 692,641. 7 Claims. (Cl. 84—385.)

7. A wind instrument having a longitudinal slot, a movable slide to close the slot and provided with a port, a side wall and means for adjusting the same whereby the width and shape of the slot may be varied manually.



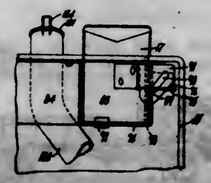
1,572,419. CENTRIFUGAL SEPARATOR. WILLIAM BIRCHALL, Ashbourne, Pa. Filed Apr. 1, 1921. Serial No. 457,652. 28 Claims. (Cl. 210—74.)

1. In a centrifugal separator for separating solids and liquids, the combination of one or more radially extending arms, the said arm or arms having radial passageways extending therethrough, means for supplying a semiliquid mixture of solids and water to the said passageway or passageways, means for causing revolution of the said arm or arms to thereby force the said mixture outwardly in said arm or arms, a cylindrical means inclosing the outer end portion or portions of said arm or arms, the said arm or arms terminating in adjacent relation to the inside surface of said means, and the said arm or arms being provided with an outwardly extending apron or aprons for supporting the said mixture in a layer against the inside surface of the said separating means.



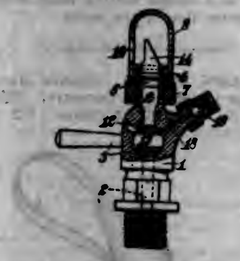
1,572,420. CENTRIFUGAL SEPARATOR. WILLIAM BIRCHALL, Ashbourne, Pa. Filed May 10, 1921. Serial No. 468,443. 20 Claims. (Cl. 210—69.)

1. In a centrifugal separator adapted for separating mixtures of solids and liquids, the combination of rotating separating means, radial means for delivering a mixture of solids and liquids on to the inner surface of said separating means, said radial means being rotatable the liquid content thereof escaping and leaving the solid content of the mixture on said surface, means



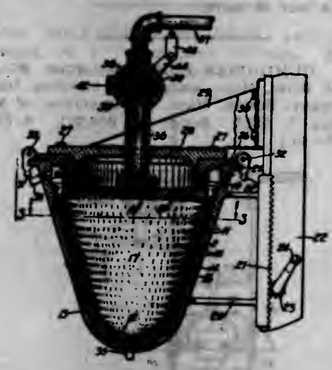
located eccentrically of the axis of rotation of said radial means for removing the said solid content from said surface which means is carried by said radial means, and means for conveying the same away from its point of removal and effecting its discharge from said separator.

1,572,421. RULING APPARATUS. ALBERT BROADMEYER, Harrisburg, Pa., assignor to W. O. Hickok Manufacturing Company, Harrisburg, Pa., a Corporation of Pennsylvania. Filed Feb. 23, 1923. Serial No. 620,800. 7 Claims. (Cl. 33—34.)



1. In a ruling machine, a movable endless work-holding cord, and an adjustably supported guide for the cord having an eye through which the cord passes.

1,572,422. VENDING MACHINE. DANIEL L. CHANDLER, Boston, Mass., assignor, by mesne assignments, to Vend Ads Corp., a Corporation of Massachusetts. Filed Mar. 28, 1923, Serial No. 628,354. Renewed Oct. 3, 1925. 23 Claims. (Cl. 194—63.)

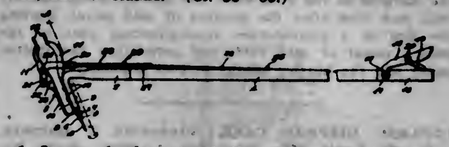


1. A machine for delivering an article in exchange for a coin of predetermined dimensions having, in combination, a casing, a coin holder rotatably mounted on said casing and having a recess in its periphery to hold said coin, said casing having a coin slot in alignment with said recess, means for testing a coin in said recess, means to rotate said coin holder and mechanism operated thereby to cause said coin to be ejected from said holder and deposited in said casing.

1,572,423. MEANS FOR OBSERVING THE WORKING CONDITIONS IN THE CYLINDER OF AN INTERNAL-COMBUSTION ENGINE. HARRY CHAPMAN, Sheffield, England. Filed July 25, 1922. Serial No. 577,476. 9 Claims. (Cl. 123—198.)

3. In an internal combustion engine, the combination with a nipple or the like having a passage through it, means for placing one end of the passage in communication with the combustion chamber of the engine, a prismatic body permitting the passage of light closing the other end of the passage, a cock capable of opening and closing communication between the prismatic body and the combustion chamber, a displaceable shield over the prismatic body having a viewing aperture, and two branches from the nipple passage to the atmosphere, both branches and the main passage being controlled by the same cock, and one of the branches being fitted with a non-return exit valve, substantially as specified.

1,572,424. FELT SHRINKING. FRANK F. CHUDOBA, Glastonbury, Conn., assignor, by mesne assignments, to United States Hat Machinery Corporation, Richmond, Va., a Corporation of Virginia. Filed July 22, 1921. Serial No. 487,141. 26 Claims. (Cl. 28—6.)

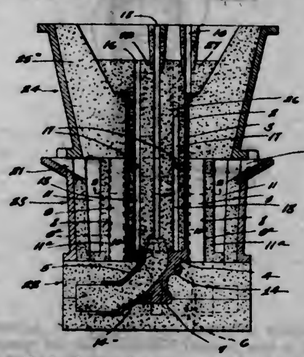


1. A bat-shrinking apparatus comprising a tapering bed, said bed serving to support the bat, and means fixed by the action of fluid pressure for intermittently applying surface pressure to the bat.

1,572,425. PROCESS FOR COLORING MINERAL MATTER. HARRY C. FISHER, Cincinnati, Ohio, assignor to The Richardson Company, Lockland, Ohio, a Corporation of Ohio. Filed July 27, 1925. Serial No. 46,491. 4 Claims. (Cl. 91—70.)

3. A process for permanently coating a granular mineral with a dehydrated silicate which consists in mixing together dry mineral granules and dry finely-divided water insoluble pigment, then adding water and silicate accompanied by agitation and finally dehydrating by heat.

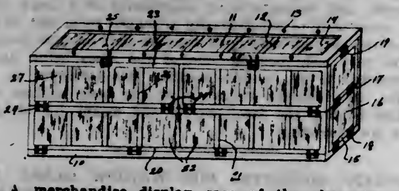
1,572,426. PRUNING IMPLEMENT. JOHN HENRY FOOTE, Delta, Utah. Filed May 23, 1925. Serial No. 32,482. 5 Claims. (Cl. 55—65.)



1. In an implement of the character described, a handle, and a pair of thinning tweezers carried by the handle, said tweezers being constructed of a single piece of metal bent to substantially U-shaped form and having a curved springy body portion and a pair of arms integral with said body portion, one of the arms being fixedly connected to the handle member, jaws formed on the arms, the inherent resiliency of the body portion normally holding the jaws spread, and means for bringing the jaws together.

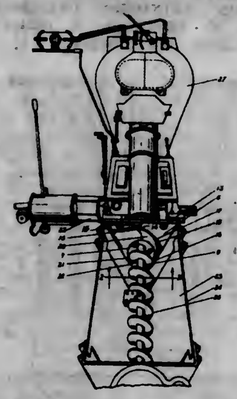
1,572,427. MOUNTING FOR WINDOW GLASS. MEL FULLER, Chattanooga, Tenn., assignor to Fuller Automobile Company, Chattanooga, Tenn., a Corporation of Tennessee. Filed Nov. 17, 1923. Serial No. 675,871. 3 Claims. (Cl. 296—44.5.)

3. A mounting for window glass having yieldably mounted side bearing surfaces and a yieldable edge bearing surface connected to and carried by the side bearing surfaces, said edge bearing surface and said side bearing surfaces being connected in such manner that when one of the surfaces yields the others will be pressed more firmly into engagement with the glass by virtue of the yielding movement.



1,572,428. METHOD OF ATTACHING COPPER FINS TO CAST-IRON CYLINDERS. CHARLES P. GRIMES, Syracuse, N. Y. Filed Apr. 4, 1924. Serial No. 704,140. 9 Claims. (Cl. 22—204.)

1. The method of attaching to a metal part, fins of a metal having a greater coefficient of expansion than said metal part, comprising supporting the fins with margins thereof projecting into a mold cavity which forms the

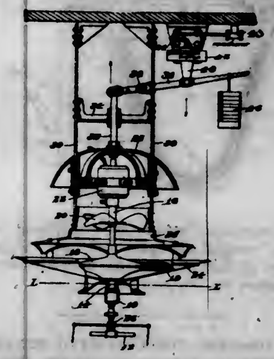


metal part to which the fins are to be attached, pouring the metal into such mold cavity, whereby it flows around the margins of the fins, while the fins are comparatively cool, and then after the pouring of said metal, heating the fins to a temperature approximating that of the molten metal of said part, and permitting the molten metal and the heating means to cool gradually.

1,572,429. DISPLAY CASE. VALENTINE J. GRITHER, Jr., St. Louis, Mo. Filed Apr. 1, 1924. Serial No. 703,496. 3 Claims. (Cl. 211—16.)

1. A merchandise display case of the character described having a bottom, top, sides and ends, vertical partition members connecting the top and bottom and engaged therewith to support the top and bottom in spaced relation to each other, each end being composed of a frame formed in two sections, the lower section being hinged to the bottom of the case for outward and downward swinging movement, the upper section being hinged to the lower section for outward and downward swinging movement, the upper section and the top of the case having latching engagement with each other, the sides being composed each of a longitudinally extending lower section having a length equal to that of the case, and a plurality of upper sections, the lower section being hinged to the bottom of the case for downward and outward swinging movement, the upper sections being hinged to the lower section for downward and outward swinging movement, the upper sections and the top having latches whereby the upper sections may be held in closed position and there being means for latching the lower sections of the sides and ends in vertical position, the top, sides and ends all having transparent panes whereby the contents of the case may be observed.

1,572,430. COAL-CUTTING KNIFE. WILLIAM T. HANNA, Cincinnati, Ohio. Filed Sept. 8, 1924. Serial No. 736,519. 5 Claims. (Cl. 83—52.)



1. The combination with a knife body having a way therethrough, of a conveyor screw revolubly mounted in the way, a forwardly projecting helical cutting edge on the body disposed eccentrically of the conveyor screw on one side of and above the way, and terminating in a cutting edge point disposed above and spaced at a distance from the conveyor screw, and a second helical cutting edge on the body on the opposite side of the way disposed substantially concentric with the screw and terminating in a second cutting point disposed below the horizontal center line of the screw.

1,572,431. HOLLOW DIBBLE. HOLGER HANSEN, Charlottenlund, near Copenhagen, Denmark. Filed Apr. 25, 1922. Serial No. 556,515. 1 Claim. (Cl. 55—67.)

A dibble for making plant holes comprising a substantially conical tube open at both ends, the smaller end of which tube is cut at an angle oblique to the axis of the tube, and the larger end of which tube is provided with a handle formed integrally with the tube for thrusting the dibble into the soil and withdrawing therewith a core of earth.

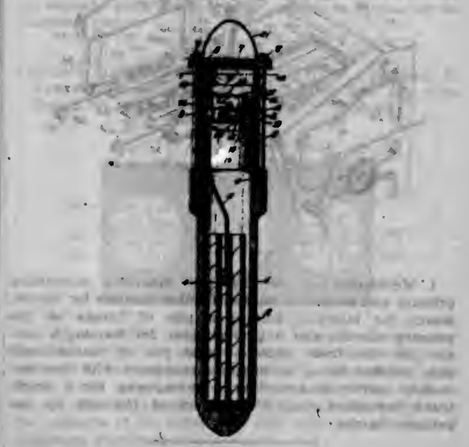
1,572,432. HUMIDIFIER CONTROL. JOHN W. JACKSON, Fall River, Mass., assignor to American Moistening Company, Boston, Mass., a Corporation of Maine. Filed Aug. 7, 1923. Serial No. 656,241. 6 Claims. (Cl. 236—44.)

1. The combination of a humidifier having a supply of still water below, a fan above, and means between these for lifting water from said supply and discharging it into the blast created by said fan, with control means responsive to increase of humidity in the air adapted to move said water lifting means away from said water supply, thereby to stop the discharge of water into the air.

1,572,433. POETIC PUZZLE AND POETIC-PUZZLE BLOCKS. MARIE CATHERINE JONES, Los Angeles, Calif. Filed Nov. 9, 1922, Serial No. 599,862. Renewed Dec. 19, 1925. 3 Claims. (Cl. 273—182.)

1. A game comprising a plurality of pieces, some of which are inscribed on one side with words adapted to form an intelligible text, when the pieces are arranged in proper order, others of the pieces being inscribed upon one side with letters adapted to form the title of the text when the pieces are arranged in proper order, all of the aforesaid pieces being inscribed on the opposite side with numerals denoting the order in which the words are to be arranged to form the text, and denoting the order in which the letters are to be arranged to form the title.

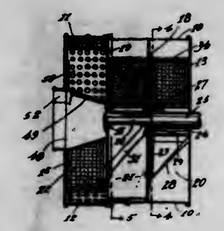
1,572,434. POCKET FOR SWEATERS. ARTHUR KAISER, Brooklyn, N. Y. Filed Mar. 20, 1924. Serial No. 700,476. 3 Claims. (Cl. 66—4.)



1. A knitted sweater or the like comprising a knitted body member having a continuous series of intermediate loops thereof separated from the other loops thereof, said separated loops being connected to form a finished edge, and a rear knitted pocket member comprising a separate single thickness of flat knitted fabric having its upper edge directly knitted to the loops of said body member directly adjacent said separated loops to form a connection having the same thickness as the portions of said body member directly above and below said connection, the bottom and side edges of said pocket being connected to said front member.

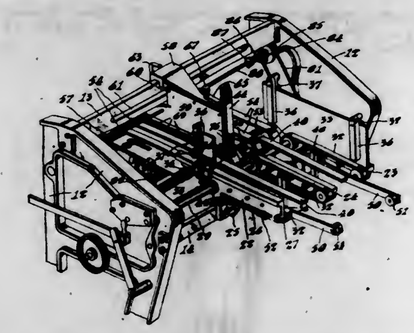
1,572,435. BOMB. ALBERT M. KING, Casper, Wyo. Filed Sept. 19, 1925. Serial No. 57,451. 11 Claims. (Cl. 102—4.)

1. A bomb including a casing having an explosive charge confined therein, and a fulminated fuse leading to the charge, in combination with fuse-igniting means comprising a time piece provided with an alarm shaft, spring actuated mechanism adapted to contact and light the end of the fuse, and means carried by said alarm shaft and adapted to prevent operative actuation of said spring mechanism, during one position of said alarm shaft.



1,572,436. BOMB CASING. ALBERT M. KING, Casper, Wyo. Filed Sept. 19, 1925. Serial No. 57,452. 5 Claims. (Cl. 102—4.)

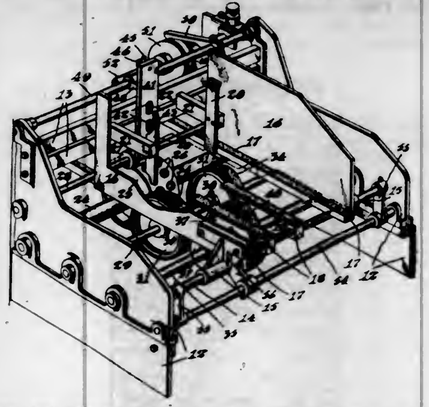
1. A housing for bombs and igniters, comprising a metallic casing for the explosive charge, and a transparent casing for the igniter.



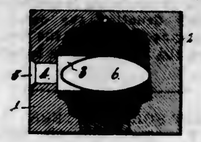
2. A housing for bombs and igniters, comprising a metallic housing for the explosive charge, and a frangible transparent casing for the igniter.

1,572,437. CORN-POPPING MACHINE. SAMUEL S. KINGSBY, Norwood, Ohio. Filed Oct. 19, 1923. Serial No. 669,559. 2 Claims. (Cl. 53—4.)

1. In a corn popping machine, a cylinder capable of rotary motion and divided vertically by partitions into a number of compartments adapted to receive corn, chutes carried by the partitions to establish communication between the compartments whereby corn will be delivered from one compartment to another by rotation of the cylinder, means for heating said cylinder, means for rotating said cylinder, a coarse screen dividing each compartment into an inner and outer chamber for separating the unpopped corn from the popped corn in each compartment and an open chute for discharging the popped corn from the inner chamber of each compartment continuously and irrespective of the unpopped corn and means for periodically opening the outer chamber into the chute.



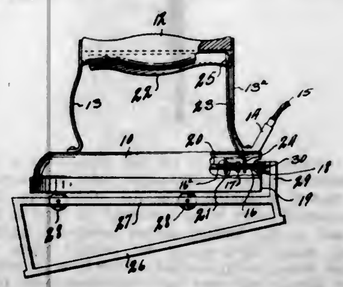
1,572,438. BLANK FEEDER. LEON E. LA BOMBARD and MELVIN H. SIDEBOTHAM, Chelsea, Mass., assignors to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed June 20, 1921. Serial No. 478,846. 30 Claims. (Cl. 271—35.)



1. Mechanism of the character described comprising primary and secondary endless friction carriers for blanks, means for laterally holding a pile of blanks on the primary carrier, and a gate member for forming a barrier for the front edges of said pile of blanks, said gate member being mounted to cooperate with the secondary carrier in providing a passageway for a single blank separated from the bottom of the pile by the primary carrier.

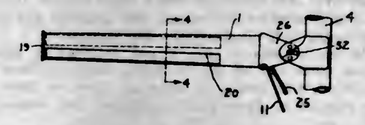
1,572,439. TIME FEEDER. LEON E. LA BOMBARD and MELVIN H. SIDEBOTHAM, Chelsea, Mass., assignors to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed June 24, 1922. Serial No. 570,697. 15 Claims. (Cl. 271—41.)

1. A blank-feeding mechanism including a normal support for a pile of blanks, said support being surfaced to frictionally retard blanks, a friction feeder to act on successive lower blanks of the pile, and means for intermittently varying the relative height of said normal support and friction feeder to reduce the retarding effect of the normal support when the feeder acts on each lower blank.



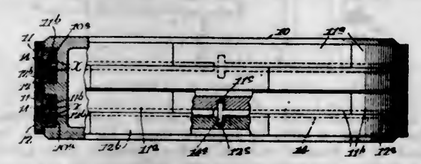
1,572,440. MOLD FOR MANUFACTURING TIRES. HENRY M. LAMBERT, Portland, Oreg., assignor to Lambert Tire & Rubber Co., Akron, Ohio, a Corporation of Arizona. Filed July 8, 1924, Serial No. 724,110. Renewed July 13, 1925. 3 Claims. (Cl. 18—42.)

3. In tire molds the combination with the side plates, of pins extending from one side plate diagonally across to the other side plate, each of said pins comprising two symmetrical matching sections, one secured to one side plate and the other secured to the other side plate with their planes of division lying at an inclination to the longitudinal axis of the pin as a whole.



1,572,441. AUTOMATICALLY-OPERATED ELECTRIC IRON. CHARLES E. MACY, Iowa Hill, Calif. Filed Mar. 3, 1925. Serial No. 12,939. 8 Claims. (Cl. 219—25.)

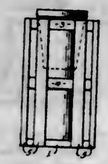
8. An electric iron comprising a body having handle supporting members, a handle section mounted between the supporting members, an electric cord having one of its wires connected to one of said supporting members,



a longitudinally movable switch disposed in the rear end of the iron, a spring urging said switch rearward and the rear end of the switch beyond the rear end of the iron, said switch when moved forward against the action of the spring closing the circuit through the heating element, an arm carried by the movable section of the handle and engaging said switch, a fulcrum supporting the movable section and the arm whereby when the movable section is forced toward the fixed section of the handle the arm will shift the switch to its circuit-closing position, and a support for the iron having rollers disposed in a downwardly and rearwardly extending plane, the rear end of the support having an upwardly extending member adapted to engage the rear end of the switch and force it forward into electrical engagement with the heating element when the iron moves rearward under the action of gravity on said support

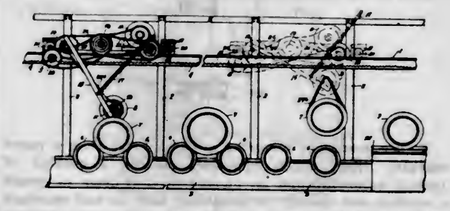
1,572,442. TRAFFIC SIGNAL FOR MOTOR VEHICLES. ALEXANDER MARRETT, Los Angeles, Calif. Filed Mar. 10, 1925. Serial No. 14,471. 1 Claim. (Cl. 116—48.)

A traffic signal for a motor vehicle having a windshield and a steering column, a bracket having a pair of cars adapted to be attached to a side frame of the windshield, a tubular signal arm having a pyramidal side wall adjacent the inner end, a lug secured to the said pyramidal wall, a pivotal connection between the lug and the bracket, the signal arm having a transverse base at its inner end, said base supporting a socket for an electric lamp, electric wires extending from the socket through the pyramidal wall, a flexible shaft connected to the tubular signal arm adjacent the pyramidal wall, and means mounted on the steering column to slide the other end of the flexible shaft to operate the signal arm.



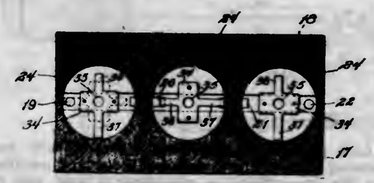
1,572,443. PISTON AND RING CONSTRUCTION. HENRY E. MUCHNIC, Atchison, Kans. Filed Jan. 12, 1925. Serial No. 1,727. 5 Claims. (Cl. 74—109.)

1. In combination with a piston member having a groove in its outer periphery, a bull-ring formed in segmental sections, said sections being constructed to fit in said groove and contact with the bottom thereof, complemental sections associated and coacting with said first named segments, a resilient extending means coacting with said segments, said first named segments and said complemental segments being grooved to accommodate said locking ring, the bottom of said segments beneath said grooves being recessed.



1,572,444. COMBINATION VASE AND DISPLAY RACK. CHARLES P. MUELLER, Wichita, Kans. Filed Nov. 11, 1924. Serial No. 749,310. 1 Claim. (Cl. 248—41.)

In a combination vase and display rack, composed of a base frame, an intermediate frame, a top frame, vertical slats attached to said frames, each of said frames having same form except the base frame which is made of wider material than that of the top and intermediate frames, thereby forming a supporting member for a can

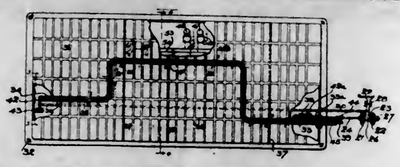


or jar when placed within the opening surrounded by the top and intermediate member, all for the purpose set forth and described.

1,572,445. PORTABLE PLASTIC-WARE-MAKING MACHINE. CLIFFORD R. NICHOLS, Dallas, Tex. Filed Apr. 20, 1925. Serial No. 24,627. 16 Claims. (Cl. 25—30.)

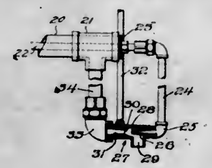
1. In a centrifugal plastic ware making machine, a multiplicity of spaced rotatable molds; rotary members supporting the molds; portable driving means for the molds including rotary driving members arranged to frictionally engage the upper arcs of the molds and exerting downward pressure thereon so as to positively hold the molds from upward movement; means for hoisting the molds by the said rotary driving means after completion of the product, and means for transporting the machine from the point of operation to dispose of the finished product

1,572,446. IGNITION-CIRCUIT SWITCH. RUSSELL H. PARKER, Benton County, Oreg. Filed Feb. 21, 1925. Serial No. 10,891. 3 Claims. (Cl. 200—43.)



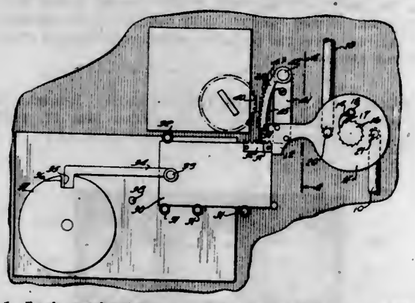
1. In a switch, a plurality of contact elements arranged in pairs, a switch element for connecting the contacts of the pairs and alignable in either of two positions, each pair of contacts connecting the contacts of one of said pairs at each alignment therewith and the contacts of the other pair only upon a predetermined alignment therewith.

1,572,447. LOCATING CHART FOR VEHICLES. WALTER F. SCHROEDER, Detroit, Mich. Filed Aug. 14, 1925. Serial No. 50,236. 10 Claims. (Cl. 116—29.)



1. In a locating chart for vehicles, the combination of a chart mounted in a vehicle, a tubular member in the

chart under the line of travel of the vehicle, a longitudinal slot in said tubular member, a flexible element



adapted to be moved through said tubular member by the rotation of one of the wheels of the vehicle, and a pointer connected to the flexible element.

1,572,448. PROCESS AND APPARATUS FOR REMOVING WATER AND AIR FROM PAPER-MACHINE DRIERS. VENNING D. SIMONS, Chicago, Ill. Filed July 15, 1920. Serial No. 396,524. 13 Claims. (Cl. 34—4.)

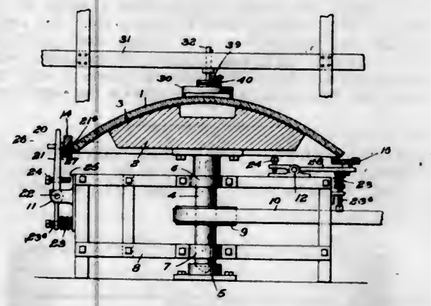
3. The process of removing air and water from a paper machine drier, which comprises passing a current of heated water through an ejector in said drier to create a suction and thereby withdrawing said air and moisture with said water, separating the air and water, heating a portion of said water and supplying said ejector with said heated water.

1,572,449. LOCK MECHANISM. HENRY N. SLEDGE, Jersey City, N. J. Filed July 6, 1925. Serial No. 41,483. 6 Claims. (Cl. 70—26.)

1. Lock mechanism comprising a locking bolt, means for moving said bolt into and out of locking position, a detent for preventing the movement of said bolt from locking position, means for withdrawing said detent and power driven mechanism under the control of said detent for operating said bolt moving means to move the bolt to unlocking position.

1,572,450. AUTOMATIC RIFLE. CARL GUSTAF SWEBILIUS, New Haven, Conn., assignor, by mesne assignments, to The Marlin Firearms Corporation, New Haven, Conn., a Corporation of Delaware. Filed May 15, 1919, Serial No. 297,201. Renewed Nov. 17, 1925. 88 Claims. (Cl. 42—8.)

2. In a take-down automatic firearm, a receiver, a barrel carried thereby, a self-contained action unit composed of a plurality of coacting elements, and means for detachably connecting said unit to said barrel and receiver.

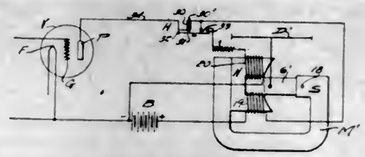


46. In a gun, a breech mechanism comprising a carriage, a breech bolt movably mounted on said carriage, locking means associated with said bolt, and means for operating the locking means upon relative movement of the carriage and bolt.

65. In an automatic gun, a gas cylinder, an action-rod having a tubular portion extending into the gas cylinder, a buffer slidably mounted in the exposed end of the tubular portion, and a resilient member engaging said buffer.

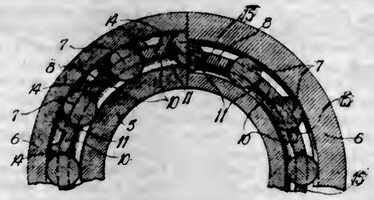
71. In an automatic gun, a barrel, a bracket carried by said barrel, a bore in said bracket having its upper surface tapered, a projection opposite said tapered surface a semicircular recess adjacent said bore, a gas cylinder having a reduced portion adapted to fit into said bore over said projection and a main portion adapted to fit in said semicircular recess, and aligning gas ports in said barrel and bracket and said cylinder.

80. In an automatic gun, a gas cylinder, a piston, an action slide and an action spring, said elements being provided with means to maintain them in their operative relation to form a self-contained unit removable from the gun.



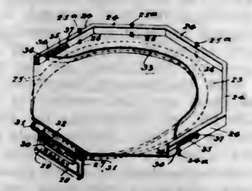
1,572,451. APPARATUS FOR FINISHING REFLECTOR BLANKS. WILLIAM H. TAYLOR, Ford City, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed June 5, 1922. Serial No. 566,202. 2 Claims. (Cl. 51—3.)

2. In combination in apparatus for finishing circular glass blanks, a table or support, means for securing the blank to be finished to such table or support, idler grinding devices arranged around the periphery of the table or support, means causing such devices to press against the edge of the blank, an annular cutter with its axis concentric with the axis of the table or support engaging the surface of the glass, and means for causing the table and grinding devices and cutter to rotate relatively to secure a cutting action between said grinding devices and annular cutter, and the glass blank.



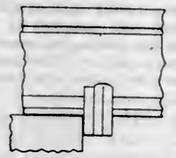
1,572,452. TELEPHONE RECEIVER. ADOLPH A. THOMAS, New York, N. Y. Filed May 16, 1925. Serial No. 30,708. 17 Claims. (Cl. 179—1.)

1. In a telephone receiving circuit, a magnet having pole pieces, a vibratory armature operatively associated with said pole pieces, a circuit containing a battery of substantially constant potential, a variable resistance path in series with the battery, means for varying the resistance of said path in accordance with transmitted intelligence, a coil on said magnet in series with the battery, a second coil on said magnet in shunt to said variable resistance path, said coils being so constructed and arranged that normally their resultant magnetic effect on the armature is substantially equal and opposite,



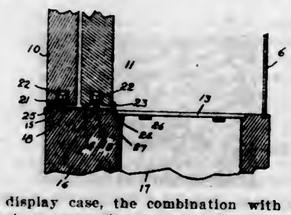
whereby current variations in the battery circuit due to variations in said resistance path unbalance the normally balanced magnetic effects of said coils and cause vibration of said armature in accordance with said current variations, and an acoustic member controlled by said armature.

1,572,453. ROLLER BEARING. HERBERT VANDERBEEK, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed July 9, 1924. Serial No. 724,961. 5 Claims. (Cl. 308—218.)



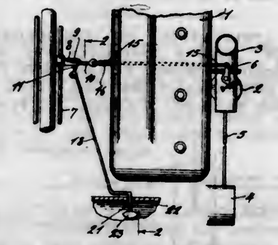
1. A roller bearing comprising inner and outer raceways, rollers between said raceways and a cage for said rollers, said cage comprising a shell substantially in circular alinement with the axes of said rollers and having pockets whose width near the ends thereof is approximately the same as the width of the adjacent portions of said rollers, and whose width at and near the middle thereof is sufficient to keep the rollers clear of said middle portion even when the end portions of said rollers contact sidewise with the side edges of the end portions of said pockets.

1,572,454. CABINET FOR PHONOGRAPH RECORDS. CHARLES A. VASTOLA, Waterbury, Conn. Filed Oct. 24, 1923. Serial No. 670,468. 3 Claims. (Cl. 211—16.)



1. In a phonograph record cabinet, a base, a plurality of identical staggered spaced plates superimposed upon said base, the spaces between adjacent plates being adapted to receive phonograph disc records, said records lying substantially concentric and a roller at the edge of each of said plates adapted to raise the front edge of the record to prevent the records from sliding out and to permit them to be readily moved into and out of position.

1,572,455. ANTICREEPER FOR RAILWAY RAILS. WILLIAM S. WESTON, Dallas, Tex. Filed Aug. 28, 1924. Serial No. 734,622. 14 Claims. (Cl. 238—304.)



9. A one-piece rail anchor, comprising a series of two or more substantially rigid jaws having, in operation, vertical plane lever grips on the same base flange of the rail, the said jaws being joined by a relatively yielding connection or connections adapted to be strained on installation and thereby initially establish the said lever grip of each jaw on the base flange.

1,572,456. DISPLAY CASE. CHARLES E. WICKE, Mount Vernon, N. Y., assignor to A. C. Wicke Manufacturing Company, New York, N. Y., a Corporation of New York. Filed May 15, 1924. Serial No. 713,393. 3 Claims. (Cl. 211—7.)

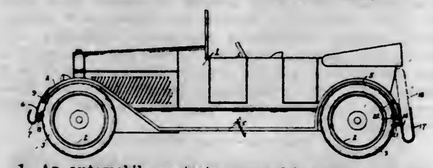
1. In a display case, the combination with a display compartment, a supporting structure therefor, and sliding doors movable over a portion of said structure, of a cover plate consisting of an elonagted strip of metal having a flat body portion fitting the top of said portion of the structure, and two downwardly extending flanges engaging the sides of said portion of the structure, whereby the said portion of the structure is sealed from moisture and the like, said cover plate also having two longitudinal corrugations pressed outwardly from said flat body portion and serving to support said sliding doors, another longitudinal corrugation extending outwardly from adjacent the edge of said flat body portion and serving as a stop to prevent displacement of said doors, and a ledge extending outwardly from said last-mentioned corrugation for supporting a tray in said compartment.

1,572,457. FOOT ACCELERATOR FOR AUTOMOBILES. WILLIAM J. WINTER and FRANK MCKINLEY HOLMES, Denver, Colo. Filed Oct. 19, 1925. Serial No. 63,327. 3 Claims. (Cl. 74—81.)

1. In an engine fuel control, in combination, a source of fuel, a carburetor, an engine, an intake manifold between the engine and the carburetor, a valve for controlling the passageway between the carburetor and the engine, and means for controlling said valve, said means

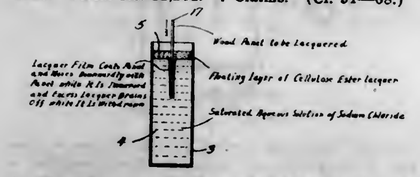
comprising an adjustable pivot, a double-levered crank member pivoted in the adjustment pivot, means for connecting one end of one of said levers with the valve, a spring means for normally holding the valve in closed position, and a push rod connected to one end of the other of said levers for moving the same about its pivot when sufficient force is applied to the push rod to rotate the double crank member against the force of the spring.

1,572,458. ALLOY STEEL. WILLIAM P. WOODSIDE and CHARLES NEUMAN DAWE, Detroit, Mich., assignors to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Aug. 24, 1923. Serial No. 659,213. 8 Claims. (Cl. 75—1.)



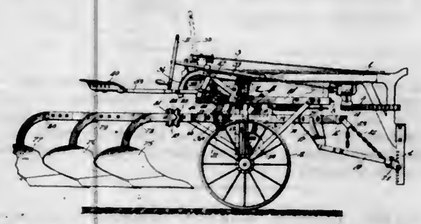
1. An alloy metal composed of .10% to .23% of carbon, .30% to .60% of manganese, 1.40% to 1.75% of nickel, .20% to .30% of molybdenum and 97% to 98.1% of iron.

1,572,459. MAKING CASTINGS OF ALUMINUM-SILICON ALLOYS. ROBERT S. ARCHER, East Cleveland, Ohio, and JUNIUS D. EDWARDS, Pittsburgh, Pa., assignors to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 27, 1920. Serial No. 426,839. 21 Claims. (Cl. 22—213.)



1. The method of making castings of aluminum-silicon alloy, comprising filling the mold with the molten alloy and causing the silicon in the alloy to take the form of minute particles by solidifying the alloy rapidly.

1,572,460. AUTOMOBILE FENDER AND GUARD. EDWARD A. BANSCHBACH, Chicago, Ill. Filed May 17, 1920, Serial No. 381,860. Renewed July 1, 1922. Serial No. 572,305. 7 Claims. (Cl. 280—152.)

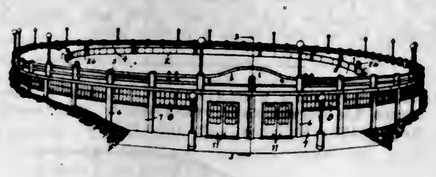


1. An automobile protector comprising a pair of opposite fenders with projecting and resilient ends, a bumper connected to the ends, and resilient means extending between the frame of the automobile and the bumper.

1,572,461. APPLICATION OF CELLULOSE-ESTER LACQUERS. REMB A. BEAUSEJOUR, Port Richmond, N. Y., assignor to Standard Varnish Works, New York, N. Y., a Corporation of New York. Filed Aug. 19, 1925. Serial No. 51,201. 7 Claims. (Cl. 91—68.)

1. An improved method of applying cellulose ester lacquers, which comprises floating a layer of the cellulose ester lacquer on a liquid body of greater density which is substantially immiscible with the lacquer and dipping the object to which the lacquer it to be applied through the floating layer of cellulose ester lacquer.

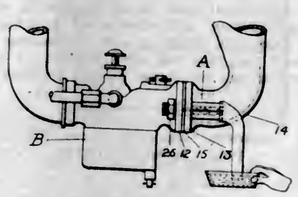
1,572,462. POWER FARMING APPARATUS. HARRY A. BECHTELHEIMER, Rock Island, Ill., assignor, by mesne assignments, to Moline Implement Company, a Corporation of Illinois. Filed Feb. 24, 1923. Serial No. 621,043. 5 Claims. (Cl. 97—72.)



1. A universal implement carriage for tractors comprising a wheeled frame having connections for connecting it to a tractor, a draft structure supported by the wheeled frame so as to be movable from a lowered or working position to a raised or transport position and vice-versa, said draft structure including means to which a wide variety of agricultural tools, including heavy tools such as plows, may be adjustably and detachably connected, a hitch device for connecting the draft structure to a tractor, powerlift mechanism operated by travel of the carriage, connections between the powerlift mechanism and the draft structure for raising and lowering the draft structure, means for adjusting said connections to vary the working position of the draft structure, said connections including parts having a limited relative vertical movement to permit a limited movement of the draft structure vertically relative to the wheeled frame when the draft structure is in working position to thereby permit the draft structure to have a limited floating action so that the tools may adjust themselves to inequalities in the soil without digging too deep or raising too high out of the ground.

3. A universal implement carriage for two-wheeled tractors of the type having a rearwardly extending coupling frame, comprising a wheeled frame having connections for attaching it to a tractor coupling frame to stabilize the implement, a draft structure supported by the wheeled frame so as to be movable from a lowered or working position to a raised or transport position and vice versa, and so that it may be inclined forwardly, rearwardly, or to either side relative to the frame, said draft structure including means to which a wide variety of agricultural tools, including heavy tools such as plows, may be adjustably and detachably connected, hitch connections for connecting the draft structure to a tractor, powerlift mechanism for raising and lowering the draft structure relative to the wheeled frame, and connections between the powerlift mechanism and the draft structure through which the powerlift mechanism may raise and lower the draft structure relative to the frame, adjusting means for said connections for adjusting the working position of the draft structure, said connections including parts having a limited relative movement vertically to permit the draft structure to have limited vertical movement relative to the frame while it is in working position to thereby permit the draft structure to float freely within limits so that the tools may adjust themselves to inequalities in the soil without digging too deeply into or rising too high out of the ground.

5. A universal implement carriage for two-wheeled tractors of the type having a rearwardly extending coupling frame, comprising a wheeled frame having connections for attaching it to a tractor coupling frame to stabilize the carriage, a draft structure supported by the wheeled frame so as to be movable from a lowered

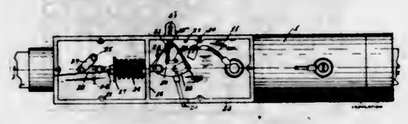


or working position to a raised or transport position and vice versa, said draft structure including means to which a wide variety of agricultural tools, including heavy tools such as plows, may be adjustably and detachably connected, hitch connections for connecting the draft structure to a tractor, powerlift mechanism operated by travel of the carriage, connections between the powerlift mechanism and each side of the draft structure, means for adjusting each of the connections independently to vary the height of the sides of the draft structure, said connections each including parts having a limited relative movement in a vertical direction which permit a limited movement of the draft structure relative to the frame in a vertical plane when the draft structure is in working position so that said structure will have a floating action which will permit the tools to adjust themselves to inequalities in the soil without digging too deep into or jumping out of the ground.

1,572,463. BATHING POOL. WESLEY BINTZ, Lansing, Mich. Filed June 14, 1923. Serial No. 645,302. 2 Claims. (Cl. 4—172.)

1. In a bathing pool structure, the combination with a pool open at the top and provided with a bottom floor resting upon the ground, a surrounding retaining wall, said bottom floor joining said wall intermediate the top and bottom thereof, a deck surrounding said pool, said deck extending outwardly from the top of said wall, an outer wall surrounding said pool wall and spaced therefrom, said deck constituting a top for the enclosure between said walls, and a floor between said walls, thereby providing a covered enclosed room space, said deck, outer wall and floor reinforcing said retaining wall, as described.

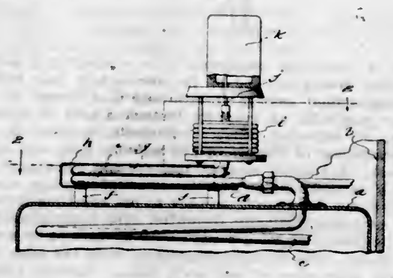
1,572,464. INTAKE-CONNECTING BOLT. CHARLES BJORKLUND, St. Paul, Minn. Filed Nov. 1, 1924. Serial No. 747,262. 8 Claims. (Cl. 251—121.)



3. A connecting bolt for carburetor and intake flanges including an air passageway through said bolt and a valve for closing said air passageway.

5. A connecting bolt for automobiles including an opening formed in said bolt, a valve for closing said opening, means for holding said valve in normally closed position and an opening extending into said bolt adapted to connect the first named opening therein with the intake passageway of the automobile in a manner so that when the automobile is in operation air can be fed from the outer atmosphere into the motor of the automobile through said bolt.

1,572,465. PROCESS FOR MANUFACTURING LUBRICATING OILS. JOHN C. BLACK, Destrehan, La., and JAMES W. WEIR, Fillmore, Calif. Filed Oct. 19, 1922. Serial No. 595,660. 10 Claims. (Cl. 196—147.)

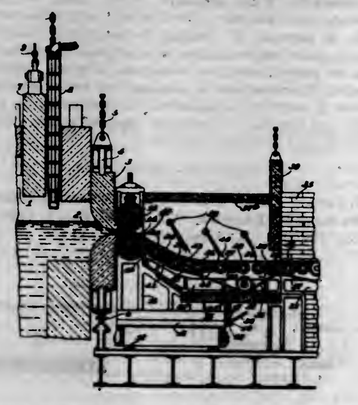


1. A method of refining hydrocarbons consisting in treating the hydrocarbons with sulphuric acid; withdrawing the precipitated acid reactions products, adding to the treated hydrocarbons a neutralizing and decolorizing reagent in sufficient quantities to decolorize the hydrocarbons and heating the mixture, then separating the hydrocarbons and admixed reagent.

1,572,466. ELECTRIC WATER HEATER. GEORGE R. BLAKESLEY, Edgerton, Wis. Filed Dec. 4, 1920. Serial No. 428,212. 1 Claim. (Cl. 200—81.)

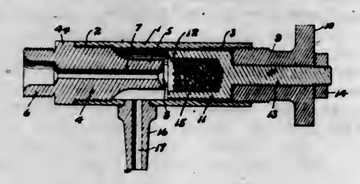
In an automatic control for an electrical water heater, means for controlling the electric current comprising a stationary contact member, a pivoted contact member having a stud projecting therefrom, a pivoted actuator having an arcuate slot for receiving said stud, a spring connected to said stud for alternately actuating said movable contact member to open or closed position, a spring actuated rod attached to said actuator for oscillating the same, and a flap valve connected to said rod and operable for shifting said rod for moving said movable contact member toward closed position.

1,572,467. REFRIGERATING APPARATUS. LOUIS G. BURGESS and HARRY THOMPSON, Detroit, Mich. Filed Nov. 22, 1923. Serial No. 676,227. 2 Claims. (Cl. 62—4.)



2. In a refrigerating control, the combination of a conduit bearing the expanded gases of a refrigerating apparatus and forming a loop, a fluid expansion type of thermostat provided with a feeler leg in the form of a loop lying against the loop of said conduit, and a shield encasing the two said loops for holding the parts in heat conductive relation.

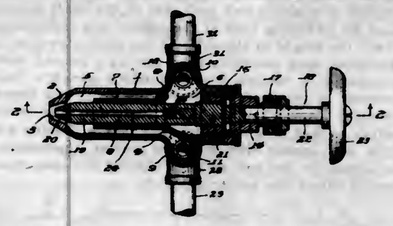
1,572,468. APPARATUS FOR MAKING SHEET GLASS. ROBERT L. CLAUSS, Sewickley, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed May 13, 1925. Serial No. 29,932. 4 Claims. (Cl. 49—33.)



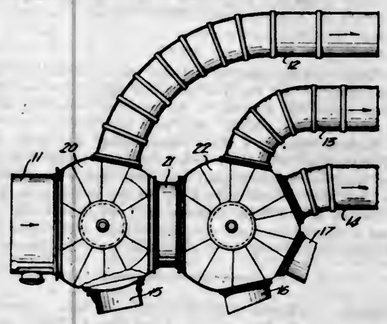
1. Apparatus for forming sheet glass continuously in a sheet or ribbon from a body of molten glass, comprising a pair of cooled rolls contacting with said molten body of

glass, and a table for receiving the glass and forwarding it, comprising a series of spaced rollers, a series of platens

interspersed between the rollers having their upper surfaces substantially flat and filling the spaces between the rollers, and means for cooling the rollers and platens.



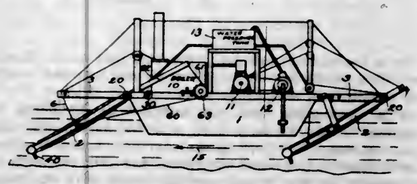
1,572,469. LIQUID-FLOW-REGULATING VALVE. MARTIN DE LIN, Holland, Mich., assignor to Holland Furnace Company, Holland, Mich., a Corporation of Michigan. Filed Sept. 28, 1925. Serial No. 58,998. 4 Claims. (Cl. 251—27.)



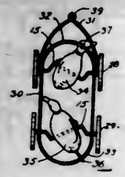
1. A liquid flow regulating valve comprising a sleeve, a plug closing one end of the sleeve, said plug having a longitudinal passage therethrough and formed at its inner end with an inwardly projecting neck of reduced size, an adjusting member adjustably mounted in the opposite end of the sleeve and movable back and forth therein, a housing member substantially cup-shaped located at the inner end of the adjusting member, means connecting the housing member to the adjusting member to move longitudinally therewith, said housing member at its inner end being formed with an opening or recess of larger cross sectional dimensions than the cross sectional dimensions of said neck, fibrous material located in said opening against which the inner end of said neck may be pressed, and an outlet to the sleeve located between the plug and housing member at one side of said neck, substantially as described.

1,572,470. OIL BURNER. CHRISTIAN A. DIEHL, Camden, N. J. Filed May 5, 1925. Serial No. 28,073. 5 Claims. (Cl. 158—75.)

1. In a liquid fuel burner, the combination of a casing, a partition therein dividing said casing into a forward fluid pressure chamber and a rear liquid fuel chamber, said chambers being provided with inlet openings disposed symmetrically on opposite sides of the axis of said casing, said fluid pressure chamber being provided at its forward end with a nozzle opening forming a valve seat, a sleeve in said casing integral with said partition extending forwardly toward said nozzle opening through said fluid pressure chamber and having a smooth cylindrical bore in alinement with said nozzle opening, a cap or closure closing the rear end of said casing, a valve stem extending through said chambers and through said cap and through said cylindrical bore, its forward end forming a valve member to cooperate with said valve seat and having an axial bore extending from the forward end thereof to said fuel chamber, a screw-threaded connection between said stem and said cap, a handwheel secured to the rear end of said stem, a fluid supply pipe and a fuel supply pipe disposed in alinement with each other and respectively communicating with the nozzles in said chambers and on which pipes said casing is mounted to be turned as on a friction pivot.



1,572,471. PENSTOCK STRUCTURE. HAROLD L. DOOLITTLE, Los Angeles, Calif. Filed May 7, 1923. Serial No. 637,157. 8 Claims. (Cl. 137—75.)

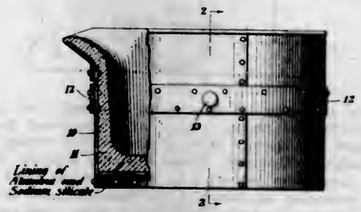


1. A penstock structure adapted to use in hydraulic power plants, comprising: a cylindrical sheet metal supply pipe; a spherical sheet metal chamber to which said supply pipe connects; and sheet metal distributing pipes extending from said chamber, said distributing pipes being arranged so that the axes thereof, if prolonged, would pass through the center of said chamber.

1,572,472. DREDGE. HENRY E. DOREN, Edmonds, Wash. Filed Mar. 9, 1925. Serial No. 14,110. 1 Claim. (Cl. 37—54.)

In a dredge, a supporting hull, beams projecting beyond each end of the hull, current deflecting planes pivotally supported from said beams to permit setting them to deflect the current downwards, a water pumping system, a header pipe extending along the lower edge of the apron and having supply connection with the pumping system, discharge nozzles carried by said header pipe to discharge downwardly, and means for rocking the header pipe to thereby vary the angle of discharge of the nozzles.

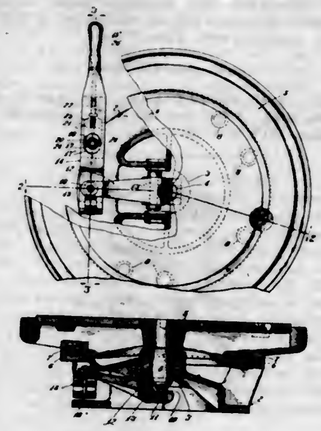
1,572,473. TOY. GEORGE W. FERGUSON, Minneapolis, Minn. Filed Mar. 23, 1921. Serial No. 454,975. 6 Claims. (Cl. 46—45.)



1. A toy comprising a pair of wheels having coincident axles, an axle connecting said wheels, having portions coincident with said axles so as to permit the same to rotate at all times perpendicular to the surface supporting the same, and another portion inclined relative thereto, a figure pivoted to said inclined axle portion and means pivoted to said coincident axle portion for supporting and guiding said figure in its movements.

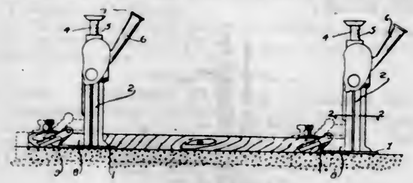
1,572,474. EXPANSION JOINT. ALBERT C. FISCHER, Chicago, Ill. Filed Mar. 24, 1925. Serial No. 17,892. 19 Claims. (Cl. 94—18.)

1. As a new article of manufacture, plastic sheet material having small narrow strips of strengthening material placed upon one or more of its surfaces.



1,572,475. REFRACTORY LINING FOR CRUCIBLES AND THE LIKE. FRANCIS C. FRARY, Oakmont, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 15, 1924. Serial No. 686,276. 1 Claim. (Cl. 263—48.)

A hollow article for handling highly heated aluminum alloy, comprising a steel shell and a lining therein composed essentially of fine particles of solidified alumina bound together by sodium silicate.



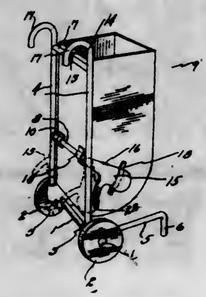
1,572,476. ROTARY TABLE FOR DRILLING MACHINES. ROBERT M. GALLOWAY and ALFRED G. SUDHOFF Richmond, Ind., assignors to The National Automatic Tool Company, Richmond, Ind., a Corporation of Indiana. Filed Feb. 26, 1923. Serial No. 621,163. 7 Claims. (Cl. 77—63.)

1. The combination of a base, a table mounted to rotate over said base and to rest upon the same, means for holding the table at different positions of rotation, means for lifting the table off its seat, and means for operating said lifting means with provisions for also releasing the table from its holding means by operation of said lifting means.

6. The combination of a base having a central bearing and an encircling track, a table having a journal stud occupying said bearing and a series of sockets over the base track, a bolt mounted to slide vertically in the base and engage the sockets in the table, a lever pivoted beneath the table and extending under the latter's journal stud on one side of its pivot, a second lever extending at right angles to the first and coupled to the latter on the other side of its pivot, and a permanent connection between the bolt and the second lever on the same side of the latter's pivot as the coupling between the two levers.

1,572,477. TRACK-ALIGNING JACK. FREDERICK HACKMANN, Chicago, Ill. Filed Jan. 25, 1924. Serial No. 688,395. 3 Claims. (Cl. 254—43.)

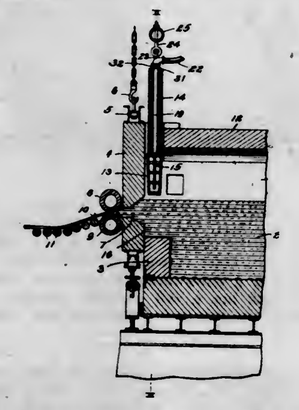
1. In a rail aligning jack, a base; a hollow vertical guide having its front side partially open rising from said base, a rack bar slidably mounted in said guide and having a lug projecting through the open side thereof, a support having a downwardly sloping end removably secured upon said lug, a rail engaging element pivoted to said support and means for operating said track bar.



1,572,478. PROCESS FOR RECLAIMING USED PAPER. GRANT HAMMOND, New Haven, Conn. Filed Mar. 12, 1925. Serial No. 15,146. 3 Claims. (Cl. 92—3.)

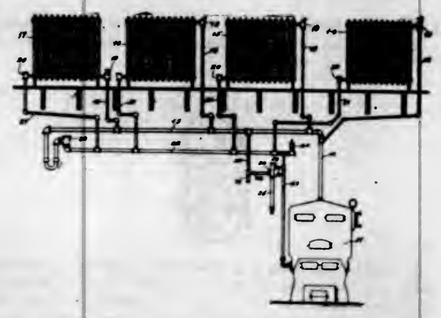
1. A process for reclaiming paper having a pigment applied thereto which comprises beating the paper at a temperature below 110° F. approximately, treating it with a caustic alkali during beating and mixing an alkali acid sulfite with the resulting pulp at substantially room temperature.

1,572,479. COMPOSITION OF INGREDIENTS AND PROCESS FOR DEINKING PAPER. GRANT HAMMOND, New Haven, Conn. Filed May 24, 1922. Serial No. 563,381. 10 Claims. (Cl. 92—9.)



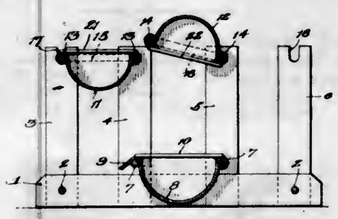
2. A composition for de-inking paper including a saponaceous ingredient and an ingredient of the glucose series all combined with water.

1,572,480. ASH RECEPTACLE. WILLIAM C. HISLOP, Detroit, Mich. Filed Apr. 25, 1925. Serial No. 25,805. 4 Claims. (Cl. 280—53.)



2. An ash receptacle comprising a frame, a pair of wheels on which the frame is mounted, a pair of legs extending from the frame and adapted to support the frame in a vertical position, a receptacle pivotally mounted on the frame and adapted to be turned on its pivot within the frame, a pair of dogs normally extending from the side of the frame and pivotally mounted on the frame, means on the receptacle whereby the dogs are moved out of position upon turning of the receptacle from dumping position to upright position, and means for securing the receptacle in the upright position.

1,572,481. GATE FOR GLASS TANKS. HALBERT K. HITCHCOCK, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Feb. 16, 1924. Serial No. 693,248. 7 Claims. (Cl. 49—55)

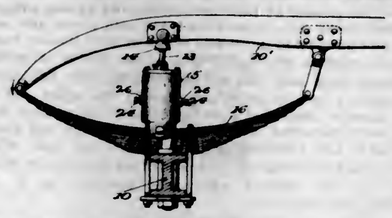


1. The combination with a melting tank having an outlet at its forward end, of a gate mounted for vertical movement through the top of the tank, and adapted when lowered to cut off the flow of glass to said outlet, said gate comprising a lower water cooled portion and a portion of refractory material lying thereabove.

1,572,482. VAPOR HEATING SYSTEM WITH DIFFERENTIAL LOOPS. GEORGE D. HOFFMAN, Pasadena, Calif., assignor to Hoffman Specialty Company, Waterbury, Conn., a Corporation of Illinois. Filed July 9, 1918, Serial No. 244,103. Renewed Sept. 24, 1925. 12 Claims. (Cl. 237—67.)

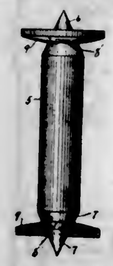
1. A heating system comprising a boiler, a heating element, steam and return lines between the boiler and heating element, a blow over device having an inlet connected to the boiler and an outlet connected to the return line, and containing a sealing medium adapted to oppose continuous yielding resistance of limited maximum force to the flow of steam from said inlet to said outlet, and a thermostatically controlled vent valve in communication with the return line and with the outlet side of said device, said thermostatically controlled valve being located in close proximity to said outlet.

1,572,483. FEED TROUGH. JOHN HOIER, Dell Rapids, S. Dak. Filed Apr. 22, 1924. Serial No. 708,161. 6 Claims. (Cl. 119—52.)



4. In a feeding device, a frame, a central feed trough carried by the frame, a pair of supperposed hoppers arranged on opposite sides of the central trough, and substantially U-shaped frames for the hoppers having their inner sides journaled in the frame and their outer sides removably supported in the frame whereby to allow the hoppers to be swung inwardly to dump their contents into the central trough.

1,572,484. SHOCK ABSORBER. FRANK T. HOMAR, Tucson, Ariz. Filed Nov. 28, 1923. Serial No. 677,505 1 Claim. (Cl. 188—88.)



A shock absorber for motor vehicles comprising a cylindrical casing adapted for the reception of a quantity of liquid, a piston mounted for movement in said casing, a piston rod extending from said piston and having a substantially liquid tight connection with the casing, means whereby the free end of said piston rod may be universally connected with a vehicle frame, a head connected to said casing having an opening receiving said piston rod, means whereby the lower end of the casing may be hingedly connected to the axle of the vehicle,

said casing provided at opposite sides with longitudinally extending by-passes having lateral branches communicating with the upper and lower end portions of the

casing, and a hand operated screw bolt threaded into each of said by-passes midway the upper and lower ends thereof and controlling the flow of liquid therethrough.

1,572,485. TIMEPIECE. ERNEST H. HORN, Waterbury, Conn., assignor to Waterbury Clock Co., Waterbury, Conn., a Corporation. Filed Aug. 27, 1925. Serial No. 52,723. 2 Claims. (Cl. 58—140.)

1. A balance staff for time-pieces having tapering ends and concave disks applied to the ends of the staff.

1,572,486. WINDOW SASH. JESSE R. HOWARD, Beloit, Wis. Filed Oct. 17, 1925. Serial No. 63,020. 3 Claims. (Cl. 20—52.)

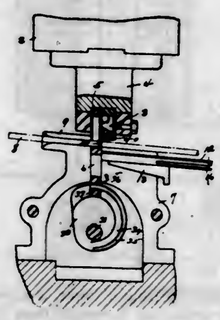
1. A window sash comprising a unitary member adapted to be set in the window casing and having a stationary upper panel, a slidable lower panel, said panels having glass panes, and a screen detachably secured outside of said lower panel, said screen and upper panel having interengaging fastening means.

1,572,487. ALUMINUM-COPPER ALLOY. ZAY JEFFRIES, Shaker Heights, and ROBERT S. ARCHER, Lakewood, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Original application filed Jan. 4, 1921, Serial No. 435,024. Divided and this application filed Apr. 29, 1924. Serial No. 709,748. 34 Claims. (Cl. 148—11.)

1. In the art of making aluminum-alloy castings, the method comprising preparing an aluminum alloy containing between about 3 and 5.5 per cent of copper, casting the alloy, heating the masting to a temperature of about 500° to 540° C. for at least about 7 hours, and cooling the casting.

1,572,488. ALUMINUM-SILICON ALLOY. ZAY JEFFRIES, Shaker Heights, and ROBERT S. ARCHER, Lakewood, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Original application filed Jan. 4, 1921, Serial No. 435,024. Divided and this application filed Apr. 29, 1924. Serial No. 709,749. 18 Claims. (Cl. 148—11.)

1. In the art of making aluminum alloy castings, the method comprising preparing an alloy containing substantial amounts of silicon and zinc, casting the alloy, heating the casting to a temperature slightly below the melting point of the eutectic, and maintaining such temperature until the silicon particles have been sufficiently altered to materially improve the physical properties of the cast alloy.



1,572,489. ALUMINUM ALLOY. RODERICK L. JOHNSTON, New York, N. Y., ROBERT S. ARCHER, East Cleveland, and ZAY JEFFRIES, Cleveland Heights, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 27, 1920. Serial No. 426,793. 12 Claims. (Cl. 75—1.)

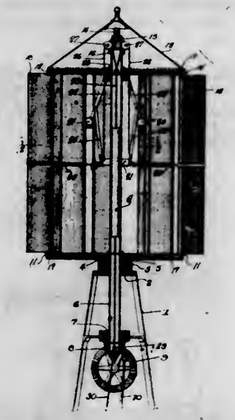
1. An alloy composed chiefly of aluminum containing a substantial amount of silicon and substantial amounts of copper and zinc.

1,572,490. ALUMINUM ALLOY. RODERICK L. JOHNSTON, Plainfield, N. J., ROBERT S. ARCHER, Lakewood, and ZAY JEFFRIES, Shaker Heights, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Original application filed Nov. 27, 1920, Serial No. 426,793. Divided and this application filed Feb. 11, 1925. Serial No. 8,517. 7 Claims. (Cl. 75—1.)

1. An alloy composed chiefly of aluminum, containing, approximately, silicon 8 per cent, zinc 10 per cent, and copper 2.5 per cent.

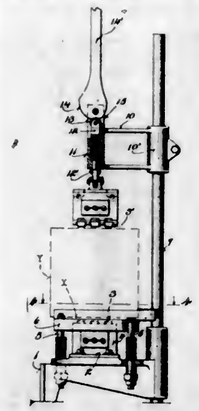
1,572,491. WIRE-MESH MACHINE. THOMAS H. KANE, Youngstown, Ohio, assignor to Truscon Steel Company, a Corporation of Michigan. Filed July 3, 1922. Serial No. 572,512. 1 Claim. (Cl. 140—11.)

A machine for making wire fabric comprising a lower feed roll, a plurality of upper feed rolls for advancing longitudinal wires, a plurality of lower reciprocating dies,



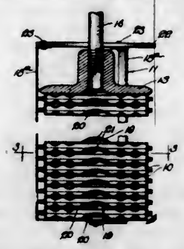
cams for reciprocating said dies, a slotted opening in each die, a recess in each of said dies around said slotted opening, a plurality of reciprocating upper dies, a recess back of each upper die for the clearance of each lower die, staple magazines for automatically feeding staples into the recess of each lower die, means for the co-action of the upper and lower dies forming ends of staples around a cross wire, substantially as described for the purpose set forth.

1,572,492. SANITARY-CONTAINER CONSTRUCTION. PHILIP KEMPTER, Milwaukee, Wis., assignor to Geuder, Paeschke and Frey Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 20, 1925. Serial No. 10,480. 1 Claim. (Cl. 220—74.)



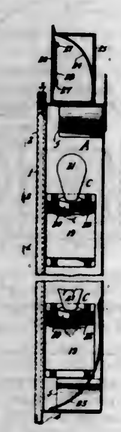
A sheet metal open top container adapted particularly to contain liquids, comprising a single blank of sheet metal shaped to constitute a one-piece conical side wall body, an annular reinforcing rod arranged at the large end of said body and upon the exterior thereof, the said end of said body being shaped outwardly around said rod throughout the circumference of the body and engaging with said rod, the outer extremity of said engaging portion being brought tight against the exterior conical surface of said body and providing a relatively broad flange extending entirely around and in tight engagement with the body, said flange being brazed, welded or soldered to said body throughout its entire breadth and circumference, the distance of said flange below the top of the container and the degree of conicity of the container wall being such as to require forcible crimping of the flange against the container wall and continuous welding, brazing or soldering to obtain a hermetically sealed joint.

1,572,493. WINDMILL. WILLIAM J. KLECKER, Watertown, Wis. Filed Apr. 21, 1924. Serial No. 707,956. 1 Claim. (Cl. 170—33.)



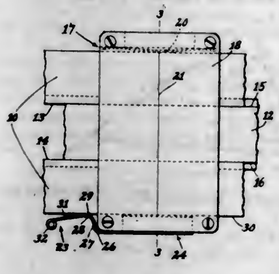
A windmill comprising a tower, a tubular shaft carried thereby and projecting upwardly from the upper end of said tower, a pair of spiders carried by said shaft, a plurality of wings having their inner ends pivotally joined to said spiders, rods extending inwardly from the free ends of said wings, a ring surrounding said shaft and connected to said rods, governor mechanism carried by said shaft said governor mechanism comprising levers pivoted at their upper ends and having weights at their lower ends, links connecting said levers and said ring and adapted to move said ring vertically thereby varying the angular seating of said wings, cables extending upwardly from said ring and downwardly into said tubular shaft, a pair of pulleys carried by the upper end of said tubular shaft and over which said cables pass and manually controlled means extending through said tubular shaft and connected to said cables, said rods being approximately horizontal and said links and levers being approximately vertical when said governor is in its slowest speed position.

1,572,494. PRESSURE BRANDING MACHINE. WILLIAM C. KRAUSE, Milwaukee, Wis. Filed June 27, 1924. Serial No. 722,733. 1 Claim. (Cl. 101—27.)



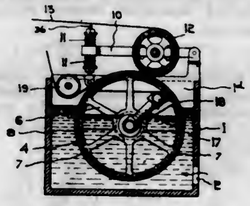
A branding machine comprising a bed plate, a post extending upwardly therefrom, a bracket adjustably carried by said post, an electrically heated branding platen movably supported by said bracket, a spring urging said platen upwardly, means for depressing said movable platen, a stationary electrically heated branding platen rigidly carried by said bed plate, a skeleton frame positioned above said stationary platen for supporting the work, and springs yieldingly supporting said frame.

1,572,495. REGULATING DEVICE. JOHN M. LARSON, Chicago, Ill., assignor to National Regulator Company, Chicago, Ill., a Corporation of Illinois. Filed June 15, 1923. Serial No. 645,620. 5 Claims. (Cl. 297—4.)



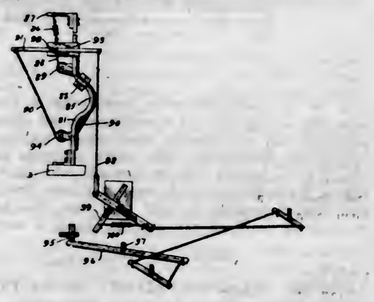
1. A heat controlled actuating device comprising a cage and a plurality of superposed, unconnected non-communicating expansible cells in said cage, said cage comprising a plurality of longitudinally extending spring bars embracing said cells and yieldable laterally to permit the removal of the cells from said cage.

1,572,496. SIGN. SIMON LIBROS, Cynwyd, Pa., assignor of one-half to Oscar Libros, Philadelphia, Pa. Filed Nov. 26, 1924. Serial No. 752,308. 7 Claims. (Cl. 40—133.)



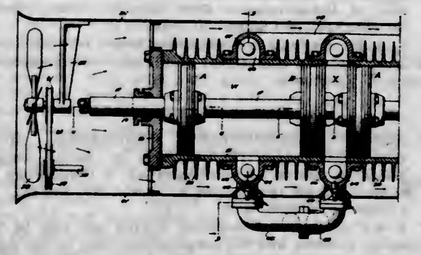
2. A display sign comprising a sheet metal casing having a back, a top wall, a bottom wall, and a side wall equal in width to the width of the top and bottom walls, a front panel having an open central portion slidably mounted upon said top and bottom walls, guide-ways upon the inner face of the front panel, a narrow side wall forming part of said casing forming an opening between said narrow wall and the front panel through which said guide-ways may pass, a plate forming a shutter slidably mounted upon said narrow wall adapted to abut against the inner face of the front panel and close said opening between said narrow wall and said panel, a slide having display characters thereon removably mounted in said guide-ways, and illuminating means within said casing.

1,572,497. CURSOR SHIFTER FOR SLIDE RULES. HAROLD A. MCCARTER, Los Angeles, Calif. Filed June 20, 1925. Serial No. 38,575. 3 Claims. (Cl. 235—70.)



2. A cursor shifter comprising a spring lever terminating in a thumb hold at one end, a resilient clamp at the other end adapted for attachment to one end of a cursor on a slide rule, said spring lever having a compound bend between said thumb hold and said clamp whereby said spring lever is brought into engagement with one edge of a slide rule with the lever arm extending at an angle therefrom.

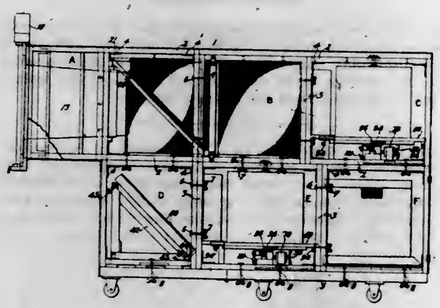
1,572,498. PAPER-MAKING MACHINE. GORDON F. MCCLAY and HARRY V. HAIGHT, Sherbrooke, Quebec, Canada, assignors to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 12, 1921. Serial No. 469,080. 13 Claims. (Cl. 92—43.)



1. In a wet machine the combination of a rotary cylinder mold, an internal spray, a couch roll and means for adjustably supporting said couch roll independently of the cylinder mold whereby part or all of its weight may be removed from the cylinder mold.

1,572,499. BEET TOPPER. ANDREW A. MATHESON, Shoshoni, Wyo., assignor to Andrew A. Matheson, Denver, Colo., A. C. Allen, Riverton, Wyo., and Edward Merriam, Moneta, Wyo., trustees of The Matheson Beet Harvester Syndicate, a Common Law Trust. Filed Jan. 28, 1924. Serial No. 688,971. 7 Claims. (Cl. 146—85.)

1. A topping device for beet harvesters, comprising, in combination, a pair of rollers mounted to rotate about substantially parallel, horizontal axes, means for introducing beet tops between said rollers, said means comprising a conveyor belt, a knife, and means for moving said knife up and down in front of said rollers at predetermined intervals.



1,572,500. ENGINE. VIRGIL W. MORAY, New York, N. Y. Filed Oct. 16, 1922. Serial No. 594,747. 3 Claims. (Cl. 123—51.)

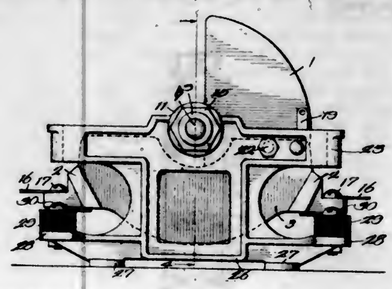
3. An engine comprising a cylinder; a crank shaft having oppositely extended cranks; a plurality of pistons reciprocatively mounted in said cylinder in paired rela-

tion; a plurality of relatively slidable piston rods, semicircular in cross section with their flat faces abutting, extending axially of the cylinder through said pistons and each operatively connected with one of said cranks and one of said pistons, and means for introducing and exhausting a power producing medium between said pistons for effecting movement thereof simultaneously in opposite directions.

1,572,501. EXHIBITION DEVICE. ALFRED E. OSWALD, Bogota, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 25, 1921. Serial No. 439,775. 72 Claims. (Cl. 88—1.)

1. In an exhibition-device comprising a front sight-tube, the combination of a rotatable upper object-bearing platform and a rotatable lower object-bearing platform alternately displayable, said upper platform being positioned to be viewed directly through said sight-tube, and means for reflecting said lower platform first upwardly and then forwardly to said sight-tube, the lower platform being mounted for rotation about a vertical axis.

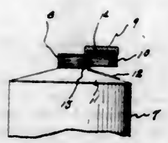
1,572,502. ALUMINUM ALLOY. ALADAR PACZ, Cleveland, Ohio, assignor, by mesne assignments, to Aluminum Company of America, a Corporation of Pennsylvania. Filed Sept. 12, 1919. Serial No. 323,350. 3 Claims. (Cl. 75—1.)



1. An alloy consisting of aluminum, copper and silicon in the proportion substantially of 70 parts by weight of aluminum, to 15 to 27½ parts of copper and 2½ to 15 parts of silicon.

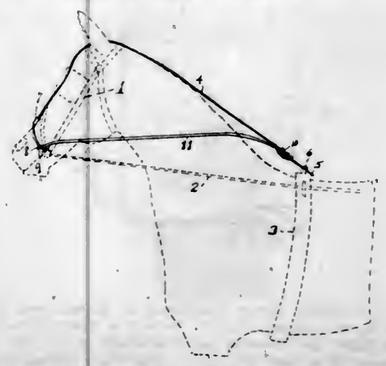
1,572,503. COMPOSITION OF MATTER. ALADAR PACZ, Cleveland Heights, Ohio, assignor, by mesne assignments, to Aluminum Company of America, a Corporation of Pennsylvania. Filed May 31, 1921. Serial No. 473,825. 5 Claims. (Cl. 75—1.)

1. A die casting alloy containing nickel between about 2½ per cent and 10 per cent of silicon, and a preponderance of aluminum.



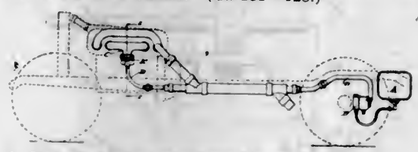
1,572,504. ELECTROSTATIC CONDENSER. HUGO PERLMAN, Chicago, Ill., assignor, by mesne assignments, to Zenith Radio Corporation, a Corporation of Illinois. Filed Oct. 22, 1924. Serial No. 745,157. 6 Claims. (Cl. 250—41.)

1. An electrostatic condenser having one side in the form of a stator and its complemental side in the form of a rotor, in combination with a cast metal frame having a sleeve element cast integrally with one side of the frame; a sleeve element assembled with the opposite side of the frame; bearings assembled with the said sleeve elements, the rotor being mounted in said bearings that are positioned to enable the rotor to turn in the



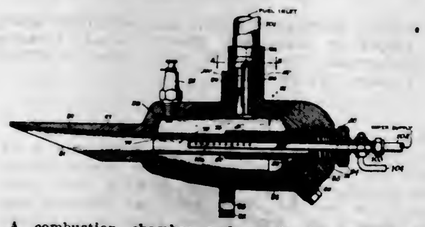
space surrounded by the frame; and a mounting of insulation assembled with the frame and carrying the stator in register with said space.

1,572,505. SCREW-CAP RETAINER AND GUIDE. JOHN D. RAYMOND, Detroit, Mich. Filed Mar. 2, 1925. Serial No. 12,470. 4 Claims. (Cl. 220—39.)



1. In combination with a container having an exteriorly threaded neck and provided with an interiorly threaded cap for threading on said neck as a closure, a guide and retainer for said cap projecting in close proximity to said neck adapted for guiding said cap upon its initial positioning on said neck for a closure and adapted for engaging the side walls of said cap and clamping the same against the exterior of said neck for retaining said cap in fixed relation on said neck when in inoperative position as a closure on said neck.

1,572,506. CONTROLLING REIN. ULYSSES SAMUEL RENNE, Fort Calhoun, Nebr. Filed Apr. 6, 1925. Serial No. 21,068. 3 Claims. (Cl. 54—1.)

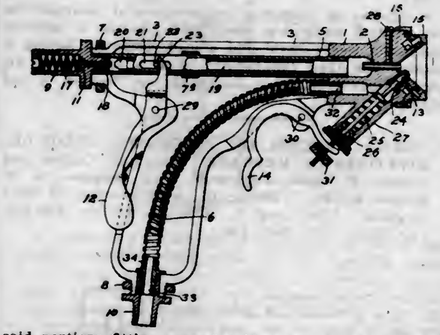


3. A controlling device for harness horses comprising an over-check, a bit provided with rings at its ends, and controlling reins extending from the front end of the over-check through said rings of the bit to the rear end of said over-check and slidable in said rings, the connection between the rear ends of the controlling reins and of the over-check being adjustable so that either controlling rein may be tightened.

1,572,507. AIR VALVE FOR FUEL-MIXTURE CONDUITS. FLORENT E. ROBERT, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Feb. 11, 1924. Serial No. 691,936. 6 Claims. (Cl. 251—128.)

1. In a fuel mixture forming and feeding system, in combination with a fuel mixture conduit which leads from a source of air and fuel to an engine intake, an air inlet valve device which comprises an inlet port member having a piston valve seat and a piston valve mounted for entering and traveling limitedly in said seat and withdrawing wholly therefrom at the end of limited withdrawal movement, means yieldingly resisting the opening of the valve, and a dash pot device connected with the valve for retarding the movements thereof.

1,572,508. INTERNAL-COMBUSTION ENGINE. FRED SCHMIDT, Chicago, Ill., assignor, by direct and mesne assignments, to Major Engineering Corporation, a Corporation of Illinois. Filed Mar. 17, 1921. Serial No. 453,109. 1 Claim. (Cl. 60—46.)



A combustion chamber and nozzle for turbine gas engines comprising a bottle-like casing having a nozzle opening thru a port into a combustion chamber in the casing; a hollow tubular valve to close the port, extending axially thru the chamber and having a piston on its outer end axially movable in a cylinder therefor, provided in the casing; an adjustable spring to yieldingly hold the valve normally seated on said port but permitting the valve to open the port by pressure generated by the explosion of gases within the casing and a pipe within the tubular valve, whereby to introduce water therein by the suction effect produced by the heated gases thru said port.

1,572,509. PNEUMATIC PAINTBRUSH. FREDERICK W. SCHNEIDER, Baltimore, Md., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Mar. 23, 1923. Serial No. 627,118. 8 Claims. (Cl. 91—45.)

1. In combination in a pneumatic air brush having a body portion, a paint nozzle and an air nozzle arranged in operative relation, supply passages leading to the nozzles, and valves for controlling said passages, of a pistol grip for the body portion, and a pair of triggers for operating the valves, one of such triggers extending along the back of the grip, and operable by the pressure of the palm or base of the hand of the operator, and the other lying forward of the grip and operable by the pull of one or more of the fingers of such hand.

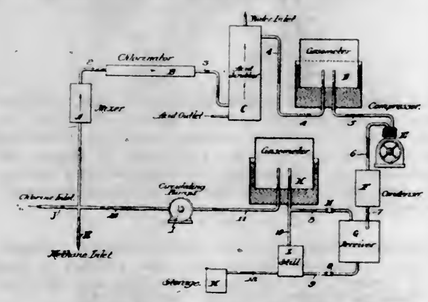
4. In combination in a pneumatic air brush, of a discharge head carrying air and paint nozzles, supply tubes leading rearwardly from said head, a pair of similar side plates fitting over and enclosing said tubes and including rear extension portions and grip portions, opposing semi-cylindrical threaded parts at the ends of

said portions fitting around said supply tubes, clamping nuts on said threaded parts for securing the tubes and side plates in assembled relation, valves for controlling the flow through the tubes, and a pair of triggers for controlling the flow through said tubes mounted between the side plates, the said supply tubes being detachably secured to said head.

1,572,510. DESTRUCTIVE DISTILLATION. FREDERICK C. ATKINSON, Indianapolis, Ind., assignor to John W. Garland, Inc., Pittsburgh, Pa. Filed Aug. 20, 1919. Serial No. 318,750. 6 Claims. (Cl. 203—6.)

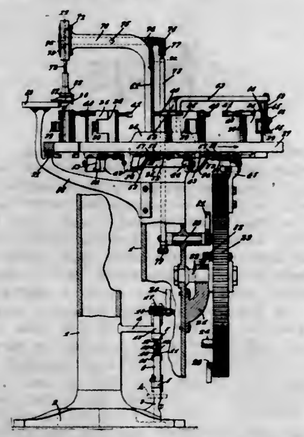
1. A process of producing a creosote which includes crushing corn cobs, extracting and then drying the same, destructively distilling said corn cobs in a closed retort at a high temperature, collecting the distillate, separating the oily constituent from the balance of the distillate and redistilling the said oil constituent.

1,572,511. SEPARABLE CUFF BUTTON. BENJAMIN F. BAKER, St. Stephen, New Brunswick, Canada. Filed July 8, 1925. Serial No. 42,282. 6 Claims. (Cl. 24—110.)



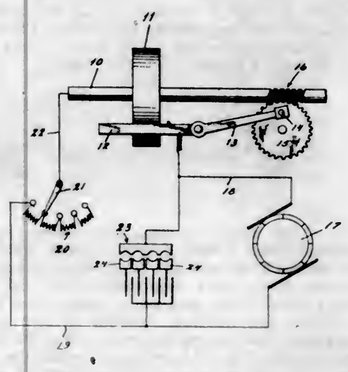
1. A button comprising separable sections, each including inner and outer heads and a shank connecting said heads, one section having its shank and outer head hollow and its shank communicating with the hollow head and opening through the inner head and at its outer end provided with recesses extending radially into the inner head and constituting pivot seats, jaws disposed longitudinally in said hollow shank and at their outer ends provided with pivot pins fitted in said seats and mounting the jaws for swinging movement and out of gripping position, the free ends of said jaws being extended into said hollow head, a spring in said hollow head provided with arms extending substantially radially of the head towards the free ends of said jaws and engaged therewith to yieldably retain the jaws in a gripping position, a plunger disposed axially of the hollow head and engageable with the free ends of said arms to move the arms to a releasing position when pressed inwardly, and a stem extending from the inner head of the other section and adapted to be inserted between said jaws and gripped thereby to retain the sections in engagement with each other.

1,572,512. COMPOSITION FOR STORAGE-BATTERY POSITIVE ELECTRODES AND PROCESS OF MAKING SAME. RAYMOND C. BENNER, Bayside, N. Y., assignor to The Prest-O-Lite Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 6, 1923. Serial No. 673,206. 9 Claims. (Cl. 136—26.)



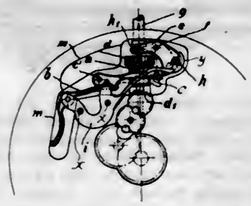
1. Process of preparing active material compositions for positive electrodes, comprising treating a mixture containing lead peroxid and a lead compound having a density less than the peroxid, with a solution of an alkali, whereby bonding compounds are formed in the mixture.

1,572,513. PROCESS OF PRODUCING CHLOR-DERIVATIVES OF METHANE. CARNIE B. CARTER and ALBERT E. COXE, Pittsburgh, Pa., assignors to S. Karpen & Bros., Chicago, Ill., a Corporation of West Virginia. Filed Aug. 9, 1923. Serial No. 656,487. 11 Claims. (Cl. 260—166.)



1. The process of producing the higher chlorination products of methane which comprises passing a mixture comprising methyl chloride, methane and chlorine through a reaction chamber maintained at elevated temperature, the methyl chloride and chlorine being present in approximately equal volumes.

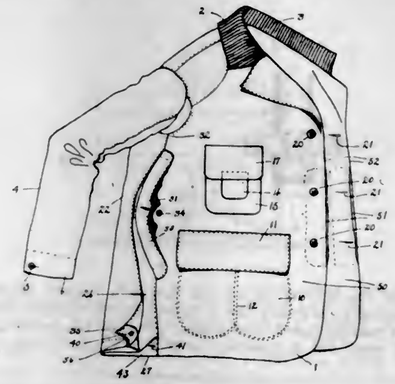
1,572,514. CAN MACHINE. THOMAS F. CASEY, Washington, D. C. Filed July 2, 1925. Serial No. 41,158. 15 Claims. (Cl. 113—24.)



1. The combination with a movable table, of cooperating fixed and movable jaws thereon constituting can gripping means, a tripping element, means projecting from the movable jaw for engagement with the tripping element to shift said jaw and release a gripped can.

1,572,515. METHOD OF ROUGHENING GRINDING WHEELS. MONROE S. CLAWSON, Upper Montclair, N. J. Filed Aug. 8, 1922. Serial No. 580,412. 1 Claim. (Cl. 219—1.)

The process of roughening a rotating grinding wheel of conducting material consisting in rubbing thereagainst transversely of the periphery thereof a conducting element, the grinding wheel and the conducting element being connected in series with a source of current.

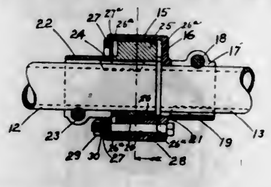


1,572,516. WINDING-UP AND HAND-SETTING MECHANISM IN WATCHES. HENRI COLOMB, Tavannes, Switzerland. Filed Dec. 23, 1924. Serial No. 757,707. 1 Claim. (Cl. 58—63.)

In a watch winding and setting mechanism, a movement plate, a double armed lever pivotally mounted on said plate and provided at its opposite ends with projecting pins, and means connected to said plate for attaching a spring to the latter to engage either one of said pins, for either a positive or negative type of winding and setting mechanism.

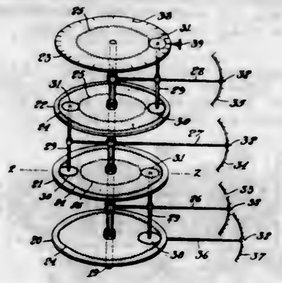
1,572,517. SPORTSMAN'S HUNTING COAT. WILLIAM E. CONOVER and BERT D. BUSH, Utica, N. Y., assignors to Utica Duxbak Corporation, Utica, N. Y., a Corporation of New York. Filed July 8, 1925. Serial No. 42,283. 2 Claims. (Cl. 2—94.)

1. In a sportsman's hunting coat, a piece of fabric forming a back portion, another piece of fabric completely covering said first named piece of fabric, other pieces of fabric sewed along the sides and bottom of the second named piece to form a bellows, whereby to enlarge the capacity of said pocket, said second and third named pieces of fabric adapted to be folded, whereby the second named piece of fabric will present the appearance



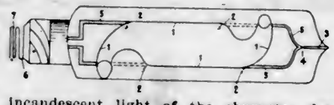
of the back of the coat, and detachable means to secure said second named piece of fabric to the first named piece of fabric.

1,572,518. SAFETY CATCH. ALBERT CROCE, Memphis, Tenn. Filed Oct. 6, 1925. Serial No. 60,859. 2 Claims. (Cl. 24—157.)



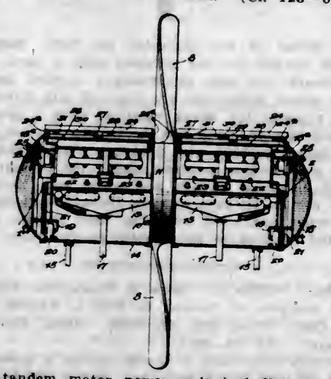
1. As a new article of manufacture, a safety catch for a pin comprising a hook embodying a shank, attaching means therefor, and a bill, said bill being formed with a groove, a latch pivotally connected with said attaching means and having its free end portion adapted to be seated in said groove, and a keeper pivotally connected to said attachment means and adapted to be connected with the free end portion of said latch for preventing accidental displacement of the same.

1,572,519. VIBRATION-ABSORBING MEANS FOR STEERING GEARS FOR MOTOR VEHICLES. FRANCIS WRIGHT DAVIS, Waltham, Mass. Filed Sept. 24, 1923. Serial No. 664,647. 6 Claims. (Cl. 74—79.)



1. A steering gear for motor vehicles, comprising a two-part steering wheel shaft composed of a lower section subjected to the usual road and engine vibrations of the vehicle, and an upper section carrying a steering wheel; and a vibration-absorbing coupling connecting said sections, and including means for transmitting rotary motion from the upper to the lower section, and for absorbing vibrations imparted to the lower section.

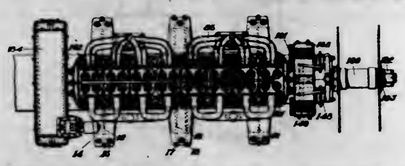
1,572,520. CALCULATING APPARATUS. PER ERIK FAGERHOLM, Stockholm, Sweden. Filed Mar. 18, 1925. Serial No. 16,553. 1 Claim. (Cl. 235—61.)



A calculating apparatus of the type set forth, comprising movable index members and function scales, with which said index members co-operate, and a result indicating member, said index members and said result indicating member being connected to each other by means of toothed gearings, one or more of the gear wheels belonging to said gearing and the movements of which depend individually on the movements of said index members being, on adjusting said latter members, put not only in a rotary motion but simultaneously in a translatory motion.

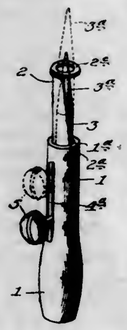
1,572,521. ELECTRIC INCANDESCENT LAMP FOR ADVERTISING PURPOSES. OTTO FEHLER, Berlin-Steglitz, Germany. Filed Aug. 29, 1921. Serial No. 496,645. 2 Claims. (Cl. 176—14.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. An incandescent light of the character described, comprising a vacuum globe, an insulated support located within the globe, means outlining the figures to be illuminated carried by said support, hooks upon said outlining means and a spirally wound filament supported by said hooks, said support being connected at one end to the cap of the globe and at its other end having resilient connection with said globe.



1,572,522. TANDEM MOTOR POWER UNIT. THOMAS M. FINLEY, St. Louis, Mo. Filed Sept. 28, 1918. Serial No. 256,035. 17 Claims. (Cl. 123—52.)

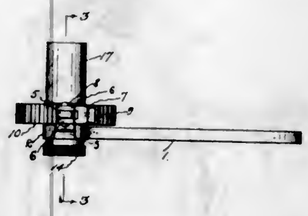
1. A tandem motor power unit including spaced engine sections having longitudinally alined crank shafts provided with side plates or flanges, and a propeller



located between the engine sections and adapted to take the power from the power unit centrally thereof and comprising blades, a fly wheel rim and spokes, said blades and spokes being clamped between the side plates or flanges and the shafts having relative longitudinal movement to clamp and release the blades.

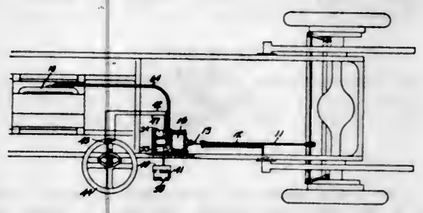
1,572,523. ENGINE. THOMAS MILTON FINLEY and ALLEN W. BROWN, St. Louis, Mo. Filed Jan. 14, 1920. Serial No. 351,346. 8 Claims. (Cl. 123—59.)

1. A motor power unit including front and rear engine sections having separate aligned crank shafts, means for rigidly securing the inner ends of the crank shafts together to provide a single continuous crank shaft and to form a single unitary engine structure, and means located below one of the said crank shafts and contained within the front engine section for taking the power of the unit from the inner connected ends of the crank shafts to divide the torque of the single continuous crank shaft and transmit the power to the outer end of the front engine section.



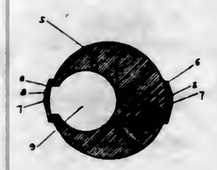
1,572,524. EMBROIDERY STILETTO. JOHN L. FLANNERY, Chicago, Ill., assignor to The Boye Needle Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 21, 1925. Serial No. 17,250. 2 Claims. (Cl. 164—119.)

1. A device of the character set forth, comprising a handle having one end provided with a bore, a combined sheath and gage comprising a member having a tubular shank fitted into the bore of said handle and having a projecting shank equipped with a transverse ring, said tubular shank and the tubular portion of said handle being provided with a slot, a pointed shaft having its base portion received within the tubular shank of said combined sheath and gage and having its pointed portion adapted to work through said ring, and a set screw connected with the base portion of said shaft and adapted to be adjusted in said slot.



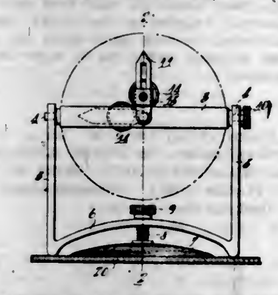
1,572,525. WRENCH. JOHN A. FRAMPTON, Columbus, Ohio, assignor of one-half to Nihl L. Parker, Columbus, Ohio. Filed Mar. 25, 1925. Serial No. 18,268. 1 Claim. (Cl. 81—63.)

A wrench comprising a handle having a laterally extending bearing sleeve upon one end, a ratchet wheel having an annular groove formed in one side thereof and a resultant hub for rotatable engagement within the bearing sleeve, an extension on the hub, a nut engageable with the extension and with the sleeve for holding the sleeve within the groove, a post rising



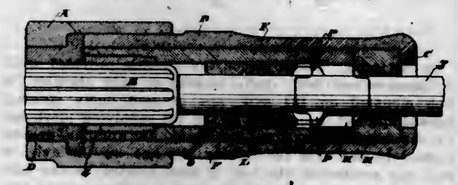
from the bearing sleeve and having a lateral shoulder adapted to overhang the periphery of the ratchet wheel and bearing sleeve, and a pawl pivotally connected with the post for engagement with the ratchet wheel.

1,572,526. VACUUM BRAKE. NORMAN H. GILMAN, Indianapolis, Ind., assignor to Carl G. Fisher and James A. Allison, both of Miami, Fla. Filed Mar. 16, 1925. Serial No. 16,033. 14 Claims. (Cl. 303—20.)



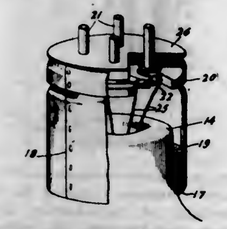
1. In an automobile, braking means, vacuum operating means therefor connected to the intake manifold, electrical controlling means for the operating means including a circuit closer, and connections for manually actuating the circuit closer to cause either service or emergency application of the braking means, substantially as set forth.

1,572,527. GOLF PRACTICE BALL. WILLIAM J. GOLDSWORTHY, San Francisco, Calif. Filed Dec. 27, 1923. Serial No. 682,874. 20 Claims. (Cl. 273—35.)



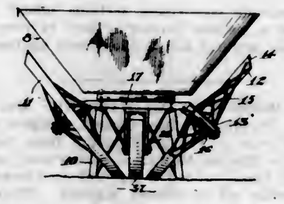
1. In a golf practice ball, in combination, a ball, a hollow removed section of the structure of the ball extending inwardly of the ball and including a portion of the surface of the ball, a perforable sheet member bridging and overlapping the said hollow and a means holding the said perforable sheet member to the ball.

1,572,528. AZIMUTH READER FOR MAGNETIC COMPASSES. CHARLES G. GUY, Vancouver, British Columbia, Canada. Filed Mar. 25, 1925. Serial No. 18,320. 4 Claims. (Cl. 33—72.)



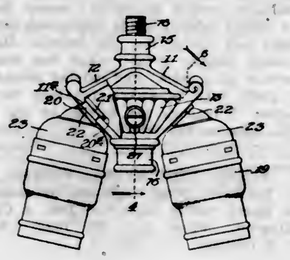
1. An azimuth reader of the class described, comprising in combination, a lens, a trunnioned frame in which the lens is secured, said frame having a sighting vane and V notch at right angles to the axis of the trunnions, a frame in which the trunnions of the lens frame are mounted, and means for attaching the supporting frame by suction to a plane surface.

1,572,529. CHUCK ASSEMBLY FOR ROCK DRILLS. HARRY V. HAIGHT, Sherbrooke, Quebec, Canada, assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 22, 1925. Serial No. 3,905. 3 Claims. (Cl. 121—32.)



1. A chuck assembly for a rock drill comprising a chuck, a chuck bushing within the chuck to receive the shank of a drill steel, a chuck key having grooves to permit lugs on the drill steel to enter, and a reversible driver interposed between the chuck and chuck key provided with means to engage the lugs on the drill steel, said chuck and chuck key being provided with clutch members and the intermediate driver having cooperating clutch members to transmit rotation from the chuck to the driver and chuck key.

1,572,530. VACUUM TUBE. WILLIAM F. HENDAY, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 28, 1918. Serial No. 268,676. 11 Claims. (Cl. 250—27.)

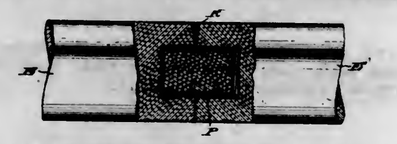


1. A vacuum tube, comprising a metal sleeve surrounding the neck of the tube and secured thereto by means of sealing material placed between said neck and sleeve, and an insulating cap fitted in the end of said sleeve, said cap having openings therethrough for the passage of the electrical connections of the tube and having a peripheral groove, the end of said sleeve being turned inwardly into said groove.

1,572,531. WHEELBARROW. FREDERICK HENKEL, Long Beach, Calif. Filed June 18, 1924. Serial No. 720,760. 2 Claims. (Cl. 280—59.)

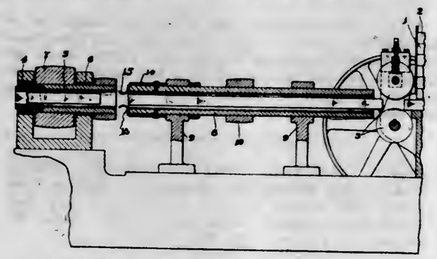
1. In a wheelbarrow, a pair of inclined wheels set at an angle to each other so as to approach each other near the ground and spread at the top, and a third wheel arranged to contact the ground on a line extending intermediate the point of contact of the tread portions of said inclined wheels.

1,572,532. ELECTRIC-LAMP-SUPPORTING STRUCTURE. MAX HERSKOVITZ, Chicago, Ill.; William Herskovitz and Charles Weinfeld executors of said Max Herskovitz, deceased. Filed Jan. 5, 1924. Serial No. 684,648. 2 Claims. (Cl. 240—78.)



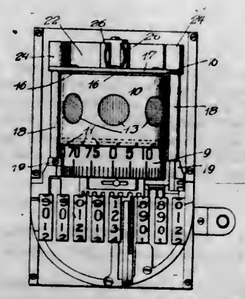
1. A cluster-socket structure comprising a supporting member formed of sections, one of said sections containing openings at the joint between said sections, another of said sections being provided with projections which extend into said openings, and electric sockets having grooved portions rotatably located, in said openings, and confined therein by the projections.

1,572,533. FOOD COMPOUND. HERMAN HEUSER, Evanston, Ill. Filed Aug. 11, 1921. Serial No. 491,522. 4 Claims. (Cl. 99—11.)



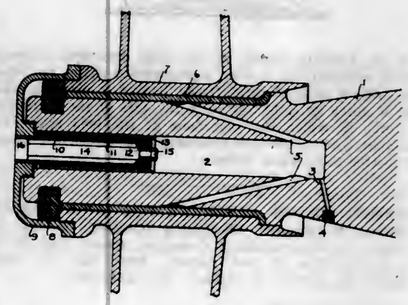
4. The method of preparing a food compound of the nature of cheese which comprises mixing live cell fermentation yeast with curd, reducing the moisture content of the mixture to 30 to 45% and ripening the mixture while excluding air.

1,572,534. SECTIONAL ELECTRODE WITH LOCKED SCREW-THREAD JOINT. ARTHUR T. HINCKLEY, Niagara Falls, N. Y., assignor to National Carbon Company, Inc., a Corporation of New York. Filed Oct. 27, 1923. Serial No. 671,158. 4 Claims. (Cl. 204—64.)



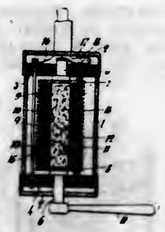
1. An electrode comprising sections joined by screw threads, and a member projecting into cavities in adjacent electrode sections and locking them against relative rotation.

1,572,535. WOOD-TURNING MACHINE. MAUNSELL B. JACKSON, Toronto, Ontario, Canada, assignor of thirty-three per cent to Thomas Cameron Bate, thirty-three per cent to Edward McMahon, twenty-nine per cent to Phillip D. Lyons, and five per cent to Alexander Pierpont Deroche, all of Ottawa, Canada. Filed Feb. 25, 1925. Serial No. 11,462. 9 Claims. (Cl. 142—54.)



1. In a wood turning machine, the combination of means for forwardly feeding square sticks; a rotary driver of angular section interiorly; means for driving the same; a rotary tubular guide interposed between the feeding means and the driver, the interior diameter of the guide being slightly greater than the diagonals of the cross section of a stick; and driving means whereby the rotary guide may be driven to start the stick in rotation, before it reaches the driver, by the frictional action of the tube on the stick.

1,572,536. SPEED-INDICATING SIGNAL. MAXEY JACKSON, Portland, Oreg., assignor, by mesne assignments, to Motor Safety Indicator, Inc., a Corporation of Washington. Filed Apr. 10, 1922. Serial No. 551,302. 2 Claims. (Cl. 264—1.)



2. In a speed indicator, a revoluble pivoted member of a speed indicating device, a member substantially cylindrical and revoluble therewith, and having differently colored transparent means carried thereby and placed in openings therein, a plate suspended within said member and forming a support for the pivot of the first-named member, the two members being revoluble as one, a second plate from which the said first plate is suspended, means for supporting the upper plate, and spring means resting on said upper plate for engaging and supporting a lamp socket for a bulb within the cylindrical member.

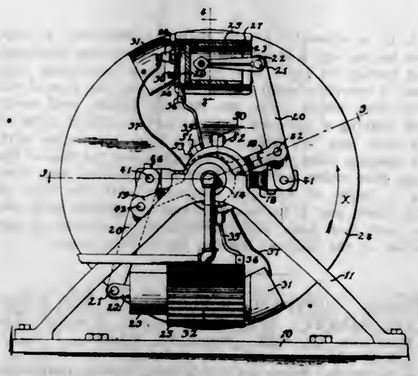
1,572,537. LUBRICATING DEVICE. BRYAN P. JOYCE, Davenport, Iowa, assignor to Thomas A. Conlon, Silver Spring, Md. Filed May 7, 1923. Serial No. 637,241. 1 Claim. (Cl. 308—103.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

A lubricating device embodying an axle provided with a chamber and with ducts leading to said chamber, a hub mounted on the axle, one of said ducts opening beyond the hub to provide means for supplying lubricant to the chamber, a ring seated in an annular groove formed in the axle for locking the hub on the axle, a hub cap secured to the hub, a tube carried by the hub cap and extending into the chamber, a washer within the chamber, a plunger within the tube and secured to the washer and a spring surrounding the tube and tending to force the washer forwardly within the chamber.

1,572,538. RESISTANCE. OLUF KLÆRBYE, Copenhagen, Denmark, assignor to Aktieselskabet Eto Electro-Co., Copenhagen. Filed Feb. 12, 1924. Serial No. 692,412. 2 Claims. (Cl. 201—54.)

1. An adjustable resistance adapted for regulation of the lighting intensity of incandescent lamps and for starting resistances and the like, comprising a support, an element mounted for rotary movement in said support, said rotatable element including annular discs formed of conducting material, spaced elements formed

of insulating material and interposed between the end and intermediate conducting discs, granular carbon arranged within the discs and insulating members, means to clamp the several discs together, a conducting rod extending substantially parallel to the axis of the rotatable element and in spaced relation thereto, and lugs carried by the conducting discs, the several lugs being helically arranged around the rotatable element and adapted, during rotation of the latter to be successively brought into contact with the said rod.



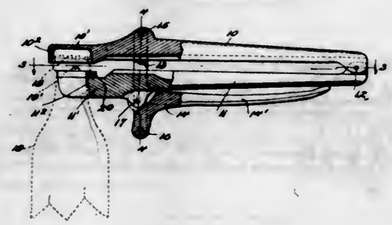
1,572,539. PREPARING AND PRESERVING FIBERS FOR PULP-MAKING PURPOSES. ELBERT C. LATHROP, Philadelphia, Pa., and TREADWAY B. MUNROE, Forest Glen, Md.; said Lathrop assignor to the said Munroe. Filed June 20, 1924. Serial No. 721,364. 6 Claims. (Cl. 92—5.)

3. The process of preserving and treating bagasse and analogous fibers which consists in subjecting said fibers in masses to suitable fermentations for times sufficient to soften the same and to generate heat on the interior of said masses; so piling said masses as will retain the heat on their interiors for a time sufficient to lessen the moisture contents thereof and to substantially sterilize said masses; and preventing sufficient moisture from entering said mass to destroy said sterilization.

1,572,540. METHOD OF PRESERVING FIBERS FOR PULP-MAKING PURPOSES. ELBERT C. LATHROP, Philadelphia, Pa., and TREADWAY B. MUNROE, Forest Glen, Md.; said Lathrop assignor to the said Munroe. Filed June 20, 1924. Serial No. 721,365. 3 Claims. (Cl. 92—5.)

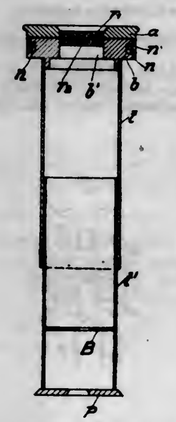
2. The process of preserving green bagasse and analogous fibers from injurious fermentations during storage which consists in wetting a mass of said fibers to substantially its water holding capacity to inhibit the growth of molds and fungi and to promote the growth of lactic acid producing and similar bacteria; and keeping said mass sufficiently wet to maintain a fermentation by said last named bacteria until a desired proportion of the parenchymatous matter present is destroyed.

1,572,541. ROTARY ENGINE. JAMES S. LAWRENCE, Twin Falls, Idaho. Filed May 1, 1924. Serial No. 710,369. 8 Claims. (Cl. 123—43.)



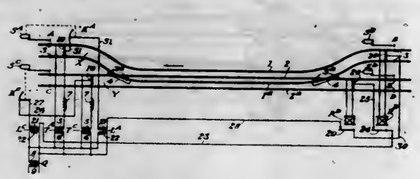
1. In an internal combustion engine, a revoluble member, a working cylinder carried by said member, a stationary bearing for said member, a piston in said working cylinder, a member to rotate therewith and slidable radially thereon mounted on said revoluble member, a rocking lever having pivotal connection at its opposite ends with said piston and said slidable member respectively, a fulcrum element for said rocking lever adapted to rotate with said revoluble member and fixed relative thereto, and means mounted on the stationary bearing to reciprocate said slidable member.

1,572,542. TENNIS RACKET. NELLIE LAWRENCE, Greenwich, near Sydney, New South Wales, Australia. Filed Mar. 16, 1925. Serial No. 16,028. 7 Claims. (Cl. 273—73.)



6. Improved means for tensioning the strings of a tennis racket consisting of a series of tensioning devices fitted to the racket frame in spaced relationship, each of said devices comprising a hollow member immovably secured in a hole bored in the frame, a movable screw passed loosely through such member, and a connecting piece for operative engagement with a racket string movable toward and from the hollow member immediately consequent upon the movement of the screw.

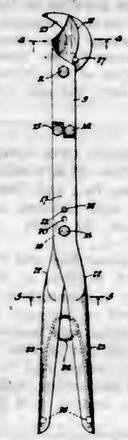
1,572,543. BOTTLE-CAPPING DEVICE. ELLSWORTH M. LETTS, Waverly, N. Y., assignor of forty-nine one-hundredths to Charles C. Annabel, Waverly, N. Y. Filed Oct. 11, 1921, Serial No. 506,963. Renewed June 30, 1925. 1 Claim. (Cl. 226—84.)



In a bottle capping device, in combination, two substantially parallel main members of equal length having one pair of adjacent ends pivotally connected together and having the free ends provided respectively with bottle and cap holding devices, and means for exerting pressure on said members to bring the bottle and cap holding devices toward each other with a gradually increasing force, in capping a bottle, said means comprising a bell crank lever pivoted to one of said main members on the side opposite the other member, one arm of said lever constituting a handle adapted to be engaged by the fingers of the operator and spaced parallel links pivotally connecting the other arm of said lever to the other of said main members, said links lying on opposite sides of the main members.

1,572,544. PHOTOMETER. HEINRICH LUX, Berlin, Germany. Filed May 1, 1924. Serial No. 710,441. 4 Claims. (Cl. 88—23.)

1. A photometer, comprising, in combination, a pair of superposed transparent plates each having parallel lines ruled thereon, means for turning said plates relatively to each other, a scale indicating the variable relative angular position between said plates, said scale being gauged so that each scale mark indicates a tested brightness.



1,572,545. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. RONALD A. MCCANN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 15, 1924. Serial No. 713,453. 20 Claims. (Cl. 246—34.)

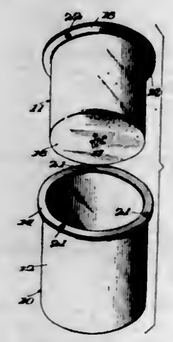
1. In combination, two parallel sections of railway track comprising a restricted territory, means for connecting a source of train controlling current across the rails of each section, and means for interrupting the supply of such current to each section when the other section is occupied.

1,572,546. PRUNER. EMERSON MCKENNEY, Newport, Me. Filed May 28, 1923. Serial No. 641,817. 3 Claims. (Cl. 30—11.)

1. In a pruner, the combination of a pair of cutting blade members fulcrumed between their two ends, and a pair of hand operating levers, each having an end pivoted to the end of a blade member, said hand levers each provided with a plurality of fulcrum holes for adjusting the fulcrum of said hand levers, the arrangement being such that the fulcrum of the hand levers is always a greater distance than the fulcrum of the blade

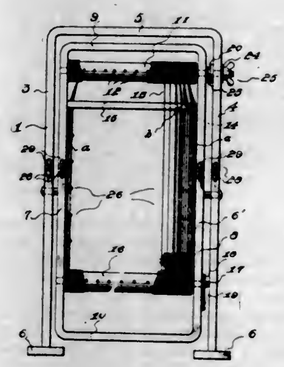
members, from their said end connections, and so that the extensions between said fulcrums will overlap in perfect alinement when the pruner is closed.

1,572,547. CALCULATOR. ROBERT WILLIAM MALLDER, Dubuque, Iowa. Filed Dec. 12, 1922. Serial No. 606,452. 4 Claims. (Cl. 235—84.)



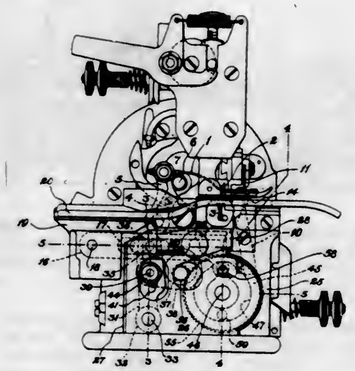
1. In a calculator of the character described, a large disk having one face bearing a table expressing distances, and having its other face bearing table expressing wire sizes, a rotatable small disk fitted against the face of the large disk which bears the distance tables, said small disk bearing a table of amperes and a related table of per cent loss, the ampere table being cooperable with the distance table, a segment fitted against the face of the large disk which bears the table of wire sizes, and bearing a table of voltages cooperable with the table of wire sizes, and a reading indicator cooperable with the per cent loss table and constrained to partake of the motion of the segment bearing the voltage table.

1,572,548. CONVERTIBLE FLOWERPOT AND HANGING BASKET. RUTH E. MATTISON, Montello, Wis. Filed Oct. 26, 1923. Serial No. 671,024. 1 Claim. (Cl. 47—35.)



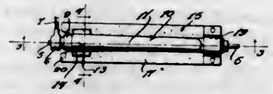
A convertible flower pot and hanging basket constructed of metal and comprising an outer cylindrical vessel having a flat closed bottom and provided with an annular and outwardly extending peripheral flange around the marginal edge of its upper end, and an inner cylindrical vessel rotatably fitted in the outer vessel and having a

substantially closed bottom provided with a plurality of small apertures, said inner vessel being provided with an annular and outwardly extending peripheral flange around the marginal edge of its upper open end, the inner vessel being smaller than the outer vessel, the flange of the inner vessel resting on the flange of the



outer vessel to support the inner vessel on the outer vessel with its bottom in spaced relation to the bottom of the outer vessel to define a water space, the flanges having openings adapted to be brought into registration to receive supporting devices whereby a hanging basket is provided, the openings being adapted to be positioned out of registration to provide a flower pot, the flat bottom providing a support for the flower pot.

1,572,549. WEAVING FRAME. EMMA V. MEEHAN, Washington, D. C. Filed Aug. 10, 1925. Serial No. 49,379. 4 Claims. (Cl. 139—34.)



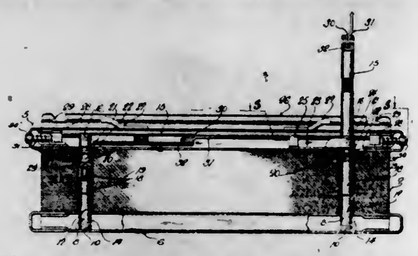
1. A weaving frame for domestic use, comprising a support including side standards, a frame journalled in said standards, a roll journalled in the top of the frame and a roll journalled in the bottom thereof, the journal of one of the rolls being extended beyond the side pieces of the frame, a bracket secured to the standard, and having a slot therein for the reception of said journal, means for securing the journal and thereby the frame in fixed position in the standard, and means for locking the lower roller in fixed position, substantially as and for the purpose set forth.

1,572,550. SHELL-STITCH MACHINE. JOSEPH M. MERROW, Hartford, Conn., assignor to The Merrow Machine Company, Hartford, Conn., a Corporation of Connecticut. Filed Jan. 23, 1923. Serial No. 614,373. 10 Claims. (Cl. 112—116.)

1. In a shell stitch overedging machine comprising stitch-forming mechanism and feeding mechanism associated to form clusters of stitches at successive spaced points on the work, the combination of trimming mechanism comprising cutters operating in consonance with the stitch-forming and feeding mechanisms, located adjacent the feeding and in advance of the stitch forming mechanism, said trimming mechanism having cutting edges of a length no less than the distance between clusters of stitches formed by the stitch-forming and feeding mechanisms.

1,572,551. ELECTRIC HAIR CURLER. JOSEPH J. MERSON, Tacoma, Wash. Filed Jan. 9, 1924. Serial No. 685,285. 6 Claims. (Cl. 219—24.)

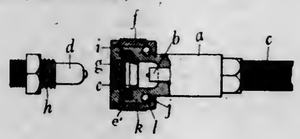
2. A hair curling unit comprising a shield of insulating material, having a clip at one end and provided with a slot extending longitudinally thereof from the said clip, a sleeve on which the hair is to be wound, the sleeve being frictionally fitted into the said clip at one end, a clip upon the sleeve at the other end thereof engageable with the said insulating shield, and an electrical resistance element within the sleeve.



1,572,552. PROCESS FOR OBTAINING PYRROL, PYRROL DERIVATIVES, AND PYROCOLL FROM ANIMAL WASTE. JOSEPH MICHELMAN, Boston, Mass. Filed Nov. 11, 1924. Serial No. 749,341. 10 Claims. (Cl. 260—46.)

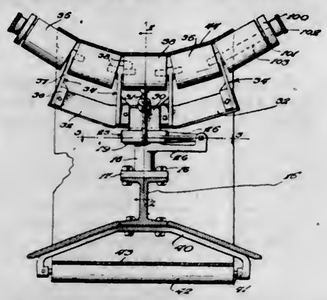
1. A process for the production of pyrrols and pyrocoll which comprises subjecting colagenous tissue to destructive distillation out of contact with air, condensing the distillate therefrom, treating the oily fraction of the condensate with a diluent, and filtering.

1,572,553. LOOSE-LEAF BINDER. HENRY C. MILLER, Milwaukee, Wis. Filed Feb. 12, 1925. Serial No. 8,720. 3 Claims. (Cl. 129—1.)



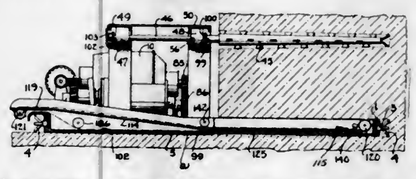
1. A loose leaf binder, comprising a pair of binder heads, a binder post carried by one head and having a

groove therein, the binder post being engageable through a keyhole slot in the other binder head and shifting of said other binder head to engage the groove of the



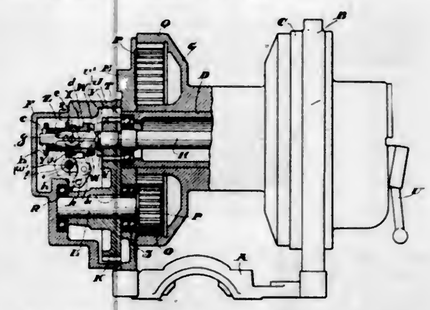
post in the small portion of the key-hole slot locking the binder heads together, and means for applying a tension on the binder post after the binder heads are connected.

1,572,554. COUPLING OR CONNECTING DEVICE FOR LUBRICATING APPARATUS AND FOR LIKE PURPOSES. CHARLES ERIC MILNER, Birmingham, England, assignor to Benton & Stone Limited, Birmingham, England. Filed Feb. 1, 1924. Serial No. 690,027. 1 Claim. (Cl. 284—19.)



In a coupling device for use with a grease gun and nipple in combination a cylindrical body part, a valve mounted therein, a collar integral with one end of the body part and having the inner surface enlarged to provide a shoulder, a nipple engaging gasket on the shoulder, an annular jamb nut for holding the gasket in position and lying flush with the forward end of the collar, a freely rotatable head mounted externally on said collar, an inward flange at the rear of said head, an annular disc secured to the forward end of the head and provided with a threaded opening for detachable engagement with the nipple, and the head being held against axial movement by the interaction of the flange and disc with the ends of the collar and the body.

1,572,555. MOUNTING FOR CONVEYER BELTS. GUS NELSON, Douglas, Ariz. Filed June 12, 1924. Serial No. 719,638. 4 Claims. (Cl. 198—192.)

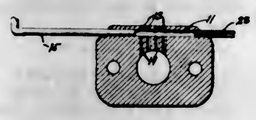


1. In a mounting for conveyer belts, a base, a carrier revolubly mounted on said base, means to limit the movement of said carrier, means for supporting a set of idlers upon said carrier permitting free rotation of each idler, said idlers being arranged to give a trough-shaped cross section to a belt running over the same; said supporting means including standards having journals for said idlers, and a centering device for said belt; said centering device including a counterpoised disc journalled on the standard for the outermost of said idlers and in axial alinement therewith, and a spacing washer inserted between said disc and the adjacent end of the idler.

1,572,556. MINING MACHINE. RICHARD PEALE, St. Benedict, Pa., assignor to Rembrandt Peale, St. Benedict, Pa. Filed Mar. 24, 1921. Serial No. 454,987. 41 Claims. (Cl. 262—9.)

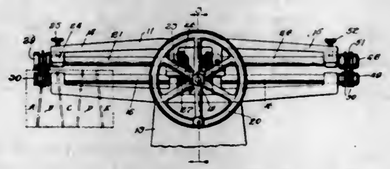
1. A mining machine including in combination means for cutting a bottom horizontal kerf, a rotatable cutter bar nested within said kerf cutting means, means for moving the rotating cutter bar to cut a cooperating kerf, and a conveyor extending from the front to the rear of the machine and having a pusher blade nested within said bottom kerf cutting means.

1,572,557. CLUTCH MECHANISM FOR HOIST CONTROL. ARTHUR E. PETERS, Littleton, Colo., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 12, 1924. Serial No. 698,603. 2 Claims. (Cl. 192—67.)



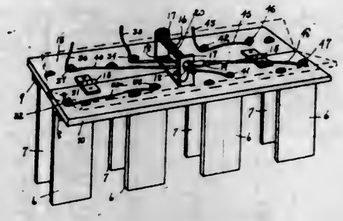
1. In a hoist the combination of a drive shaft, a pinion loosely rotatable on said drive shaft and having a clutch jaw, a movable clutch member driven by the shaft and slidable longitudinally thereon to engage the clutch jaw of the pinion, a collar on the clutch member, a yoke pivoted at one end and at the other end engaging the collar, a link attached to the yoke, an eccentric cooperating with the link, a lever for operating the eccentric, a spring normally tending to hold the clutch member in engagement with the jaw on said pinion and a stop cooperative with the lever behind the dead center position of the eccentric whereby the clutch is held disengaged from the pinion against the force of said spring.

1,572,558. AIR INTAKE. GEORGE A. PREISSER, Denver, Colo. Filed May 31, 1922. Serial No. 564,887. 1 Claim. (Cl. 251—34.)



A device of the character described comprising a body portion provided with a central opening, and a longitudinally extending bore positioned above said opening,

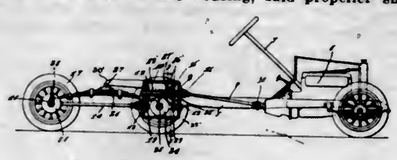
said bore communicating with said opening and provided with a plurality of air ports extending through the wall thereof, a feed pipe connected with one end of said bore to admit steam therein, a slide valve extended into the



bore from the opposite end thereof to regulate the passage of steam and air into said central opening, an eye formed on the outer end of said valve, a rod extending through said eye and an actuating rod connected therewith.

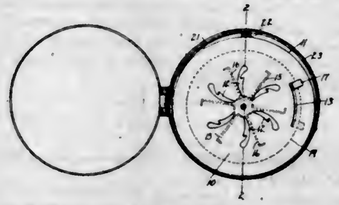
1,572,559. MACHINE FOR MAKING PIPE ELBOWS. LEMUEL H. PURNELL, Chicago, Ill., assignor of one-half to Henry G. Goelitz and one-half to Enoch Purnell, both of Oak Park, Ill. Filed May 26, 1922. Serial No. 563,845. 6 Claims. (Cl. 164—61.)

1. Mechanism for cutting pipe comprising a templet adapted to be secured to said pipe, a rotary cutter adapted to cut said pipe and to be guided by said templet, and means for driving said cutter.



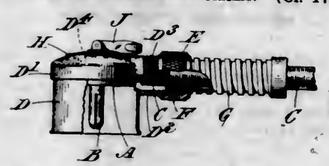
1,572,560. MACHINE FOR RECHARGING MAGNETOS AND BATTERIES. JOHN J. RARICK, Utica, N. Y. Filed July 3, 1922. Serial No. 572,860. 3 Claims. (Cl. 175—315.)

1. In a device for recharging magnetos and batteries, a plurality of jars, electrodes disposed within said jars, members for supporting said electrodes, and spring means for holding said members in given position, to control the distance between the ends of said electrodes, whereby to govern the resistance in the circuit.



1,572,561. AUTOMOBILE FOUR-WHEEL DRIVE. RICHARD C. ROSE, Osceola, Ark. Filed Dec. 1, 1922. Serial No. 604,833. 1 Claim. (Cl. 180—22.)

In a four-wheel drive motor vehicle, a chassis including side rails, a pair of rear drive axles, spring members connecting the rear drive axles, means for pivotally connecting the rear ends of the side rails of the chassis to the spring members at points intermediate the ends of the spring members, a propeller shaft, a transmission housing housing a portion of one of the axles, a transmission mechanism in the housing, said propeller shaft

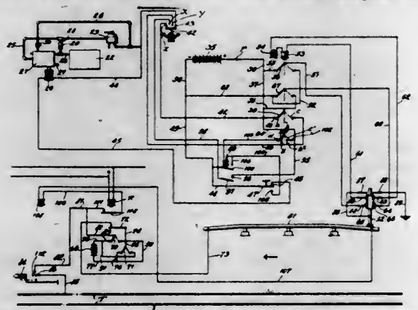


adapted to transmit motion to the transmission and axle supporting the housing, and means for transmitting motion from the transmission to the rear drive axle.

1,572,562. POWDER HOLDER. EMIL SCHUBLKE and JULIUS ROSS, Meriden, Conn., assignors to The Napier Co., Meriden, Conn., a Corporation. Filed July 10, 1925. Serial No. 42,650. 1 Claim. (Cl. 132—82.)

A powder-holder, comprising a top-plate formed with openings and with a concentric slot and having a downwardly-extending flange provided with bayonet grooves, a shutter bearing against the under-face of the top-plate, formed with slots, the edges of which form downwardly-turned blades, and a back-plate fitting within said flange and provided with a transverse bar, the ends of which engage with said bayonet grooves.

1,572,563. ELECTRIC WALL PLUG. HAROLD FREDERIC SECRETAN, Pelaw-on-Tyne, England, assignor to A. Reyrolle & Company Limited, Hebburn-on-Tyne, Durham, England, a British Company. Filed Sept. 19, 1923. Serial No. 668,664. 3 Claims. (Cl. 173—361.)

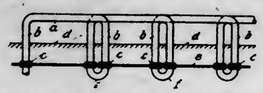


1. In an electrical attachment plug, in combination, a sleeve portion, a cap closing one end thereof, an insulating block carried by said cap, contacts mounted in said block and protected by said sleeve portion, a half tubular extension on each said sleeve portion and said cap and detachable means securing said half tubular extensions together to hold said cap and sleeve in proper relation and to house a conductor.

1,572,564. TRAIN-CONTROL SYSTEM. ARCHIBALD G. SHAVER, Chicago, Ill., and ALLEN B. KENDALL, Niagara Falls, N. Y., assignors to The Regan Safety Devices Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 18, 1922. Serial No. 607,684. 15 Claims. (Cl. 246—49.)

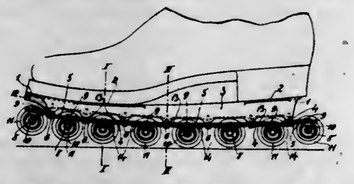
1. In a train control system, in combination, an electrically operated vehicle control device, a vehicle circuit therefor for normally energizing the same, provisions in-

cluding roadside mechanism active for opening the said circuit to effect deenergization of said device, and vehicle provisions for re-energizing the said device comprising circuit means including a make and break device closed upon the opening of the first circuit, a speed con-



trolled contact device closed when the train reaches a speed below a predetermined limit, and a normally open switch means closed by a manual operation of the engineman and openable only by a break in the circuit at the said make and break device.

1,572,565. PROCESS OF MAKING BOARD FROM BAGASSE AND ANALOGOUS FIBERS. JOHN K. SHAW, Minneapolis, Minn. Filed Oct. 23, 1920. Serial No. 419,044. 7 Claims. (Cl. 92—3.)

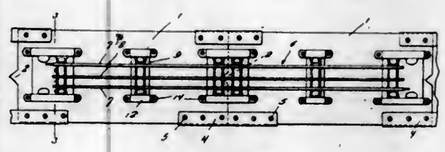


1. The process of producing a substitute for lumber from flexible and strong bagasse fibers which consists in cooking the same while associated with their natural pith in the presence of a suitable chemical and at a temperature and for a time sufficient to loosen the encrusting material of said fibers, but insufficient to produce fibers suitable for paper making; recovering the fibers thus treated; and forming said fibers by water deposition into a substitute for lumber.

1,572,566. REHEATING FURNACE. FRIEDRICH CARL SIEMENS, Berlin, Germany. Filed Sept. 22, 1924. Serial No. 739,180. 3 Claims. (Cl. 193—38.)

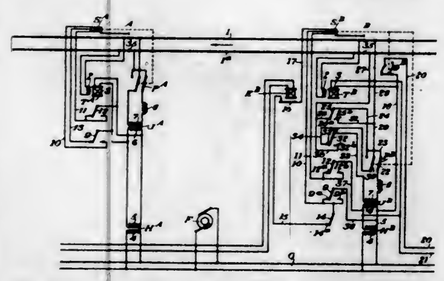
1. A stationary water-cooled slide-rail for reheating furnaces, comprising in combination a plurality of inverted U-shaped pieces of tubing having a horizontal part constituting a slide-way and downwardly directed limbs constituting supports for the slide-way, as set forth.

1,572,567. ROLLER SKATE. MICHAEL SKORKA, Budapest, Hungary. Filed Oct. 10, 1925. Serial No. 61,757. 4 Claims. (Cl. 208—175.)



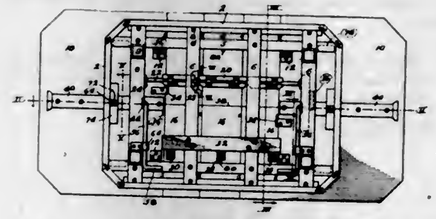
1. A roller skate comprising in combination a frame, two rows of downwardly extending projections on the frame, two parallel longitudinal flat spring attached to the said two rows of projections so as to be capable of moving freely and to extend at the front and back ends of the skate beyond the foremost and backmost projections, roller bearings fixed rigidly to the said springs between the points of attachment of each spring and so as to project downwards and skate rollers on the said roller bearings, the foremost and backmost skate roller bearings being fixed on the unsupported forward and backward extensions of the longitudinal springs, as and for the purpose set forth.

1,572,568. ATTRACTANT FOR INSECTS, PARTICULARLY FOR THE JAPANESE BEETLE. LOREN B. SMITH and EDWARD AVERY RICHMOND, Riverton, and PETER A. VAN DER MEULEN, New Brunswick, N. J., assignors, by mesne assignments, to the People of the United States. Filed Aug. 12, 1925. Serial No. 49,844. 3 Claims. (Cl. 167—6.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



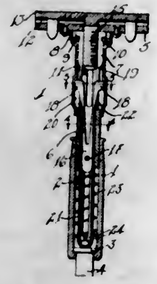
1. An insect attractant, comprising geraniol as the active ingredient.

1,572,569. TOY RAILROAD. ROY G. SPENCER, Seattle, Wash. Filed Apr. 21, 1925. Serial No. 24,827. 3 Claims. (Cl. 238—10.)



3. In a toy railroad structure, a sectional base, sub-ties upon said base, resilient means on said sub-ties, a track including cross ties resting upon the resilient means of said sub-ties, and clamps for simultaneously holding said sub-ties upon the base and said cross ties upon said sub-ties.

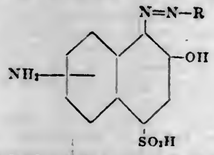
1,572,570. RAILWAY SIGNALING SYSTEM. LESTER E. SPRAY, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 4, 1925. Serial No. 27,740. 4 Claims. (Cl. 246—34.)



3. In combination, a railway track divided into successive sections, a track circuit for each section including a source of current and a track relay responsive to reversals of the relative polarity of the track circuit current, a signal for each section, means for each alternate section for controlling the relative polarity of the track circuit current in the section by only the signal for the section in advance, means for each intermediate section for controlling the relative polarity of the track circuit current in the section by the signal and also the track relay for the section next in advance, an auxiliary relay for each of said alternate sections controlled by the signal for the second section in advance, means for controlling the signal for each of said alternate sections by the associated track relay and auxiliary relay, and means for controlling the signal for each intermediate section by the associated track relay.

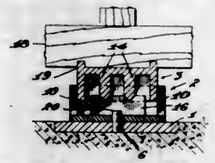
1,572,571. EXTENSION TABLE. ANDREW H. STONE, Kansas City, Mo. Filed July 5, 1923. Serial No. 649,446. 3 Claims. (Cl. 45—113.)

1. In a table of the character described, a frame, a leaf slidably mounted on said frame, a rail fixed to said leaf, a member mounted on the frame having an inclined surface and overlapping said rail, and means guided by said inclined surface into frictional engagement with the rail to secure the leaf at any point of its movement.



1,572,572. SAFETY RAZOR. JOHN STRAKA, Chicago, Ill. Filed Dec. 18, 1922. Serial No. 607,652. 8 Claims. (Cl. 30—12.)

1. A safety razor comprising a handle, a blade carrying member, means carried by said handle for removably securing said member to said handle, and a head member for clamping a blade to said blade carrying member, said means being adapted to lock said head to said handle, said means releasing said blade carrying member after it engages with said head, whereby said head holds said blade carrying member in position.

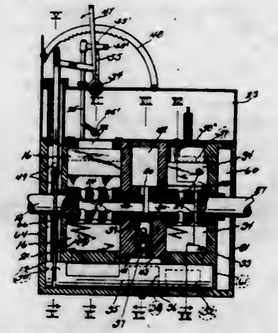


1,572,573. AZODYESTUFFS CONTAINING ZINC AND PROCESS OF MAKING SAME. FRITZ STRAUB, Basel, and HERMANN SCHNEIDER, Riehen, near Basel, Switzerland, assignors to the Firm Society of Chemical Industry in Basle, Basel, Switzerland. Filed Oct. 1, 1925. Serial No. 59,960. 3 Claims. (Cl. 260—11.)

2. As new products the herein described new azodyestuffs containing zinc, which are derivatives of the dyestuffs corresponding with the general formula:

wherein R stands for a hydroxynaphthalene nucleus to which the azobridge is attached in ortho-position to the hydroxyl group, which products form dark powders, dissolving readily in water with violet coloration which changes to bluish-red by addition of caustic alkalies, dyeing wool violet to brownish black tints which become gray to black by afterchroming.

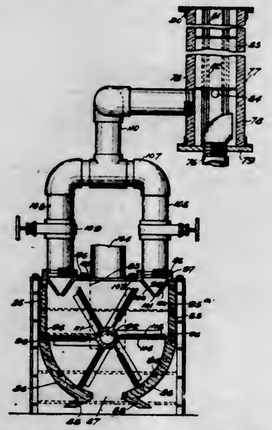
1,572,574. DEVICE FOR PROTECTING STRUCTURES AGAINST EARTHQUAKE DAMAGE. OSCAR STROMBORG, Los Angeles, Calif. Filed Jan. 31, 1924. Serial No. 689,824. 8 Claims. (Cl. 72—77.)



8. A building support comprising a series of penetrable blocks, blades seating on said blocks and adapted to penetrate the same under excessive strain, means supporting said blocks, and means carrying said blades and adapted to support a building.

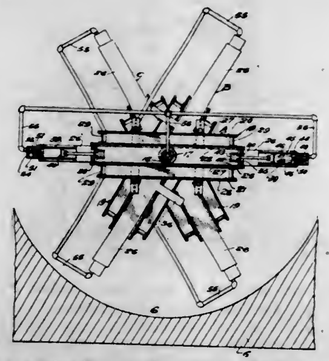
1,572,575. OPTICAL INSTRUMENT. WILLIAM TAYLOR, Leicester, England. Filed Aug. 31, 1921. Serial No. 497,293. 7 Claims. (Cl. 88—57.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. An optical instrument, comprising an inner tubular container having a lateral opening, a removable optical element adapted to be inserted through said opening transversely into operative position in the container having a cylindrically curved surface engaging the inner surface of the container opposite said opening and having a projecting portion extending into said opening and lying flush with the outer surface of the container, and an outer tube slidably engaging the tubular container and having its inner surface in engagement with said projecting portion to retain the optical element in the container.



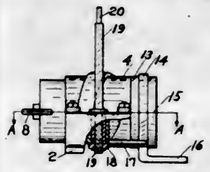
1,572,576. TRANSMISSION. JAMES B. THOMAS, Blairstown, Mo. Filed Feb. 18, 1924. Serial No. 693,515. 10 Claims. (Cl. 60—53.)

1. In a transmission, a drive shaft hollow for a portion of its length, a driven shaft hollow for a portion of its length, a wheel integral with each shaft having a plurality of radially disposed slots and passages, said passages forming connections between the hollow of said shaft and said slots, lugs slidably mounted in said slots, cam guide faces for engaging the outer edges of said lugs, means operable by said drive shaft for main-



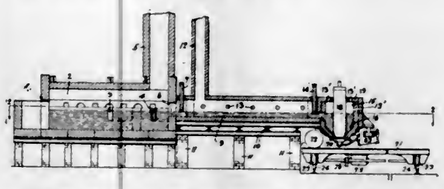
taining fluid under pressure within the hollow shafts and against said lugs and a fluid valve interconnecting the wheels of said drive and driven shaft.

1,572,577. POWER-GENERATING MECHANISM. JAMES F. THOMAS, Windsor, Ontario, Canada. Original application filed Apr. 8, 1922, Serial No. 550,758. Divided and this application filed Oct. 21, 1922. Serial No. 596,060. 3 Claims. (Cl. 253—137.)



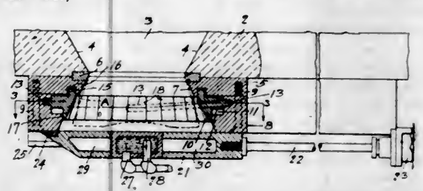
1. In a mechanism of the class specified, a motor consisting of an enclosing casing constructed of plastic material and having upper opposite straight side walls and lower curved walls, metal top plates having collars projecting upwardly therefrom, the top of the casing having oppositely disposed distributing chambers confined between inwardly and longitudinally converging walls with contracted slot outlets, the enclosing casing of the motor mechanism having top and bottom continually open outlets, a rotor within the casing comprising a plurality of blades alternately having relief openings adjacent the center of the rotor, and valved supply connections associated with said collars for delivering the operating medium under pressure to the distributing chambers for passage between the converging walls and through the contracted outlets to engage and forcefully impact against the blades of the rotor.

1,572,578. POWER-GENERATING MECHANISM. JAMES F. THOMAS, Montreal, Quebec, Canada. Filed June 4, 1925. Serial No. 34,962. 9 Claims. (Cl. 230—31.)



5. In a mechanism of the class specified, a rotatable shaft having a pipe extending therethrough and beyond one end of the same, a plurality of compressing units mounted at different angles on and rotatable with the shaft, the compressing units being spaced apart longitudinally of the shaft and each unit having compressing devices at opposite ends and an intermediate weighted body freely slidable in reverse longitudinal directions and connected and actuating part of the said compressing devices to alternately charge the said devices with air and discharge air therefrom, and pipe connections between the said devices and the pipe extending through the shaft.

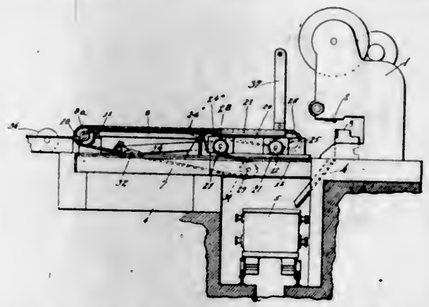
1,572,579. RAILWAY-SWITCH STAND. GEORGE L. THOMPSON, Memphis, Tenn. Filed Sept. 23, 1925. Serial No. 58,083. 3 Claims. (Cl. 246—405.)



2. In a railway-switch stand, a rotating barrel with fixed collars and loose collar connecting rail shifter, and propelling means to rotate a staff.

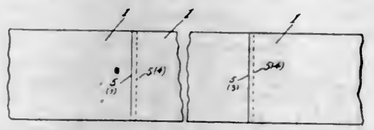
1,572,580. METHOD AND APPARATUS FOR CASTING PLATE GLASS. FRANK E. TROUTMAN and CHARLES H. CHRISTIE, Butler, Pa. Filed Dec. 28, 1921. Serial No. 525,327. 27 Claims. (Cl. 49—3.)

1. The method of casting molten glass that comprises establishing a body of molten glass above a discharge outlet, and then chilling the glass at the outlet to a predetermined thickness to cause the glass to issue slowly initially from the said outlet.



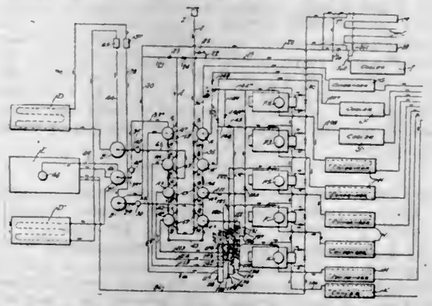
1,572,581. CASTING PLATE GLASS. FRANK E. TROUTMAN and CHARLES H. CHRISTIE, Butler, Pa. Filed Apr. 14, 1924. Serial No. 706,393. 26 Claims. (Cl. 49—55.)

1. The method of controlling the discharge of glass from an outlet, that comprises applying a chilling instrument to said outlet, thereby causing the glass within said outlet to harden, withdrawing said instrument from said outlet, and loosening the hardened glass in said outlet by downwardly moving a member adjacent to said glass within said outlet.



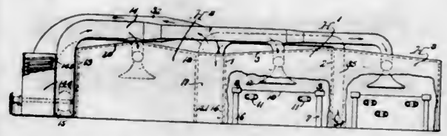
9. Apparatus for casting plate glass comprising a glass receptacle having a downwardly opening outlet, an annular structure beneath said outlet having a downwardly movable inner portion, and a shear member adapted to be moved into and out of position beneath the opening defined by said annular structure.

1,572,582. PULL-BACK TABLE. JOHN B. TYTUS, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Oct. 11, 1923. Serial No. 667,826. 8 Claims. (Cl. 164—48.)



1. A pull back table having a fixed rear portion, and a movable forward portion, an endless carrier upon which the piece to be carried is to be supported means for driving the carrier, said carrier driven from the fixed portion end of the device, and passing idly around the movable portion, and means for maintaining the carrier substantially taut, in all positions of the movable portion.

1,572,583. SHEET-PICKLING METHOD. JOHN B. TYTUS, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed May 12, 1925. Serial No. 29,826. 4 Claims. (Cl. 204—1.)

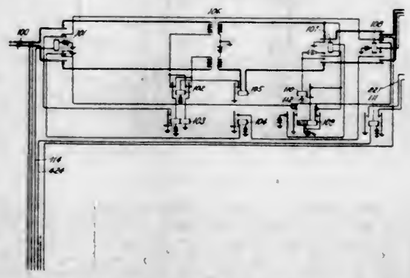


1. A process for electrolytically treating iron or steel pieces which because of their width must be produced in short length, which consists in uniting the pieces end for end, feeding the band so formed through an electrolyte containing suitable electrodes and establishing current connection with the band to convert it into an electrode.

1,572,584. METHOD AND APPARATUS FOR DISTILLING OIL. JAMES M. WADSWORTH, Fort Worth, Tex., assignor to Pierce Petroleum Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 27, 1921. Serial No. 525,170. 15 Claims. (Cl. 196—73.)

6. A method of distilling oil, characterized by subjecting oil to repeated vaporizing operations, combining fractions of similar boiling point and condensing them to form primary distillates of varying volatility, and continuously redistilling the primary distillates as separate bodies, the residue from the bodies of lighter distillates being added in series to the bodies of heavier distillates.

1,572,585. APPARATUS FOR USE IN STRETCHING AND DRYING TEXTILE FABRICS. JOSEPH H. WALSH, Boston, Mass., assignor to Johns-Manville, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 14, 1922. Serial No. 552,726. 8 Claims. (Cl. 34—16.)



1. Apparatus of the class described comprising a heat insulated housing having therein a machine for tentering dampened textile webs, a series of heating coils arranged to radiate heat directly against the under surface of such webs in passing through said machine, a series of transversely elongate nozzles spaced longitudinally of said tentering machine and constructed and arranged to deliver blasts of air downwardly against the upper surface of such webs and throughout substantially the entire width thereof, means conducting heated air from said housing, and means for passing air on its way to the nozzles in heat transferring relation to such heated outgoing air.

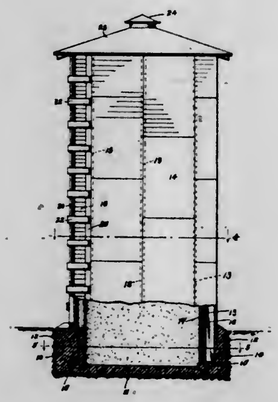
1,572,586. COMPOSITION FOR STORAGE-BATTERY ELECTRODES AND PROCESS OF MAKING THE SAME. HELEN GILLETTE WEIR, Newark, N. J., assignor to The Prest-O-Lite Company, Inc., a Corporation of New York. Filed Nov. 6, 1923. Serial No. 673,160. 7 Claims. (Cl. 136—27.)

1. Process of regulating the porosity of storage battery electrodes, comprising preparing a paste embodying as initial ingredients lead-containing sulfatable material and a lead compound having a density less than that of the active material to be prepared, the proportion of the said lead compound being varied in accordance with the physical and chemical characteristics of the particular batch of lead-containing sulfatable material used, placing the composition upon a support, and converting the composition into active material.

1,572,587. TELEPHONE SYSTEM. SAMUEL B. WILLIAMS, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 21, 1924. Serial No. 707,795. 10 Claims. (Cl. 174—18.)

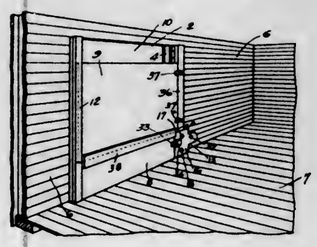
1. In a telephone system, a subscriber's line, a selective switch having contacts, means for operating the contacts of said switch to extend a talking connection to said line, a test circuit separate from the loop of the

subscriber's line and including the contacts of said switch for testing the condition of the connection extended to said line, and means operated when a connection is extended to said line for rendering effective the test circuit.



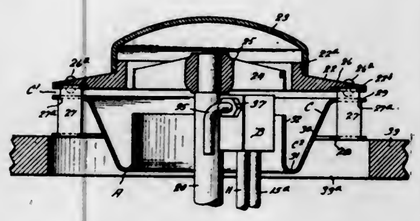
1,572,588. LOOSE-LEAF BINDER. WILLIAM DALE WINDERS, Columbus, Ohio, assignor to Henry C. Miller, Milwaukee, Wis. Filed May 6, 1925. Serial No. 28,301. 5 Claims. (Cl. 129—41.)

1. In a binder, a pair of hollow clamping strips, flexible binding posts fixed to one of said strips, adjustable take up mechanism provided in the other of said strips and cooperative with said posts for varying their effective lengths, said mechanism comprising a rotatable sleeve having internal right and left threaded portions, and nuts carried by certain of the ends of said posts and cooperative with the right and left threaded portions of said sleeve to traverse the sleeve longitudinally upon rotation of said sleeve.



4. In a loose leaf binder, a clamping member, a magazine movably mounted within said clamping member, a flexible post contained within said magazine and locking means operated by variations in position of said magazine to control the withdrawal of said post from said magazine.

1,572,589. SILO CONSTRUCTION. ADOLPH I. ANDERSON, Zumbrota, Minn. Filed Nov. 18, 1924. Serial No. 750,579. 1 Claim. (Cl. 72—6.)

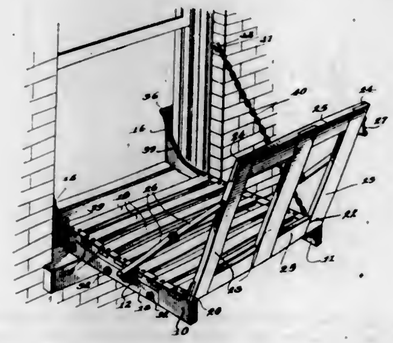


A wall formed of units engaging edge to edge and end to end, each unit being formed of impervious spaced side members, impervious outer members connected to the outer edges of the side members, an inner member capable of holding a coating of plastic material and a coating of plastic material applied over said inner member, the spaces between the members constituting continuous dead air chambers when the units are arranged to form a wall.

1,572,590. GRAIN-DOOR LATCH. DANIEL ROBERT CAMERON, Vancouver, British Columbia, Canada. Filed Mar. 17, 1924. Serial No. 699,728. 3 Claims. (Cl. 292—142.

1. A grain door latch, comprising a latch plate extending throughout the greater part of the depth of the door, and slidably mounted on the inner side of the car adjacent the doorway and susceptible of having its edge projected beyond the edge of the doorway or retracted clear thereof, and means for operating the plate from the outer side of the car by means of a lever, the weight of which tends to hold the plate in the retracted position.

1,572,591. APPARATUS FOR BURNING LIQUID FUEL. JOHN W. CANNON, Providence, R. I. Filed May 29, 1925. Serial No. 33,626. 7 Claims. (Cl. 158—77.)

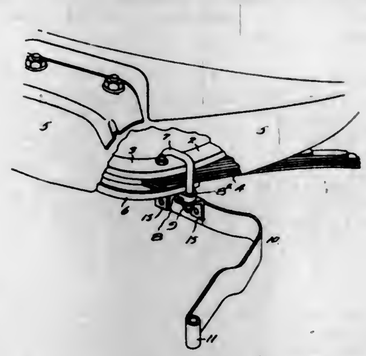


7. The combination, with a combustion chamber, of a burner within said combustion chamber and subjected to the heat thereof, said burner comprising an upper and a lower plate arranged to provide a peripheral outlet therebetween, the lower plate having a central passageway for admitting air to the space between said plates, a superheater in said combustion chamber, an atomizing device located within the central opening of the lower burner plate, means for conducting oil to said atomizing device, means for conducting superheated steam from the superheater to said atomizing device, there being a narrow air way provided between the inner edge of the lower plate and the upper plate, and means for delivering the mixture of superheated steam and atomized oil from the atomizing device to the space between said plates.

1,572,592. WINDOW SCAFFOLD OR SEAT. URIEL ARTEMUS CARR, Warren, Ohio. Filed Mar. 9, 1925. Serial No. 14,244. 2 Claims. (Cl. 304—24.)

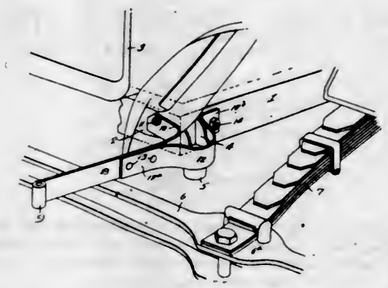
1. A device of the character described adapted to be supported on a window frame, comprising a pair of spaced beams having longitudinal grooves provided therein, a pair of arms having right angularly bent portions for engaging the facing strips of a window frame, extension members carried by said arms and received in said longitudinal grooves formed in said beams, a series

of bars having their opposite ends extending through said beams and extension members, means upon said bars for holding said extension members in said grooves



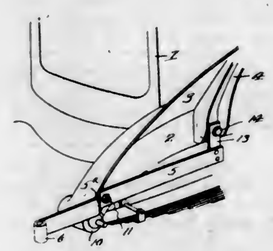
formed in said beams, cross strips having their opposite ends attached to said beams for forming a platform, and a back support hingedly connected to said beams.

1,572,593. ALLOY. JEAN H. L. DE BATS, East Orange, N. J., assignor to De Bats Metals Company, Bloomfield, N. J., a Corporation of New Jersey. Filed Jan. 24, 1924. Serial No. 688,303. 6 Claims. (Cl. 75—1.)



1. An alloy of nickel in the proportion of not more than 30 and not less than 15 per cent of the whole and two metals of the chromium groups each present in a proportion of not less than 15 per cent of the whole and together forming not over 85 and not less than 70 per cent of the whole.

1,572,594. BUMPER ATTACHING AND SUPPORTING MEANS. WAYNE E. DUNSTON, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 8, 1923. Serial No. 637,458. 5 Claims. (Cl. 293—55.)

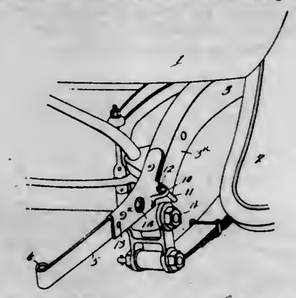


1. The combination, with the inwardly inclined side portions of a vehicle frame, of a bumper, and arms connecting said bumper to such inclined portions of the side frame, the ends of said arms extending at substantially right angles from the bumper and at substantially right angles from such inclined side portions of the vehicle frame.

1,572,595. BUMPER ATTACHING AND SUPPORTING MEANS. WAYNE E. DUNSTON, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 8, 1923. Serial No. 637,460. 2 Claims. (Cl. 293—55.)

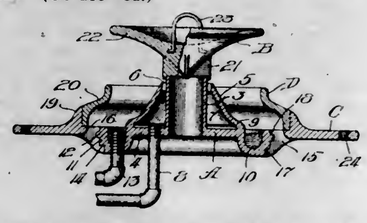
1. The combination, with a cross member and a side member of a vehicle frame, of a buffer-supporting bracket adjacent to the junction of said members, and a bumper supporting member comprising an arm having a lateral projection adapted to engage and to be secured to the cross member and a second arm extending rearwardly from the first mentioned arm and projected outwardly and inwardly to provide a bracket-receiving recess, the second arm being extended beyond such bracket and provided with a portion adapted to engage and to be attached to the said side member.

1,572,596. BUMPER-SUPPORTING MEANS. WAYNE E. DUNSTON, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 8, 1923. Serial No. 637,464. 5 Claims. (Cl. 293—55.)



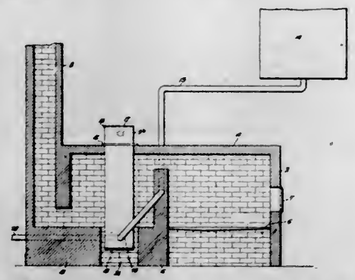
3. The combination, with the side frame member of an automobile, of a fender bracket, a bumper supporting arm secured intermediate of its ends to the said side frame member, a vertical projection carried by the rear or inner end of the said arm, and means connecting the said projection and the said bracket to the said side frame member.

1,572,597. BUMPER ATTACHING AND SUPPORTING MEANS. WAYNE E. DUNSTON, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 8, 1923. Serial No. 637,468. 4 Claims. (Cl. 293—55.)



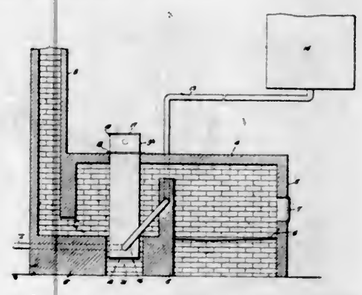
1. The combination, with the end portion of the side member of a vehicle, of a bracket comprising a base plate adapted to bear against the top of such end portion, means for securing such base plate to the top of

such end portion, the bracket having a longitudinal extension provided with an inverted U-shaped channel



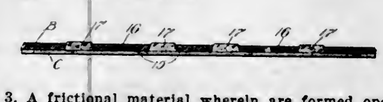
extending in the direction of the length of the side member, and a bumper supporting arm fitted within said channel and secured to said extension.

1,572,598. OIL BURNER. FRANK S. EGLOFF, Riverside, Ill. Filed Feb. 14, 1924. Serial No. 692,661. 1 Claim. (Cl. 158—91.)



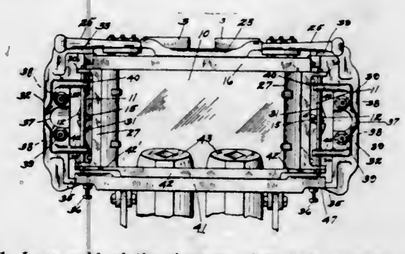
An apparatus of the kind described in which is comprised a chambered burner head having smooth outer conical walls in association with inner cylindrical walls between which is an annular space adjacent their upper edges, means for delivering a quantity of oil through the chamber of the burner head and down upon the smooth outer conical walls thereof, means adjacent the base of the conical walls for retarding the downward flow of oil thereupon, also other means for collecting oil which drains past said retarding means, and means for directing air against the conical walls of the burner head whereby to support combustion upon the outer side thereof, substantially as described.

1,572,599. APPARATUS FOR PURIFYING GAS. HOWARD TOLAN GRAFTON, CARL WILLIAM WEESNER, and FLOYD JACOB HOFFMAN, Warren, Ohio. Filed Mar. 30, 1921. Serial No. 456,913. 14 Claims. (Cl. 183—32.)



1. A furnace for purifying gas having a preheater adapted to be heated by the furnace-gases, purification-chambers suspended from and entirely supported by the furnace-roof and means for delivering the gas from the preheater to the purification-chambers.

1,572,600. PROCESS OF ANNEALING IRON ARTICLES. HOWARD TOLAN GRAFTON and CARL WILLIAM WEESNER, Warren, Ohio. Filed Mar. 30, 1921. Serial No. 456,914. 3 Claims. (Cl. 148—16.)

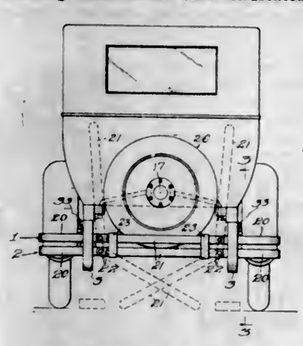


1. In a process of annealing iron articles, the use of purified producer gas substantially free from oxygen and containing a quantity of moisture insufficient to stain the iron article.

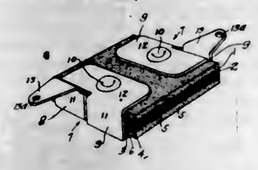
1,572,601. FRICTION MATERIAL. ORRIN D. GRAY, Chicago, Ill., assignor to Advance Automobile Accessories Corporation, Chicago, Ill., a Corporation of Delaware. Filed Apr. 9, 1923. Serial No. 630,714. 3 Claims. (Cl. 188—250.)

3. A frictional material wherein are formed openings, an insert of solidified lubricating material contained in each opening, and yielding means positioned rearwardly of each insert adapted to project its acting end beyond the wearing face of the frictional material, substantially as described.

1,572,602. CEMENT-BLOCK MACHINE. CHARLES R. HARRY, Fredericktown, Ohio, assignor to The J. B. Foote Foundry Company, Fredericktown, Ohio, a Corporation of Ohio. Filed Sept. 29, 1924. Serial No. 740,473. 6 Claims. (Cl. 25—41.)



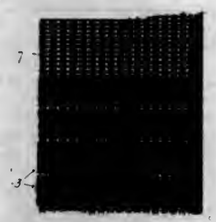
1. In a mold of the character described, movable end plates, operating levers, links connected with said levers, each link including an adjustable head having a pair of arms, and a rod carried by each end plate to which the arms of the corresponding head are connected.



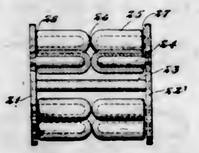
1,572,603. BUMPER AND BRACKET THEREFOR. CHRISTEN P. HEIDE, Kenosha, Wis., assignor to Tom C. Igo, Chicago Heights, Ill. Filed Feb. 24, 1925. Serial No. 11,002. 5 Claims. (Cl. 293—55.)

1. The combination with the side members of a motor vehicle chassis and a horizontal bumper at one

end of the same, of brackets carried by the bumper and extending between the same and the chassis, said brackets having their inner ends bifurcated and upturned to receive and extend about the associated ends of the side members, and means for clamping the ends of the brackets thereto.

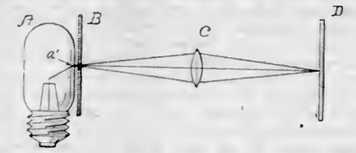


1,572,604. RADIOCONDENSER. CHARLES HORTON, Ridgefield Park, N. J., assignor to Dubilier Condenser & Radio Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 3, 1924. Serial No. 735,562. 7 Claims. (Cl. 250—41.)



1. An electrical condenser comprising a stack having clips thereon, each clip including separate sections secured to the stack, one section of each clip directly engaging only one of the faces of the stack and having a portion bent over only the adjacent side of said stack, and the other section directly engaging only the opposite face of the stack and having a portion bent over only the same side thereof.

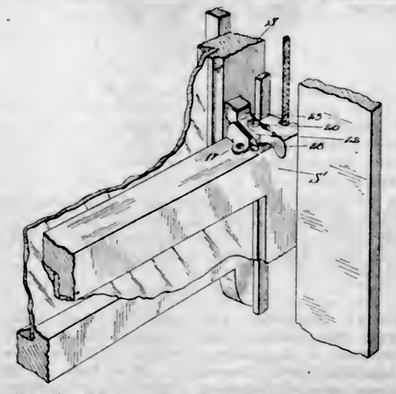
1,572,605. LAUNDRY BAG. WILLIAM C. HOWE, Chicago, Ill., assignor to The Alden Speare's Sons Co., Boston, Mass., a Corporation of Massachusetts. Filed May 7, 1923. Serial No. 637,046. 2 Claims. (Cl. 139—383.)



1. A laundry bag composed of a fabric body having integral lateral reinforcements extending across the bottom, across the bilge, and across the neck portion of the body to form a pin-receiving part whereby to close the bag, and integral longitudinal reinforcements extending along the center and the sides of the body, the entire body being perforated and the perforations of the reinforcements being smaller than those of the remainder of the bag, the lateral reinforcements being composed of a plurality of bands each spaced from the adjacent band by a single row of perforations larger than the perforations of the bands.

1,572,606. ROLLER BEARING. CHARLES H. HUGHES, East Orange, N. J. Filed May 16, 1924. Serial No. 713,649. 5 Claims. (Cl. 308—215.)

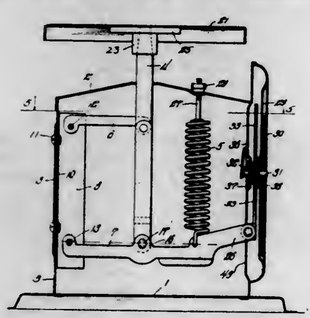
1. A roller bearing comprising a cage, a plurality of studs in said cage alternatingly disposed to point in opposite directions, each having a semi-spherical free end, and a hollow roller on each stud having an axial bore of a depth less than the length of the stud for keeping the flat outer end of each roller spaced from the walls of said cage to prevent gouging.



1,572,607. OFFSET FILAMENT LAMP. CHARLES FRANCIS JENKINS, Washington, D. C. Filed Oct. 22, 1924. Serial No. 745,212. 4 Claims. (Cl. 176—16.)

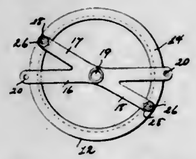
1. In a lamp unit, a light source, an enclosing casing therefor filled with hydrogen, said light source located in approximate contact with the casing wall.

2. In a lamp unit, a light source, and an enclosing casing, said light source being located in approximate contact with said casing wall.



1,572,608. SASH AND DOOR LOCK. EDWARD J. KINGWILL, Santa Monica, Calif., assignor of one-half to Charles G. Kingwill, Hammond, Ind. Filed July 25, 1924. Serial No. 728,123. 6 Claims. (Cl. 292—242.)

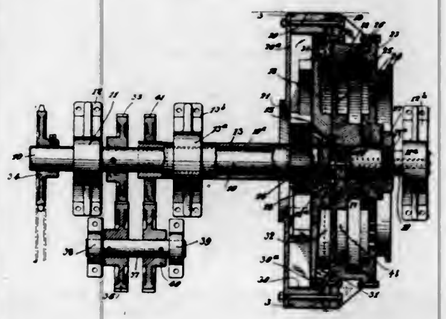
1. A sash and door lock including a pintle, an engaging member having a slot therein, through which said pintle extends, spring means for urging said member to assume an upwardly inclined position upon said



pintle, and means for causing said member to slide forwardly so as to cause its engaging end to engage a surface, whereby movement of said surface relatively to said lock will cause said engaging member to pivot about its opposite end and wedge against said surface.

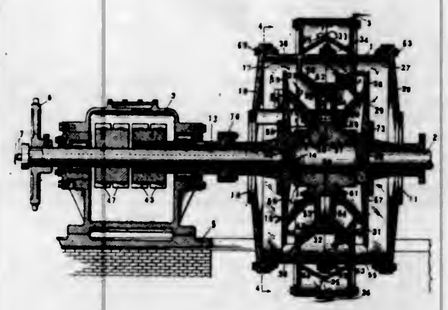
1,572,609. SCALE. LELAND G. KNAPP, Chicago, Ill., assignor to Montgomery Ward & Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 15, 1924. Serial No. 755,984. 11 Claims. (Cl. 265—68.)

1. In a scale of the class described, a casing including a top provided with a perforation, a vertically disposed stem extending freely through the perforation, a pair of parallel links disposed one above another and each pivotally connected at its opposite ends respectively to the casing and the stem, the stem having its upper end tapered to a frusto-pyramidal shape, a flange having a shank provided with an upwardly tapering bore corresponding throughout its length to the frusto-pyramidal shape of the said stem end and having the said end socketed therein, the flange having its top enlarged to form a head larger than the said perforation, a platform seated on the said flange head, a screw extending through the platform into the said upper stem end to clamp the flange between the stem and the platform, and resilient means for resisting the movement transmitted to the stem by the load on the platform.



1,572,610. BRACKET HOLDER FOR JUNCTION BOXES. WILLIAM LACKS and MORRIS S. NEWMAN, Newark, N. J. Filed Oct. 30, 1924. Serial No. 746,761. 2 Claims. (Cl. 240—85.)

1. A bracket holder formed of a flat plate, having a screw threaded central opening, said plate being provided with pairs of obliquely disposed arms of different length, said arms having openings in the outer ends thereof.

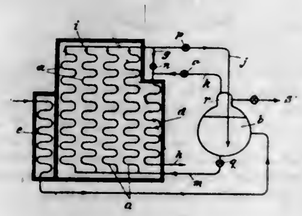


1,572,611. METHOD AND CENTRIFUGAL SEPARATOR FOR SEPARATING SOLIDS FROM LIQUIDS. WILLIAM C. LAUGHLIN, Glendale, Calif., assignor to Laughlin Filter Corporation, New York, N. Y., a Corporation of Delaware. Filed June 21, 1924. Serial No. 721,531. 21 Claims. (Cl. 233—7).

1. In centrifugal separation, a rotary casing having a separating chamber in the peripheral portion of the same and an axial discharge throat in communication with said chamber, means for supplying material for separation into the axial portion of the casing, rotating guide means within the casing, for directing solid material from the separating chamber inwardly to the

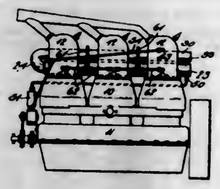
axial discharge throat and deflecting means located inwardly of said guide means and forwardly of same in the direction of rotation for deflecting entering material clear of the guide means.

1,572,612. CENTRIFUGAL SEPARATOR. WILLIAM C. LAUGHLIN, New York, N. Y., asssignor to Laughlin Filter Corporation, New York, N. Y., a Corporation of Delaware. Filed June 2, 1925. Serial No. 34,301. 49 Claims. (Cl. 233—18.)



1. In centrifugal apparatus, a rotary casing having concentric discharge throats at opposite ends of the same and a peripheral discharge intermediate said ends, a collector surrounding said peripheral discharge and supply means discharging into the casing.

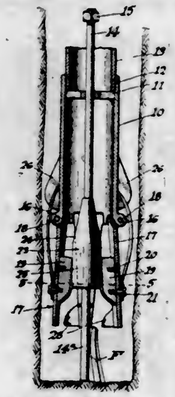
1,572,613. HIGH-PRESSURE STEAM GENERATOR. FRANZ LÖSEL, Brunn, Czechoslovakia. Filed Aug. 17, 1923. Serial No. 657,844. 8 Claims. (Cl. 122—35.)



7. A high pressure steam generator and supply unit comprising a high pressure tubular boiler of comparatively small water capacity within a furnace, a high pressure combined hot water and surplus steam storage reservoir of comparatively large water and steam accumulator capacity located outside of said furnace and forming the water supply space for said high pressure boiler, feed water feeding means for said unit supplying feed water to said storage reservoir and from the water space thereof through a hot water feed supply line to

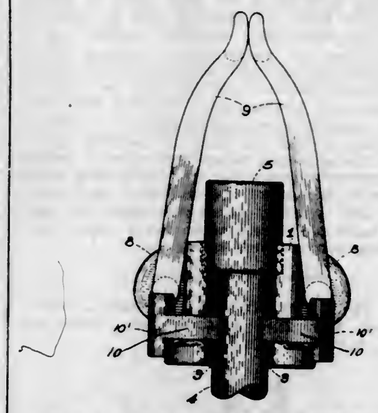
the water space of said tubular boiler, a tubular steam collector for the steam generated in said tubular boiler, a main steam supply line leading from the collector for supplying high pressure boiler steam directly to consumption apparatus, a storage steam branch line leading from said main steam supply line into said storage reservoir at a point below the water level thereof and another separate steam supply and equalizing line leading from the steam space of said high pressure storage reservoir to said main steam supply line to add storage steam in case of demand to said main supply line, whereby said high pressure storage reservoir

also functions to preheat the feed water to boiler water temperature and to smooth out and absorb the fluctuations and irregularities of the steam generation of the tubular boiler so as to supply an even flow of substantially constant pressure steam to said main steam supply without affecting the quality of the boiler steam by the water space of said storage reservoir, and regulating means for effecting the passage of surplus steam through said storage branch line and storage in said reservoir and for the additional steam supply from said storage to said main steam supply line and means for controlling the feed water supply to said tubular boiler.



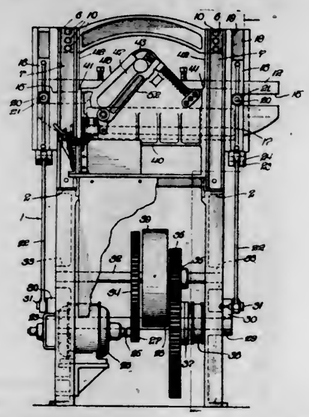
1,572,614. STEAM GENERATOR FOR INTERNAL-COMBUSTION ENGINES. LOUIS LEONARD LUCE, Portland, Oreg., assignor to Luce-Mattson Engine Company, San Francisco, Calif., a Corporation of California. Filed Oct. 2, 1923. Serial No. 666,056. 3 Claims. (Cl. 123—25.)

1. In an internal combustion engine, an engine cylinder having an exhaust port in its lower side wall, a gas-inlet port in the lower side wall of the cylinder opposite said exhaust port, a steam-inlet port in the lower side wall of the cylinder adjacent said gas-inlet port, means to supply steam communicating with said steam-inlet port, and a piston in said cylinder controlling the opening and closing of the ports.



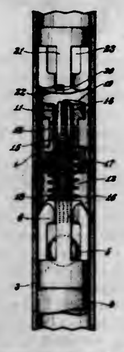
1,572,615. FISHING TOOL. RICHARD A. MAGOR and WALTER STONE, Long Beach, Calif. Filed Nov. 20, 1924. Serial No. 751,080. 9 Claims. (Cl. 294—116.)

1. A fishing tool comprising a body, a plurality of fish engaging elements pivoted to said body, spring means for urging said fish engaging elements into contracted position, a stem carried by said body and slid-



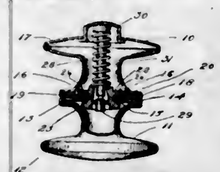
able thereon, and a head formed upon said stem adapted to engage the interior surfaces of said fish engaging elements to cause their expansion before contraction.

1,572,616. ELEVATOR OF THE RIGID-YOKE TYPE. RUEL E. MOHNKERN, Oil City, Pa. Filed May 24, 1923. Serial No. 641,099. 1 Claim. (Cl. 294—91.)



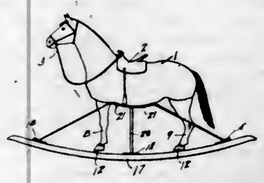
An elevator of the rigid yoke type adapted for use with a tubular element having a coupling collar secured thereto, comprising in combination a rigid yoke having a gap for the reception of said tubular element also a feature consisting of a straight-walled, concentrically-arranged enlargement of the upper rearward portion of said gap, the junctional point of the walls of said enlargement with the walls of said gap forming a square shoulder for contact with the lower end of said collar, the walls of said enlargement being of sufficient extent to engage said collar throughout more than one half of its circumference for the purpose set forth, latch-levers pivotally mounted within said yoke at each side of and adjacent the entrance of said gap so as to be movable in a plane transversely to the axis of said yoke, a torsion spring arranged to actuate said levers to the position whereat their inner ends are within said gap with their inner faces in retaining juxtaposition to the periphery of said tubular element, said levers being manually actuable to withdraw said ends from said gap, and bales carried by said yoke for the attachment of a hoisting cable.

1,572,617. PAPER-CUTTING MACHINE. JOHN E. MULRONEY, Chicago, Ill. Filed June 10, 1922. Serial No. 567,425. 12 Claims. (Cl. 164—54.)



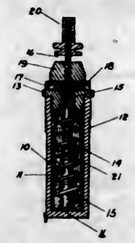
1. In a paper cutting machine of the class described, the combination of a main frame, a feed table mounted on said frame, a knife reciprocatingly mounted in the frame and in transverse relation to the feed table, an upwardly and downwardly movable paper-engaging clamp slidably mounted in the main frame in parallel relation to the knife and provided with an upwardly and downwardly extending elongated inclined slot, a clamp supporting and operating pin anchored in the knife and extending into said inclined slot, anti-friction means interposed between said pin and the walls of said inclined slot, locking means mounted upon said clamp and adapted to frictionally engage a stationary frame member, to hold the clamp in clamping engagement with the paper to be operated upon, a locking lever arm operatively connected with said locking means and adapted to be engaged and operated by said clamp supporting and operating means, and means for operating said knife and thereby automatically raising, lowering, locking and releasing said clamp.

1,572,618. PUMP FOR OIL WELLS. HARRY L. NOLAN, Maplewood, Mo. Filed Jan. 17, 1921. Serial No. 437,796. 3 Claims. (Cl. 103—180.)



1. In a well pump having a working element provided with a perforation, a standing element, and a tap on said standing element adapted for cooperation with said perforation, substantially as and for the purpose set forth.

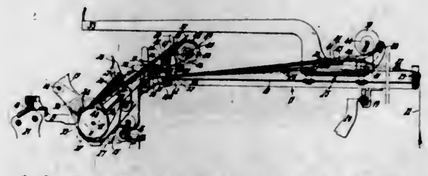
1,572,619. CUFF BUTTON. JOHN G. NYBERG, Providence, R. I., assignor to Dolan & Bullock, a Firm composed of Arthur F. Dolan and Fred A. Bullock, Attleboro, Mass., and William G. Bennett, Providence, R. I. Filed May 9, 1925. Serial No. 29,067. 5 Claims. (Cl. 24—110.)



1. A separable cuff button comprising stud and socket members, separable bodily movable jaws carried by said stud member for releasably engaging said socket member, means for positively forcing said jaws to contracted position, an axially movable pin in said stud member for controlling the action of said jaws, and means acting on said pin for causing said pin to normally expand said jaws into their locking position.

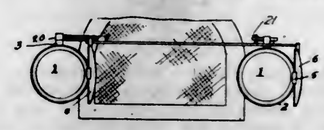
1,572,620. ROCKING-HORSE. FREDERICK THOMAS OAKLEY, Pawling, N. Y. Filed Mar. 5, 1925. Serial No. 13,117. 6 Claims. (Cl. 272—52.)

5. In a rocking horse having a body portion and rockers, and legs moving independently of the rockers; hollow hoofs for the legs, the said hoofs having apertures pierced through its walls; and weights pendulously mounted within the said hollow hoofs.



1,572,621. MANIFOLD HEATER. EUGENE G. SIEGFRIED, Lincoln, Nebr., assignor of one-half to August W. Vogt, Lincoln, Nebr. Filed Aug. 6, 1924. Serial No. 730,441. 2 Claims. (Cl. 219—38.)

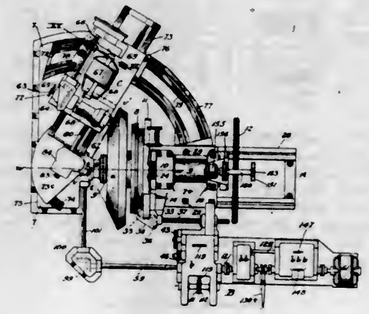
2. A manifold heater comprising a cylinder which is closed at one end, a plug for closing the other end of said cylinder, said plug being provided with a central conical aperture, a conducting core which is so shaped as to fit snugly into the aperture of said plug, said core being surrounded by a sheath of insulating material, a binding post integral with said core and projecting from said plug, a resilient insulated washer surrounding said binding post and bearing against said plug, said binding post bearing against said washer



for firmly drawing said core into aperture of said plug, and a resistance coil surrounding said insulating sheath, said resistance coil being grounded in said plug and having its other terminal in the inner extremity of said core.

1,572,622. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 3, 1924. Serial No. 696,556. 53 Claims. (Cl. 197—126.)

1. In a continuous billing typewriting machine, the combination with a revoluble platen, a platen-displacing frame and a carbon-carrier reciprocable toward and from the platen, of a record-web and record-web-carbon bearing roll mounted on the carbon-carrier, a shield also carried by the carbon-carrier between the record-web and its carbon, constructed and arranged to prevent the copying through onto the record-web of all matter typed on the work-web except a portion written in a predetermined field longitudinally of the work-web, feed-rolls co-operating with the platen to feed the work-web and record-web together, record-web take-up mechanism at the delivery side of the platen to take up and hold against retraction a stretch of record-web corresponding in length to the length of the record-web field typed upon, and a friction device on the carbon-carrier engaging the record-web to cause the record-web to be drawn to the rear by the corbon-carrier until all of the slack at the delivery side of the platen created by the line-feeding of the record-web by the platen has been taken up, and then to permit the record-web to remain stationary during the further retraction of the carbon-carrier.

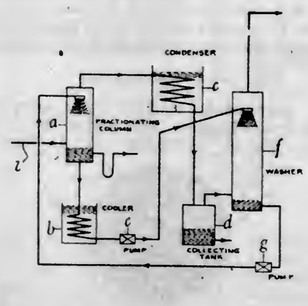


1,572,623. SCREEN FOR AUTOMOBILE LAMPS. SAMUEL S. STALEY, Reading, Pa. Filed Aug. 24, 1923. Serial No. 659,082. 2 Claims. (Cl. 240—45.6.)

1. The combination of two screens, one on each lamp of an automobile and free to move into a position cutting off the light on the left hand side of the driver, yieldingly acting mechanism tending to cause these screens to shut off the portions of the light extending forward and to the left hand side of the driver, and positively acting mechanism under the control of the driver, acting oppositely to the said yielding mechanism and opening the screens against the pressure of the said mechanism, the said screens being hinged at the left side of the lamps.

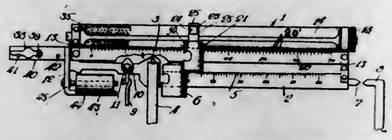
1,572,624. APPARATUS FOR CUTTING HELICAL BEVEL TEETH. HOWARD H. TALBOT, Wooster, Ohio, assignor of one-half to Louis A. Woodard, Wooster, Ohio. Filed Sept. 1, 1921. Serial No. 497,493. 31 Claims. (Cl. 90—4.)

1. A machine for cutting helical bevel gears having a rotatable blank support, means for alternately rotating the blank thereon forward and back, a rotating end milling cutter, a slidable support therefor, driving mechanism for the cutter on said support, a pivotally



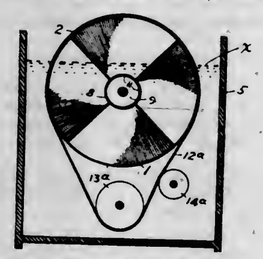
mounted laterally swinging table for the cutter support, and gearing for moving the cutter support thereon in a straight line movement during reversal of the blank.

1,572,625. GLASS. WILLIAM CHITTENDEN TAYLOR, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Jan. 7, 1921. Serial No. 435,739. 10 Claims. (Cl. 106—36.1.)



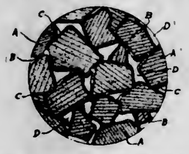
1. The hereinbefore described process of modifying the colors due to metallic salts in borate glasses, which comprises adding a halogen.

1,572,626. APPARATUS FOR THE PRODUCTION OF GASOLINE. FRANK TINKER, Sutton Coldfield, England. Filed June 7, 1923. Serial No. 643,968. 1 Claim. (Cl. 196—139.)



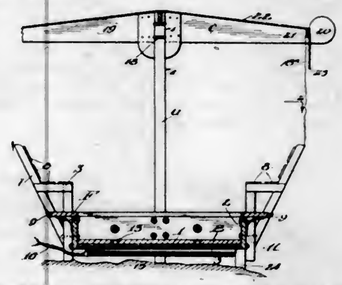
In apparatus for the production of gasoline and like motor spirits by distillation processes, the combination with a fractionating column, of a condenser, means for conducting vapour from the fractionating column to the condenser, a collecting tank, means for conducting condensed liquid, gas and vapour from the condenser to the collecting tank, a washer, means for passing vapour and gas from the collecting tank to the washer, a cooler, means for passing condensate from the fractionating column to the cooler, means for conveying cooled condensate from the cooler to the washer, and means for returning liquid from the washer to the fractionating column, substantially as described.

1,572,627. WEIGHING SCALE. MATHIAS J. WEBER, Chicago, Ill., assignor to Continental Scale Works, Chicago, Ill., a Corporation of Illinois. Filed Mar. 26, 1920. Serial No. 368,892. 15 Claims. (Cl. 265—32.)



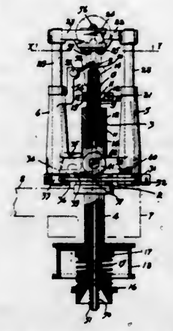
1. The improvements herein described, comprising a weighing scale provided with a beam, a movable weight on the beam, a postal transmission cost element associated with the weight and bearing both weight and postal rate zone indications, and an indicator on the weight for designating on the cost element the transmission cost for each unit of weight indication substantially as described and means limiting the visual designations to a single postal zone rate indication.

1,572,628. AIR BLOWER OF THE CAGNIARDELLE TYPE. UTLEY WEDGE, Paoli, Pa. Filed Apr. 21, 1925. Serial No. 24,719. 9 Claims. (Cl. 230—22.)



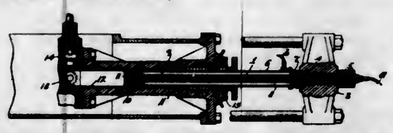
5. An air blower of the "Cagniardelle" type including in combination a rotatable casing contracted at its discharge end and provided with an external ported casing wall and with an internal ported drum wall and having mounted therein and between said walls a spiral or Archimedean screw element, a tank for liquid in which the casing is partially submerged, and means for covering the ports at the exposed portion of the external wall and for uncovering the ports at a submerged portion of the external wall.

1,572,629. METHOD OF MAKING FUEL BRIQUETTES. PARK E. WELTON, Akron, Ohio. Filed May 19, 1924. Serial No. 714,358. 17 Claims. (Cl. 44—12.)



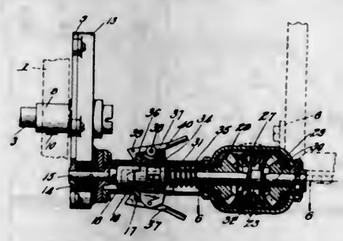
1. The process of forming combustible briquettes which comprises mixing coal culm with a suitable binder in plastic form, adding a water-proofing material to protect the binder, the water-proofing material being in a granulated form, mixing these ingredients to obtain a homogeneous consistency of the mass, subjecting the mass to sufficient pressure to cause it to temporarily retain its formed shape and subjecting the formed material to heat to cause the moisture in the binder material to be driven off and thereafter to cause the water-proofing material to be reduced to a liquid form, whereupon it may cerate the binder material and subsequently prevent the absorption of moisture by the binder material.

1,572,630. SAND BOX AND PLAYHOUSE. ROBERT E. WHITESIDE, Los Angeles, Calif., assignor to Henry Bielfeldt, Los Angeles, Calif. Filed Aug. 28, 1924. Serial No. 734,811. 4 Claims. (Cl. 272—1.)



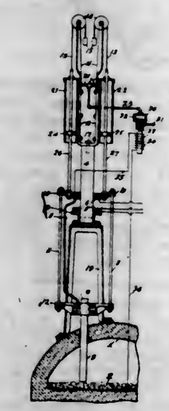
1. A playhouse comprising a box adapted to hold sand, a peripheral flange flush with the top of said box, oppositely disposed uprights extending through openings in said flange and engaging the sides of said box, means for securing said uprights to said box and a canopy extending over said box and supported on said uprights.

1,572,631. SEALING-IN MACHINE FOR TIPLESS LAMPS. JAMES BRYANT WHITMORE and JOHN EBLING FERGUSON, Bloomfield, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Aug. 1, 1921. Serial No. 488,754. 35 Claims. (Cl. 49—2.)



1. A head for a sealing-in machine comprising a lamp-mount holder, means for temporarily supporting a bulb and means associated with said holder whereby said bulb may be adjusted and supported with its axial line coincident to that of the mount holder.

1,572,632. COMPRESSOR OR PUMP. ZENO W. WICKS, Fort Worth, Tex., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Apr. 3, 1925. Serial No. 20,335. 6 Claims. (Cl. 230—6.)



1. A compressor or pump plunger, comprising, in combination, a plunger head, a tubular member secured to said head, a flexible plunger rod within said tubular member arranged to drive said head, and means for circulating cooling fluid through said rod and head.

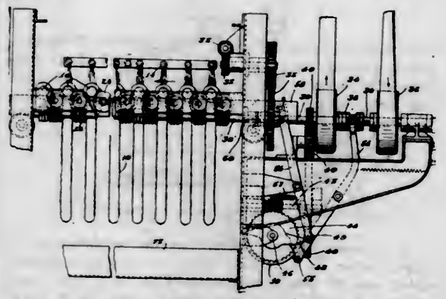
1,572,633. DRIVING MECHANISM FOR IRONING MACHINES. ALPHEUS W. ALTORFER, Peoria, Ill., assignor to Altorfer Bros. Company, East Peoria, Ill., a Corporation of Illinois. Filed Feb. 25, 1921. Serial No. 447,833. Renewed Nov. 23, 1925. 4 Claims. (Cl. 68—9.)

3. A driving attachment for the purposes described, including a vertically disposed shaft, a coupling member thereon, a horizontally disposed shaft, a coupling member, slidable thereon, means bearing yieldingly thereagainst, gearing connecting said shafts, a clutch in said gearing, means to actuate said clutch, and clamping means on said attachment.

1,572,634. ELECTRIC FURNACE. MORRIS H. BENNETT, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed June 27, 1923. Serial No. 648,164. 21 Claims. (Cl. 204—64.)

2. In an electric furnace, the combination with an electrode, of a transformer for supplying current to the electrode, and means for utilizing the transformer to control the position of the electrode with respect to the charge.

1,572,635. WINDOW-REGULATOR LOCK. ROBERT W. BOSTWICK, Detroit, Mich. Filed Sept. 24, 1923. Serial No. 664,558. 3 Claims. (Cl. 192—8.)

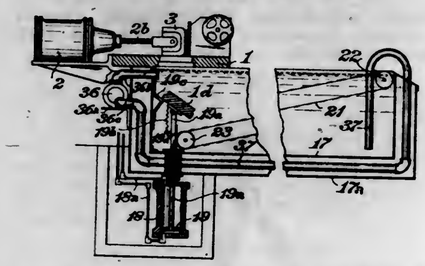


1. The combination with a gear rotatable in opposite directions for raising and lowering a window, of a stationary ratchet wheel, a disk between said ratchet wheel and gear and connected to the latter, pivoted pawls upon said disk and engageable with the teeth of said ratchet wheel on opposite sides of its axle, means for yieldably forcing said pawls into engagement with the teeth, and an operating member having an alternative driving contact with the free ends of said pawls for releasing either of said pawls and subsequently rotating said gear in either direction through the released pawl and said disk.

1,572,636. ADJUSTABLE PIPE HANGER. CHARLES J. BRANCH, Philadelphia, Pa. Filed Mar. 29, 1924. Serial No. 702,934. 1 Claim. (Cl. 248—31.)

In a device of the character stated, the combination of a support, a threaded rod carried thereby, a nut threaded upon said rod, a pipe hanger having a bifurcated and an apertured head through which said bolt has free passage, said nut being accommodated within said bifurcated portion, which latter is of a dimension in excess of the thickness of said nut, and an upper curved locking shoulder for said nut.

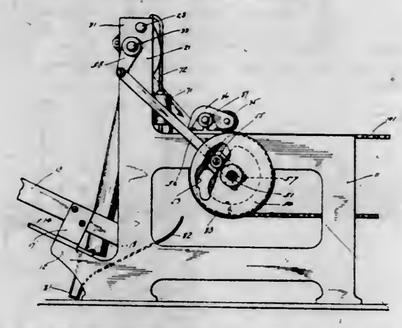
1,572,637. APPARATUS FOR THE CONTINUOUS TREATMENT OF TEXTILE FIBERS IN SKEIN FORM. JOSEPH BRANDWOOD, Newton, Mass. Filed Sept. 21, 1925. Serial No. 57,506. 6 Claims. (Cl. 8—19.)



1. Apparatus for fluid treatment of material comprising rods for holding the material; supporting rollers between which the rods are positioned, arranged in series with the rods side by side; and means to push the rods against and over the said rollers, thereby advancing each along the series while supported by one of said rollers.

1,572,638. PROCESS FOR THE MANUFACTURE OF SALTS OF UREA. JOSEPH BRESLAUER and CHARLES GOUDET, Geneva, Switzerland, assignors to Société d'Etudes Chimiques pour l'Industrie, Geneva, Switzerland, a Corporation of Switzerland. Filed May 2, 1922. Serial No. 557,964. 3 Claims. (Cl. 260—125.)

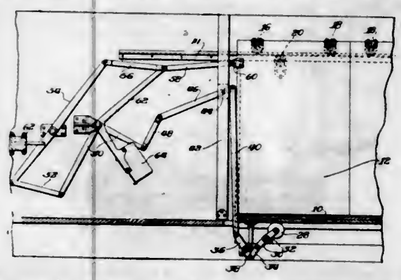
1. A process for the manufacture of insoluble salts of urea from cyanamides consisting in producing a concentrated solution of free cyanamide of extraction and



adding thereto sulphuric acid and a quantity equivalent to this acid of a salt containing the acid radical of the salts of urea to be prepared so as to convert the solution directly into the salt.

1,572,639. SPRING-FORMING MACHINE. THOMAS F. BUCKLEY, Scranton, Pa. Filed Oct. 9, 1924. Serial No. 742,598. 5 Claims. (Cl. 266—6.)

2. In a spring-forming machine, the combination with an oil tank, a table above the same, and spring-shaping means on said table, of a section in said table capable of being lowered into said tank and tilted, a conveyor in said tank, a common means to actuate said section and conveyor, and means on the tank to tilt said section as it is lowered.

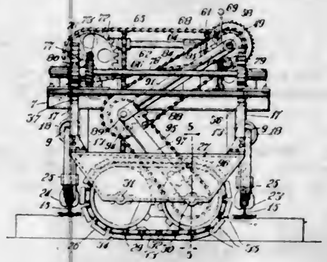


1,572,640. AUTOMATIC SHEET-FEEDING DEVICE. WILLIAM F. BUTLER, Hillside, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 20, 1923. Serial No. 669,825. 16 Claims. (Cl. 271—27.)

1. In a sheet feeding mechanism the combination of a stack holder for holding a stack of sheets in upright position and in bowed formation with their rear faces concave and with the sheets resting upon their lower edges, the rear of said stack being substantially open and said stack holder permitting the insertion of quantities of sheets in the front thereof, and means for successively withdrawing the sheets from the back of the stack and in an initial direction substantially at right angles to the plane of the individual sheet.

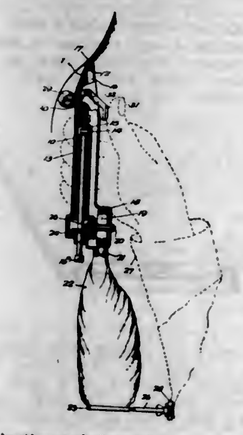
1,572,641. DOOR. JAMES DART, Chicago, Ill. Filed Apr. 12, 1924. Serial No. 706,015. 6 Claims. (Cl. 268—8.)

1. In a device of the class described, in combination, a wall having an opening, a vertically movable sill under said opening, gangplanks extending in opposite directions from said sill, fixed supports for the remote ends of said gangplanks, the proximate ends of said gangplanks resting on said sill, a slidable door for said opening, tension means supporting said sill, a fixed pivot, a rotatable member on said pivot rotated by said tension member, a second fixed pivot above the door, a crank arm on said pivot, a link pivoted to said rotatable member and crank arm, means for adjusting the effec-



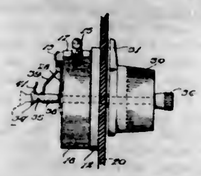
tive length of said link, a long arm projecting down from said second pivot beside the door, and an extension pivotally connected to the door and said long arm, said extension and said adjustable link being both almost in alignment with the parts actuating them when the door is closed.

1,572,642. WINDOW-SHADE BRACKET. DAVID Z. EVANS, Philadelphia, Pa. Filed Feb. 19, 1923. Serial No. 619,811. 2 Claims. (Cl. 156—24.)



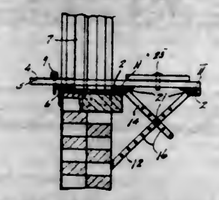
1. A window shade bracket formed from a single piece of wire the free end portion of which is screw threaded, the said wire then extending rearwardly and being doubled over upon itself to form a roller pin receiving portion of several thicknesses, the said wire then being extended forwardly towards the screw-threaded portion and being twisted to form a reinforced stem, one of the wires comprising said stem thereafter being spirally wound to form a substantially circular head arranged transversely with respect to said screw threaded stem.

1,572,643. TRACK SHIFTING AND RAISING MACHINE. BENJAMIN HARRISON FALKNER, Cleveland, Ohio, assignor to Western Wheeled Scraper Company, Aurora, Ill., a Corporation of Illinois. Filed May 25, 1925. Serial No. 32,705. 28 Claims. (Cl. 104—7.)



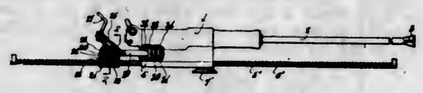
9. A track shifting machine comprising a wheeled truck adapted to run on a track and having means for attaching the track thereto, a tractor disposed transversely of the truck and movable vertically relatively thereto between the rails of the track, and power operated means for propelling the tractor.

1,572,644. HAIR CUTTER. WILLIAM W. FARNSWORTH, Chicago, Ill. Filed Mar. 24, 1924. Serial No. 701,373. 7 Claims. (Cl. 30—1.)



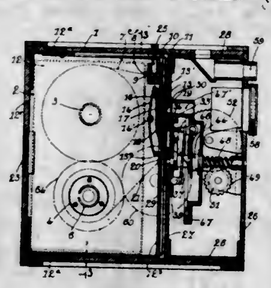
1. In combination a hair cutter, a conduit associated with the cutter, the inlet of the conduit being disposed adjacent the cutting edge of the cutter, means for creating a suction in the said conduit, the said conduit receiving the hair directly it is severed, a receptacle with which the said conduit has communication for delivering the hair thereinto, and means for supporting the said receptacle from the person of the operator.

1,572,645. COMBINED RHEOSTAT AND SWITCH. JOHN V. FRANCESCO, Brooklyn, N. Y. Filed Dec. 10, 1924. Serial No. 755,042. 7 Claims. (Cl. 201—55.)



5. In a variable resistance unit, a resistor, resistance varying means associated therewith and including a shaft rotatable for varying the effective resistance of said resistor, and means reciprocable independently of said shaft for breaking a circuit through the resistor and through the latter means.

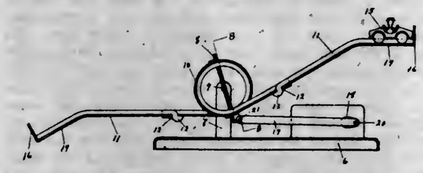
1,572,646. WINDOW JACK. EDWARD FRANKLIN GAMBER, Shamokin, Pa. Filed Apr. 11, 1925. Serial No. 22,448. 1 Claim. (Cl. 304—27.)



A device of the kind described, comprising two planks adapted for positioning side by side across a window sill, the planks being provided at their inner ends with a series of laterally aligned stay pin holes; strap hinges connecting the planks at their under adjacent side edges, the joints of the hinges being offset at right angles from the hinge bodies; brace bearing lugs mounted at the outer side edges of the planks, the same being provided with tie rod eyes; a pair of legs provided medially with a series of laterally aligned tie rod holes and having eyes in their outer ends registering with the eyes of the outer brace lugs; a pair of braces provided medially with a series of laterally aligned tie rod holes and having eyes in their ends registering with the eyes of the inner brace lugs; three tie rods having threaded ends, the ends of the two upper rods being adapted for insertion through the tie rod eyes of the said lugs and the ends of the lower rod through the tie rod holes of the angularly crossed legs and braces for locking the same together, the said lower rod having stop shoulders immediately back of its threaded ends; nuts for the ends of the said rods; stay pin plates mounted on the inner ends of the planks over the said stay pin holes and having holes therethrough registering therewith; and stay pins adapted for insertion through the said stay pin holes.

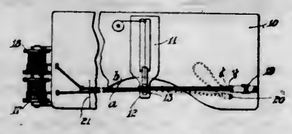
1,572,647. FEED MECHANISM. ELMER G. GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 23, 1921. Serial No. 471,897. 8 Claims. (Cl. 255—45.)

1. In a drilling mechanism, an impact motor including a casing, a support on which said motor is movable, and fluid cushioning means between said motor casing and said support including a longitudinal bore in said motor casing, a connecting arm extending forwardly into said bore, a member carried by said arm and slidably mounted in said bore, and means for admitting pressure fluid to said bore.



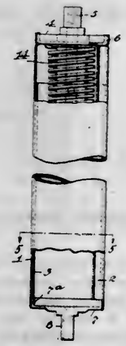
1,572,648. APPARATUS FOR TAKING CINEMATOGRAPHIC VIEWS. PIERRE SYLVAIN GAUDIAT, Paris, France, assignor to Pathe Cinema, Anciens Etablissements Pathe Freres, Paris, France. Filed Jan. 26, 1923. Serial No. 615,165. 3 Claims. (Cl. 88—17.)

1. In a cinematographic apparatus for taking views, the combination with an outer protecting box of a driving mechanism in said box for feeding the film, a removable loader adapted to be inserted into said box, means carried by said loader for centering it within said box, a winding-up spindle rotatably mounted in said loader, means for automatically coupling up said spindle with the said driving mechanism when the loader is inserted into the outer box, a light tight interchangeable magazine adapted to contain the unwinding and the winding up film spools and to be inserted into said loader, means



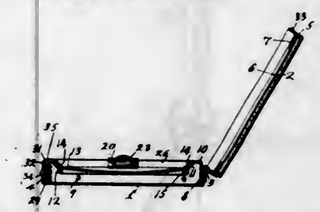
provided on the winding-up spool for automatically frictionally coupling up the latter with the said spindle when the interchangeable magazine is inserted into the removable loader.

1,572,649. MECHANICAL TOY. LESTER S. GUNDERMAN, Pittsburgh, Pa. Filed July 16, 1925. Serial No. 43,960. 5 Claims. (Cl. 104—55.)



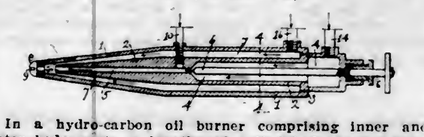
1. A mechanical toy comprising a base, a track having reversely inclined surfaces, having a loop therein and pivotally supported in the center thereof above the base, car retaining terminals at each end of the track, operating means supported on the base to alternately elevate the ends of the track and a car adapted to roll on the track.

1,572,650. ART OF MAKING LIGHTING-OUTFIT FESTOONS. LESTER HAFT, New York, N. Y., assignor to Haft, Wood & Co., Inc., New York, N. Y., a Corporation of New York. Filed May 14, 1925. Serial No. 30,201. 6 Claims. (Cl. 140—71.)



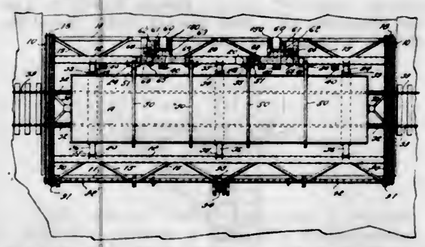
1. The method of making lighting outfit festoons which comprises forming and bonding the loops in one of its lead wires at a given point and as each loop is completed moving the lead wires along a measured distance and in so doing folding the leads between and gathering together the finished loops.

1,572,651. SHADE ROLLER. STEWART H. HARTSHORN, Short Hills, N. J., assignor to Stewart Hartshorn Company, East Newark, N. J., a Corporation of New Jersey. Filed Aug. 6, 1923. Serial No. 655,850. 5 Claims. (Cl. 156—25.)



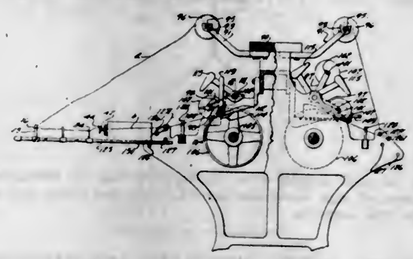
1. A device of the character described, comprising a vertically arranged cylindrical member, there being a longitudinal groove in the surface of the member, said groove being of less length than the member whereby a wall is formed at one end of the groove, and an element carried in the groove, said element engaging the wall whereby the element will be supported thereby, the width of the groove being greater than the lateral dimension of the element.

1,572,652. LOOSE-POWDER VANITY BOX. BURDON P. HYDE, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 20, 1925. Serial No. 10,467. 7 Claims. (Cl. 132—83.)



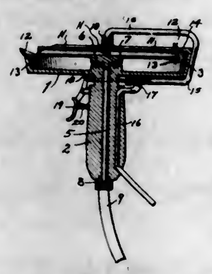
1. In a loose powder vanity case, the combination of a body and a cover, one of these parts forming a powder compartment, a member in the powder compartment pivotally associated therewith on a hinge, and a puff retaining member carried by the hinge and extending inwardly over a puff carried in the powder compartment.

1,572,653. HYDROCARBON-OIL BURNER. HANS W. JAEGER, Tacoma, Wash. Filed Mar. 17, 1925. Serial No. 16,120. 1 Claim. (Cl. 158—74.)



In a hydro-carbon oil burner comprising inner and outer body parts, a lengthened cylindrical steam receiving chamber within said inner body part, a valve controlled steam and air pipe into said chamber, a valve controlled tubular nozzle outlet from said steam chamber, a valve controlled oil and a valve controlled water supply into said tubular nozzle outlet, an annular air receiving channel and nozzle between said inner and outer body parts, a valve controlled air pipe into said annular air channel and nozzle, and said annular air nozzle adjacent to and surrounding the tubular nozzle outlet from said steam chamber, at which joint all the elements of combustion will be vaporized, heated, and mixed, prior to passing through the discharging nozzle of said oil burner.

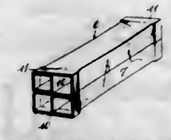
1,572,654. CAR-DUMPING APPARATUS. ROBERT W. KALTENBACH, Cleveland Heights, Ohio, assignor to The McMyler-Interstate Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 10, 1923. Serial No. 679,629. 35 Claims. (Cl. 214—55.)



1. In a car dumping apparatus, the combination of a cradle adapted to tip and provided with means to support a car, clamp for such car, a motor connected with such clamp, and means controlled by the tipping of the cradle for controlling the motor.

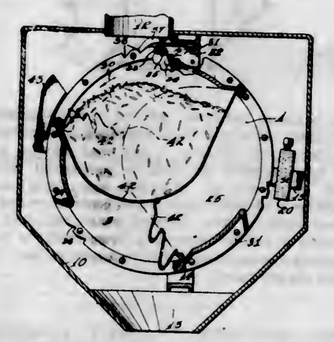
1,572,655. MACHINE FOR UNITING THREADS OR CORDS. WILLIAM H. PEARSON and TIMOTHY J. KELLY, Passaic, N. J., assignors to Brighton Mills, a Corporation of New Jersey. Original application filed Apr. 12, 1921, Serial No. 460,725. Divided and this application filed Dec. 1, 1921. Serial No. 519,257. 4 Claims. (Cl. 117—6.)

1. In a machine for winding and uniting threads, the combination of a plurality of supply spools located side by side on an upper level, a corresponding plurality of winding spools located side by side on a lower level, devices which may be rendered individually inoperative, for rotating the winding spools, a guideway extending along in front of the spools, and a thread uniting device which untwists and retwists the threads as a part of the thread uniting operation, movable back and forth along the guideway at a still lower level.



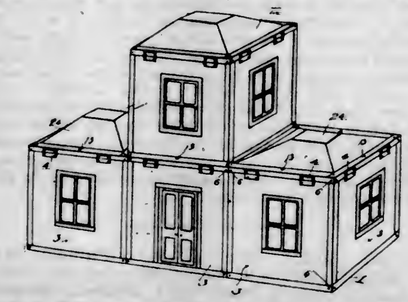
1,572,656. SPRAYING DEVICE. NORMAN W. KREUDER, Chicago, Ill. Filed July 6, 1925. Serial No. 41,526. 7 Claims. (Cl. 91—44.)

1. In a device of the class described, a casing having a radial outlet, a fluid supply-pipe, a rotatable shaft, a member on the shaft in the casing communicating with the supply-pipe and having a plurality of discharge orifices in line with the outlet, and cups mounted on said member to ride on said casing to normally close said orifices and to periodically open the latter when the cups register with said radial outlet.



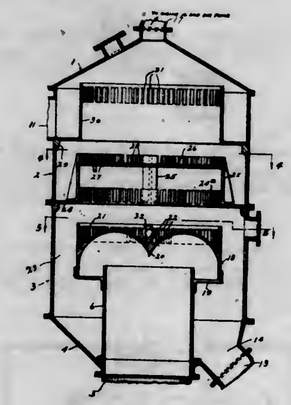
1,572,657. RADIATOR. HUGO KURTZNER, Cleveland, Ohio. Filed Apr. 3, 1924. Serial No. 703,976. 1 Claim. (Cl. 257—128.)

A radiator unit formed of a single sheet of metal substantially rectangular in configuration, said sheet being bent right angularly in opposite directions at points spaced from the center to form a central wall, said sheet being again bent right angularly at points spaced from the first named bending points to form side walls parallel with the central wall, the side wall portions being bent right angularly toward the first bending points to form wall portions co-acting with the portions between the first and second bends to form additional side walls, the sheet then having its ends bent inwardly upon opposite faces of the central wall to the medial point of the latter, then bent outwardly in opposite directions to form short walls at right angles to the central wall, and lastly, said sheet being bent at right angles to the short walls



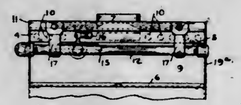
and upon the inner faces of the first named side walls and terminating at the third named bending point, the ends of said unit being of greater area than the intermediate portions.

1,572,658. WEIGHING DEVICE. WIGGERT LANGERAK, Pella, Iowa, assignor of one-half to Meyer Langerak, Pella, Iowa. Filed May 29, 1924. Serial No. 716,815. 17 Claims. (Cl. 249—19.)



1. A weighter rotor having a plurality of pockets therein, a flexible element forming the bottom of said pockets whereby the flexible element may when the rotor is in one position partially extend into the space previously occupied by another of the pockets and when in another position extend into the space of a different pocket.

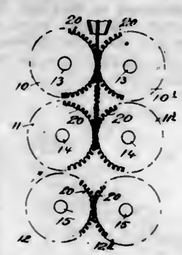
1,572,659. BUILDING CONSTRUCTION FOR TOYS. JOSEPH M. A. LARKIN, New York, N. Y. Filed Jan. 30, 1923. Serial No. 615,823. 6 Claims. (Cl. 46—35.)



1. A building construction for toys comprising a plurality of reinforcing elements, rectangular strips having depressed end portions, the depressed portions of adjacent strips engaging with each other, and one of said reinforcing elements, and secured to and held by said reinforcing element to form the frame work of said construction detachably hinged to said framework so formed.

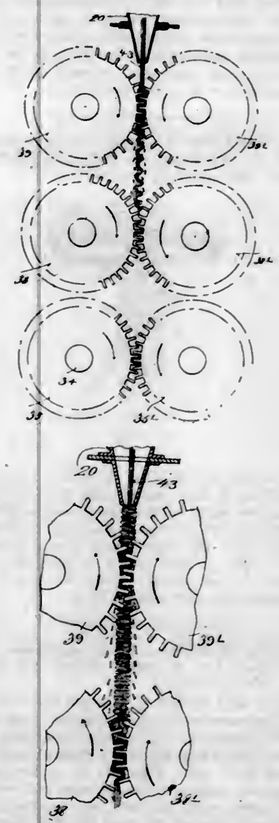
1,572,660. CONDENSER. MARTIN J. LIDE, Birmingham, Ala. Filed Sept. 20, 1920. Serial No. 411,624. 4 Claims. (Cl. 261—109.)

1. In a steam condenser of the counter-current type, a cylindrical condenser body having a concentric steam inlet entering its bottom, a top wier having a water supply for marginal jet slots, a perforated spray pan disposed to receive the discharge from said slots and to discharge a shower through the central portion of the condenser body, a wier adapted to receive said shower and having a bottom forming a dome designed to divert the entering steam outwardly with a reverse flow inwardly into said shower space.



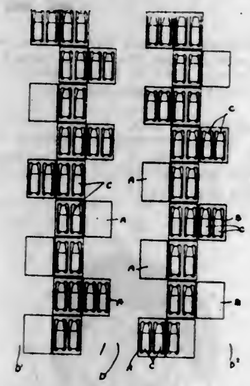
1,572,661. GAS STOVE. WALTER C. LINDEMANN, Milwaukee, Wis. Filed Feb. 17, 1925. Serial No. 9,749. 15 Claims. (Cl. 126—39.)

1. In a gas stove, a cooking top provided with cooking holes adapted to be closed, means for closing the same, a bottom member beneath said top and spaced therefrom, a stove frame comprising back and side members forming with said top and bottom a substantially unobstructed burner box and heat generating and distributing chamber extending from front to back of the stove, said box being open at its front, a burner located in the forward part of said space intermediate said top and bottom and in proximity to and below the top of the said open front, and having its top in free communication with said space and with the said top vertically and laterally, said open front admitting air directly to the top of and below said burner.



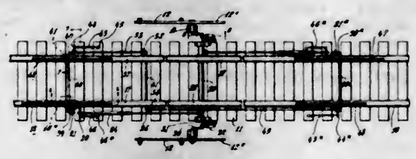
1,572,662. MEANS FOR CLEANING FIBROUS MATERIALS. GEORGE A. LOWRY, New York, N. Y., assignor to John J. Feuge and L. Richmond Browne, both of New York, N. Y. Filed Sept. 6, 1924. Serial No. 736,264. 12 Claims. (Cl. 19—30.)

1. In a machine for cleaning the woody part from the fibrous part of plant stalks, the combination of a plurality of members rotatably mounted in pairs, means for causing said members to move periodically in one direction alternated with intermittent movement of said members in the other direction, the relative movement of said pairs of rods being such as will cause the plant stalk to be folded transversely of its forward movement.



to be then subjected to end-on breaking or disruptive action of said successive rolls to strip the chives out of the fiber material.

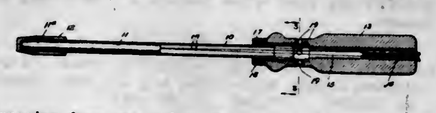
1,572,663. METHOD OF CLEANING AND PREPARING FIBROUS MATERIALS. GEORGE A. LOWRY, New York, N. Y., assignor to John J. Feuge and L. Richmond Browne, both of New York, N. Y. Filed Sept. 6, 1924. Serial No. 736,265. 11 Claims. (Cl. 19—32.)



1. The method of preparing for spinning and weaving the fiber from fibrous plants, which comprises bending the fiber stalks to break the woody material of said plants, then folding said bent or ruptured portions upon themselves and subjecting said folded parts to end thrusts and repeating the bending and the end thrusts to thereby free and remove the woody matter from the fiber.

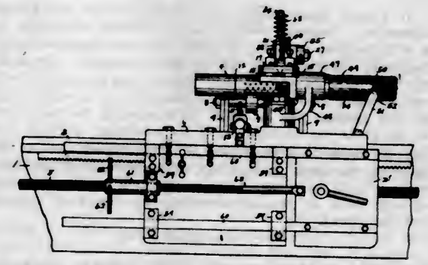
1,572,664. AUTO PARKING SYSTEM. JOSEPH L. LYNCH, Oak Park, Ill. Filed Jan. 11, 1924. Serial No. 685,506. 2 Claims. (Cl. 214—16.)

2. In a garage, a series of car elevating and parking units, wherein successive units in one line have each another unit laterally adjacent thereto, but on alternate sides of said line, each unit having sustaining platforms.



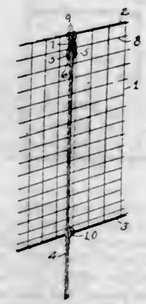
1,572,665. AUTOMATICALLY-OPERATED SAFETY GATES. WILLIAM THOMAS MCDUFFEE, Pensacola, Fla. Filed Jan. 6, 1925. Serial No. 783. 6 Claims. (Cl. 246—293.)

3. The combination with a railroad track of crossing protecting gates and means for automatically lowering and raising said gates, said means comprising a recessed rail section, a trigger pivotally mounted therein for engagement by the wheels of a train unit, a counterbalanced gate located on each side of the track, said trigger being distant from said gates, a device associated with the track for engagement by said trigger, means for operatively connecting said device to both of said gates whereby the movement of the trigger under pressure will actuate said device to transmit motion through said connecting means to lower the gates, means functioned by the movement of the train unit along the rails to lock the gates in lowered position and means, including a weight actuated trigger, for releasing said locking means and permit the gates to ascend.



1,572,666. SOLDERING IRON. JOHN E. MARSDEN, Philadelphia, Pa. Filed Feb. 11, 1925. Serial No. 8,361. 2 Claims. (Cl. 113—105.)

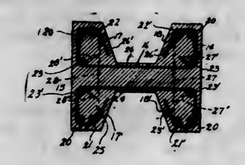
1. The herein described soldering iron comprising a shank, a point, a handle for the shank arranged to surround a portion thereof and to lie in spaced relation thereto, and a heat insulating member fitted between the shank and the handle to reduce the transfer of heat from the shank to the handle, said insulating member having direct contact with the handle and the shank in said space to support said shank and having grooves



running from one end to the other and communicating with the exterior to permit of circulation of air between the shank and the handle and to reduce the transference of heat therebetween.

1,572,667. WIRE-WINDING MACHINE. EMIL H. MEYER, Saratoga, Tex. Filed Dec. 22, 1923. Serial No. 682,139. 3 Claims. (Cl. 29—33.)

1. In a wire winding machine, a die roller having a peripheral groove, a punching roller spaced from the die roller, projecting punches radiating from the punching roller, and aligned with said groove, spindles on which said rollers are mounted, said spindles having internal annular oil chambers provided with inlet ducts, bearing sleeves on which the spindles are mounted, said sleeves having oil ports, bearing rods on which the sleeves are mounted, and a frame in which said rods are mounted.

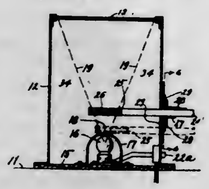


1,572,668. FENCEPOST. HERBERT A. MOREHOUSE, Hastings, Mich. Filed July 7, 1924. Serial No. 724,649. 5 Claims. (Cl. 256—33.)

2. A fence post comprising twisted strands having an untwisted connecting loop at the top thereof folded downwardly with the arms of the loop on opposite sides of the post providing a downwardly opening fence engaging clamp under which longitudinal strands of a fence may be engaged and acting to clamp the same upon the side of the post, one of the twisted strands of the post having a kink therein disposed downwardly at the side of the post providing a facing fence strand engaging member.

5. A fence post comprising twisted strands having untwisted portions at the top thereof folded downwardly on opposite sides of the post providing a downwardly opening clamp under which portions of a fence may be engaged.

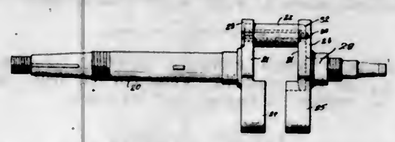
1,572,669. REENFORCED-CONCRETE POST. KARL MÜLLER, Detroit, Mich. Filed Aug. 13, 1924. Serial No. 731,705. 3 Claims. (Cl. 72—85.)



1. A post formed from concrete or the like and having oppositely disposed web-forming portions connected by a neck-forming portion; reenforcing rods projected longitudinally through said web-forming members, the number and location of said reenforcing rods in each of said web-forming members being duplicated at opposite sides of the medial line of said neck-forming portion; and wires projected through said neck-forming portion and bent at opposite ends around the reenforcing rods in the opposite web-forming members, said wires being projected through said neck on the same side of the medial line of said neck as the reenforcing rods embraced thereby are positioned.

1,572,670. INCANDESCENT LAMP. RALPH EMERSON MYERS, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed June 25, 1921. Serial No. 480,469. 6 Claims. (Cl. 176—16.)

1. An electric device having an envelope filled with hydrogen and resistant to the chemical action thereof, whereby blackening of the envelope during operation of the device is avoided.

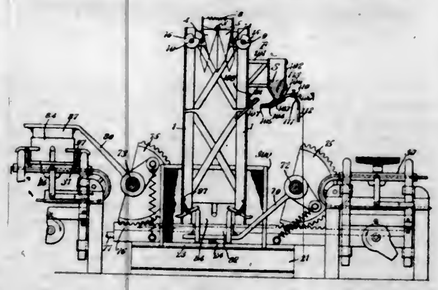


1,572,671. MAP HOLDER AND MAGNIFIER. ROY A. MYERS, St. Paul, Minn. Filed Sept. 19, 1924. Serial No. 738,646. 3 Claims. (Cl. 88—24.)

1. A rond map holder comprising an inclosure having a translucent sight glass in its top and a lamp in its bottom, and a translucent map smaller than the sight glass interposed between the sight glass and the lamp, and means for readily adjusting the map film in any direction in its own plane, and means for adjusting the film toward and away from the sight glass, and means for holding the adjusting means yieldingly yet firmly against accidental movement.

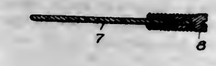
1,572,672. ENGINE CRANK SHAFT. JOHN NEWMANN, Brooklyn, N. Y. Filed June 30, 1921. Serial No. 481,499. 8 Claims. (Cl. 74—38.)

1. A crank shaft for engines comprising a shaft, a crank-throw made on the shaft, a crank-pin made a part of the crank-throw and provided with a longitudinal bore made therethrough, a removable counterweight disposed on the shaft and lying adjacent the crank-pin, and a screw disposed through the bore to secure the counterweight.



1,572,673. INTERRUPTER. PAUL A. NEWMAN, Germantown, Pa., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1923. Serial No. 683,300. 14 Claims. (Cl. 200—144.)

4. In an interrupter, the combination of conducting segments, resistance units connecting them together and a body of insulating material holding said segments and resistance units together.

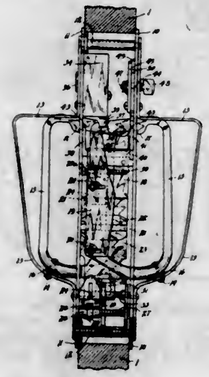


1,572,674. SANDING APPARATUS FOR MOLDING MACHINES. CHARLES L. NORTON, Boston, Mass. Original application filed Dec. 14, 1922, Serial No. 606,869. Divided and this application filed Oct. 13, 1924. Serial No. 743,192. 7 Claims. (Cl. 25—116.)

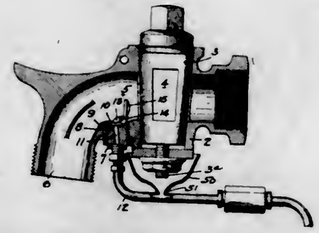
1. A machine of the type having means for freely dropping a charge of material from a height into a mold box to fill the latter comprising means for supporting the mold box below the charge-dropping means, and means for delivering material into the empty mold box for coating the interior of the latter while so supported.

1,572,675. SPRING FOR WIND INSTRUMENTS. CHARLES H. NORTON, Brooklyn, N. Y. Filed Nov. 1, 1924. Serial No. 747,200. 3 Claims. (Cl. 84—380.)

3. In a spring structure for a wind instrument which includes a post and a shaft provided with an operating arm, rotatably borne by said post, said post being provided with an internally screw-threaded perforation, being a resilient rod externally screw-threaded at its base and removably seated in such perforation in the post and at its remote end adapted to engage the operating arm of the shaft first named.



1,572,676. ELECTRIC BLASTING CAP. ALBERT LESLIE OLIVER, Oakland, Calif., assignor to California Cap Company, Oakland, Calif., a Corporation of California. Filed May 2, 1925. Serial No. 27,443. 1 Claim. (Cl. 102—9.)

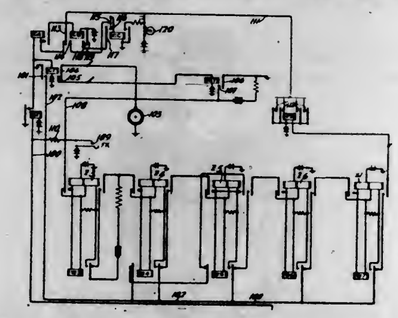


A device for the described purpose comprising a fuse; a detonating member associated with one end thereof; a closed shell fitted to the other end of said fuse, said shell having a vent in its wall; an inflammable substance within said shell for igniting said fuse; electrical means for igniting said inflammable substance; filtering material within said shell between said inflammable substance and said vent; and a burstable sealing member for normally closing said vent comprising a sheet of flexible material applied to the exterior of said shell, said sheet having its exposed edges permanently joined to said shell, its central region being free to expand away from said shell before bursting.

1,572,677. DOOR LOCK. CARL PETERS, Sherburn, Minn. Filed July 26, 1923. Serial No. 653,908. 14 Claims. (Cl. 70—29.)

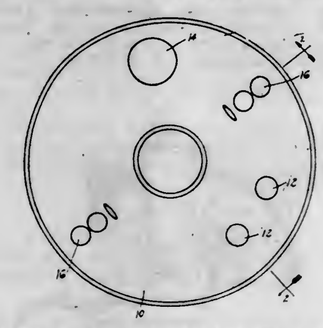
1. A door lock comprising spaced plates adapted to be disposed at each side of the door, oscillating handles carried by said plates and movable in planes perpendicular to the sides of said door, a reciprocating means disposed and bodily movable vertically between said plates, means connecting said reciprocating means to said handles, a latch movable laterally between said plates, means connecting said latch to said reciprocating means, means carried by one of said plates movable to engage both of said handles to prevent movement thereof and of said latch, and a handle at the outer side of said plate for operating said means carried by said plate.

1,572,678. DEVICE FOR PREVENTING LOSS OF LIQUID BY LEAKAGE FROM A VALVE. MARINO E. PORDON, Alameda, Calif. Filed Jan. 5, 1921. Serial No. 435,133. 5 Claims. (Cl. 277—52.)



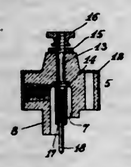
1. In a valve structure for controlling the flow of a liquid, means providing an inlet, means providing an outlet, a valve for connecting and disconnecting the inlet and the outlet, a drain device having an opening communicating with the outlet, and means operated by the pressure of the liquid flowing through the outlet for controlling the drain opening.

1,572,679. TELEPHONE-EXCHANGE SYSTEM. ALBERT C. POWELL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 23, 1923. Serial No. 676,478. 12 Claims. (Cl. 179—27.)



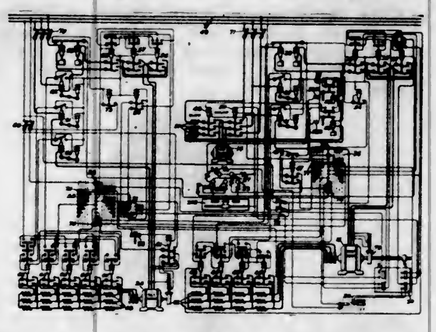
1. A telephone system comprising a calling line, an impulse sender, an impulse relay, a circuit including the calling line and the impulse relay controlled by the impulse sender, a plurality of selector switches operable in sequence, a slow relay, an impulse circuit including one of the selector switches and the slow relay controlled by the impulse relay for setting the selector switch and operating the slow relay, means controlled by the joint action of the slow relay and of each selector switch in sequence excepting the last, for substituting the next succeeding selector switch in the sequence for the prior

selector switch at the end of the corresponding impulse train until all the required selector switches in the train have been properly set, means for indicating the progress



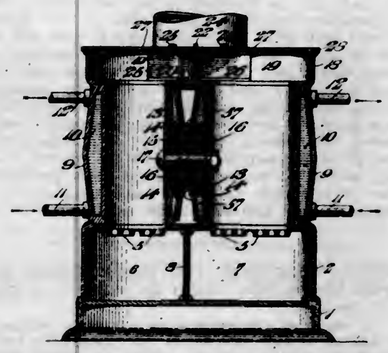
of a call, manually controlled means for releasing the selector switches, a called line, manually controlled means for linking the calling and called lines together, and signaling means for summoning the called line.

1,572,680. BRAKE-BACKING PLATE. JACOB L. PRICE, Chicago, Ill., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 17, 1925. Serial No. 50,697. 3 Claims. (Cl. 188—2.)



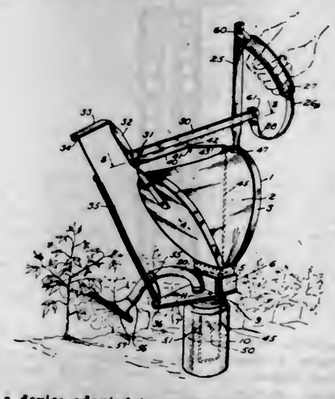
1. A backing plate for a brake arranged to be engaged at spaced points by anchoring means and brake-applying means, and having openings at a point between the anchoring means and brake-applying means which are plugged with material having different physical characteristics, to prevent drumming.

1,572,681. OILING DEVICE. WALTER A. RARIG, Oakland, Calif. Filed Sept. 20, 1923. Serial No. 663,792. 3 Claims. (Cl. 123—196.)



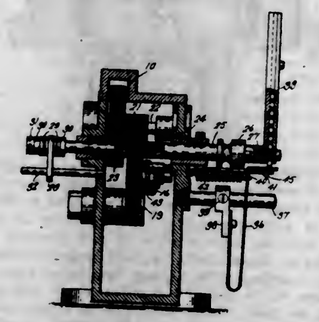
1. An oil conducting terminal electric plug comprising a plug body entirely of insulating material in one piece having a bottom surface adapted to seat directly on an engine housing and having an annular extension below the bottom of the plug adapted to project into an aperture in a transmission casing, and a top surface through which bolts are adapted to pass to clamp the plug to a housing, a central bore extending upward a considerable distance from the base of the plug and a lateral passage for exit of oil at the upper part of the bore, a metal pin having a shoulder bearing against the top of the bore with a stem extending upward through the body of the plug having a clamp nut and a thumb nut at the upper end, a central longitudinal bore in the pin, a metal uninsulated contact pin inserted in the said bore of the pin and a compression spring in the said bore bearing on the head of the said contact pin.

1,572,682. MOTOR-CONTROL SYSTEM. WILLIAM C. RAUBE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 5, 1925. Serial No. 48,379. 7 Claims. (Cl. 214—47.)



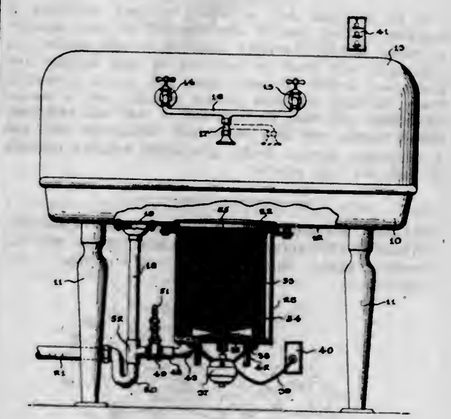
1. In a system of control for effecting the unloading of a carrier, a motor for clamping the carrier in position to be hoisted, a motor for hoisting the carrier to permit the material to spill from the carrier, a common controller for said motors, and means comprising switch mechanism and connections cooperating with said controller whereby operating said controller effects the energization of the clamp motor until the clamping operation is completed and then the automatic energization of the hoist motor.

1,572,683. COMBINATION HOT-WATER STOVE. SAMUEL V. REEVES, Haddonfield, N. J. Filed Apr. 26, 1922. Serial No. 556,722. 3 Claims. (Cl. 126—5.)



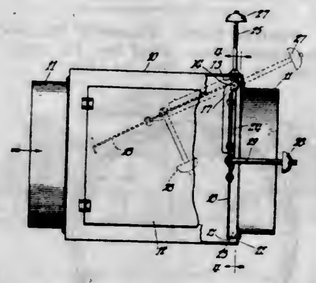
1. A combination hot water stove having a single base unit, a single, independent base top unit mounted thereon, a pair of independent grates, a pair of individual, cored fire pot units mounted upon said base top, there being a separate grate for each unit, a water chamber surrounding each fire pot, a bolt and nut for securing said fire pot units together as a single unit, a top member constituting an independent unit having a chamber communicating with said fire pots all of said units being separably fitted together in superimposed relation, a single discharge flue, and independent dampers for controlling the exit of products of combustion from said fire pots to said discharge flue.

1,572,684. POWDER SPRAYER. JOHN A. RHODES, Atlanta, Ga., assignor of one-half to Joseph S. Reynolds, Atlanta, Ga. Filed June 23, 1924. Serial No. 721,801. 6 Claims. (Cl. 43—147.)



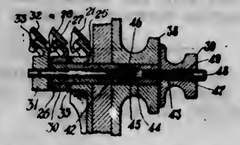
5. In a device adapted to spray powder on plants and the like, the combination of a container for said powder; a bellows like pump associated with said container; a vertically disposed bar projecting upwardly from one side of said bellows; a hand grip pivotally attached to the upper end of said bar, and serving to support the entire device; an inclined upwardly extending bar projecting from the opposite side of said bellows; a link pivotally connected to last named bar and said hand grip; an agitator extending into said container and pivotally connected to said last named bar, whereby when said hand grip is suddenly rocked the entire device is also rocked and said bellows and agitator are actuated.

1,572,685. TAPPING MACHINE. FRANK M. SANDERSON, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 30, 1921. Serial No. 518,939. 7 Claims. (Cl. 10—139.)



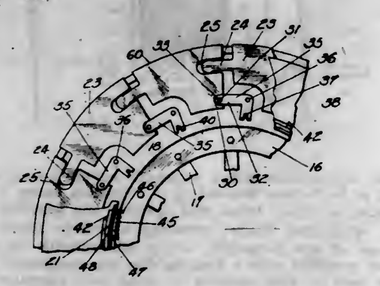
2. In a tapping machine, a thread cutting tool, a shaft having axial and rotary movement supporting said tool, a helical driving gear for the shaft, means for imparting oscillatory movement to said driving gear, a helical pinion on the shaft with which the gear meshes, said pinion being of greater length than the thickness of the gear, and means connected with the shaft for imparting thereto an adjustable braking load.

1,572,686. COMBINED SINK AND DISH WASHER. JOSEPH L. SCHERTZ, St. Louis, Mo. Filed Nov. 28, 1923. Serial No. 677,480. 1 Claim. (Cl. 141—9.)



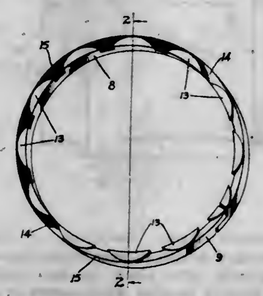
In combination with a receptacle having a large opening in its bottom bounded by a depending flange, a dish washer container below said opening, and provided with an upstanding flange extending exteriorly about said flange of said receptacle, and a substantially flat cover plate provided with a packing ring for engagement with the wall of said opening to close said container and seal same against ingress of water.

1,572,687. AUTOMATIC REGULATING DEVICE FOR HEATING SYSTEMS. HENRY SCHMELZ, Willard, N. Y. Filed Sept. 5, 1922. Serial No. 586,245. 7 Claims. (Cl. 236—45.)



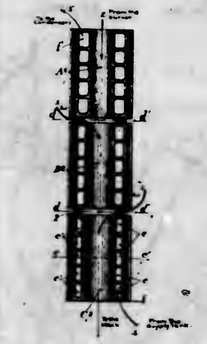
1. An automatic damper comprising in combination a housing having a hinged damper valve therein, means for balancing said valve about its axis, said damper valve being arranged to close when moved in the direction of travel of the flue gases, and a counter pressure means for balancing the damper valve responsively to the pressure of the flue gases thereon.

1,572,688. THREE-CIRCUIT COUPLER. WALTER B. SCHOEPFLER, New York, N. Y. Filed July 17, 1924. Serial No. 726,467. 4 Claims. (Cl. 171—242.)



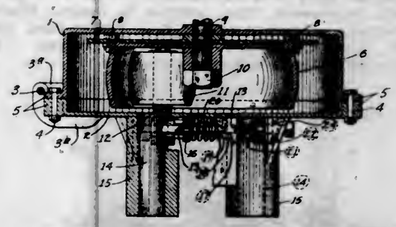
1. In a radio set, a frame element including a bracket, a fixed coupler coil mounted on said bracket, a hollow spindle rotatably mounted in said bracket, an adjustable coil fixed on one end of said spindle and positioned within the said fixed coil, a rod extending freely through the said hollow spindle, and a second adjustable coil fixed on one end of said rod and positioned within the first mentioned adjustable coil, and a relensable friction device preventing relative rotation of said rod and spindle.

1,572,689. NONSKIDDING DEVICE FOR VEHICLES. HENRY J. SCHULTE, Anaheim, Calif. Filed Feb. 20, 1923. Serial No. 620,157. 14 Claims. (Cl. 301—39.)



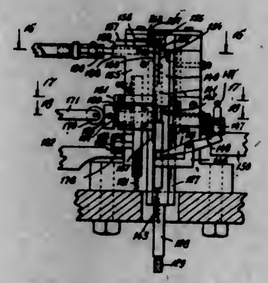
9. In combination with a vehicle wheel; an inner plate mounted to said wheel; an outer plate secured to said inner plate and spaced away from said inner plate so as to provide a space therebetween; engaging members disposed in said space, said engaging members arranged to provide a substantially continuous engaging surface; and means for projecting said engaging members in a manner to engage the surface of the road.

1,572,690. PISTON RING. FREDERICK WILLIAM SEELERT, Minneapolis, Minn. Filed Dec. 15, 1922. Serial No. 607,069. 4 Claims. (Cl. 74—109.)



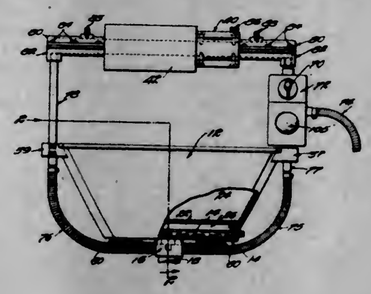
1. A piston ring having its lower face provided with a plurality of spaced bearing portions and an outer scraping edge whereby the cylinder wall may be scraped, the lower face between the spaced bearing portions being inwardly and upwardly beveled to discharge the scraped oil, and the side portion of the bearing portions being undercut to facilitate the discharge of scraped oil without reduction of bearing aren.

1,572,691. APPARATUS FOR TRANSFORMING AND DISTILLING HYDROCARBONS AND THE LIKE. ADOLPHE ANTOINE FRANÇOIS MARIUS SEIGLE, Paris, France. Filed July 16, 1920. Serial No. 396,767. 1 Claim. (Cl. 196—128.)



Apparatus for treating hydrocarbons and the like comprising a retort having a hollow cylindrical wall, a second hollow cylindrical wall spaced therefrom and concentric therewith, spaced annular transverse partitions between said two walls dividing the space between said walls into a series of annular chambers, a longitudinal partition between said two walls extending throughout the length of said walls, said transverse partitions having apertures situated alternately on opposite sides of said longitudinal partition whereby material to be treated may flow successively through each of said annular chambers in series and in alternately opposite directions, and means for heating the inner wall of said two walls.

1,572,692. GRINDER AND PULVERIZER. HARRY J. SHELTON, St. Louis, Mo. Filed July 17, 1922. Serial No. 575,561. 4 Claims. (Cl. 83—9.)



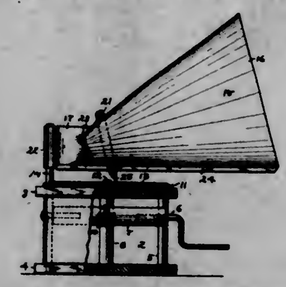
1. In a grinder and pulverizer having a housing comprising a main casting with a grinding ring rotatably mounted therein and a side casting hinged to said main casting, a pair of grinding rolls rotatably mounted to contact with the inner surface of said grinding ring at substantially diametrically opposite points thereof, each of said grinding rolls having associated therewith a shaft upon which said roll is mounted, an arm pivotally mounted on said side casting and carrying said shaft, resilient means mounted on and carried by said side casting for engaging said arm to cause its associated grinding roll to be held normally in grinding relation with said grinding ring.

1,572,693. MACHINE FOR MAKING LINK MESH. HARRY W. SMITH, Conimicut, R. I., assignor to Whiting & Davis Company, a Corporation of Massachusetts. Filed Feb. 14, 1924. Serial No. 692,719. 30 Claims. (Cl. 140—3.)

1. In a machine for making link mesh, the combination of a support for a piece of mesh, link forming devices, power driven mechanism for giving the devices and the mesh a step by step relative movement and for operating the devices in each period of rest of the movemeut to form links, a supply of solder, and means for punching discs therefrom and inserting a disc between the ends of each link as it is formed.

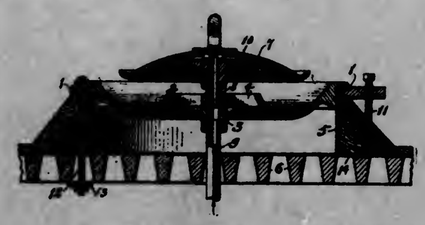
1,572,694. SHOE-FILLER APPARATUS. ERROL M. THOMPSON, Brockton, Mass., assignor to Thompson-Field Company, Inc., Brockton, Mass., a Corporation of Massachusetts. Continuation of application Serial No. 619,330, filed Feb. 16, 1923. This application filed June 17, 1924. Serial No. 720,571. 11 Claims. (Cl. 18—1.)

8. A shoe filler apparatus having, in combination, a receptacle for holding filler material, the bottom of said receptacle being provided with minute perforations for admitting steam vapor to the filler material therein and means for furnishing steam vapor to said receptacle through said perforations; said perforations being spaced apart a distance sufficient to prevent the running of the filler binder.



1,572,695. ELECTRIC SWITCH. OTTO H. VAN AMBURG and LESLIE A. KEMPTON, Bridgeport, Conn., assignors to General Electric Company, a Corporation of New York. Filed Dec. 8, 1921. Serial No. 520,960. 4 Claims. (Cl. 200—6.)

1. In an electric switch, the combination of stationary contacts, a pole piece movable into and out of engagement therewith, a spring for moving said pole piece with a snap action, an oscillating actuating lever connected to said spring and normally held thereby in

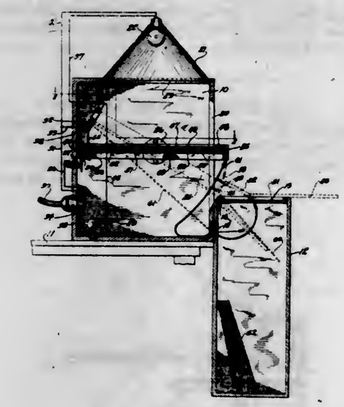


opposite positions, a spring-pressed plunger adapted to be actuated by said lever, and auxiliary contacts controlled by said plunger.

1,572,696. SOUND-REPRODUCING MACHINE. JOHN VANDERKAMP, Cleveland, Ohio, assignor, by direct and mesne assignments, to The Van Toy Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 10, 1921. Serial No. 499,744. 3 Claims. (Cl. 274—16.)

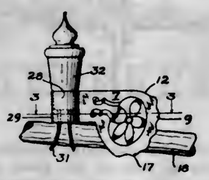
1. A sound-reproducing machine, comprising a base in combination with a sound-reproducing and amplifying horn, mounted upon said base, a needle-supporting arm extending through said horn having a bulged portion in vibrating engagement with a portion of the wall thereof.

1,572,697. OIL BURNER. WILLIAM H. VON HAGEL, Baltimore, Md. Filed Aug. 20, 1925. Serial No. 51,292. 3 Claims. (Cl. 158—80.)



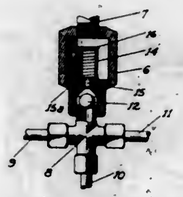
3. An oil burner for domestic furnaces, comprising a cylinder adapted to seat on the grate, a flanged pan adapted to be supported on the top edge of said cylinder, an oil spreader centrally supported in said pan, the latter having air passages leading from the grate to the underside of said spreader, bolts passed through the flange of said pan to clamp it and said cylinder to the grate, and leveling screws for said pan abutting said grate.

1,572,698. MANUFACTURE AND PRODUCTION OF ALKYL ESTERS. RUDOLF WIETZEL, Ludwigshafen-on-the-Rhine, Germany, assignor to Badische Anilin- & Soda-Fabrik, Ludwigshafen-on-the-Rhine, Germany, a Corporation of Germany. Filed May 20, 1925. Serial No. 31,702. 3 Claims. (Cl. 260—106.)



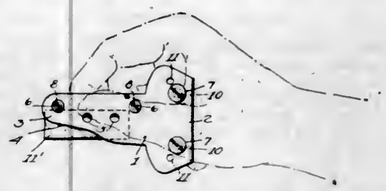
1. The process of manufacturing alkyl formates which consists in causing carbon monoxid to react on liquid alcohols in the presence of a metal alcoholate and at an elevated pressure, at temperatures ranging between about 30 and 150 degrees centigrade.

1,572,699. PHOTOGRAPHIC-PRINTING DEVICE. ALBERT WIRTHWEIN, Milwaukee, Wis. Filed Jan. 26, 1925. Serial No. 4,951. 18 Claims. (Cl. 95—73.)



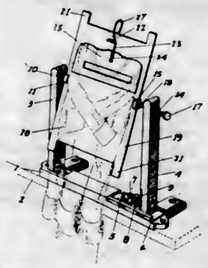
1. In a device of the character described, the combination with a printing frame supported for oscillation about a substantially horizontal axis, of an incandescent bulb arranged to illuminate a face of said frame in one position of oscillation thereof, and a switch controlling the illumination of said bulb and including a moving contact element disposed in the path of oscillation of said frame and adapted to be adjusted by the frame to switch closing position, said element including a stop member adapted to abut said frame to define said position thereof.

1,572,700. TREE-LIGHT HOLDER. WILLIAM M. YOUNG, Oakland, Calif. Filed Aug. 18, 1924. Serial No. 732,612. 2 Claims. (Cl. 248—48.)



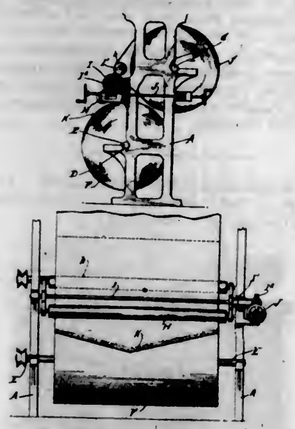
1. A tree-light holder comprising a pair of pivotally-connected spring-pressed jaw members, a receptacle for a source of light on one of said members, and sets of teeth provided on each of said members and extending transversely therefrom in cooperating relation.

1,572,701. GAS SAVER FOR INTERNAL-COMBUSTION ENGINES. HENRY ALLEC, Stockton, Calif., assignor of one-third to James A. Fenno and one-third to John Pisenti, both of Stockton, Calif. Filed Nov. 29, 1924. Serial No. 752,894. 4 Claims. (Cl. 277—70).



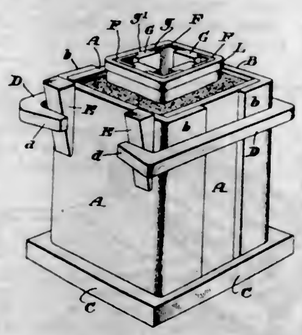
2. A suction actuated check valve structure comprising a hollow body having an opening at one end adapted for connection to the intake manifold of a gas engine and having a passage leading from its opposite end, a closely wound compression spring fixed at one end in the body and surrounding the passage into the same, and a solid cap on the opposite end of the spring, said spring being opened by reason of a sectional pressure through the opening, and set up in the body.

1,572,702. RAZOR-BLADE CUTTING AND SCRAPING TOOL. ANNIE M. BROWN, St. Louis, Mo. Filed June 17, 1924. Serial No. 720,569. 4 Claims. (Cl. 30—9.)



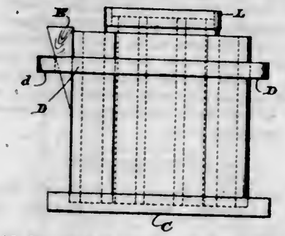
1. A device of the character described, comprising a longitudinally extending portion and a transverse portion at one end thereof, and means for clamping a blade thereon on either side of said longitudinal portion or on said transverse portion, the unoccupied portion under any condition serving as a handle.

1,572,703. DRESS AND SUIT FOLDER. BERNARD CAHN, Sacramento, Calif. Filed Sept. 17, 1923. Serial No. 663,214. 2 Claims. (Cl. 223—59.)



1. The combination with a support including spaced posts, of a fixed turnable clip on one post, and a turnable clip on the other post longitudinally movable in alinement with the first clip, said turnable clip being formed as a channel one side of which projects outwardly of the other side to support and guide objects into the channel.

1,572,704. PAPER FEED. CHARLES E. CARPENTER, New York, N. Y. Filed May 28, 1923. Serial No. 641,873. 4 Claims. (Cl. 242—58.)

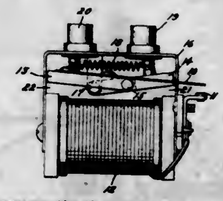


2. In web feeding mechanism the combination with web advancing means, of two sets of supply roll bearings, each set being adapted to hold a roll of web material while the web of that roll is delivered to said advancing means, and means for moving the travelling web being fed from a nearly exhausted roll mounted in either set of bearings into yielding contact with the periphery of a fresh roll mounted in the other set of bearings to thereby set the fresh roll into rotation and effect a paste bond between the travelling web and the web of the fresh roll.

1,572,705. METHOD OF MOLDING SHRINK-HEAD CASINGS. FRED H. CHAPIN, Cleveland, Ohio, assignor to The Bourne-Fuller Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 16, 1925. Serial No. 56,753. 3 Claims. (Cl. 25—155.)

1. The method herein described of making shrink head casings for ingot molds which consists in giving tubular shape to liquid or semi-plastic material while held against either expansion or contraction between rigid non-resilient inner and outer mold walls, allowing the material to partially set, harden or solidify, while so held, then releasing the material from the inner mold walls to allow the material to completely set, harden or solidify while surrounded by the rigid non-resilient outer walls of the mold, and to allow the article as a whole to contract inwardly and then separating the completed article from the outer mold walls.

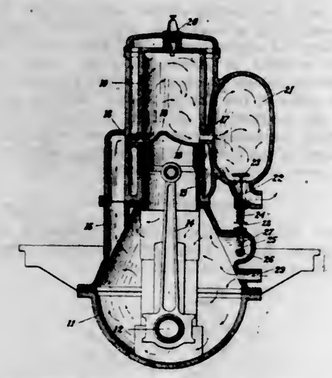
1,572,706. MOLD FOR MAKING SHRINK-HEAD CASINGS. FRED H. CHAPIN, Cleveland, Ohio, assignor to The Bourne-Fuller Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 16, 1925. Serial No. 56,754. 5 Claims. (Cl. 25—121.)



1. A mold for making shrink head casings for ingot molds comprising non-resilient outer walls composed of two sections of approximately the same size and shape and two sections of substantially the same size and shape having flanges at opposite edges which overlap the adjacent edges of the first mentioned sections, means for locking the sections in molding position, non-resilient inner walls composed of separable sections, and means independent of the first mentioned locking means for holding the inner walls in locked position.

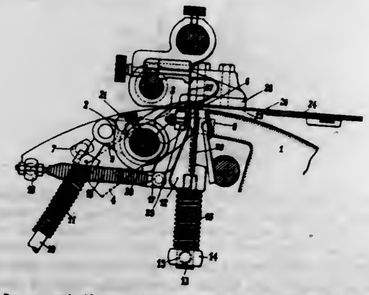
1,572,707. DENTAL FLOSS REEL. FRANK G. DRESSER, Providence, R. I. Filed July 25, 1923. Serial No. 653,690. 1 Claim. (Cl. 242—123.)

A dental floss dispensing reel comprising two circular disks, a tubular hub interposed between said disks and holding them spaced apart, and lugs projecting from the opposite ends of said hub and extending through holes in the disks and securing them to the hub, one of said disks having a small central aperture therein adapted to receive a pivot pin to support the reel for rotation, and the other disk having a central aperture therein nearly as large as the internal diameter of the hub and affording free access to the inner face of the first disk.



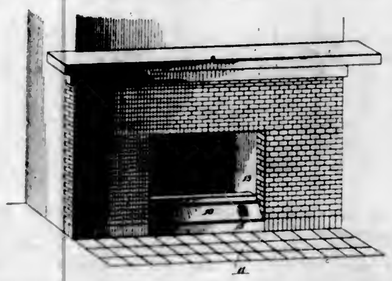
1,572,708. ELECTROMAGNETICALLY-CONTROLLED DEVICE. JOHN EATON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 29, 1921. Serial No. 504,051. 15 Claims. (Cl. 200—94.)

1. An electromagnetically controlled device comprising a movable controlled member, a controlling electromagnet therefor having a magnetic structure, a magnetic movable member connected to the said controlled member and disposed with respect to the said magnetic structure to provide an air gap which is normally open, a second magnetic movable member cooperating with the said first magnetic movable member and disposed with respect to the said magnetic structure to provide a second air gap



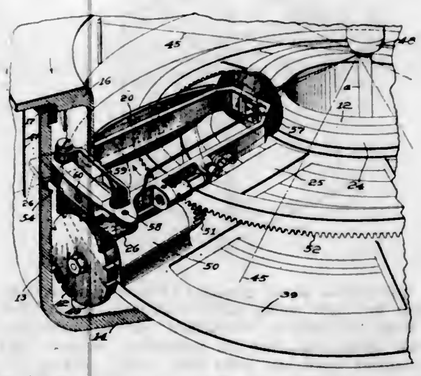
which is open when the controlled member is in a second position, and a resilient connection between the said magnetic movable members, whereby the controlled member is moved to the second position by the operation of the first of said magnetic members to close the first said air gap and magnetically held in the second position when the energization of the said electromagnet is above a predetermined minimum value, and the controlled member is operated away from the said second position by the operation of said second magnetic member due to the magnetic pull across the said second air gap when the energization of the said electromagnet is above a predetermined maximum value.

1,572,709. ENGINE. EMERY H. FAHRNEY, Chicago, Ill. Filed Dec. 10, 1923. Serial No. 679,590. 5 Claims. (Cl. 123—65.)



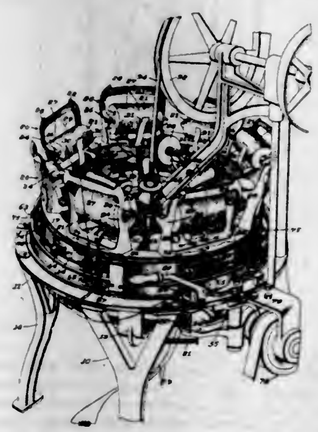
5. An explosion engine embodying a cylinder having a fuel supply inlet and an exhaust outlet, a piston reciprocable in the cylinder, a muffler chamber, the said exhaust outlet discharging into the muffler chamber, said muffler chamber itself having a discharge outlet, a valve for controlling the outlet of the muffler chamber, and means operating in timed relation with the pistons for actuating the valve, the said fuel inlet and the exhaust outlet of the engine cylinder being controlled by the piston and being out of alinement whereby the said exhaust outlet will be opened in advance of the said fuel inlet.

1,572,710. GRIPPER MECHANISM OF PRINTING PRESSES. OSKAR FINKHAUS, Wurzburg, Germany, assignor to Bohn & Herber, Maschinenfabrik und Eisengiesserei, Wurzburg, Germany, a Kommanditgesellschaft of German Law. Filed Aug. 2, 1924. Serial No. 729,813. 9 Claims. (Cl. 101—410.)



1. In a printing press comprising a frame, a rotary printing cylinder supported in said frame, a gripper spindle rotatably supported within and rotating with said printing cylinder, grippers mounted on said gripper spindle, a printing sheet support mounted within and rotating with said printing cylinders, a fixed stop outside of and adjacent to said printing cylinder, means on said spindle for engaging said fixed stop and actuating said gripper spindle, and means cooperating with said printing sheet support for momentarily stopping said support in a determinate position and relation with respect to an adjacent point on the frame when the grippers close down on said sheet support and releasing said support immediately after said stopping.

1,572,711. WOOD-BURNING FIREPLACE. JAMES R. FISK, El Paso, Tex. Filed Apr. 11, 1925. Serial No. 22,355. 4 Claims. (Cl. 126—120.)



1. In combination with an open fire-place having a closed bottom and closed back and side walls leading to the flue, of a removable solid front wall forming a closed lower portion resting on the bottom of the fire-place and fitting closely between the side walls at the forward end of the fire-place, said solid front wall cooperating with the closed bottom, side and back walls of the fire-place to form a pit without bottom or side drafts and on the bottom of which the wood to be burned is placed.

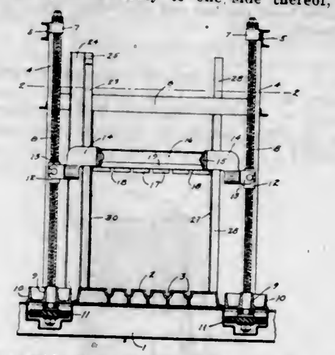
1,572,712. BRAIDING MACHINE. OTTO A. FREDERICKSON, Wethersfield, Conn., assignor to The American Wiremold Company, Hartford, Conn., a Corporation of Connecticut. Filed May 15, 1925. Serial No. 30,468. 22 Claims. (Cl. 96—5.)

1. In a braiding machine, the combination of a revolving drum having an annular bearing surface facing the axis of the machine, inner yarn carriers, a driver for the inner carriers, means for rotating the driver about the axis of the machine, driving disks carried by said driver, blocks secured to the carriers and having bearing surfaces that rest upon the driving disks to cause these disks to support and drive the inner carriers, and thrust means extending from the inner carriers into engagement with said bearing surface.

1,572,713. BRAIDING MACHINE. OTTO A. FREDERICKSON, Wethersfield, Conn., assignor to The American Wiremold Company, Hartford, Conn., a Corporation of Connecticut. Filed June 9, 1925. Serial No. 35,917. 13 Claims. (Cl. 96—7.)

1. In a braiding machine, in combination, outer and inner yarn carriers, means for revolving the carriers in opposite directions, tilting noses pivotally mounted on the inner carriers in position to engage the strands of yarn passing inwardly from the outer yarn carriers, and abutments supported independently of the inner carriers and in the path of travel of the tilting noses to engage and tilt the noses and cause them to direct the outer strands of yarn alternately under and over the inner carriers.

1,572,714. PLASTIC AND PROCESS OF PRODUCING SAME. OSCAR FROSELL, Hackensack, N. J., assignor, by mesne assignments, to Williamsport Building Products Co., Williamsport, Pa., a Corporation of Pennsylvania. Filed Mar. 25, 1921. Serial No. 455,492. 7 Claims. (Cl. 18—55.)



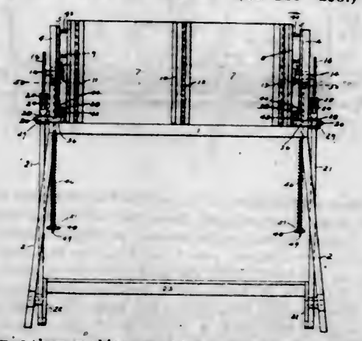
1. The process of producing hard plastic articles which comprises setting calcined magnesia by hydrating with water under simultaneous heat and compacting pressure.

1,572,715. SOLID STABLE DIAZO COMPOUNDS. FRITZ GÜNTHER and FRITZ LANGE, Ludwigshafen-on-the Rhine, Germany, assignors to Badische Anilin- & Soda-Fabrik, Ludwigshafen-on-the-Rhine, Germany, a Corporation of Germany. Filed July 22, 1924. Serial No. 727,522. 4 Claims. (Cl. 260—11.)

1. Solid stable diazo compounds containing double chlorids only of zinc and of a diazonium compound and derived from an aromatic amine carbocyclic which is free from azo groups, which diazo compounds are soluble in water and directly react with the usual components of azo dyestuffs, for example beta-naphthol.

1,572,716. POWER BALING MACHINE. JOHN HANSEN, Bettendorf, Iowa, assignor to Davenport Manufacturing Co. Inc., Davenport, Iowa. Filed June 15, 1925. Serial No. 37,209. 5 Claims. (Cl. 100—8.)

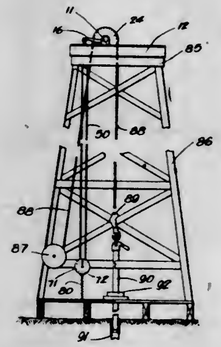
1. A device of the class described, comprising a frame and receptacle therein, vertical screws rotatably mounted in the ends of said frame, travellers on said screws, a platen frame supported by said travellers, so as to be capable of movement vertically of said receptacle, a platen section hingedly connected with said platen frame, so as to swing downwardly to one side thereof, means



for holding said platen section in a horizontal position in its movement in the receptacle and to a point above the same, said means being releasable at said point to permit said section to drop downwardly by the force of gravity.

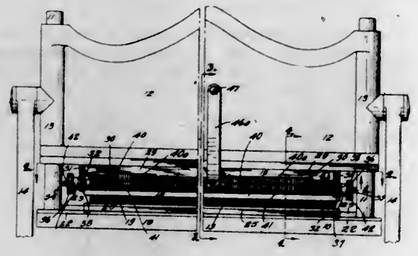
1,572,717. END CONNECTER FOR BRACELETS. GEORGE D. HARRISON, North Attleboro, Mass., assignor to Providence Stock Company, Providence, R. I. Filed Dec. 13, 1924. Serial No. 755,669. 8 Claims. (Cl. 24—77.)

4. In combination with a bracelet having a finishing member on an end of the bracelet, a male member on the bracelet, an eyelet on the bracelet end to receive the male member, spring means for engagement with the male member, and means whereby to rigidly secure the spring means between the bracelet and the finishing member and in direct contact with each.



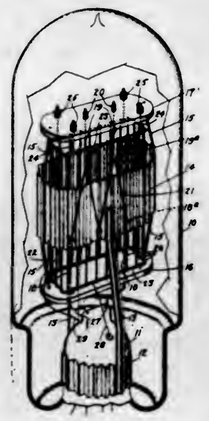
1,572,718. BOX-MAKING MACHINE. WALTER V. HART, Jacksonville, Fla.; Elsie Hart Heddon administratrix of said Walter V. Hart, deceased. Filed Apr. 28, 1924. Serial No. 709,492. 3 Claims. (Cl. 144—295.)

1. In a box making machine, of the class described; a stand; a box assembling fixture resting on said stand; discs rigidly attached to pivots mounted on the ends of said assembling fixture; a plurality of right hand and a plurality of left hand notches cut on each of said discs;



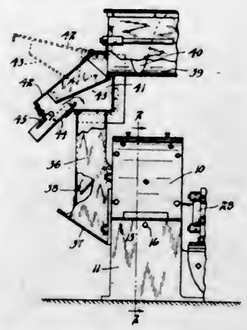
vertical guides, in which said pivots slide, attached to the stand; a treadle mounted on the stand; levers attached to said treadle engaging in the notches cut in the said discs; and automatic means for changing the engagement of these levers from the right hand notches to the left hand notches and vice versa, when the treadle is depressed.

1,572,719. CROWN-BLOCK STRING WEIGHER. WALTER H. HAZLETT, Long Beach, Calif., assignor of one-half to Vale M. Stedman, Whittier, Calif. Filed July 23, 1925. Serial No. 727,675. 11 Claims. (Cl. 265—52.)



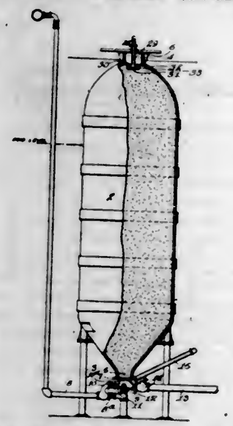
1. In combination, in a crown-block weigher; a lever fulcrumed on a crown-block; means for resiliently resisting the movement of said lever; a sheave carried by said lever; a plunger operated by said lever when a weight is carried by said sheave; and means actuated by said plunger for indicating said weight.

1,572,720. PERFORATING-MACHINE ATTACHMENT. CHARLES D. HIGHLAND, Des Moines, Iowa. Filed Oct. 27, 1924. Serial No. 746,059. 4 Claims. (Cl. 164—111).



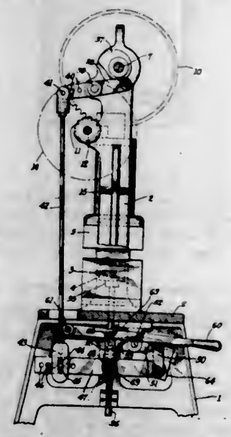
1. The combination of a perforating machine having a bed, a pin guide spaced above the bed, a pin actuating head adapted for reciprocation provided with a pin carrier bar or stripper, pins in said carrier bar, and guide, a bar on the head above the pins and spaced above them when they are in their lower position with an attachment comprising a rod, means for supporting said rod on the reciprocating head, a plurality of pin fingers rotatably mounted on said rod and provided with extensions adapted in one position of rotation of the pin fingers to rest beneath said last described bar and above the pins and in another position to leave the space between the said last-named bar and the pins open.

1,572,721. VACUUM TUBE. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 11, 1920. Serial No. 429,923. 11 Claims. (Cl. 250—27.)



5. In a vacuum tube, cathode, grid and anode electrodes, said grid electrode being interposed between the other electrodes and comprising end frames of metal having a low fusing temperature and lateral wires joining said frames said wires being composed of a metal having a relatively low vapor pressure point, said end frames being out of the main electron stream between the cathode and anode.

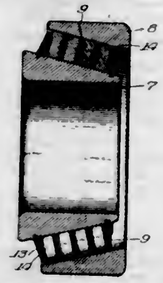
1,572,722. GRINDING MACHINE. AXEL E. JACOBSON, Minneapolis, Minn. Filed Sept. 10, 1924. Serial No. 736,908. 13 Claims. (Cl. 83—11.)



1. A grinding machine having in combination, a substantially cylindrical casing having one closed side and an axial opening in its other side, a shaft extending axially of said casing through said closed side, a rotary grinding head in said casing comprising a plurality of spaced disks disposed at right angles to said shaft, said disks except the one adjacent the closed side of the casing having central openings therethrough, and means secured to said shaft having spaced arms disposed between and secured to said disks and affording openings through said latter disks for material entering said axial opening to pass therethrough, said means and the disk adjacent the closed side of said casing forming an imperforate side of said grinding head.

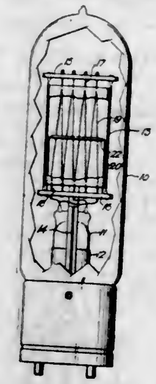
1,572,723. PROCESS AND APPARATUS FOR COOKING WOOD CHIPS. JULIUS THEODORE JAEGER, Iroquois Falls, Ontario, Canada. Filed Apr. 1, 1922. Serial No. 548,858. 4 Claims. (Cl. 92—7.)

1. An apparatus for the treatment of wood chips in the production of pulp, including in combination, a vessel for containing the chips, a steam supply pipe communicating with the vessel adjacent one end thereof, and acid supply for the vessel, an acid conveying pipe leading from one end of the vessel to the opposite end thereof into which it descharges and means for circulating the acid from one end of the vessel, through said acid pipe, into the opposite end of the vessel and a nozzle upon the discharge end of the acid circulation pipe, such nozzle comprising a pipe length presenting a flared front end, a perforated head covering the flared end and means for securing the head in spaced relation with respect to the flared end of the pipe length to present side openings additional to the perforations of the head.



1,572,724. POWER PRESS. JOSEPH E. JOHNSON and HERBERT W. SPELLMAN, Meriden, Conn., assignors to The Connecticut Telephone & Electric Company, Incorporated, Meriden, Conn., a Corporation of Connecticut. Filed Sept. 8, 1923. Serial No. 661,590. 13 Claims. (Cl. 18—16.)

1. In a pressure relief device for a press, a platen, a tubular housing member thereon, a compression spring in said housing member, a head engaging said compression spring, a connecting rod engaging said head, and means for confining said head and connecting rod.

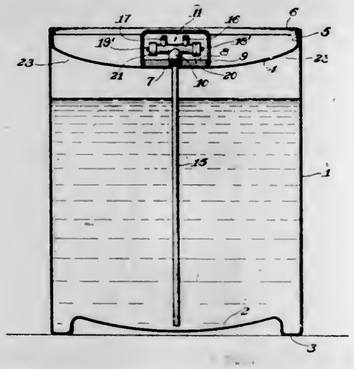


5. In a press, a member having a mold cavity therein, a knock-out head in said mold cavity and extending to the outside thereof, a die punch, link mechanism connected to said knock-out, and automatically actuated operating means for moving said knock-out in said mold cavity for ejecting a molded article.

1,572,725. ROLLER BEARING. JULIUS KELLER, Sr., Chicago, Ill. Filed Sept. 28, 1922. Serial No. 591,013. 4 Claims. (Cl. 308—215.)

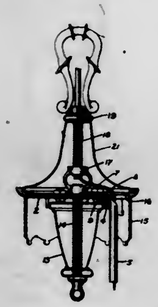
1. A roller bearing roller having a cylindrical bearing engaging surface, and a circular concentric bead on each of the lateral faces of said roller adjacent to the circumference thereof for contacting with the adjacent retainers.

1,572,726. ELECTRON-DISCHARGE DEVICE. MERVIN J. KELLY, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 31, 1922. Serial No. 585,370. 3 Claims. (Cl. 250—27.)



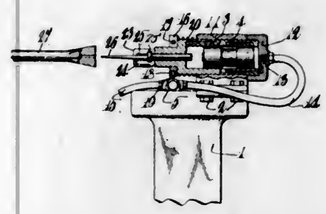
1. In an electron discharge device, an anode, a cathode, a pair of insulating members gripping said cathode intermediate its ends to prevent vibration thereof.

1,572,727. LIQUID-FUEL CONTAINER. ARTHUR N. KEAN, Bellevue, Pa., assignor to Rockgas Products Company, Cornopolis, Pa., a Corporation of Delaware. Filed June 20, 1924. Serial No. 721,245. 1 Claim. (Cl. 221—73.5.)



The combination of a closed shipping container for volatile liquids comprising a body, a depressed head fixed to one end of the body, said head being curved down-

wardly from its periphery toward its center, an apertured supporting plate attached to the central portion of the head projecting above the head and having its periphery threaded, a T-shaped valve block having a depending recessed nipple removably anchored in the aperture of said plate, said block being equipped with a pair of fluid conducting ducts, a pair of oppositely disposed laterally extending needle valves threaded in said block for controlling flow through the respective ducts, one of said ducts communicating with a depending pipe

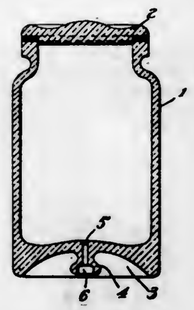


attached to the block and extending through the nipple, the cross-sectional dimension of the pipe within the nipple being smaller than that of the recess therein whereby to provide an annular space within the nipple, the remaining duct communicating with the said annular space, an inverted cup-shaped cover threadedly engaging the said threaded peripheral portion of the said plate and completely housing the valve mechanism, the head together with all of the parts carried thereby being disposed entirely below the upper edge of the container.

1,572,728. ELECTRIC-LIGHTING FIXTURE. PHILIP KESTELL, San Francisco, Calif., assignor to Thomas Day Company, San Francisco, Calif., a Corporation of California. Filed Jan. 31, 1925. Serial No. 6,008. 2 Claims. (Cl. 240—78.)

1. A lighting fixture comprising a body plate having a plurality of circumferentially spaced apertures therein, a plurality of tubular fixture arms, the ends of the arms extending through said apertures and being flattened to lie against the surface of the plate, bolts securing the flattened ends of the arms to the plate, a skirt depending from the plate to conceal the apertures and a cover disposed within the skirt and concealing the bolts on the under side of the plate.

1,572,729. DRILL-SHARPENING MECHANISM. FRANK M. LEE, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Feb. 1, 1923. Serial No. 616,432. 17 Claims. (Cl. 76—5.)

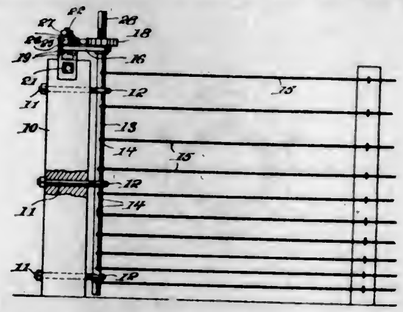


4. In a punching mechanism, a stationary support, a punching motor slidable relative thereto, and controlling means carried directly by said support and operatively connected to said motor for automatically starting said motor when the latter is moved rearwardly and for automatically stopping said motor as the latter moves forwardly.

1,572,730. BATCH FOR MAKING CERAMIC MATERIAL AND TO A CERAMIC MATERIAL MADE THEREFROM. FRED M. LOCKE and FRED J. LOCKE, Victor, N. Y. Filed Oct. 17, 1924. Serial No. 744,287. 10 Claims. (Cl. 106—12.)

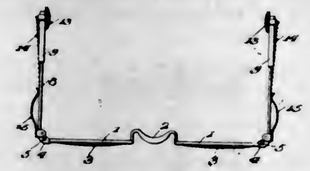
1. A raw batch for refractory bodies containing a relatively small amount of a compound of manganese and a relatively large amount of clay.

1,572,731. CONTAINER PACK. CURTIS L. LYNCH, Cherryfield, Me. Filed Oct. 22, 1923. Serial No. 669,945. 3 Claims. (Cl. 215—56.)



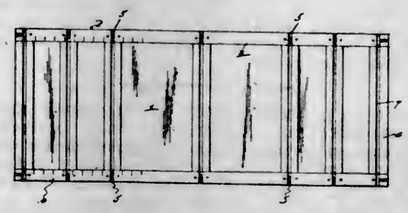
1. A preserving container comprising an enclosed vessel having one wall recessed and vented, and a nipple within said recess and below the surface of said wall, and enclosing said vent and adapted to receive an exhaust connection.

1,572,732. STRETCHER. CHARLES MCCAMMACK, Quincy, Ind. Filed Apr. 3, 1925. Serial No. 20,558. 1 Claim. (Cl. 254—163.)



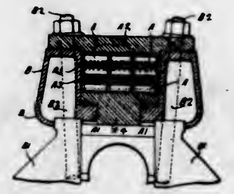
In a fence wire stretching device, a support, a slotted bracket mounted thereon, a pivot bolt rising from said bracket, a plate having an opening receiving said pivot and projecting laterally from said bracket, a vertically disposed bar, means including said plate for supporting the bar for rotation, said bar having spaced openings for connecting the adjacent ends of the fence wires to

said bar, whereby said wires are stretched when the bar is rotated, means whereby said bar can be rotated, a ratchet wheel mounted on said bar above said plate, and



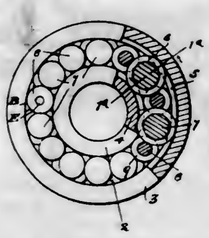
a pawl mounted on said pivot bolt and cooperating with said ratchet wheel to prevent retrograde movement of said bar.

1,572,733. SPECTACLES. PATRICK HENRY MCCOURT, St. Louis, Mo. Filed May 9, 1925. Serial No. 29,166. 3 Claims. (Cl. 88—52.)



1. Spectacles comprising lens holding means, extensible head engaging arms carried by the lens holding means, each of said arms comprising a pair of telescopic slidably co-engaged sections and a chain having a length slightly less than the combined length of said sections, the ends of said chain being connected to the opposite end portions of said sections and said chain thus being adapted to limit the relative movement of said sections in opposite directions.

1,572,734. FABRIC-MEASURING DEVICE. JAMES HERBERT MCDERMOTT, Hartford, Conn. Filed June 3, 1924. Serial No. 717,571. 2 Claims. (Cl. 164—78.)

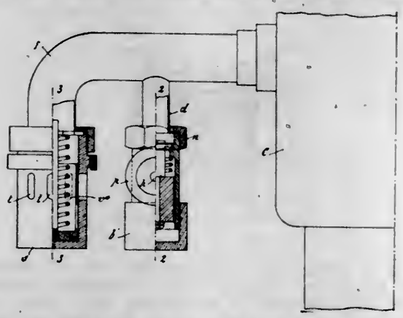


1. A fabric measuring device comprising a pair of warp-proof metallic straight edges disposed in transversely spaced parallelism and calibrated and provided at longitudinally spaced points with transverse grooves, the grooves in one straight edge being opposed to the grooves in the other straight edge, and strips interposed between said straight edges and having grooves in their upper sides alined with and opening into the opposed grooves in said straight edges, said strips being made of wood to eliminate objectionable noises produced by metallic cutting implements.

1,572,735. SPRING-RELIEVING GEAR FOR ROLLS OF SUGAR-CANE MILLS, METAL-ROLLING MILLS, AND THE LIKE. CHARLES MCNEIL, Glasgow, Scotland. Filed Oct. 20, 1924. Serial No. 744,749. 2 Claims. (Cl. 267—1.)

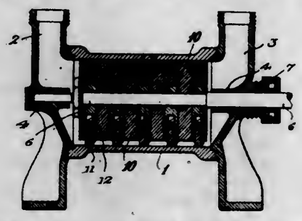
1. In a rolling mill, a displaceable roll, a pressure block displaceable with the roll, an abutment member spaced from said block, in combination with a plurality of layers of spring elements in series interposed between the pressure block and the abutment member, each layer comprising a plurality of corrugated spring plates extending parallel with the axis of the roll and having corrugations transverse to said axis, and distance pieces between the layers.

1,572,736. ROLLER BEARING. DUNCAN STUART MCPHAIL, Detroit, Mich., and JAMES EUSTACE PASTORIUS, Kingsville, Canada. Filed Dec. 13, 1923. Serial No. 680,487. 1 Claim. (Cl. 308—209.)



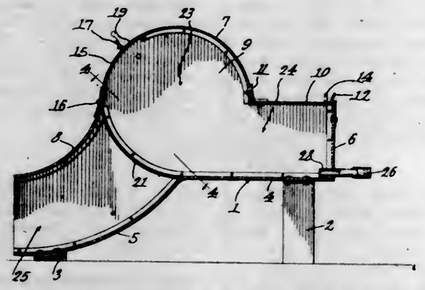
A roller bearing structure comprising inner and outer race members having their adjacent faces formed with oppositely disposed circumferential grooves, and a plurality of roller members positioned between the race members and having the same axial length and the same diameter at their adjacent ends, said roller members having every alternate one formed with a centrally disposed peripheral groove of similar dimensions to the grooves in the race members, the remaining roller members having centrally disposed peripheral flanges received within the grooves of the last mentioned roller members and the grooves of the race members and similarly contacting with the walls of both.

1,572,737. AUTOMATIC DEVICE WITH LIMITED FEED FOR THE SUPPLY OF INTERNAL-COMBUSTION ENGINES. AGÉNOR MARCHANT, Jr., Fourmies, France. Filed Feb. 20, 1922. Serial No. 537,976. 4 Claims. (Cl. 123—137.)



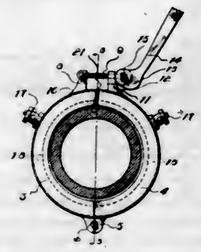
3. An automatic fuel feed device for internal combustion engines, comprising a cylindrical tube, a piston movable therein, means for varying the position of the piston in the tube whereby the volume of the chamber can be regulated, a second tube connected with the first-mentioned tube, a piston movable therein, a valve secured to the same, a duct for the emission of carburant within the latter tube, said duct being so disposed as to be cut off by the piston when the said valve is lifted, means for

connecting the tube containing the valve with the suction conduit of the engine, a third tube connected with the suction conduit of the engine, apertures formed therein, a hollow cylinder movable in the said tube by



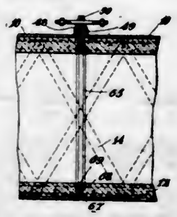
the effect of the engine suction and ports formed in the hollow cylinder and cooperating respectively with the apertures in the tube, whereby air shall be admitted into the suction conduit of the engine.

1,572,738. ROTARY PUMP FOR LIQUIDS OR GASES. SAMUEL MAROGER, Nimes, France. Filed Oct. 27, 1924. Serial No. 746,106. 5 Claims. (Cl. 103—134.)



1. A rotary pump comprising in combination a pump-body, a drum mounted eccentrically in said pump-body, said drum having a helical groove, and a helix fitted in said groove, said helix being made in sections for the purpose set forth.

1,572,739. CEMENT-BAG CLEANER. CURTIS R. MATTERN, Towar City, Pa. Filed Sept. 12, 1925. Serial No. 56,029. 1 Claim. (Cl. 15—20.)



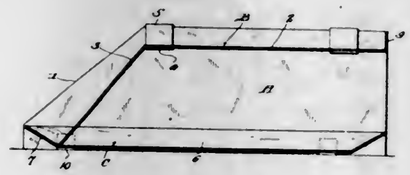
A bag cleaner comprising a drum having a downwardly extending outlet spout and a substantially horizontal feed chamber located upon opposite portions of its periphery, doors operable to afford access to the drum and to the feed chamber, a screen located at the inner end of the spout, and an air blast nozzle discharging into the outer end of the feed chamber in approximate parallelism to the bottom of the feed chamber, and toward the screen.

1,572,740. METHOD OF AND APPARATUS FOR ELECTRIC WELDING. ROYAL MATTICE, Bethlehem, Pa. Filed Oct. 17, 1924. Serial No. 744,167. 11 Claims. (Cl. 219—10.)

2. The method of repairing cracked or broken tubular structures which comprises covering the crack or break with welding material, heating the welding material to the fusion point and finally compressing the welding material entirely around the tubular structure at one operation until a part at least is forced into the pores of the tubular structure.

1,572,741. TUNNEL AND METHOD OF BUILDING AND SUBMERGING. JAMES C. MEEM, Brooklyn, N. Y., assignor of one-half to Frederick L. Cranford, Brooklyn, N. Y. Filed July 2, 1925. Serial No. 40,987. 6 Claims. (Cl. 61—43.)

1. The method of adding a tunnel section to an end of a previously laid portion of a sub-aqueous tunnel, said section being closed by diaphragms positioned substantially flush with its ends and the end of said previously laid portion being closed by a similarly located diaphragm, which method consists in sinking said section to a position such that one of its diaphragms is in substantially facial contact with the diaphragm at the end of the previously laid section, sealing any remaining space between said contacting diaphragms by introducing grout therebetween from the interior of said previously laid portion, cutting central openings in said contacting diaphragms and riveting the remaining portions of said diaphragms to one another.



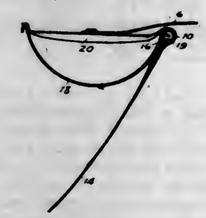
1,572,742. PRODUCTION OF ALCOHOLS FROM HALOGENATED ALDEHYDES. HANS MERRWEIN, Konigsberg, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed May 28, 1925. Serial No. 33,505. 2 Claims. (Cl. 260—156.)

1. The process for producing halogenated alcohols from halogenated aldehydes, which process comprises the treatment of halogenated aldehydes dissolved in primary alcohols with alcoholates of aluminum.

1,572,743. PORTABLE CANDY TRAY. RAY S. MEREDITH, Columbia City, Ind. Filed Mar. 12, 1924. Serial No. 698,698. 1 Claim. (Cl. 211—28.)

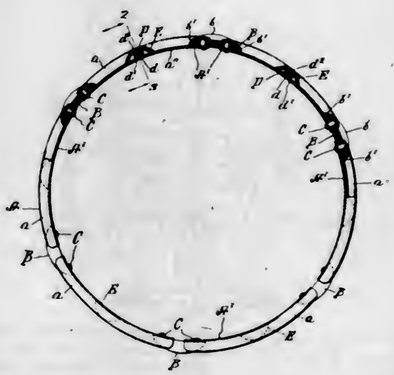
A device of the character specified comprising a pair of separate laterally spaced side members of general rectangular oblong form, having downwardly and forwardly

inclined front edges, supporting feet for the side members, a separate top or cover member mounted between the side members, said top or cover member comprising a flat rectangular body portion disposed somewhat below and in a plane parallel with the upper edges of the side members and a downwardly and forwardly bent front end portion disposed a corresponding distance below and in a



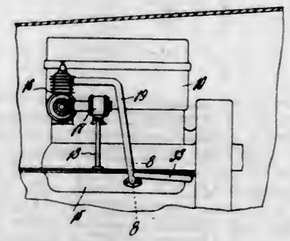
plane substantially parallel with the downwardly and forwardly inclined front edges of the side members, supporting means for the top or cover member, and a tray mounted between the side members beneath the top or cover member with its front end extending beyond that of the latter, the lower end of the front end portion of the cover member being beveled to snugly fit the bottom and side walls of the forwardly protruding end of the tray.

1,572,744. NICKEL ALLOY AND METHOD OF MAKING THE SAME. PAUL D. MERICA, New York, N. Y., assignor to The International Nickel Company, New York, N. Y., a Corporation of New Jersey. Filed June 26, 1923. Serial No. 647,911. 19 Claims. (Cl. 75—1.)



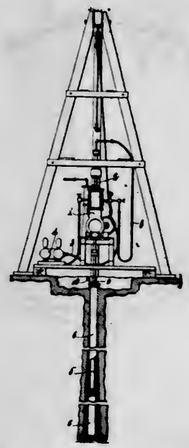
1. The method of making nickel alloys, which includes deoxidizing the principal melt and then mixing it with molten aluminum.

1,572,745. GUTTER HANGER. CHARLES MEUNIER, Great Neck, N. Y. Filed Jan. 25, 1923. Serial No. 614,879. 1 Claim. (Cl. 108—29.)



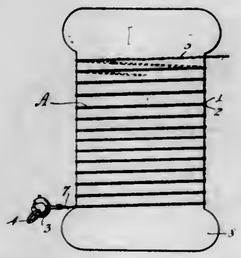
A gutter hanger for use with a gutter having a beaded edge and comprising a strap having a rigid portion extending transversely between the upper edges of the gutter, said strap having a resilient arched portion at one end of said rigid portion, the resilient arched portion being designed to be bent to snugly fit around the bead of the gutter, said strap also having a cradle portion designed to underlie the gutter, the juncture of the cradle portion and the arched portion being relatively stiff and unyielding, and the cradle portion adjacent the juncture also being sufficiently stiff and unyielding to insure proper bending of the arched portion around and into snug engagement with the head of the gutter when the cradle portion is moved up against the bottom of the gutter, the end of the cradle portion being engaged with the rigid portion.

1,572,746. COMPRESSIBLE SAFETY RING FOR PNEUMATIC TIRES. ANDRÉ JULES MICHELIN, Paris, France. Filed June 17, 1925. Serial No. 37,811. 9 Claims. (Cl. 152—20.)



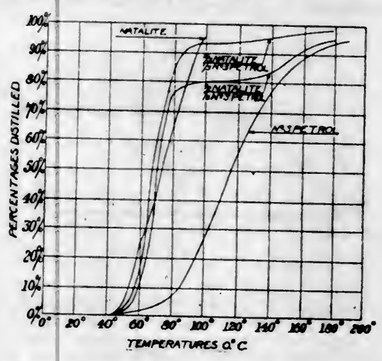
5. In a safety attachment for pneumatic tires, the combination with the casing and the rim, of a compressible elastic safety ring, normally of greater diameter than the circumference of said rim, and adapted to fit between the beads of the tire, and an inner tube adapted to be filled with compressed air, and to force said compressible safety ring inwards between said beads and in engagement with said rim, with additional means for holding said safety ring in the contracted position on said rim.

1,572,747. HEATER FOR AUTOMOBILES. PATRICK R. MINAHAN, Green Bay, Wis. Filed Dec. 8, 1924. Serial No. 754,693. 1 Claim. (Cl. 123—196.)



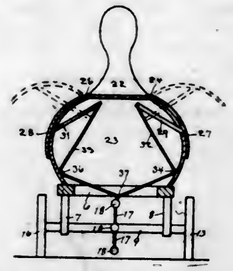
In an automobile, the combination with a main internal combustion engine, an auxiliary internal combustion engine, a pipe for conducting the exhaust gases from the auxiliary engine through the crank case of the main engine, a pipe leading from said exhaust pipe to the exhaust pipe of the main engine to carry off said gases, a pipe establishing communication between the exhaust pipe of the auxiliary engine and the exhaust pipe of the main engine in advance of the point of said communication and means whereby exhaust from the main engine may be directed into the exhaust pipe of the auxiliary engine.

1,572,748. METHOD AND APPARATUS FOR PRESSURE-TESTING DRILL-HOLE CASING. JOSEPH STUART MITCHELL, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed July 19, 1922. Serial No. 576,090. 16 Claims. (Cl. 73—56.)



1. The method of pressure testing drill hole casings located in a well hole which consists in, sealing off the casing, and passing through a seal mechanical means in increasing volume.

1,572,749. BEAD WIRE. SAMUEL MOLLENGARDEN, New York, N. Y., assignor to Royal Importing Co., a Copartnership of New York, composed of Samuel Mollengarden, William Smith, and Harry Berk, all of New York, N. Y. Filed July 17, 1925. Serial No. 44,341. 1 Claim. (Cl. 223—37.)

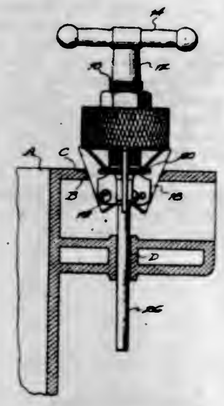


A bead wire composed of a plurality of strands, said strands disconnected throughout the main portion of their lengths and secured together at their end portions only, the securing means at one end comprising the twisting of said strands together throughout a portion of their length whereby a relatively stiff member is formed for threading beads on the wire without the use of a separate needle.

1,572,750. FUEL FOR INTERNAL-COMBUSTION ENGINES. BENJAMIN HOWELL MORGAN, London, England. Filed Apr. 4, 1925. Serial No. 20,861. 3 Claims. (Cl. 44—9.)

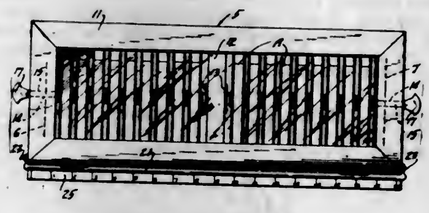
1. A fuel for internal combustion engines consisting of as to about one-half a mixture of alcohol (60 parts to 30 parts) with ether (30 parts to 60 parts) and as to about the other half, petrol as defined.

1,572,751. FIGURE WHEELED TOY. MITSUTARO NAKAMURA, Chico, Calif. Filed Mar. 25, 1925. Serial No. 18,284. 1 Claim. (Cl. 46—45.)



In a toy of the character described, a wheeled carriage, a figure simulating a bird positioned on said carriage, wings pivoted to the opposite sides of said figure, a lever secured to each of said wings, said lever extending inwardly and upwardly with respect to the body of said figure, a cord secured to each of said levers and extending downwardly within said figure, eyes positioned in each side of said figure in such a manner as to receive the ends of said cords therethrough, a second cord secured to the ends of said first mentioned cords, said second mentioned cord extending to a point beyond said carriage and a third cord secured to said second mentioned cord and to said carriage for the purpose of limiting the amount of pull of said second mentioned cord with respect to said carriage.

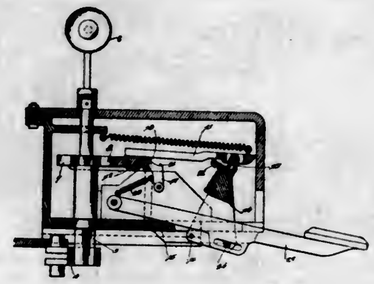
1,572,752. VALVE-RESEATING TOOL. GEORGE H. NORTH, Kansas City, Mo. Filed Aug. 15, 1924. Serial No. 732,210. 1 Claim. (Cl. 90—12.5.)



A tool of the character described comprising an elongated body member having a threaded intermediate portion, a handle mounted upon one end of said body, the other end of the body being formed with a plurality of spaced ears, blades pivoted between said spaced ears

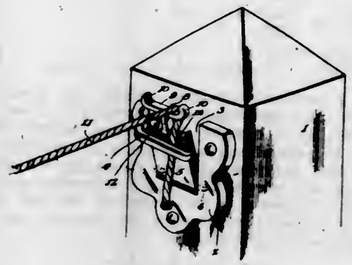
and having their outer edges sharpened, spring means engaging said blades normally urging them in one direction, a shell member slidably engaged upon the body

and engageable with said blades whereby to move the same into adjusting position, and a nut member screwed upon the threaded intermediate portion of the body and engaging said shell for moving the same.



1,572,753. DISPLAY CABINET. LYSLE H. NUTTER, Hamburg, Ark. Filed Oct. 4, 1922. Serial No. 592,370. 1 Claim. (Cl. 33—127.)

A display cabinet comprising a casing, a shaft disposed in said casing and adapted to support merchandise, the rear wall of said casing having a longitudinally extending slot, for the reception of the merchandise, a supporting member carried by the lower portion of the rear wall exteriorly of the casing, a rule movably mounted on the support, said rule being movable longitudinally of the rear wall of the casing, said rule being provided with a longitudinally disposed slot extending substantially the entire length thereof, and a stop member extending outwardly from the rear wall of the casing and extending through the slot of the rule, said stop member being positioned above and at substantially the longitudinal center of the supporting member, said stop member coacting with the ends of the slot to limit the longitudinal movement of the rule in either direction.

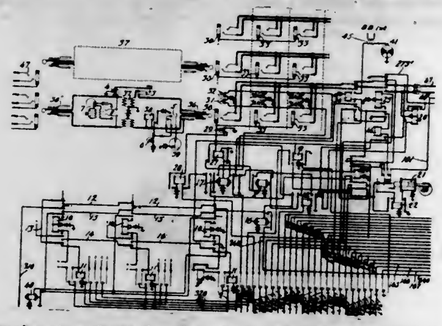


1,572,754. SWITCH STAND. OMER D. OLIVER, Gary, Ind. Filed Sept. 9, 1925. Serial No. 55,367. 6 Claims. (Cl. 246—393.)

2. A switch stand including in combination with a switch point, of an operating plate having a slot formed therein, with offset ends, means operatively connecting the operating plate to the switch point, a foot treadle, and an operating arm operatively connected to the foot treadle and having a portion working in the slot adapted upon depression of the treadle to move into one of the

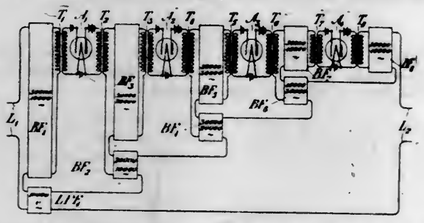
offset ends to operate the operating plate in one direction and adapted upon return of the treadle from depressed position to move in the slot and enter the other offset end to operate the plate in an opposite direction upon return of the treadle to depressed position.

1,752,755. CLOTHESLINE HOLDER. EARL M. OTT, Cleveland, Ohio. Filed Dec. 26, 1924. Serial No. 758,208. 2 Claims. (Cl. 24—133.)



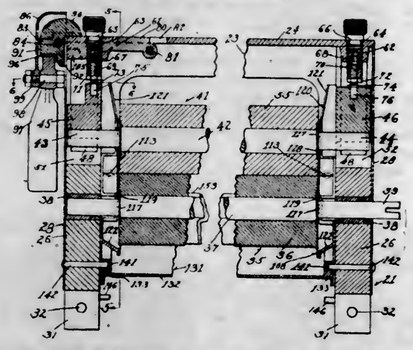
1. A line holder comprising a transversely disposed fixed clamping bar, a clamping block pivotally mounted in rear of said bar for movement toward and from the bar, a stem rising from the upper end of the clamping block, and a crosshead carried by the upper end of the stem above the bar and provided at its end with a stop to limit lateral movement of a line trained over and under the head, the said line having its end portion disposed below the crosshead and between the block and the bar to be clamped by and between the bar and the front face of the block.

1,572,756. HIGH-FREQUENCY-WAVE SIGNALING AND COMMUNICATING SYSTEM. EDWIN H. SMYTHE, Evanston, Ill., and SAMUEL B. WILLIAMS, Jr., Brooklyn, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 14, 1921. Serial No. 469,398. 62 Claims. (Cl. 179—2.)



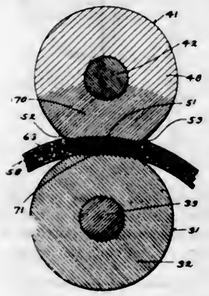
1. In a high frequency communicating system having a plurality of stations, the combination with a plurality of trunks at each station, means for transmitting and

receiving high frequency signals associated therewith, and means for preselecting an idle one of said



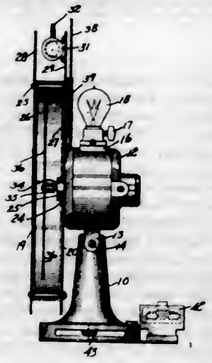
trunks at each station for use in establishing communicating relation with another station through the associated high frequency signaling means.

1,572,757. MULTIPLEX SIGNALING SYSTEM. HERMAN A. AFFEL, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 24, 1920. Serial No. 383,941. 19 Claims. (Cl. 179—15.)



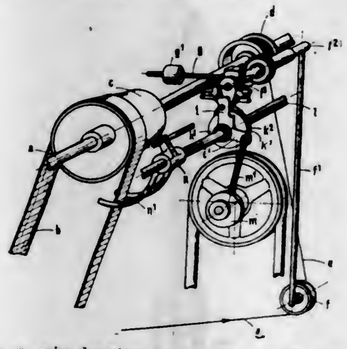
1. In a multiplex signaling system, the method of equalizing the transmission of a plurality of frequencies transmitted by a common transmitting medium which consists in separating the currents of different frequencies into individual circuits amplifying the current of each of said circuits to a degree depending upon the degree of attenuation of the current of the said circuit caused by transmission through the medium and combining the resulting currents.

1,572,758. CLOTHES WRINGER. ROBERT J. ANDERSON, Sidney, Ohio. Filed Jan. 20, 1922. Serial No. 530,579. 11 Claims. (Cl. 68—32.)



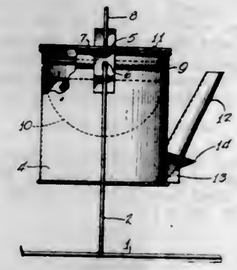
1. In a clothes wringer of the character described, the combination with a frame, of a comparatively hard resilient wringer roll and a comparatively soft resilient wringer roll mounted in said frame, said wringer rolls being of comparatively great and substantially equal diameters, the sole driving means between said rolls consisting in the entrance by pressure of the cylinder of said comparatively hard wringer roll into the normal cylinder of said comparatively soft wringer roll, maintaining means to maintain said pressure, means between said maintaining means and said rolls to transmit said pressure, and quick release safety means comprising a retaining element cooperating with said maintaining means and a releasing element therefor, said maintaining means acted on solely by said resiliency in said resilient wringer rolls to cause separating movement between said wringer rolls.

1,572,759. CLOTHES WRINGER. ROBERT J. ANDERSON, Sidney, Ohio. Filed Jan. 8, 1923. Serial No. 611,242. 2 Claims. (Cl. 68—32.)



1. In a clothes wringer of the character described, the combination of a comparatively hard resilient wringer roll, a comparatively soft resilient wringer roll, each of said wringer rolls being solid and of substantially equal resilience throughout its body, a central rigid shaft in the body of said comparatively soft resilient wringer roll, and pressure means exerting pressure on said shaft at the ends of said last-named roll, and said wringer rolls being substantially coextensive in length.

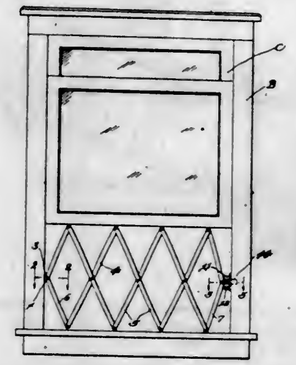
1,572,760. OPTICAL DEVICE. RAMÓN RUIZ ARNAU, San Juan, P. R. Filed Nov. 17, 1921. Serial No. 515,879. 5 Claims. (Cl. 128—76.)



5. A device for treating the eyes, comprising an object to be gazed upon, an apertured screen for mounting in front of said object with the aperture in alignment with the object to be gazed upon, means for illuminating the object to be gazed upon, and an object movably mounted between said screen and the object to be gazed upon for intermittently screening from view the object to be gazed upon.

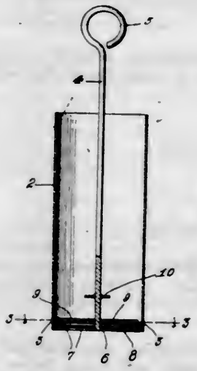
1,572,761. APPARATUS TO CONTROL THE NUMBER OF TURNS OF THE DRAWING SHAFT IN DRAWING BENCHES. LOUIS BRÉGUET and PAUL BRÉGUET, Geneva, Switzerland. Filed Dec. 11, 1923. Serial No. 680,047. 2 Claims. (Cl. 242—45.)

1. In a wire-drawing bench, the combination of a drawing shaft; a cone pulley thereon a driving belt passing around the pulley a belt shifter engaged with said belt to move it toward either end of said pulley; an independent mechanism for moving the belt shifter in either direction; a pendulum controlled by the strain of the wire for starting said mechanism; and a weighted lever for counter-balancing the pendulum.



1,572,762. GREASE-DISPENSING DEVICE. ALBERT HARRY BRUNNER, Carbondale, Ill. Filed Oct. 17, 1924. Serial No. 744,216. 1 Claim. (Cl. 221—1.)

A device of the type described comprising a container supporting frame, a container pivotally carried by said frame, said frame holding said container in close proximity to the supporting surface, said container being adapted to swing into normal position after being tipped, this swinging being due to gravity, a spout in communication with said container, a grease catching trough disposed at the bottom of said spout and being in the same plane as the bottom of said container, said trough being adapted to catch the grease draining down the outside of the spout and being positioned adjacent to the supporting surface, whereby the heat from the supporting surface will keep the grease within the trough in a liquid state, and permit the grease to be poured from said trough the next time the container is tilted.

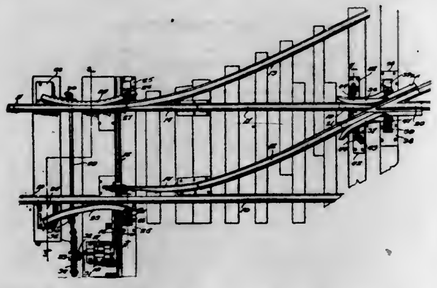


1,572,763. SAFETY DEVICE. MATTIE CARR, Chicago, Ill. Filed Sept. 28, 1923. Serial No. 665,428. 1 Claim. (Cl. 20—71.)

A safety device comprising a toggle joint member having a projection formed on one end of the member provided with a notch, a stationary casing having an opening for the passage of said projection, a latch pivoted within the casing and having its inner end adapted to be raised by said projection and then dropped into said notch, said latch having its other end projecting out of the casing and having an opening, a keeper on

the casing having an opening to align with the opening in the latch when the inner end of the latch is engaged in the notch and a lock engaged with the keeper and latch for holding said latch in its engagement with said notch.

1,572,764. EGG BEATER. JOHN E. CHATTIN, Dahlonega, Ga. Filed May 31, 1924. Serial No. 717,118. 1 Claim. (Cl. 259—113.)

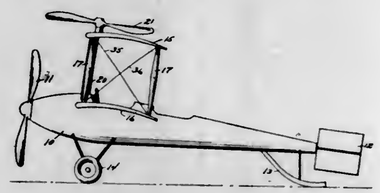


An egg beater comprising a cylinder designed to be received in a receptacle and having its lower end provided with a series of apertures, a rod having an outer rounded end movable in the cylinder, said rod having an apertured disk on its inner end, a second apertured disk freely mounted upon the rod above the first mentioned disk, a third non-threaded disk freely movable on the rod and resting on the last mentioned disk, a stop element on the rod above the last mentioned disk, all as and for the purpose set forth.

1,572,765. SAFETY MECHANISM FOR RAILWAY TRACKS. JOHN H. CHESTNUT, Jr., Tarentum, Pa. Filed Mar. 9, 1925. Serial No. 14,211. 10 Claims. (Cl. 246—441.)

2. A safety mechanism for railway tracks including in combination with a switch frog having a tread portion,

a guard shoe mounted at the outer side of said tread portion of the frog to coact with the outer edge of the tread of a car wheel for crowding the wheel laterally and



directing the wheel across the frog, and yieldable means to accommodate movement of the shoe away from the tread portion of the frog.

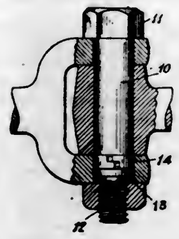
1,572,766. PROCESS FOR THE DISTILLATION OF NATURAL RESINS AND OLEORESINS. JOSEPH MARIE ALPHONSE CHEVALIER, PAUL BOURCET, and HENRI REGNAULT, Paris, France. Filed May 17, 1922. Serial No. 561,746. 2 Claims. (Cl. 203—4.)

1. A process for the distillation of a natural resin which comprises mixing therewith from 1 to 5% of tribasic phosphoric acid and distilling the mixture, wherein the temperature of the mixture is raised progressively until the temperature of the vapors during distillation reaches approximately 310° centigrade.

1,572,767. AEROPLANE. JOSEPH CICCOIANNI, Smock, Pa. Filed Sept. 4, 1925. Serial No. 54,523. 2 Claims. (Cl. 244—15.)

1. In a machine of the class described, a main structure including upper and lower planes, driving means for said machine, a plurality of wind screens movable vertically between the planes and on opposite sides of the central portion thereof, the screens being movable in the same vertical plane and being spaced apart at the central portion of the machine, means for guiding the screens in their vertical movement, and means for shifting the screens.

1,572,768. PHARMACEUTICAL PRODUCT. JÜRGEN CALLSEN, Elberfeld, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y. Filed June 26, 1925. Serial No. 39,864. 2 Claims. (Cl. 260—156.)

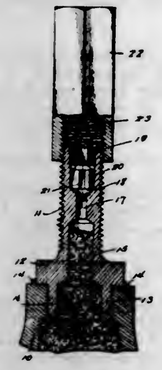


1. The herein described new basic ethers of quinolines, being generally from colorless to yellowish oils soluble in the usual organic solvents almost insoluble in water, being useful in the treatment of diseases of the heart, forming two series of salts with hydrochloric acid which retain the valuable properties of the free bases.

1,572,769. OIL-WELL SAND CLEANER. JAMES B. CLARK, Midwest, Wyo. Filed Nov. 19, 1924. Serial No. 750,876. 1 Claim. (Cl. 255—64.)

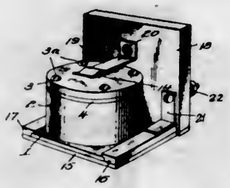
An oil well cleaner comprising a barrel having spaced abutments, a coiled, toothed scratcher surrounding the barrel and interposed between the said abutments, a connecting member carried at the upper end of the barrel and having a reduced portion and apertures in communication with the interior of the barrel, a union connection to the lower end of the barrel below the lower abutment thereof, a bit having cruciform blades and also having apertures between the blades and in communication with the interior of the bit and the interior of the barrel, an annular valve seat disposed in the union and interposed between the barrel and the bit, and a flap valve for cooperation with said valve seat.

1,572,770. BOLT LOCK. GEORGE F. COLLEY, Memphis, Tenn., assignor of one-half to John Q. Roberts, Memphis, Tenn. Filed June 27, 1923. Serial No. 648,099. 3 Claims. (Cl. 85—1.)



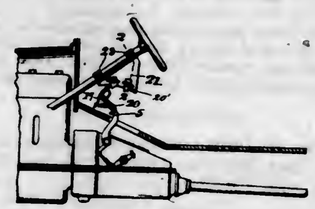
2. A bolt adapted to be inserted in a receiving opening, said bolt having a groove extending around the same between the ends of the receiving opening, a resilient split ring in said groove similar in cross section to said groove, each end of said ring having flat stepped surfaces, said ring being adapted to engage the wall of said receiving opening between the ends thereof to maintain the bolt therein and to serve as an antirattling and lubricant retaining device, substantially as set forth.

1,572,771. TOWROPE. CLYDE A. CONNELLY, Shelby, Ohio. Filed Feb. 10, 1925. Serial No. 8,288. 2 Claims. (Cl. 280—33.14.)



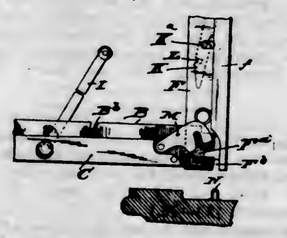
1. A towing device comprising a length of rope, a ring adjacent an end of the rope, said rope being passed through the ring and then formed into an auxiliary loop and being passed again through the ring so that the ring has running engagement with the rope at said auxiliary loop, the rope beyond said ring and auxiliary loop being returned upon itself to form a main loop, the returned portion extending through the auxiliary loop to have running engagement therewith.

1,572,772. GREASE CUP. MILLARD F. COX, Louisville, Ky. Filed Jan. 10, 1923. Serial No. 611,905. 3 Claims. (Cl. 184—38.)



1. A lubricating plug for locomotive rods, said plug being permanently positioned and having a central bore communicating with the part to be lubricated, said bore having a constricted portion, a piston slidable in said bore above said constricted portion, the periphery of said piston being longitudinally grooved, and an internal collar fixed in said bore above said piston, whereby a lubricant under pressure may be forced into said plug past said piston, the backing up of said lubricant forcing said piston against said collar whereby the latter overlaps the grooved periphery of said piston and prevents the escape of the lubricant.

1,572,773. PIEZO-ELECTRIC-CRYSTAL APPARATUS. ALFRED CROSSLEY, Washington, D. C. Filed Nov. 24, 1925. Serial No. 71,090. 16 Claims. (Cl. 171—327.)

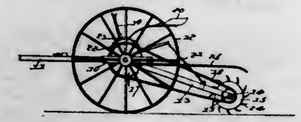


13. A piezo electric crystal holder comprising in combination a hermetically sealed closure and means within said closure for securing a piezo electric crystal therein and establishing electrical connection therewith, while permitting the free vibration of said piezo electric crystal with substantially no restriction.

1,572,774. CLUTCH PEDAL. JOHN S. CROXFORD, Winthrop, Mass., assignor to Bitbetter Manufacturing Company, Winthrop, Mass. Filed May 22, 1925. Serial No. 32,145. 5 Claims. (Cl. 74—81.)

1. In combination with the clutch pedal of a motor vehicle, a locking device comprising a pivoted latch member mounted on the pedal, a bracket secured to the steering column of a motor vehicle, adjustable keepers on the bracket and adapted to lie in the path of travel of the latch member, and means for moving the latch member to disengage the keepers.

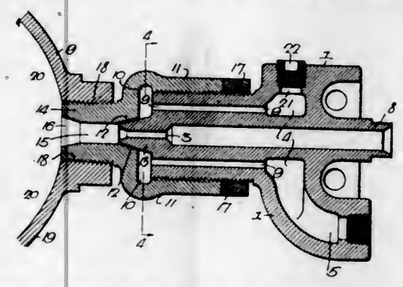
1,572,775. VERTICALLY-SLIDABLE INWARDLY-SWINGING WINDOW. OWEN L. DAUTRICK, Detroit, Mich., assignor to The Dautrick Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 27, 1925. Serial No. 26,010. 3 Claims. (Cl. 20—49.)



1. In a device of the class described, a pair of vertically movable channel members provided with horizontally projecting pivot studs, a vertically slidable sash provided with metal strips secured to the sash and having bearing recesses receiving the pivot studs and a pair of swinging hooks provided with recesses intersecting the recesses of the said strips and receiving the pivot studs for confining the said pivot studs in the recesses of the said strips.

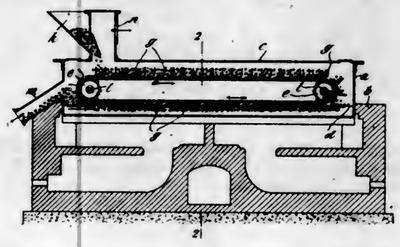
1,572,776. GLASS-RIM STRETCHER. FRANK DE NOME, Philadelphia, Pa. Filed July 16, 1923. Serial No. 651,906. 2 Claims. (Cl. 81—3.5.)

1. An eye glass rim stretcher comprising a cup member, a plurality of movable segments, flat springs carried by the cup member and engaging said segments for connecting the segments to the cup member, a plunger movable along said segments for spreading the segments, certain of said segment-engaging springs having downwardly extending fingers formed on their ends remote from the cup member and provided with cupped-out portions to receive and hold an eye glass rim.



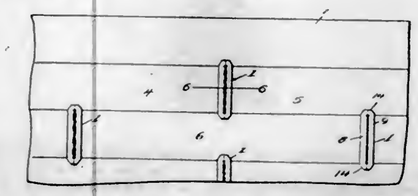
1,572,777. HARROW. HENRY J. DORMAN, Bald Knob, Ark. Filed Mar. 22, 1923. Serial No. 626,838. 1 Claim. (Cl. 97—40.)

In a harrow, a main wheel-supported frame disposed horizontally, and a harrow frame consisting of side bars secured to the ends of the main frame and extending rearwardly and inclined downwardly, of a revolubly driven harrow journaled in the side bars, a fender secured to the under face of the main frame and extending rearwardly and deflected downwardly over the revoluble harrow, said fender having an elongated slot, means consisting of an angular lever mounted to swing on a fulcrum concentric with the wheels of the main frame, and an operative connection consisting of a chain passing through the slot and operatively connected to the side bars, whereby the harrow frame may be raised and lowered concentrically with the wheels of the main frame.



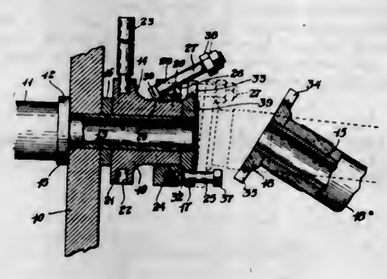
1,572,778. OIL BURNER. RICHARD DOUGHERTY, Philadelphia, Pa., assignor to The Baldwin Locomotive Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 27, 1922. Serial No. 590,904. 3 Claims. (Cl. 158—76.)

1. The combination in an oil burner, of a body portion having a central air passage terminating in a reduced portion and extending from one end of the body portion to the other, said body portion having a tapered projection at the forward end through which the reduced air passage extends; an annular oil channel surrounding the air passage at the rear end of the burner and connected with an oil supply; a series of longitudinal channels connected with the annular channel and extending parallel with the air passage; and an adjustable nozzle section mounted on the body portion and having a tapered opening into which extends the projection of the body portion, the nozzle section and the body portion forming



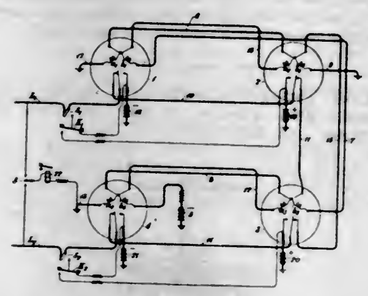
an annular chamber for the oil so that, when the air under pressure is admitted to the air passage, it will draw oil through the channels and through the space between the tapered extension of the body portion and the nozzle section.

1,572,779. APPARATUS FOR HEAT TREATMENT BY MEANS OF A BATH OF MOLTEN METAL. ARTHUR MCDOUGALL DUCKHAM, London, England, assignor to Thermal Industrial and Chemical (T. I. C.) Research Company Limited, London, England. Filed June 20, 1923. Serial No. 646,616. 6 Claims. (Cl. 202—14.)



1. Apparatus of the character described, comprising a chamber to contain molten metal, a chain travelling through said chamber above and in close proximity to the normal level of the metal in said chamber, and transverse plates projecting from the chain and dipping below the said level.

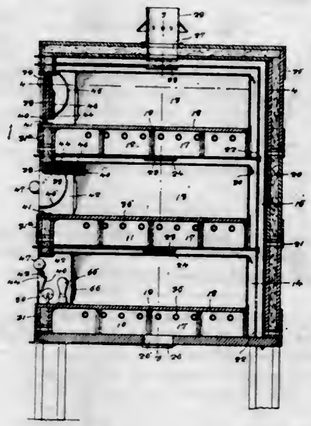
1,572,780. BOARD JOINER. CHARLES J. EISCHEN, Los Angeles, Calif. Filed Apr. 25, 1925. Serial No. 25,830. 3 Claims. (Cl. 25—131.)



1. In a concrete form wall, a plurality of boards arranged in end to end and edge to edge relation, the vertical end joints being disposed in staggered relation, and means for connecting the meeting ends to a pair of boards together, said means being interposed between the ends of said pair and having connection with the intermediate portion of the adjacent top and bottom boards extending across the joints.

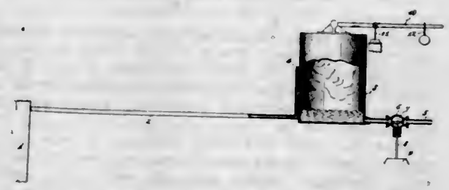
1,572,781. HOSE COUPLING. PERCY L. FARMER, Richmond, Me. Filed Oct. 29, 1923. Serial No. 671,471. 3 Claims. (Cl. 285—138.)

2. A pipe coupler comprising a pair of coupler members having contact faces non-rotatable relative to each other, a sleeve rotatably connected with one of said members and having screw threads on its outer face, a ring threadedly mounted on said sleeve, bolts fixedly secured to said ring, and bolts secured at one end to said ring but movable radially relative to said ring, said bolts adapted to be connected with said other member and all simultaneously movable with said ring whereby the said members are drawn to a liquid proof joint.



1,572,782. TELEGRAPH CIRCUITS. FRANK H. FAY, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 8, 1923. Serial No. 667,377. 3 Claims. (Cl. 178—71.)

1. A telegraph repeater interconnecting two line sections, said repeater including two sets of polar relays having actuating windings and biasing windings, said biasing windings being so arranged that the actuating windings of one set of relays will be connected to one of the line sections over the contacts of all of the relays of the other set.

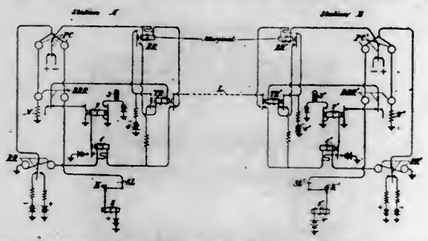


1,572,783. OVEN. KENNETH B. FISKE, Chicago, Ill. Filed Jan. 30, 1925. Serial No. 5,873. 3 Claims. (Cl. 107—62.)

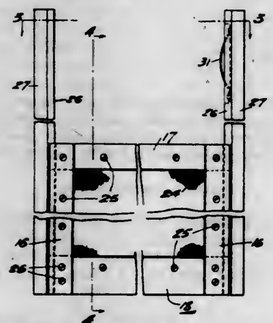
1. In an oven, a plurality of separate baking units, each of said units including a baking chamber, a heating chamber located below the baking chamber, an inner circulating chamber around the baking chamber, an outer circulating chamber around said inner chamber, said outer chamber communicating with the inner chamber and having air inlet openings in its outer wall, means whereby the baking units may be assembled to provide communication between the inner and outer circulating chambers of each unit, means for controlling such communication and damper controlled outlets for the inner and outer circulating chambers.

2. In an oven, a door mounted for swinging movement in opposite directions, whereby the door may open either inward or outward and yieldable means located in the path of the door for normally limiting outward swinging movement.

1,572,784. AUTOMATIC FLOW CONTROLLER. DAVID ALBERT FLEMING, Indiana, Pa., assignor of one-third to Albert C. Fleming, Indiana, Pa. Filed Aug. 20, 1924. Serial No. 733,245. 1 Claim. (Cl. 137—103.)



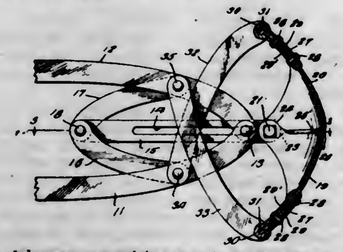
An automatic flow controller, comprising a tank, an inlet metal pipe constituting a support of the tank and rigidly secured at its free end to the tank and at its opposite end to a fixed support, a fixed outlet valve, and a valve casing connected to the tank and movable with the tank by reason of the weight of water in the tank to control the opening and closing of the valve.



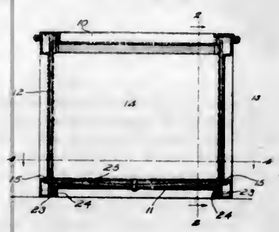
1,572,785. TELEGRAPH CIRCUIT. FRANCIS H. FOX, Detroit, Mich., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 27, 1923. Serial No. 665,174. 5 Claims. (Cl. 178—2.)

1. In a signaling system, a line circuit, terminal stations at each end of said line circuit, transmitting apparatus and receiving apparatus at each terminal station, a transfer relay at each terminal station, said transfer relays being arranged to connect the transmitting apparatus to the line circuit at one station and the receiving apparatus to the line circuit at the other station for transmission in one direction, said transfer relays being also arranged to shift the connection so that the transmitting apparatus will be connected to the line circuit at the second station and the receiving apparatus

to the line circuit at the first station to transmit signaling currents in the opposite direction, locking circuits for said transfer relays, relay means at each station connected in series with the receiving apparatus thereat and means controlled by said relays for opening said locking circuits.

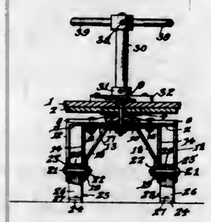


1,572,786. WINDOW SCREEN. ERNEST P. GARNER, Charlotte, N. C. Filed Jan. 14, 1925. Serial No. 2,380. 5 Claims. (Cl. 156—14.)



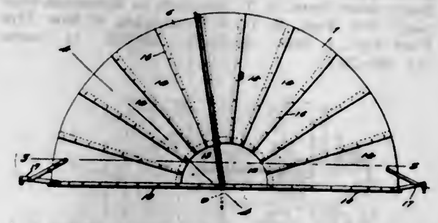
1. A screen frame comprising upper and lower and side main frame members having corner joints comprising interfitted and secured tongues and slots, a part of the tongues being projected beyond the remaining portion of the tongues and providing reinforcing means and the side members of the frames also extending beyond the ends of the upper and lower members, a wire gauze covering applied to the main frame members, and metal strips removably applied over the wire gauze covering and the one side of the main frame members and having flanged edges to reinforce the same, the side metal strips projecting outwardly beyond the ends of the upper and lower main frame members equally with the side members of the main frame to form grooves for engaging guide devices.

1,572,787. DEHORNER. CHARLES P. GLEE and ARTHUR GLEE, White, Nebr. Filed Oct. 26, 1923. Serial No. 670,916. 2 Claims. (Cl. 128—308.)



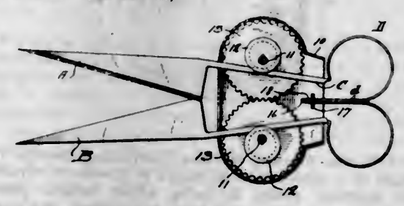
2. A dehorner comprising a pair of sheet metal blades of arched formation respectively presenting a forwardly disposed cutting edge and a rearwardly disposed tapered shank, integral side portions depending from each blade adjacent the cutting edge thereof, the side portions of one blade overlapping the corresponding side portions of the other blade, pivots connecting the said overlapping side portions, a supporting plate depending from one of the said pivots, handles pivoted to the said plate, links pivoted to the said handles, a loop on the shank of each blade, and means pivotally connecting the said links of the handles to the said loops.

1,572,788. COLLAPSIBLE BOX. ABRAHAM GORDON, Brooklyn, N. Y. Filed Feb. 24, 1925. Serial No. 11,258. 3 Claims. (Cl. 220—6.)



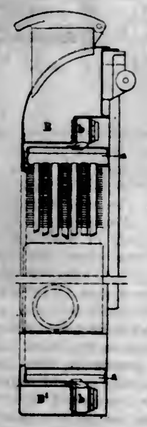
1. A collapsible box, which comprises a lateral section having on its end an offset wall parallel to the section, a wall transverse to the section, a rearwardly turned flange on the end of said transverse wall, said flange being parallel to the section, and a plate spaced from the transverse wall and parallel thereto to form a passage therebetween, an end section having an offset flange portion on its end, and a connecting wall, the flange portion adapted to slide between the spaced-plate, and the transverse wall of the lateral section, the connecting wall of the end section adapted to slide between the rearwardly extending flange and the end of the spaced-plate.

1,572,789. CHILD'S COASTER TOY. SIDNEY S. GRIFFIN, Detroit, Mich. Filed Oct. 9, 1924. Serial No. 742,691. 1 Claim. (Cl. 280—16.)



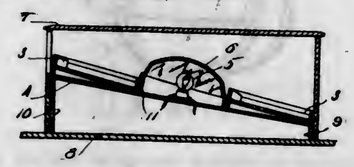
In a toy coaster, a body board, transversely extending front and rear bolster members upon the under side thereof, a sand board pivotally secured beneath said front bolster, an outer inverted substantially U-shaped member secured longitudinally beneath said rear bolster and said sand board, an inverted substantially U-shaped inner member secured within each of said outer members, the adjacent legs of said members being in spaced parallel relation, an inverted substantially V-shaped brace member within each of said inner U-shaped members, a stub axle extending through the lower ends of said spaced legs and one leg of an adjacent brace member, and a runner member having a hub adapted to be positioned between said legs and traversed by said axle, to be pivotally secured to swing, at will, longitudinally of the vehicle.

1,572,790. GARAGE. HUGH S. GRIGSBY, Richmond, Va. Filed May 28, 1925. Serial No. 33,551. 4 Claims. (Cl. 189—2.)



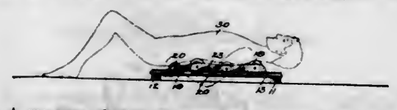
1. A building of the class described, comprising a pair of telescoping sections and formed of semi-circular shape in elevation and means for supporting the sections so that they can be moved about a horizontal axis.

1,572,791. POWER-OPERATING ATTACHMENT FOR SHEEP SHEARS. FRANKLIN N. GUYMON, Huntington, Utah, assignor of one-sixth to James P. Johnson, Huntington, Utah. Filed Sept. 19, 1925. Serial No. 57,367. 5 Claims. (Cl. 30—1.)



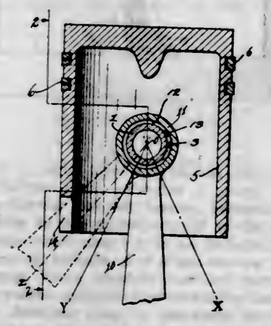
1. A power operating attachment for sheep shears comprising a casing through which the shanks of shears may be disposed, eccentrics mounted within the casing, one for each shank, and adapted to engage the shanks of the shears, power operated means for operating the eccentrics including a shaft extending to the exterior of the casing and having means whereby a flexible shaft may be connected thereto.

1,572,792. RADIATOR WITH REMOVABLE ELEMENTS. HENRI RAYMOND GUYOT, Paris, France, assignor to Société R. Guyot & Cie., Paris, France. Filed Nov. 22, 1922. Serial No. 602,582. 5 Claims. (Cl. 257—129.)



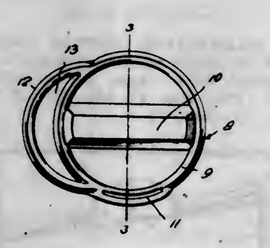
1. In a radiator having removable elements, a tubular member connecting the header of the radiator with an element thereof, a cylindrical member adapted to be inserted in the tubular member for closing the communication between a header and an element, said cylindrical member comprising two telescoping and spring-pressed sections, and means for telescoping the said sections.

1,572,793. ILLUMINATED DISPLAY CASE. JAMES WILLARD HALL, Brighton, Mass., assignor to The Moore Pen Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 21, 1925. Serial No. 51,696. 4 Claims. (Cl. 240—2.)



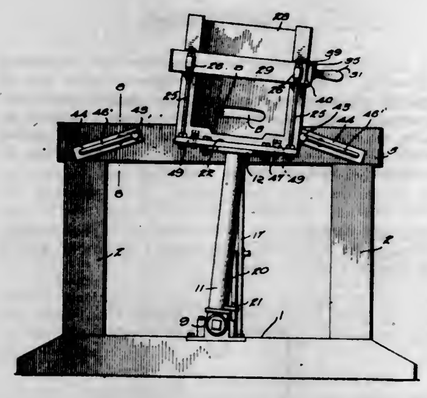
1. A display case comprising a transparent enclosure having top, front and side panels of glass, a light centrally located within said enclosure, and a plurality of trays adapted to hold articles for display arranged about said central light and within said enclosure, said trays and said light lying substantially in the same plane and inclining downwardly toward the front panel of said enclosure.

1,572,794. MASSAGE APPARATUS. CHARLES LESTER HAMILTON, Seattle, Wash. Filed Aug. 21, 1922. Serial No. 583,280. 3 Claims. (Cl. 128—57.)



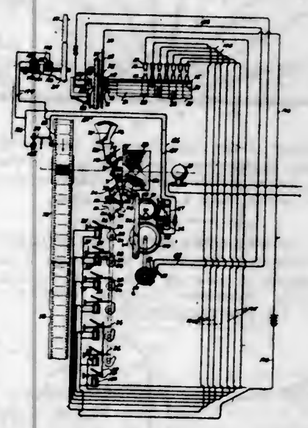
1. A massage device of the class described, comprising a plurality of grooved rollers of different sizes and alternately arranged, said rollers being shaped to straddle the spine, means for retaining the rollers in spaced relation to one another, a table on which said rollers travel, and means atached to the table for guiding the movement of said rollers on said table.

1,572,795. WRIST-PIN CONNECTION. DREW HEAD, Chicago, Ill. Filed May 25, 1925. Serial No. 32,671. 4 Claims. (Cl. 74—108.)



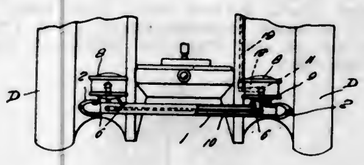
1. In a device of the type described, a connecting rod having a bore, a wrist pin adapted to pass through said bore, and interengaging means on said connecting rod and said wrist pin for preventing a longitudinal movement of the pin with respect to the connecting rod in any of the operative positions of said connecting rod, and for permitting rotative movement of the connecting rod with respect to the wrist pin.

1,572,796. SADDLE RING. JOHN HELM, Meade, Kans. Filed May 19, 1925. Serial No. 31,832. 1 Claim. (Cl. 54—46.)



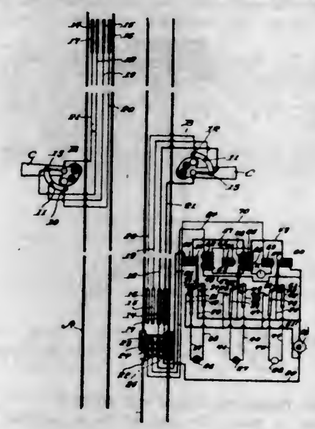
A saddle rigging ring of the class described comprising a concentric annulus provided with a central integral cross plate flat upon its inner face, said annulus being provided at its bottom with an arcuate slot, and a segmental member integral with one side of the annulus and spaced therefrom to provide a segmental opening for passage of a predetermined saddle strap.

1,572,797. WOODWORKING MACHINE. WILLIAM R. HIRT, Deerbrook, Wis. Filed Nov. 2, 1922. Serial No. 598,659. 3 Claims. (Cl. 144—140.)



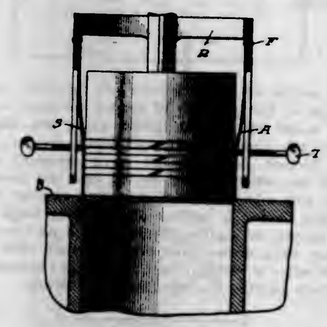
1. In a machine for cutting hand holes in end boards of crates, a frame, a rotatable shaft carried by said frame and projecting beyond one end thereof, a cutting element mounted on the projecting end of said shaft, a slidable shaft carried by said frame below and parallel to said first named shaft and adapted to oscillate, a standard carried by said slidable shaft outwardly of said frame and adjacent said cutting element, a plate arranged on the upper end of said standard, a pair of spaced upstanding arms carried by said plate, means for clamping an end board to said arms, and a pair of substantially horizontal arms carried by said frame and projecting from the end thereof on opposite sides of said upstanding arms, said horizontal arms being adapted to contact with said upstanding arms to limit the oscillating movement of said slidable shaft throughout its sliding movement.

1,572,798. LIGHT-CONTROL ATTACHMENT FOR FILM-PRINTING MACHINES. ROSCOE CONKLING HUBBARD, Mount Vernon, and AUGUST E. MUTSCHER, South Ozone Park, N. Y., assignors to Erbograph Company, New York, N. Y., a Corporation of New York. Filed Sept. 1, 1923. Serial No. 660,583. 21 Claims. (Cl. 95—75.)



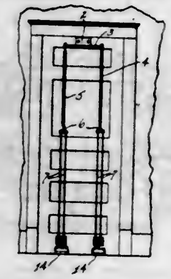
1. In a film printing machine functioning through the medium of a travelling film, means to produce a variable light aperture, means to bring about various predetermined unit adjustments of the first means, and selective means optionally operable to determine the unit adjustments; together with means to fractionally modify the extent of the selected unit adjustment.

1,572,799. DIRIGIBLE HEADLIGHT. ROBERT E. KAISER, Conemaugh, Pa. Filed Apr. 16, 1925. Serial No. 23,566. 1 Claim. (Cl. 240—62.)



In a dirigible headlight structure, an elongated tube adapted for connection at its opposite ends to the fenders of an automobile, said tube being provided with securing flanges at its respective ends, a pair of opposed ears struck out from the tube adjacent each end thereof to provide a pair of openings adjacent the respective ends of the tube, a pair of bearings, each bearing having forwardly extending arms, the forward portions of the arms being disposed adjacent the outer sides of the rearwardly disposed ears of each pair, the free ends of the arms being disposed laterally and secured to the tube, whereby the bearings are disposed directly behind the respective openings in the tube, a pair of head-lights embodying vertical standards, the upper ends of said standards being rotatable in said bearings, forwardly extending crank arms connected to the standards and extending through the respective openings into the tube, and a connecting rod within the tube connected at its respective ends to the forward ends of the respective crank arms.

1,572,800. TRAIN-SIGNALING SYSTEM. WILLIAM KANNENBERG, Milwaukee, Wis. Filed May 8, 1925. Serial No. 28,886. 1 Claim. (Cl. 246—195.)

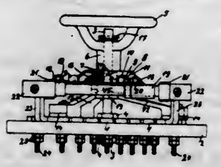


In a signal system of the character described, a source of current carried by a locomotive, a plurality of signal devices in the locomotive, a source of current, a plurality of switches on the locomotive for controlling the energization of said signal devices, means for operating said switches including armatures carried thereby, electro-magnets positioned to attract the armatures, track means for selectively controlling the energization of said electro-magnets, the track means including contact shoes depending from the locomotive, elements mounted along the trackway engageable by the shoes, and a circuit closing device connected with a semaphore and with said track elements, a separate signal device and one of the track elements and one of the locomotive carried shoe members being connected therewith for giving a visible indication when there is no change in the signal.

1,572,801. PISTON-RING COMPRESSOR. PAUL CECIL KEARNEY, Bridgeport, Conn. Filed Feb. 5, 1925. Serial No. 7,014. 2 Claims. (Cl. 29—86.4.)

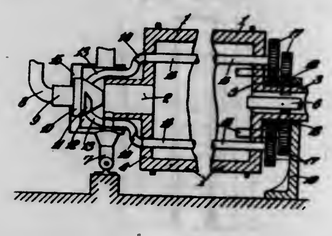
1. A piston ring compressor having a frame consisting of a rigid ring and a plurality of approximately equidistantly spaced arms extending in one direction therefrom at right angles to the diameter of said ring, with a spring finger rigidly fastened to one end of each of said arms and screw means adapted when turned to push inward against said spring fingers to form an adjustably tapered opening through which a ringed piston can be forced.

1,572,802. EXERCISER. CHARLES D. LAYMAN, Louisville, Ky. Filed Mar. 3, 1924. Serial No. 696,633. 3 Claims. (Cl. 272—82.)



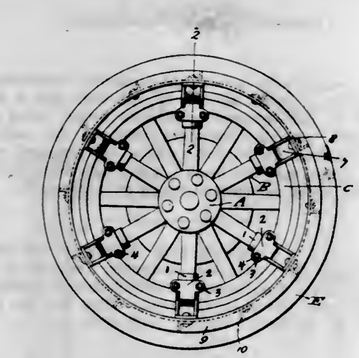
1. An exerciser of the type described, a non-rotatable friction drum, means for hingedly mounting said drum upon a supporting surface, a flexible cable arranged for frictional engagement with said drum, a hand grip associated with said cable at one end thereof, and means for opposing the movement of said cable in one direction associated with the opposite end of the cable.

1,572,803. ORNAMENTAL BUTTON. ABRAHAM I. LEWIS, Newark, N. J. Filed May 26, 1925. Serial No. 33,014. 5 Claims. (Cl. 27—90.)



1. An ornamental button for garments, comprising a button body, a socket formed in said body and a jewel mounted in part of said body, said socket being provided with clamping members whereby the same is clamped to said button body, and a bar arranged opposite the jewel, said bar being adapted to receive threads when the button is sewed in place on a garment.

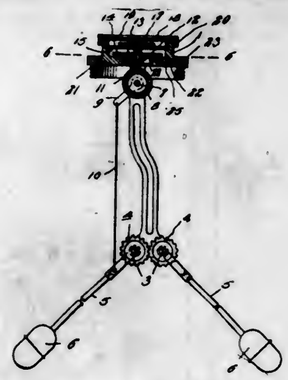
1,572,804. STARTER FOR ELECTRIC MOTORS. CHRISTIAN LEY, Glauchau, Germany, assignor to The Firm of Alos Apparatebau, Gesellschaft mit beschränkter Haftung, Glauchau, Germany. Filed Mar. 28, 1925. Serial No. 19,099. 2 Claims. (Cl. 200—7.)



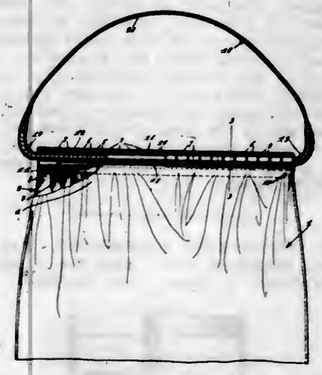
1. A starter for electric motors, comprising, a base plate carrying stationary contacts, a spindle attached to the base plate, a handle, an insulating disk and a contact carrier rotatable about the spindle, the contact carrier including a ring surrounding the spindle at a distance and carrying contact arms for sliding over the stationary contacts, coupling members on the contact carrier for engaging the insulating disk from below, a single centrally arranged spring exerting central pressure on the upper surface of the insulating disk when the starter is assembled, a cap embracing the spring and provided with notches, coupling members on the upper face of the insulating disk engaging the notches in the cap, and means causing the cap and handle to rotate together.

1,572,805. ROTARY FURNACE. ADAM HELMER PEHRSON, Berg Granbergsdal, Sweden, assignor of one-half to Alfred Petter Pehrson, Kincraig, England. Filed June 15, 1925. Serial No. 37,356. 11 Claims. (Cl. 263—33.)

1. In a rotary furnace the combination of inlet and outlet necks at the ends, a valve-like device for controlling the supply of aeriform fluid, conduits extending longitudinally of the furnace and having lateral openings, means for conducting the aeriform fluid from said valve-like device to said longitudinal conduits, and means for preventing the charge in the furnace undergoing treatment from entering said openings during the rotation of the furnace.



1,572,806. WHEEL ATTACHMENT. JOHN PETERSON and HENRY PETERS, Winamac, Ind. Filed June 19, 1925. Serial No. 38,297. 3 Claims. (Cl. 301—40.)

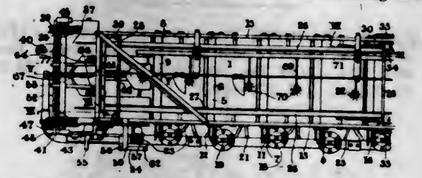


2. A wheel attachment of the character described comprising cooperatively associated semi-circular members adapted to embrace a spoke of the wheel, plates formed on the opposite sides of each semi-circular member for receiving bolts for securing the same to the spoke, a rim bead engaging portion formed on one of said plates, an arm formed on the other of said plates, and means formed on the end of said arm for receiving a cleat or a rim.

1,572,807. GASOLINE GAUGE. ARCHIE P. PRICE, Covington, Ind. Filed July 5, 1922. Serial No. 572,854. 1 Claim. (Cl. 200—84.)

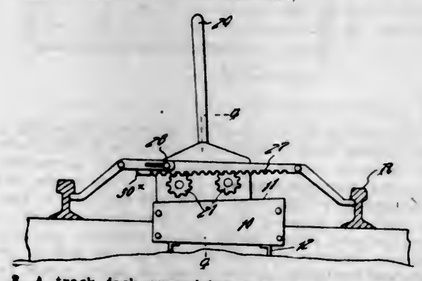
The combination with a cap adapted to have threaded engagement with the filling opening of a tank, and having a recess in its upper face, and a transverse opening passing through one side thereof and communicating with the recess, of a dial arranged in the cap, an indicating hand movable over the dial, a float, a gearing supported upon the under face of the cap and operatively engaging the indicating hand, an arm fixed to alternate with the gearing, a connecting rod between the arm and float, a cam element fixed to rotate with the gearing and disposed in the recess and a spring pressed plunger movable in the transverse recess and adapted to be engaged by the cam to move the plunger to a position to complete an electric circuit.

1,572,808. CLOSURE FOR CONTAINERS. SVENAS QUISLING, Madison, Wis. Filed Oct. 30, 1925. Serial No. 65,810. 3 Claims. (Cl. 150—3.)



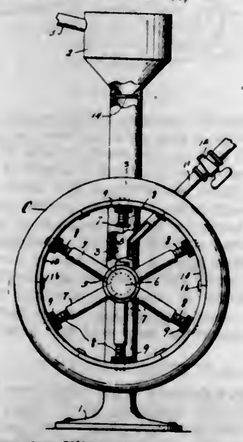
1. A device of the character set forth for connecting the edges of two portions of flexible material, comprising means to set up a rigid trough along one edge of one portion, the interior diameter being greater than the mouth thereof, means to set up a casement along one edge of the other portion having one end fixed in said trough, and a locking cord extending through said casement and having a portion of relatively large diameter and a portion of smaller diameter, said portion of larger diameter when drawn into said casement after positioning the same in said trough, filling and preventing the same from passing the mouth of the trough.

1,572,809. MACHINE FOR SORTING DOCUMENTS. CHARLES FREDERIC RATCLIFF, North Finchley, London, and DONALD MACADIE, Palmers Green, London, England. Filed Feb. 25, 1925. Serial No. 11,594. 16 Claims. (Cl. 209—72.)



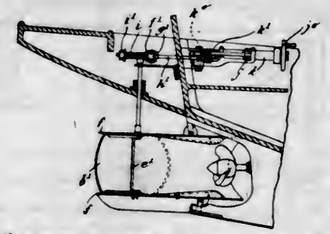
1. A machine for sorting documents and the like provided with determinate perforations, comprising a track having a series of successive interceptors movable from an inoperative position to permit a document to pass

along the track over the interceptor or to an operative position to deflect the document and intercept its track travel, means for feeding the document successively along the track and simultaneously operating all interceptors to an operative position and thereafter permitting them



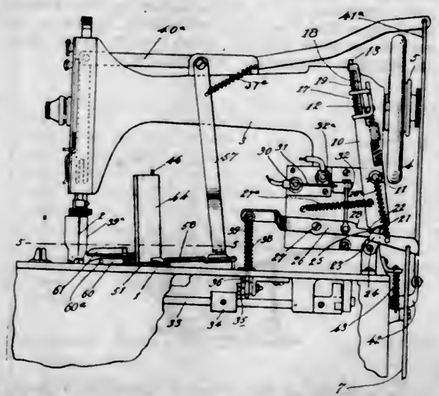
to move to an inoperative position, and pneumatically operated means to prevent an interceptor from returning to an inoperative position, the pneumatic control of such means being governed by the position of the perforation in the document approaching the interceptor.

1,572,810. RAIL JACK. THOMAS RAY, Siegas, New Brunswick, Canada. Filed Sept. 30, 1924. Serial No. 740,808. 3 Claims. (Cl. 254—43.)



3. A track jack comprising a supporting base having an inclined top, arms disposed transversely of the track above the base and engaging the rails of said track, a member mounted for vertical adjustment upon the inclined top of the base, means operatively associating the member and arms whereby the latter may be moved vertically and horizontally and means whereby the arm moving means may be actuated.

1,572,811. TIRE-FILLING APPARATUS. ENRICO RE, Camden, N. J. Filed Aug. 14, 1924. Serial No. 732,005. 1 Claim. (Cl. 154—9.)

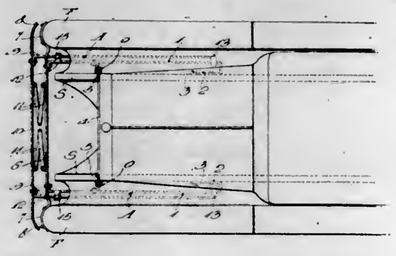


An apparatus for filling tires comprising, in combination, a supporting member provided at its upper portion with a reservoir, said supporting member having extending therethrough a conduit leading from the reservoir and opening through a side wall of the member at a point below the reservoir, a check valve within the conduit to prevent retrograde flow through the conduit into the reservoir, a laterally disposed tubular member engaged within the lower open end of the conduit of the supporting member and in communication therewith, the outer end of said tubular member being closed, tubular members radiating from the first named tubular member and in communication therewith, said last named members being expansible and retractile, a rim section carried by each of the last named members, each of the said last named members extending through and outwardly of the rim section carried thereby, and a nozzle extending within the lower portion of the conduit of the supporting member and discharging toward the lower end thereof, said nozzle being adapted for communication with a fluid under pressure.

1,572,812. PROPULSION AND MANEUVERING OF SHIPS AND AIRCRAFT. EDMUND SCOTT GUSTAVE REES, Wolverhampton, England. Filed Sept. 8, 1922. Serial No. 586,949. 7 Claims. (Cl. 244—18.)

1. In the propulsion and maneuvering of ships and aircraft, the combination of a rearwardly-flaring augmenter or draft tube situated immediately in rear of the propeller, and a pressure chamber at the rear end of the said tube increasing in cross-sectional area from said tube to a point intermediate its length, and then decreasing to its discharge outlet, said pressure chamber being adapted to raise the pressure of the fluid stream within the chamber to a value greater than that or the surrounding fluid.

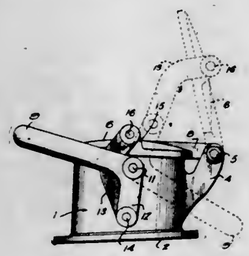
1,572,813. TAG-MOUNTING MACHINE. MORRIS G. ROSENTHAL, Cincinnati, Ohio, assignor of one-half to Fred E. Klein, Cincinnati, Ohio. Filed Mar. 4, 1922. Serial No. 540,956. 12 Claims. (Cl. 192—2.)



1. In a sewing machine, the combination with driving means adapted for connection with a source of electric power, a stop for the driving means, a switch controlled by the operator, both of said switches in circuit with

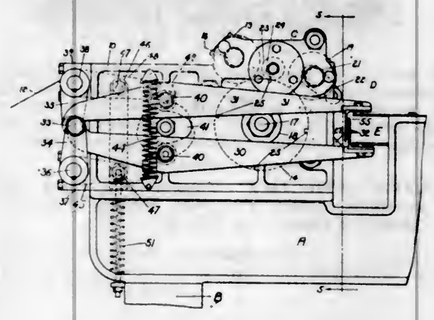
the electric source of power, a release for the stop, and connections from the first named switch to the stop, and from the second named switch to the stop release, for the purpose described.

1,572,814. DETERGENT COMPOSITION. WILLIAM SCHNEIDERMAN, New York, N. Y. Filed May 25, 1923. Serial No. 641,512. 4 Claims. (Cl. 87—5.)



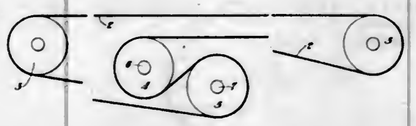
1. A detergent composition comprising about one volume of a soap cream, about an equal volume of turpentine, and a somewhat greater volume of petrolatum, together with a small amount of carbon tetrachloride.

1,572,815. COMBINED LUGGAGE CARRIER AND BUMPER. RUDOLF G. SCHULTZ and OTTO L. HENDREN, Columbus, Nebr.; said Schultz assignor to said Hendren; Mary Hendren administratrix of said Otto Hendren, deceased. Filed Apr. 20, 1925. Serial No. 24,538. 3 Claims. (Cl. 293—55.)



1. A combined bumper and luggage carrier comprising a pair of parallel longitudinal bars adapted to be secured to the side bars of a chassis, a transverse bar secured to and extending between the outer ends of said longitudinal bars, a bumper bar spaced outwardly from and parallel with said transverse bar, a second pair of parallel longitudinal bars carrying said bumper, means slidably mounting said second pair of longitudinal bars on said first named pair of longitudinal bars, and extensible and retractible luggage supporting means between and connected to said transverse bar and said bumper bar.

1,572,816. CLOSURE MEMBER. WILLIAM SCHWEMLEIN, Parkersburg, W. Va., assignor to The Parkersburg Rig & Reel Company, Parkersburg, W. Va., a Corporation of West Virgina. Filed Feb. 27, 1924. Serial No. 695,556. 3 Claims. (Cl. 220—36.)

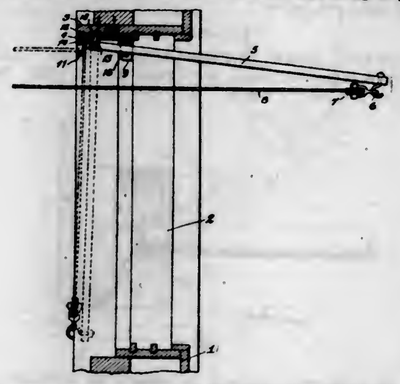


1. In a device of the character described, a shell, a cover pivoted on said shell, an operating lever pivoted on said shell, said lever being provided with downwardly extending terminal extending beyond their pivots, and a floating link connected to each of said terminals and to said cover whereby upward movement of the free end of said lever will move said terminals about said pivots as an axis and raise said links to open said cover.

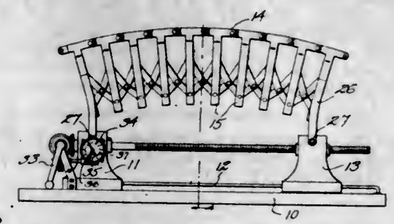
1,572,817. MACHINE FOR INTERFOLDING PAPER. GLENN A. SHAFFER and FRANKLIN H. WIRTZ, Green Bay, Wis. Filed Dec. 31, 1924. Serial No. 759,059. 10 Claims. (Cl. 270—39.)

1. A machine of the character described, comprising a stand, a guide plate on the stand, means for feeding sheets onto the plate, means for cutting the sheets successively into units, strippers adjacent to the cutting means, one of the strippers being constructed and arranged to position the units adjacent to each other in overlapped relation to each other, tucker means including pivotally connected members on opposite sides of the path of the units, and mechanism for actuating the tucker means for effecting the interfolding of said units and the pressing of the same in an assembled mass.

1,572,818. DRIVE MECHANISM. FRANK E. SMITH, Scottdale, Pa. Filed Mar. 26, 1925. Serial No. 18,539. 6 Claims. (Cl. 198—203.)



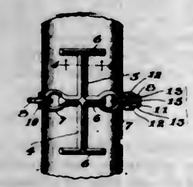
2. The combination with an endless conveyer of tandem drive pulleys over which said conveyer is trained, drive shafts for said pulleys, the shaft for one of said pulleys having a geared connection with a source of power forming a positive drive, the other of said drive shafts being divided intermediate its ends, one portion of said second named shaft having a geared connection with a source of power forming a positive drive, a coupling connecting the other portion of said second named shaft with said first named portion, and means in said coupling for automatically forming a positive connection between said shaft portion when said second named portion tends to rotate at a lesser speed than said first named portion.



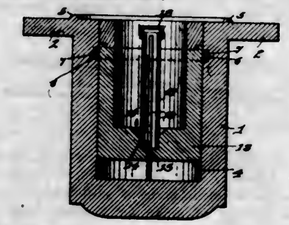
1,572,819. EXTENSION ARM FOR PULLEY LINES. RALPH H. SMITH, Brooklyn, N. Y. Filed Feb. 4, 1924. Serial No. 690,597. 2 Claims. (Cl. 68—34.)

2. In a clothesline support, a bracket for supporting an arm, said bracket being formed with a base having a

pair of spaced ears at one end, said ears being apertured for receiving a pin, a pair of spaced ears near the opposite end formed with apertures for receiving a pivotal pin, a pair of hooks arranged near the last mentioned ears, and a shoulder arranged in the base adjacent the second mentioned ears.

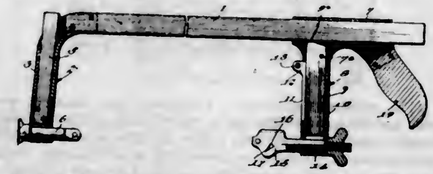


1,572,820. ADJUSTABLE CURVATURE FORM. ANTON W. SPORER, Manitowoc, Wis. Filed Mar. 12, 1923. Serial No. 624,682. 3 Claims. (Cl. 33—177.)



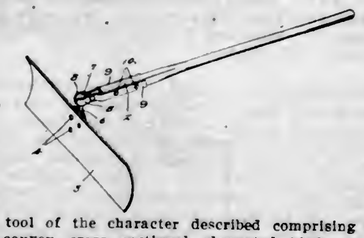
1. An adjustable form of the character described comprising a base, a stationary upright thereon, a block slidable along the base, a form supported from the block and upright and consisting of a series of pivotally connected sections, and means for adjusting the position of the movable block, said means consisting of a screw rotatable through the upright and having threaded connection with the block, a gear on said screw, a counter-shaft carrying a gear meshing with said first named gear and a handle on the counter-shaft.

1,572,821. ANTISKID DEVICE. WILLIAM F. STAGGERS, Mannington, W. Va. Filed Jan. 9, 1924. Serial No. 685,253. 3 Claims. (Cl. 152—14.)



1. An antiskid device including a metallic rod adapted to extend longitudinally of the tire, a plurality of transverse rods carried by the longitudinally extending rod, and means for attaching chains to the ends of one of the intermediate transverse rods, the ends of the remaining transverse rods being free.

1,572,822. HYDRAULIC RAM. SAMUAL E. STEPHENSON, Atlanta, Ga. Filed Dec. 17, 1924. Serial No. 756,500. 10 Claims. (Cl. 138—10.)

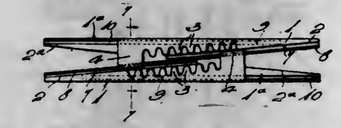


1. A hydraulic ram of the sectional or cut type provided with means for maintaining the joint thereof above the packing in the cylinder for the ram.

1,572,823. HACK-SAW FRAME. FRANCIS ALEXANDER STIERHEIM, Pittsburgh, Pa. Filed Jan. 23, 1924. Serial No. 687,993. 2 Claims. (Cl. 145—34.)

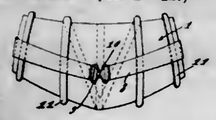
1. A hack saw frame including a body portion and a pair of diverging legs carried by the body portion, each leg of the pair comprising a pair of leg members constrained to axial adjustment relative to each other whereby the legs are extensible, one pair of the legs being adjustable along the body portion, the legs having means for holding and tensioning the saw blade, one of the leg members of one of the legs being engageable with the body portion under the influence of said means when the same is tightened up to secure a saw blade in position.

1,572,824. SCRAPER. JOHN TATGE, White City, Kans. Filed Oct. 22, 1923. Serial No. 670,167. 1 Claim. (Cl. 37—53.)



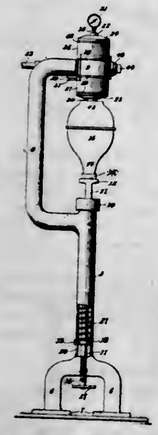
A tool of the character described comprising a concavo-convex cross sectional elongated blade, a shank secured to the convex side of said blade midway its ends and terminating beyond the upper longitudinal edge thereof in a ball, a handle, straps secured to one end of said handle and terminating in concavo-convex resilient members in a manner to form a socket for receiving the ball, said ball having a circumferential series of spaced notches, with each notch disposed substantially at right angles to the length of the socket and being adapted to lessen the liability of the ball casually turning in the socket.

1,572,825. PRINTER'S QUOIN. ALBERT E. UNRUH, Salem, Oreg., assignor of one-half to Stanley J. Ostrander, Salem, Oreg. Filed May 14, 1925. Serial No. 30,245. 2 Claims. (Cl. 254—42.)



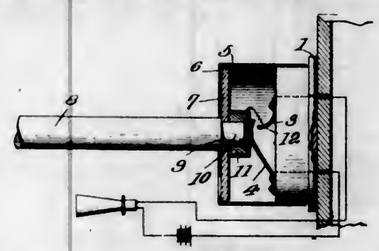
1. A printer's quoin comprising a pair of co-operating wedges having oblique contacting inner edges and having

their wide ends remote from each other, a second pair of similar wedges similarly related with each other, one pair of wedges contacting with the other pair, and the oblique edges of one pair crossing the correspond-



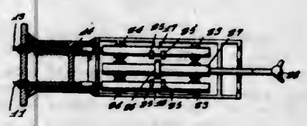
ing edges of the other pair, means for longitudinally guiding the wedges, and slidable connecting means between the adjacent wide ends of said wedges causing one wedge of each pair to move as a single unit with one wedge of the other pair.

1,572,826. COMBINED ABDOMINAL SUPPORTER AND TROUSERS-SUSPENDING DEVICE. WILLIAM H. VIRGIN, New Orleans, La. Filed Mar. 21, 1925. Serial No. 17,283. 2 Claims. (Cl. 2—41.)



1. A combined abdominal supporter and trousers suspending device comprising a belt forming an abdomen support and provided with means for detachably connecting the ends thereof together, a stay member flush with the top and bottom edges of the belt and secured to the inner face of the latter at the vertical median thereof, a pair of oppositely disposed inclined stay members flush with the top and bottom edges of the belt, secured to the inner face of the latter and extending from one end of the vertical median thereof, and a series of, unitary, independent spaced combined belt stay and trousers suspending elements secured to the outer face of said belt said elements of a length to extend from the lower edge and project above the top edge of the belt, said upper extended ends of said elements adapted to be detachably connected with the waist band of a pair of trousers for suspending the latter.

1,572,827. ELECTRICALLY-OPERATED SEALING MEANS FOR VACUUM BOTTLES. WALTER WAGNER, Chicago, Ill. Filed May 29, 1923. Serial No. 642,323. 7 Claims. (Cl. 220—1.)

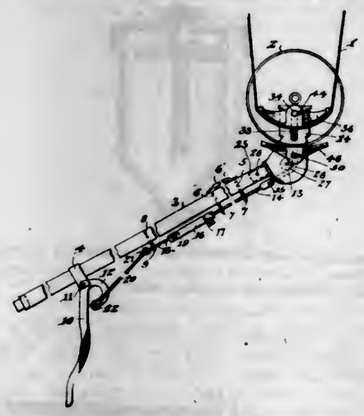


1. The method of producing a vacuum in a metallic walled chamber wherein a finely divided material is positioned and sealing the same which consists in connecting the chamber while in an inverted position to a vacuum pump and sealing the chamber by electrically inserting a plug into its connection after the said chamber has been evacuated.

1,572,828. HORN BUTTON ATTACHMENT. ALBERT U. WALTER, Baltimore, Md. Filed Aug. 2, 1922. Serial No. 579,183. 1 Claim. (Cl. 200—59.)

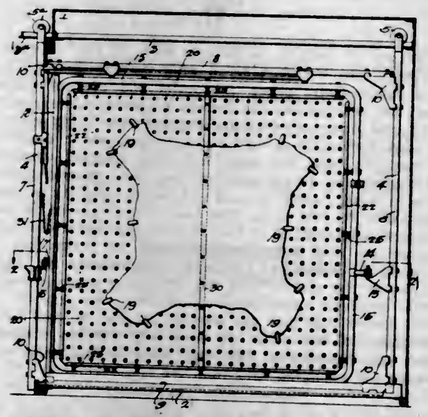
An attachment adapted to replace the ordinary push button of an automobile horn controlling switch, including a plate constructed and arranged to replace the button of the switch and to be loosely retained in place adjacent the contacts of the switch by the button retaining flange of the usual housing enclosing the contacts of the switch, one of said contacts being yielding and operating to normally hold the plate in contact with the flange, said plate having rigidly attached thereto, centrally thereof, a relatively long operating lever, which lever projects outwardly through the open end of the housing when the plate is positioned therein to a convenient point for operation, said plate fulcruming at any point on the retaining flange for closing the contacts when said lever is operated in any direction.

1,572,829. GEAR-SHIFT CONTROL. HUGH T. WHITE, Dallas, Tex. Filed June 4, 1924. Serial No. 717,809. 2 Claims. (Cl. 74—39.)



1. A gear shifting mechanism for motor vehicles, comprising in combination with the gear shifting members of the transmission, a housing, operating rods slidably mounted within the housing and having inwardly extended spaced enlargements formed thereon, flexible members for connecting the operating rods to the gear shifting members of the transmission, a slidable rod disposed between the operating rods, said slidable rod being manually controlled, an enlargement carried by the last mentioned rod and extending upwardly therefrom, said enlargement adapted to be moved between the enlargements of the operating rods to move the operating rods, and means for normally holding the slidable rod normally against movement.

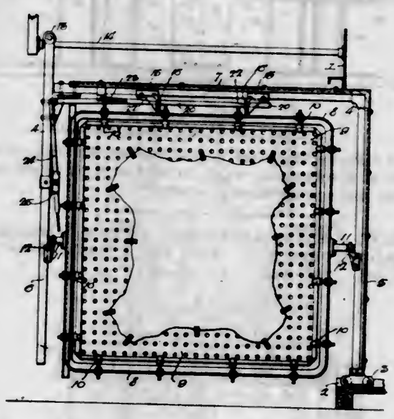
1,572,830. DEVICE FOR PLACING BELTS ON PULLEYS. FRED ANDREWS, Detroit, Mich. Filed Aug. 29, 1925. Serial No. 53,336. 5 Claims. (Cl. 64—51.)



1. A device for the purpose set forth comprising a combined support and housing, a handle bar extended from one end thereof, a stationary lower jaw supported from each side of the housing, a vertically movable normally elevated, spring controlled carrier arranged within said housing, a pair of upper clamping jaws supported

from the carrier and arranged at opposite sides of the housing, each upper jaw cooperating with a lower jaw, and means shiftably supported from the handle bar and

extending into the housing for shifting the carrier from normal position, to provide for the cooperation of an upper and lower jaw to position a belt on a pulley.



1,572,831. CARRYING FRAME FOR LEATHER DRIERS. ELWOOD B. AYRES, Melrose Park, Pa., assignor to Proctor and Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 2, 1925. Serial No. 60,106. 8 Claims. (Cl. 94—40.)

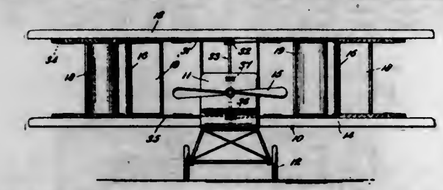
4. The combination of a carriage adapted to be inserted into a drier; a frame pivotally mounted on the carriage; a perforated plate within the frame for supporting the material to be dried; and adjustable bolts connecting the plate with the frame so that tension can be applied to the perforated plate.

1,572,832. LOCKING DEVICE FOR DRYING FRAMES. ELWOOD B. AYRES, Melrose Park, and ALPHEUS O. HURXTHAL, Philadelphia, Pa., assignors to Proctor and Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 3, 1925. Serial No. 60,241. 5 Claims. (Cl. 34—40.)

5. The combination of a drying frame; a carriage on which the frame is mounted; slotted brackets on the upper portion of the carriage; a latch slidably mounted on each bracket, the latch being notched to engage the frame and also notched at one side; a longitudinally movable cam bar extending through the slots of the brackets and through the notches in the sides of the

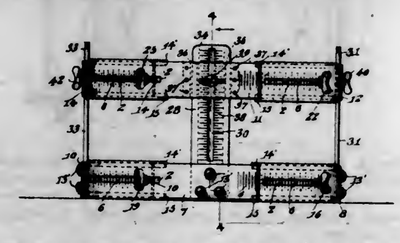
latches; a lever for moving said bar; and a spring for withdrawing the bar to allow the latches to normally rest in the engaging position, so that when the frame is moved into the vertical position it will be engaged by the latches.

1,572,833. BURNER CONSTRUCTION. GEORGE BAKER, Pershing, Okla., assignor of one-third to Lee McCrory and one-third to Rees J. Jones, jr., both of Pawhuska, Okla. Filed June 9, 1925. Serial No. 36,029. 5 Claims. (Cl. 158—118.)



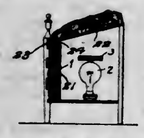
4. In combination with a fixed mixing chamber having an inlet and a gas drum aligned with said inlet, a sleeve slidably fitting the inlet of the mixing chamber and said drum, and having means whereby it may be secured in adjusted positions with relation thereto, said sleeve having openings formed in the wall thereof elongated longitudinally of the axis of the sleeve, the sleeve having secured thereto upon its exterior and at the end of the openings next adjacent the inlet of the mixing chamber the smaller end of a conical flange the outer end of which is directed toward the drum engaging end of the sleeve, said sleeve being of greater length than the openings and a collar slidably mounted upon the sleeve in opposition to the larger end of the flange and having a flange which, when in one position of the collar, engages the first named flange interiorly to prevent the passage of air between said flange and the sleeve to said opening and means for securing said collar in adjusted positions.

1,572,834. BRAKE FOR AIRPLANES. HAROLD E. BAUGHMAN, Waterloo, Iowa. Filed Nov. 14, 1925. Serial No. 69,043. 7 Claims. (Cl. 244—29.)



1. In an airplane, a strut member, the rear portions of which are cut away; aerofoils normally positioned behind said strut member in planes substantially parallel

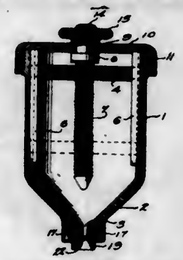
to the path of wind travel with their forward portions in the cut away portions of said strut, said aerofoils



being movable therefrom to positions at the sides of said strut at a substantial angle to said path of travel; and means for moving said aerofoils.

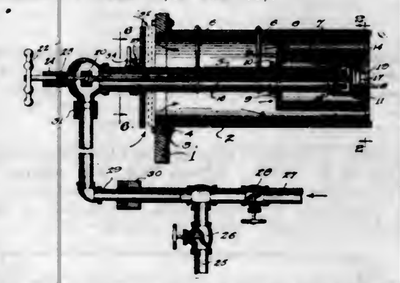
1,572,835. SKIRT-MEASURING DEVICE. MINNIE J. BEAMER, Flint, Mich. Filed July 3, 1925. Serial No. 41,383. 2 Claims. (Cl. 33—9.)

1. A measuring device for the purpose set forth comprising a series of vertically disposed height gauges, a lower set of circumferential gauges interengaging with each other and further adjustably connected together, means for fixedly securing each of the gauges of said set to the lower end of a height gauge, an upper set of circumferential gauges interengaging with each other and further adjustably connected together and bodily adjustable vertically with respect to said height gauges, means for adjustably connecting each of the gauges of the upper set to a height gauge, and each of the gauges of said sets provided with a lengthwise extending slot and its outer face formed with scale graduations, the scale graduations of a gauge of one set exposable through the slot of an adjacent gauge of the same set.



1,572,836. ELECTRIC FIRE. HERBERT HENRY BERRY, London, England. Filed Sept. 5, 1924. Serial No. 736,190. 1 Claim. (Cl. 240—2.)

An electric fire, comprising an independent grate, a panel fitted into the front of the grate, imitation fuel in the panel, a second panel fitted over the grate and removable therefrom, imitation fuel carried by the second panel, and a bar carried by said second panel and adapted to be positioned in front of and conceal the juncture between the panels at the upper forward edges thereof when the panels are in applied position.



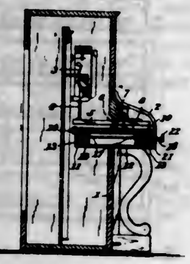
1,572,837. DISPENSING DEVICE. HELEN BETTS and EDWARD DAWSON BETTS, Passaic, N. J. Filed Aug. 7, 1923. Serial No. 656,247. 3 Claims. (Cl. 221—79.)

1. In an apparatus of the character described, a container having an outlet opening at the lower end thereof, means for forcing the contents of said container toward said outlet opening, a plate arranged beneath said outlet opening, said plate being provided with an opening in alinement with said outlet opening, a cylinder depending from said plate in alinement with

said openings, and a cutter member slidably mounted in said plate adjacent the opening in said container and normally closing the opening therein.

1,572,838. LIQUID-FUEL BURNER. JAMES B. BIRD, Vancouver, Wash. Filed Dec. 10, 1924. Serial No. 755,044. 1 Claim. (Cl. 158—78).

In an oil burner, a burner pipe, a rod extending through said burner pipe, a plug carried by said rod and substantially filling the outlet end of said burner pipe and adapted to slide therein, a burner tip carried by said pipe and extending therebeyond, the inner surface of said burner tip being tapered to increase in diameter toward its outer end and having an internal diameter throughout its length greater than that of said burner pipe, a head carried by said rod within said tip in close proximity to said plug, said head being tapered to correspond substantially to that of the inner surface of said burner tip and being provided with an inner face of substantial diameter arranged substantially at right angles to the axis of said rod, said plug being provided with openings communicating between the interior of said burner pipe and the interior of said tip and being arranged in the circle, of materially smaller diameter than the diameter of the inner face of said head, and means for adjusting said rod.



1,572,839. BAKED-ENAMEL REMOVER. GEORGE W. BLAIR, Wabash, Ind. Filed Mar. 26, 1924. Serial No. 702,150. 2 Claims. (Cl. 87—5.)

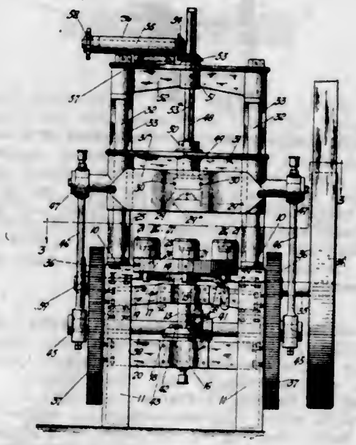
1. A liquid composition suitable for removing baked enamel from surfaces, comprising a major proportion of shellac, smaller proportions of lacquer and paraffin wax, and a still smaller proportion of aqua-ammonia.

1,572,840. PRODUCTION OF PULP. LINN BRADLEY, Montclair, N. J., and EDWARD P. MCKEEVER, Plattsburg, N. Y. Original application filed Mar. 28, 1921, Serial No. 456,187. Divided and this application filed Apr. 10, 1924. Serial No. 705,711. 6 Claims. (Cl. 92—18.)

2. In the preparation of chemical pulp, the use of a cooking liquor comprising sodium hydroxide and sodium thiosulfate, the sodium hydroxide being used materially in excess of the amount required to decompose silicates and aluminates in the material treated.

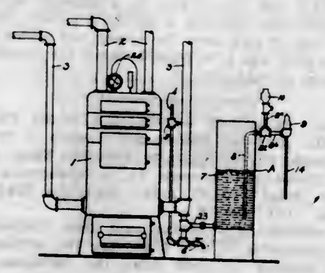
1,572,841. SUPERTRANSPOSING PIANO. ENGELBERT W. BACHMEYER, Hawley, Pa. Filed Jan. 28, 1922. Serial No. 531,218. 4 Claims. (Cl. 84—447.)

4. An automatic transposing mechanism for a keyboard instrument comprising a keyboard structure including a base member and spaced depending flanges carried by said base member, rack members carried by said depending flanges, a guide frame for said base member, operating members extending through said flanges and through the guide frame and projecting through the casing of the instrument near either end thereof, and means carried by said operating members for cooperation with the rack members to shift the keyboard structure in the guide frame in either direction to transpose automatically from one key to another so that a selection played in a selected key according to the fingering on the keyboard may be rendered in any other key desired, each complete operation of the operating members serving to shift the keyboard a predetermined number of spaces and change the keyboard to as many different positions for playing the selection in the key desired, each movement of the keyboard structure serving to change the same to position for playing in a different key, and indicating means carried by said base board and adapted to extend through slots in certain of said keys for cooperation with an indicating scale mounted on said instrument.



1,572,842. AUXILIARY INTAKE AIR VALVE. LE ROY R. BLADES, Chicago, Ill., assignor, by direct and mesne assignments, to Frank J. Gandy. Filed Aug. 11, 1923. Serial No. 656,932. 4 Claims. (Cl. 251—145.)

1. In combination with an intake manifold, air supply means communicating therewith and operable by suction therein to vary the amount of air admitted therethrough, said means comprising a sleeve fixed to said manifold and opening thereinto, a sleeve slidable in said first-mentioned sleeve and having a longitudinal slit adjacent its outer end, a casing around said sleeves and having a port therethrough, said casing comprising a plurality of members adjustably secured to each other, and a spring for yieldingly holding said inner sleeve in its normal position whereby the increase of suction in the manifold will move said inner sleeve against the action of the spring to vary the effective size of the slit opening.



4. In combination with an intake manifold, a sleeve adapted to be fixed to said manifold and opening thereinto, a valve slidably journaled by said sleeve and having an elongated opening at one end, means for normally pressing said valve outwardly of said sleeve, a casing enclosing said sleeve and valve and having a port through which all air entering said opening must flow, said valve being actuated by suction in said manifold, and manually operable means for controlling the effective size of the port.

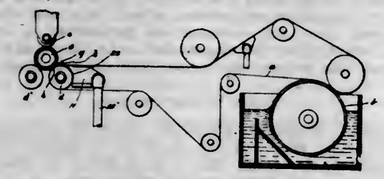
1,572,843. PRESS. JOHN J. CHAMBERLAIN, Akron, Ohio, assignor to The United States Stoneware Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 11, 1924. Serial No. 749,147. 7 Claims. (Cl. 25—73.)

1. A machine of the class described comprising a rotary mold-carrying table, a die reciprocable toward and from said table, and means for rotating the table and reciprocating the die, said means comprising a rotating shaft, an eccentric on the shaft, a drive plate secured to the table, projections on the drive plate, a pawl formed on the eccentric strap and adapted to ride on said plate and to engage the projections, a stop plate also on the eccentric strap for engaging the projections, a crosshead for carrying the die, cranks on the shaft and connecting rods between the cranks and the crosshead.

1,572,844. HEATING SYSTEM. JOHN M. DOUGHERTY, St. Louis, Mo., assignor to D. & T. Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 27, 1925. Serial No. 26,162. 7 Claims. (Cl. 237—66.)

3. In a closed liquid heating system, an expansion tank for containing air and water under pressure exceeding atmospheric pressure, an air inlet valve connected to said tank, a drain cock for the system connected to the lower portion of said tank, and a supply cock for connecting the system to an exterior source of liquid under pressure greater than atmospheric pressure, whereby solely by operation of said cocks said tank may be charged with air under pressure exceeding atmospheric pressure.

1,572,845. CURTAIN SUPPORT. GRACE A. EFFORD and NELS S. ERICKSON, Chicago, Ill., assignors, by mesne assignments, to Urbane L. Barrett, Mason City, Iowa. Filed Aug. 24, 1923. Serial No. 659,049. 7 Claims. (Cl. 156—22.)

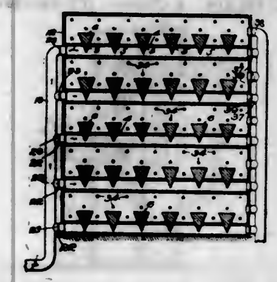


1. In a curtain support, the combination of a bracket provided with a vertical bearing, a tubular curtain rod formed with a tubular vertical pintle mounted in and projecting below said bearing, the lower end of said pintle having an outwardly swaged flange, and a coil compression spring encircling the projecting portion of said pintle and stepped at its lower end on said flange and at its upper end abutting against the lower end of said bearing.

1,572,846. MANUFACTURE OF ALKALI-METAL PHOSPHATES. CLAYTON M. HOFF, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 17, 1924. Serial No. 726,634. 9 Claims. (Cl. 204—9.)

1. Process which comprises subjecting a solution of an alkali metal phosphate to electrolysis in a diaphragm cell and separately recovering the alkali metal phosphate contents of the anode and cathode liquors.

1,572,847. SUCTION APPARATUS. HOWARD PARKER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of New Hampshire. Filed Dec. 12, 1921. Serial No. 521,895. 28 Claims. (Cl. 92—66.)



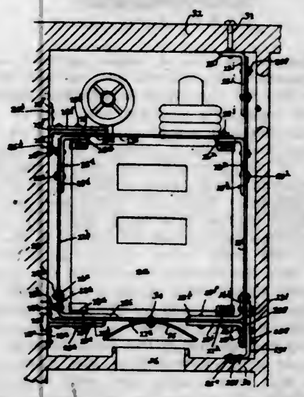
1. That improvement in the formation of bodies by winding a wet web of pulp onto a mandrel which consists in passing a wet web of pulp on a conveyor between an imperforate base roll and a mandrel, convolutely winding the web of pulp onto the latter, and sucking water from the pulp web at a point between the conveyor and the surface of said roll.

1,572,848. REMOVAL OF OXIDES FROM FERROUS METAL. RUDYARD PORTER and JOSHUA C. WHETZEL, Pittsburgh, Pa., assignors to American Sheet and Tin Plate Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Aug. 27, 1924. Serial No. 734,519. 10 Claims. (Cl. 148—8.)

5. A method of removing oxid from ferrous metal articles consisting in first immersing the articles in an alkaline solution to break down the resistance of the oxid to acid, and then immersing the article so treated in an acid picking bath to remove the oxid.

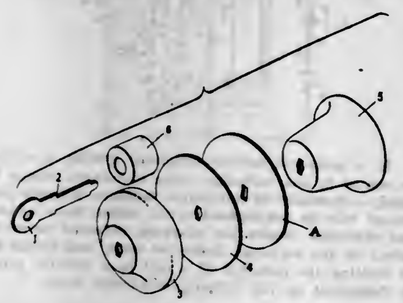
1,572,849. DRYING APPARATUS. FREDERICK A. SECORD, Portland, Me., assignor of one-third to Charles Henry Peters and one-third to Alexander Pierce Patterson, both of St. John, New Brunswick, Canada. Filed Apr. 25, 1922. Serial No. 556,445. 19 Claims. Cl. 34—19.)

6. A drying apparatus comprising, in combination, a hollow support provided with an opening for the partial insertion of the work, means to supply a current of tempered fluid to the interior of said support in contact



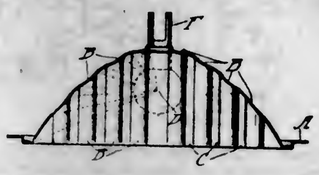
with the portion of the work projecting thereinto and means to supply a fluid of lower temperature to the portion of the work protruding from said support.

1,572,850. VANITY CASE. HENRY SLAIGER, North Attleboro, Mass., assignor to D. F. Briggs Company, Attleboro, Mass. Filed Apr. 4, 1925. Serial No. 20,657. 4 Claims. (Cl. 132—83.)



1. In a vanity case, a body, a cover therefor, a ring therein, a powder cup seated on the rim and having a depressed part, a rouge tray engaged in the depressed part, a top member seated on the top edge of the rim of the cup and having an opening in register with the tray and a segmental opening, and a centrally pivoted rotatable cover pivoted to the cup bottom and to the top member and having a segmental opening for register with either the tray or the powder cup.

1,572,851. UNIVERSAL BRINE-TANK SUPPORT. CHARLES C. SPREEN, Detroit, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Dec. 17, 1924. Serial No. 756,514. 1 Claim. (Cl. 248—20.)



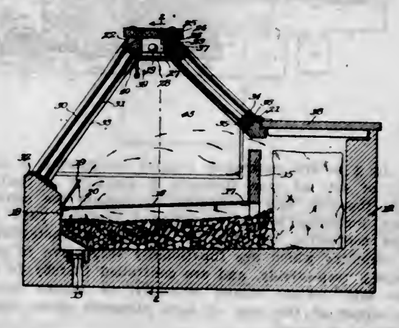
Means, for supporting a brine tank from the interior of a refrigerator, comprising a plurality of seat members, disposed about and engaging the edges of said tank, a plurality of L-shaped members each having one arm connected to one of said seat members and the other arm connected to a supporting member, a plurality of adjustable strip members, comprising such supporting members, and connecting said seat members and said L-shaped members into a complete support for said tank, and means securing together said seat members and L-shaped members and strip members into such complete support.

1,572,852. TOY TELEPHONE TRANSMITTER. CLIFFORD M. WATROUS, East Hampton, Conn., assignor to Gong Bell Manufacturing Company, a Corporation of Connecticut. Filed May 13, 1925. Serial No. 29,852. 13 Claims. (Cl. 46—46.)

3. As an article of manufacture for a toy telephone, a transmitter having a supporting bar for a mouthpiece, a transmitter shell supported on the bar with said mouthpiece and a stop block within the transmitter shell and surrounding the bar.

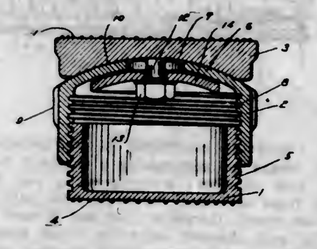
1,572,853. LIGHT PROJECTOR. JOHN GRAHAM BALSILLIE, Melbourne, Victoria, Australia, assignor, by mesne assignments, to The American Flatlite Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 19, 1922. Serial No. 589,284. 3 Claims. (Cl. 240—41.)

1. A concave reflector, part of which is divided into parallel configurations or sections which have their edges in planes parallel to each other to project the rays of light reflected therefrom into an elongated elliptical shape in cross section, and other parts being substantially portions of a surface of revolution of a conic section to project the rays issuing from a light source at its focus in a beam of substantially circular cross section positioned about the minor axis of said elongated ellipse.



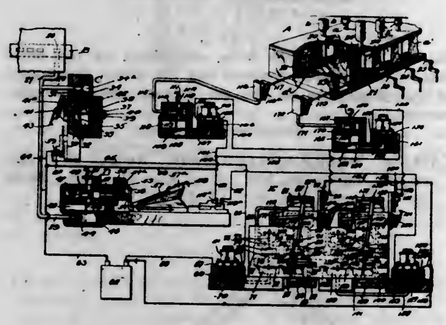
1,572,854. PAVING BLOCK AND THE LIKE. ERNEST CLARK, Rio de Janeiro, Brazil, and DANIEL T. GILMARTIN, Jr., East Orange, N. J. Filed Feb. 7, 1924. Serial No. 691,161. 9 Claims. (Cl. 94—15.)

1. An article of the character described comprising, a rubber element and a plastic element united by direct contact between the two, one of said elements having projections extending into the other, a plurality of said projections being spaced from the edges of the element to which they belong, and the binding contact between



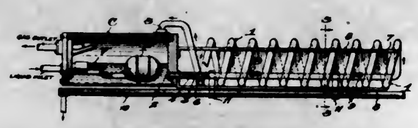
the two said elements being established by the direct contact of the said elements and the direct engagement of the projections on the one element with the other element.

1,572,855. REFRIGERATED CASE. REUBEN E. OTTENHEIMER, Baltimore, Md. Filed Jan. 31, 1925. Serial No. 6,151. 10 Claims. (Cl. 62—87.)



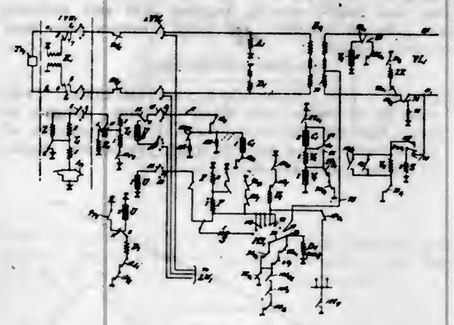
1. The combination of a display case having a wide bottom, a top defined by a narrow frame structure, and an inclined transparent front sustained at its upper edge by said frame structure; artificial lighting means concealed within the top of said frame structure; and refrigerating means arranged to exert a localized refrigerating effect in the lower portion of said case.

1,572,856. TREE JACK. LAWRENCE WATSON and AUSTIN O. MIDDLEMISS, Vancouver, Wash. Filed July 21, 1925. Serial No. 45,027. 1 Claim. (Cl. 254—101.)



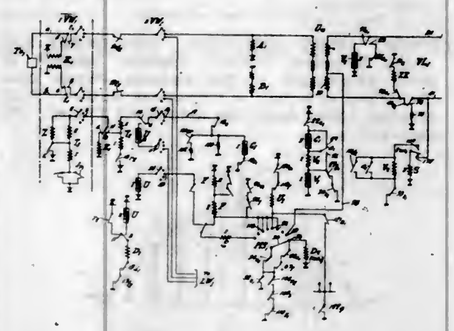
In a lifting jack, a cylindrically shaped base with threads on the outer surface, a cylindrically shaped cap with threads on the inner surface to correspond with the threads of the base, and means on the outer surface of the cap by which it may be rotated, said cap having a curved upper surface with an opening in the center and a head with a stem projecting through the opening of the cap, said stem having means at its inner end for adjustably and slidably holding the head to the cap.

1,572,857. AUTOMATIC MUSICAL INSTRUMENT. HEINRICH BOCKISCH, deceased, late of Poughkeepsie, N. Y.; by George W. Gittins, administrator, New York, assignor to Welte-Mignon Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 21, 1920. Serial No. 375,575. 83 Claims. (Cl. 84—88.)



1. In a record controlled musical instrument, a plurality of sets of tone elements, a plurality of control means therefor, and mechanism to operate the control means, including means providing a common path for record controlled impulses of different characteristics, and members which are functionally responsive to said impulses, respectively, and are controlled thereby to operate said control means severally, to render operative either of the sets of tone elements alone under control of a record.

1,572,858. FLOODED HORIZONTAL REFRIGERATING COIL. EDWARD S. HALSEY, Washington, D. C., assignor of one-third to Royce A. Rness, Washington, D. C. Filed Apr. 25, 1925. Serial No. 25,827. 8 Claims. (Cl. 62—95.)

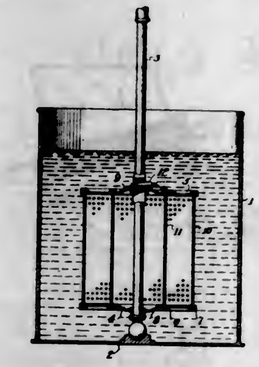


1. An evaporator comprising a refrigerating float chamber; means for maintaining a constant refrigerant level in such chamber; a refrigerating coil having a series of traps extending outwardly from said chamber in a closed circuit therewith; one end of said coil connecting to said chamber below the liquid level therein and its other end entering said chamber above the liquid level; a check valve in the coil adapted to restrict flow of the liquid in one direction; a liquid supply pipe connected to said chamber, and means for conducting vaporized refrigerant from said chamber whereby the coutinuous exhaust of vapor from said chamber will cause spasmodic convulsive ebullition in the lower portion of each succeeding trap of said circuit with intermittent seating and unseating of said valve to cause flow of all alternate slugs of liquid and gas throughout said closed circuit in a continuous flow.

1,572,859. TELEPHONE SYSTEM. ERNST HORN, Berlin, and MAX LANGER, Hermsdorf, Germany, assignors to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt, near Berlin, Germany. Filed Sept. 7, 1923. Serial No. 661,409. 4 Claims. (Cl. 179—9.)

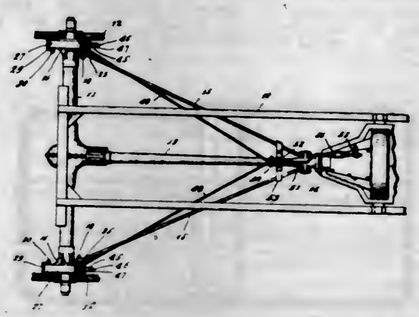
1. In a measured service telephone system, a calling line located in one exchange, other exchanges, means including a plurality of automatic switches whereby connections can be established with called lines of any other exchange, means for charging different rates dependent on the exchange connected with, and means for also limiting the duration of a call to a definite period also dependent on the exchange connected with.

1,572,860. TELEPHONE SYSTEM. ERNST HORN, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Filed Sept. 7, 1923. Serial No. 661,444. 11 Claims. (Cl. 179—9.)



1. In a measured service telephone system, a main exchange, a plurality of sub-exchanges, trunking facilities enabling the establishment of talking connections between lines of any two sub-exchanges via said main exchange, meters for the calling lines, and means at the main exchange for operating the meter of a calling line at the termination of a call a number of times dependent on the duration of the call.

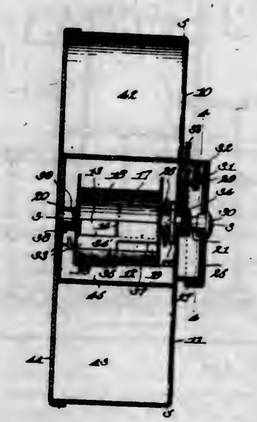
1,572,861. ROTARY PERCOLATOR. ELISA LARREY, Mexico, Mexico. Filed July 27, 1925. Serial No. 46,409. 6 Claims. (Cl. 53—3.)



1. A percolator adapted to be rotatably mounted in a receptacle containing liquid and comprising a rotary shaft, and a filter cage to receive the substance to be treated secured to said shaft to rotate therewith and

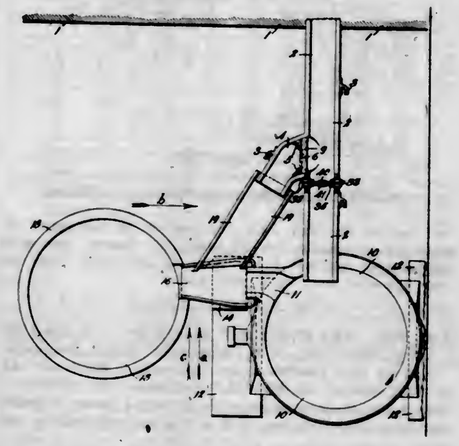
completely submergible in the liquid; said cage embodying a perforated side wall, and perforated top and bottom walls through which the shaft axially extends and with which it is connected, said top and bottom walls

having openings other than their perforations for admitting liquid freely into the interior of the cage to be discharged laterally therefrom by centrifugal force through the perforations in the side wall.



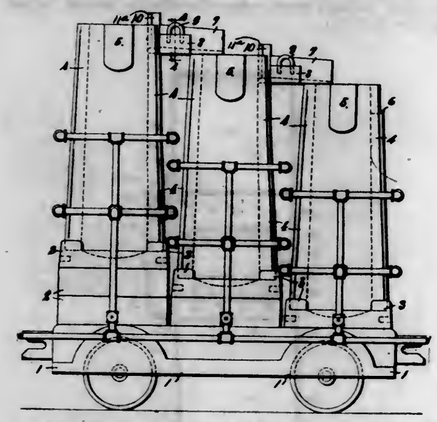
1,572,862. BRAKE. NEIL S. LINCOLN, Connersville, Ind., assignor to Lincoln Manufacturing Company, Connersville, Ind., a Corporation of Indiana. Filed Sept. 9, 1922. Serial No. 587,091. 13 Claims. (Cl. 188—77.)

1. An external brake for automobiles, comprising a supporting member for mounting on a brake support, a brake band associated with said supporting member and having free ends at said supporting member, a pivot ear carried by one of said free ends, said member having flanges overlying the sides of said pivot ear, a pivot pin in said pivot ear, one of said flanges having a hole therethrough to permit the ready removal of said pivot pin when said pivot pin and said hole are alined, and means interconnecting said pivot pin and the other end of said brake band and operable to draw the two ends of the brake together.



1,572,863. MOTION-PICTURE MACHINE. FREEMAN H. OWENS, New York, N. Y. Filed May 12, 1923. Serial No. 638,448. 20 Claims. (Cl. 88—17.)

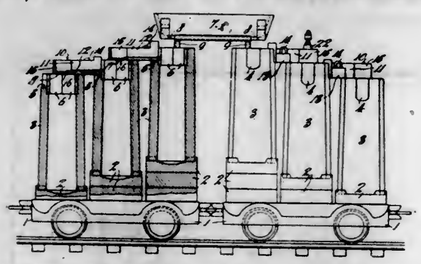
1. A motion picture machine comprising a film exposure window, means for moving a film containing laterally displaced rows of images longitudinally in either of opposite directions past the said exposure window, a stationary objective for the said exposure window adapted for cooperation with either of the rows of images, and means for obliterating one of the rows of images when the film is moved in one direction, and for obliterating the other of said rows when the film is moved in the opposite direction.



20. A shutter and intermittent mechanism for motion picture machines comprising an apertured barrel, a pin wheel carried by said barrel, a star wheel coacting with said pin wheel, and a sprocket wheel driven by said pin wheel.

1,572,864. TAPPING TROUGH, SLAG SWEEPER OR SKIMMER. FRANK BAIRD MCKUNE, Hamilton, Ontario, Canada. Filed Sept. 25, 1922, Serial No. 590,486. Renewed Oct. 15, 1925. 5 Claims. (Cl. 266—38.)

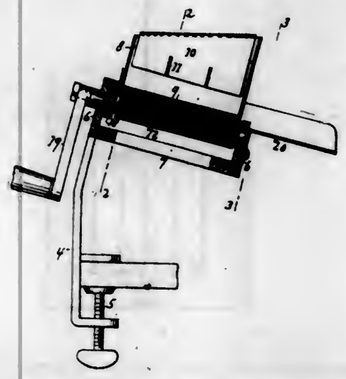
1. In apparatus of the class described, a tapping trough leading from the furnace to the ladle, said trough having a by-pass branch with a removable dam at the entrance, and a slag sweeper gate in the trough located beyond the entrance to the by-pass branch, a casting including a trough leading from the top of the ladle to the slag pot and including a branch to receive the slag from the by-pass branch.



1,572,865. METHOD OF AND MOLD AND APPLIANCE FOR THE CONTINUOUS TRANSFER OF MOLTEN METAL. FRANK B. MCKUNE, Hamilton, Ontario, Canada. Filed Nov. 14, 1922. Serial No. 600,942. 19 Claims. (Cl. 22—204.)

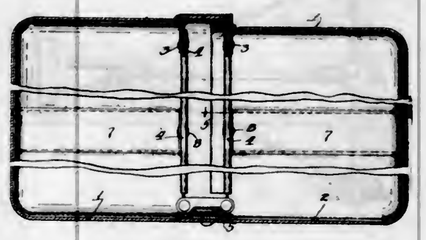
1. The method of casting metal ingots which comprises filling a mold with molten metal, chilling a portion of the molten metal in the mold, and maintaining hot another portion of the molten metal in the mold, by flowing a stream of fresh molten metal across the last mentioned portion.

1,572,866. TRANSFER SPOUT. FRANK BAIRD MCKUNE, Hamilton, Ontario, Canada. Filed Nov. 21, 1923. Serial No. 676,192. 4 Claims. (Cl. 22—79.)



1. A transfer spout comprising an elongated trough-like body having side walls and one end wall, said body having a discharge hole in its bottom adjacent to the

end having the end wall, the bottom of the spout inclining downwardly toward said hole, lateral lugs with lifting eyes located at the sides of said body near the end opposite that with the hole.



1,572,867. PEA-SHELLING MACHINE. CHARLES SABELL, Jersey City, N. J.; Augusta A. Sabell administratrix of said Charles Sabell, deceased. Filed Oct. 25, 1922. Serial No. 596,701. 2 Claims. (Cl. 130—30.)

1. A pea shelling machine comprising a frame, a casing having a sloped bottom with a longitudinal opening carried by the frame, a hopper with inclined sides removably and slidingly connected to the casing for positioning a quantity of pods end up, transverse partitions dividing the hopper into a number of compartments for preventing the pods from toppling over, a pair of rollers

arranged at an incline in a line below the opening in the casing to compress the pod shells there between, and an inclined chute secured to the frame adjacent to the front ends of the rollers for the peas to roll down from the sloped bottom.

1,572,868. REENFORCED SUITCASE. MAYER AXELMAN and HARRY W. AXELMAN, Chicago, Ill. Filed May 31, 1921, Serial No. 474,048. Renewed Nov. 9, 1925. 2 Claims. (Cl. 190—49.)

1. In a suit case having a pair of hinged box-like sections and an opening frame secured to said sections, transverse resilient braces conforming to the inner contour of said sections fixedly secured to said frame at their upper end, a grooved plate for slidably anchoring the lower ends of said braces upon the bottom of said case, and horizontal resilient braces having their ends secured to said frame with their body portions conforming to the contour of said box-like sections to truss the ends of said case.

Patents Nos. 1,572,869 to 1,573,791.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 343—No. 3. TUESDAY, FEBRUARY 16, 1926. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Notice—Changes in Personnel.

The Patent Office announces with regret the resignation of Hon. Samuel E. Fouts as a member of the Board of Examiners in Chief. Mr. Fouts served several years as a member of the examining corps, was for 13 years in practice as a patent lawyer and solicitor, and reentered the examining corps in 1918, being appointed an Examiner in Chief in 1916. He has served the Office with marked ability and distinction.

The President has appointed Mr. George R. Ide, for a number of years Principal Examiner in charge of Division 38, as a member of the Board of Examiners in Chief to fill the vacancy created by the resignation of Mr. Fouts.

The President has also sent to the Senate the nomination of Mr. Millard J. Moore, Principal Examiner from 1898 to 1920 and Law Examiner since 1920, to fill the office of Assistant Commissioner, left vacant by the resignation of Hon. Karl Fenning.

Notices of Cancellation.

U. S. PATENT OFFICE, *Washington, Jan. 25, 1926.*

Bidart Machinery Corporation, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Kimberly-Clark Company, of Neenah, Wis., to effect the cancellation of trade-mark registrations No. 98,455, dated July 21, 1914, and No. 102,015, dated January 26, 1915, to American Rotogravure Company, of No. 482 Fourth Avenue, New York, N. Y., and it appearing by the statement of the president of the said American Rotogravure Company, made under oath in response to interrogatories addressed to it, that the title to the trade-marks concerned no longer remains in the said American Rotogravure Company, but has been transferred to the Bidart Machinery Corporation, and it further appearing that the said Bidart Machinery Corporation, of New York, N. Y., has been substituted to defend the registrations concerned and that the Office has failed to secure proper service on the said Bidart Machinery Corporation notice is hereby given that unless said Bidart Machinery Corporation, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Jan. 19, 1926.*

New York Incandescent Lamp Company, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Manhattan Electrical Supply Company, Incorporated, of 17 Park Row, New York, N. Y., to effect the cancellation of the trade-mark registration of the New York Incandescent Lamp Company, of 132 West Fourteenth Street, New York, N. Y., No. 82,351, dated June 20, 1911, and the notice of such proceeding sent by registered mail to the said New York Incandescent Lamp Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said New York Incandescent Lamp Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

Disclaimer.

1,561,924.—*Augustus M. Henry*, Brooklyn, N. Y. METAL FOUNDING. Patent dated November 17, 1925. Disclaimer filed February 1, 1926, by the assignee, *William W. Wettling.*

Hereby enters this disclaimer to that part of the claim in said specification which is in the following words, to wit:

"1. A mold including a molding cavity having a permanent facing formed of a surface of a preformed block of a material having the qualities of being able to be pressed to such shape from granular components, and of having the ability to withstand repeated heat-shocks as the result of repeated casting operations."

Further, inasmuch as this disclaimer is based on the discovery just made that United States Letters Patent No. 1,501,337, granted said Henry July 15, 1924, contains in claim 2 thereof a claim to subject matter which might conceivably be held to cover (although that is not now conceded) substantially the same subject matter as that to which is directed the hereinabove quoted claim 1 of said Letters Patent No. 1,561,924, your petitioner also enters this disclaimer to that part of the term of said Letters Patent No. 1,561,924 as shall overlap or extend beyond the date of expiration of the term of said Letters Patent No. 1,501,337.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decisions.

EX PARTE SPEER.

Decided January 30, 1925.

AMENDMENT AFTER FINAL REJECTION.

Where the applicant, after the case had been pending over four years and a clear issue had been reached, presented a new claim with an appeal to the Examiners in Chief, arguing that it presented the same subject matter as the claim under final rejection in a different form, the Examiner properly refused to enter and consider the new claim.

ON PETITION.

SELF-SPACING SHINGLES.

Messrs. Emery, Booth, Janney & Varney for the applicant.

ROBERTSON, *Commissioner:*

Applicant petitions from the Examiner's refusal to enter and consider claim 4 presented with the appeal to the Examiners in Chief on the ground that the submission of the claim is irregular.

This case has been pending more than four years, and a clear issue appears to have been reached. There must be some finality to the prosecution of cases before the Primary Examiners.

Petitioner's argument that the claim presents the same subject matter in a different form has been noted. If the claim includes a limitation which makes it patentably different from the appealed claims, it was properly refused admission under the rules. If the statement as to the exact proportions of the shingle which is exposed when the roof is laid adds nothing patentable, then it is clearly unnecessary.

The petition is accordingly denied.

EX PARTE ELLIS.

Decided August 8, 1924.

1. INVENTION—USE OF OLD IDEA IN ANALOGOUS SITUATION.

Where the alleged novelty resided in the use of hydrogenated oil in confectionery in lieu of oil which had not been hydrogenated, and where edible products containing hydrogenated oil had previously been in use and applicant did not disclose the advantages which he relied upon to obtain a patent until after it was known that such advantages were present in other edible products made with hydrogenated oil, *Held* that there was no inventive thought in the broad conception of using such oil in the manufacture of confectionery, and applicant's claims were refused.

2. SAME—DOUBLE PATENTING.

Where the applicant has already patented one edible product containing hydrogenated oil and such oil appears to have the same properties in the edible product which he has patented and in the one which he now seeks to patent, *Held* that its use in the latter would not be a matter of invention, and applicant is not entitled to a separate patent for each edible product in which he considers it desirable to use hydrogenated oil.

(Affirmed by the Court of Appeals of the District of Columbia. See p. 484 post.)

Application for patent.

APPEAL from the Examiners in Chief.

CONFECTIONERY COMPOUNDS.

Application filed January 11, 1918, Serial No. 211,358.

Mr. Sol Shappirio for the applicant.

KINNAN, *First Assistant Commissioner:*

This is an appeal from the decision of the Examiners in Chief affirming the final rejection by the Primary Examiner of claims 1 to 9, inclusive.

The claims are drawn to an edible product in which hydrogenated oil is one of the ingredients. Some of the claims are specific to confectionery, while claim 8 is still more specific to ice-cream material.

The following claims are illustrative:

1. A confectionery material, comprising hydrogenated oil material, edible non-fatty material comprising sugar and a flavoring material.

5. An edible product comprising hydrogenated oil and a dissimilar non-fatty edible material of a non-rigid character.

8. Ice cream material comprising as constituents, a homogeneous artificial lacteal fluid containing homogenized hydrogenized fatty oil which is liquid at normal body temperature, together with sugar, egg, and other usual constituents of ice cream material.

The references relied upon are: Campbell, 717,968, January 6, 1907; Hatmaker, 872,416, December 13, 1907; McCaddon, 1,087,599, February 17, 1914; Crary, 1,193,477, August 1, 1916.

The alleged novelty resides in the use of hydrogenated oil in lieu of oil which has not been hydrogenated in food products of the character defined in the claims. Appellant contends that such use improves the product by increasing its properties to retain moisture and also by making it less liable to become rancid.

On December 10, 1912, appellant patented (Patent No. 1,047,013) an edible product containing hydrogenated oil. In that patent, as in the instant case, the alleged novelty resided in the use of hydrogenated oil. The patent claims are not drawn to a confectionery, but the patent specification discloses the use of hydrogenated oil in the manufacture of confectionery.

On December 23, 1913, appellant filed application Serial No. 808,461, which, after allowance, forfeiture, and renewal, finally matured into Patent No. 1,426,629 on August 22, 1922. That application as originally filed disclosed the use of hydrogenated oil in the manufacture of confectionery. It did not claim confectionery, however, nor did appellant indicate therein that he considered confectionery containing hydrogenated oil as patentable subject matter.

Appellant relies upon application Serial No. 808,461, which was copending with his instant application, to carry his effective filing date back to the year 1913, and thereby escape the two-year bar of a printed publication which would otherwise exist by virtue of his Patent No. 1,047,013.

[1] The instant application was filed on January 11, 1918, more than five years after appellant had patented one edible product containing hydrogen-

ated oil and disclosed to the public that such oil is also suitable for use in confectionery. It for the first time disclosed the advantages on which appellant here relies to patent the claims on appeal. As pointed out below, it was known as early as 1910 that edible products containing hydrogenated oil have a minimized tendency to become rancid, and as early as 1916 that they have an increased tendency to retain moisture. It therefore does not appear that appellant is the original discoverer of either of these properties, and it is not believed that he is entitled to patent the broad and dominating claims here on appeal by virtue of them.

In *Berlin Mills Company* v. *Procter and Gamble Company*, 281 O. G. 574; 254 U. S. 156, the Court said:

> This record establishes that it was known before Burchenal took up the subject that a vegetable oil could be changed into a semisolid, homogeneous, substance by a process of hydrogenation arrested before completion and that it might be edible. This much of the art was public property and open to general use. The product of this process was known and open to public use. To supply such products as the patentee has described in the broad claims in suit may have been new and useful, but does not in our opinion arise to the dignity of invention, and is an advance step which would occur to one skilled in the art when investigating and considering the subject.

[2] It is believed that the same reasoning applies with equal force in the instant case. No inventive thought is seen in the broad conception of using hydrogenated oil in the manufacture of confectionery. The substitution of such oil for the oils formerly used would seem to amount to no more than the selection of an oil suitable for the purpose in hand. Furthermore it is not believed that appellant is entitled to patent the claims on appeal, since he has already patented, in Patent No. 1,047,013, one edible product containing hydrogenated oil. Such oil appears to have the same properties in the edible product which he has patented and in the one he now seeks to patent. The alleged novelty in each resides in the use of hydrogenated oil. It is not believed appellant is entitled to a separate patent for each edible product in which he considers it desirable to use hydrogenated oil. Having obtained a patent for one, its use in the others would naturally occur to one skilled in the art and would not be a matter of invention.

The decision of the Examiners in Chief is affirmed.

Court of Appeals of the District of Columbia.

IN RE ELLIS.

No. 1,772. Decided December 7, 1925.

APPEAL from Patent Office. Affirmed.

(For Commissioner's Decisions see p. 483 ante.)

Mr. Sol. Shappirio for the applicant.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, ROBB, Justice, and SMITH, Judge U. S. Court of Customs Appeals.

ROBB, *J.*:

Appeal from a decision of the Patent Office refusing the claims of appellant's application for a patent on confectionery material composed in part of hydrogenated oil.

Each of the several tribunals of the Patent Office has fully and satisfactorily answered appellant's contentions. An examination of the record convinces us of the correctness of the conclusion reached by the Office, and, since we can add nothing to what has been said there, we affirm the decision without further discussion.

Affirmed.

ADJUDICATED PATENTS.

(C. C. A. Ohio.) The Hewitt patent, No. 893,168, for cement-spreading machine, claims 1 and 3 *Held* not infringed. *Lakewood Engineering Co.* v. *Stein*, 8 F. (2d) 713.

(D. C. N. J.) The Burnham patent, No. 900,055, for improved squeeze rolls for wool-washing machinery, *Held* invalid. *Wilkie* v. *Manhattan Rubber Mfg. Co.*, 8 F. (2d) 785.

(C. C. A. Ohio.) The Myers patent, No. 990,210, for casings or coverings relating to lubrication of vehicle springs, *Held* not infringed. *Jeavons* v. *Reliable Spring Oiler Co.*, 8 F. (2d) 734.

(D. C. Mich.) The Haynes patent, No. 1,057,423, for alloy of cobalt, chromium, and tungsten, claims 1 to 4 *Held* invalid and claims 5 to 8 *Held* valid and infringed. *Haynes Stellite Co.* v. *Chesterfield*, 8 F. (2d) 765.

(C. C. A. Ohio.) The Jeavons patent, No. 1,135,186, for casings or coverings relating to lubrication of vehicle springs, *Held* not infringed. *Jeavons* v. *Reliable Spring Oiler Co.*, 8 F. (2d) 734.

(C. C. A. N. Y.) The Rockwood patent, Reissue No. 14,746, for a dry-pipe valve used in sprinkler system, claims 1, 2, 3, 4, and 7 *Held* valid and infringed. *Rockwood* v. *General Fire Extinguisher Co.*, 8 F. (2d) 682.

(C. C. A. Calif.) The Lorraine patent, Reissue No. 15,220, for oil, gas, and sand separator, claims 17, 18, and 19 *Held* invalid. *Lorraine* v. *Townsend*, 8 F. (2d) 673.

TRADE-MARKS CANCELED.

97,675. Certain named furniture and window seats not in the nature of receptacles. Louise Brigham, New York, N. Y. Registered June 16, 1914. Canceled January 27, 1926.

REISSUES

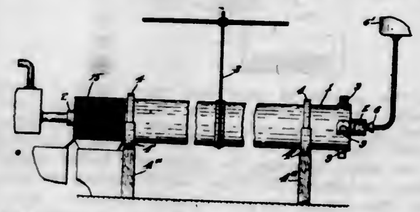
FEBRUARY 16, 1926.

16,262. GAS PRODUCER. CHARLES W. LUMMIS and GEORGE H. ISLEY, Worcester, Mass., assignors to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 13, 1923. Serial No. 651,413. Original No. 1,251,064, dated Dec. 25, 1917, Serial No. 840,110, filed May 21, 1914. 11 Claims. (Cl. 48—85.2.)

11. A gas producer having a U-shaped agitator, its ends mounted to swing at the top of the producer and its bend playing freely against the coal at one side only of the producer center, and means for causing relative horizontal motion between the agitator and the coal.

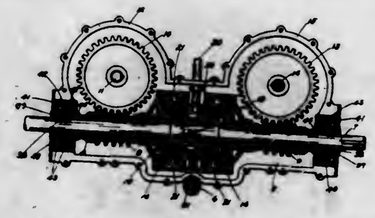
16,263. TYPE BAR. EDNA G. ROBERSON, Atlanta, Ga., assignor to Atlanta Model Machine Company, a Corporation of Georgia. Filed Apr. 25, 1925. Serial No. 25,924. Original No. 1,454,692, dated May 8, 1923, Serial No. 584,699, filed Aug. 28, 1922. 8 Claims. (Cl. 197—9.)

1. A type bar comprising, in combination, a bar supporting member, a type bar supported thereon, a plurality of type mounted on said type bar, selective means upon said member to move said type bar to bring a desired type to a printing position, means whereby continued movement of said selective means moves said type to make an impression, and means to prevent the impression making portion of said movement during the selecting portion thereof.



16,264. SAFETY RAZOR. GEORGE ARTHUR SCHIEREN, Great Neck, N. Y. Filed Sept. 8, 1924. Serial No. 736,452. Original No. 1,445,452, dated Feb. 13, 1923, Serial No. 525,393, filed Dec. 28, 1921. 4 Claims. (Cl. 30—12.)

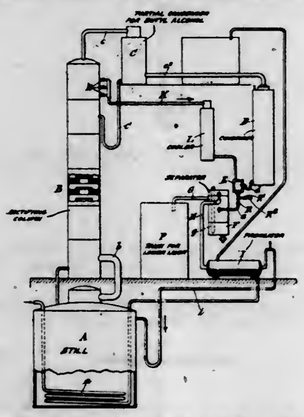
1. In a razor of the Gillette type having a guard, a clamp plate having a threaded bolt, a handle adapted to cooperate with said guard and provided with a threaded socket adapted to receive said bolt, a rotatably



adjustable sleeve swiveled on said handle, and cooperating index marks and an index, on the sleeve and a fixed part of the razor.

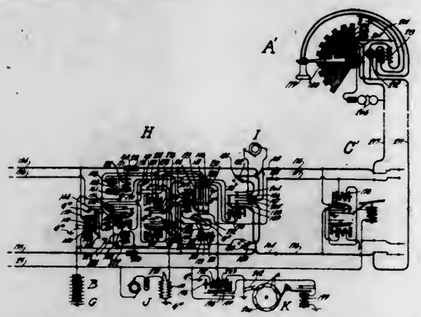
16,265. ROTARY DRIER. WILLIAM A. HARTY, Buffalo, N. Y., and FRANK W. MOORE, Thorold, Ontario, Canada. Filed Oct. 16, 1925. Serial No. 62,943. Original No. 1,531,438, dated Mar. 31, 1925, Serial No. 631,904, filed Apr. 13, 1923. 4 Claims. (Cl. 34—5.)

1. A drier comprising a rotary shell, a screen at the discharge end of the shell and a central heating tube extending through the shell and screen, and rotating therewith and a burner at the end thereof and disposed to project its flame into the tube.



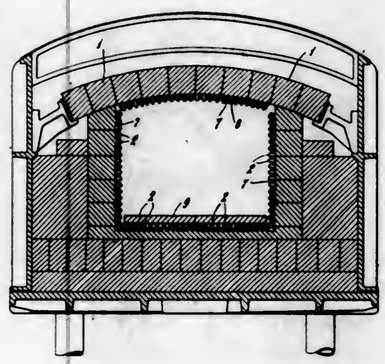
16,266. TRANSMISSION DEVICE. FREDERICK D. WILSON and LEONARD S. BURNS, Harvey, Ill., assignors, by mesne assignments, to Wilson Tractor Manufacturing Company, Ottumwa, Iowa, a Corporation of Iowa. Filed Oct. 19, 1925. Serial No. 63,542. Original application filed Jan. 2, 1923, Serial No. 610,181. Renewed Oct. 27, 1924. Original No. 1,533,626, dated Apr. 14, 1925. 10 Claims. (Cl. 180—17.)

1. In a device of the class described comprising a driving element, and an element driven thereby; gear mechanism operatively connected to said driven element; a plurality of friction clutch-driving discs adapted to co-operate to impart the movement of the driving element to said gear mechanism; a plurality of friction



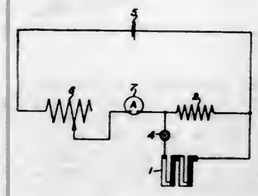
clutch discs capable of a brake action on said gear mechanism; manually operable means adjacent the driving discs for actuating them; and non-rotatable means between the driving and brake discs operatively connected with and movable toward the said manually operable means for actuating the brake discs when the driving discs are released.

16,267. PROCESS OF SEPARATING BUTYL ALCOHOL AND WATER. ARTHUR STEVENS, Buffalo, N. Y. Filed Oct. 9, 1924. Serial No. 742,672. Original No. 1,394,232, dated Oct. 18, 1921, Serial No. 364,697, filed Mar. 10, 1920. 5 Claims. (Cl. 195—15.)



1. The process of separating water from a homogeneous aqueous butyl alcohol mixture which comprises distilling the mixture to evolve a constant boiling mixture, condensing the latter and allowing it to settle in two layers, returning the upper layer to the original mixture undergoing distillation and eliminating the lower layer from the process.

16,268. TELEPHONE-EXCHANGE ANTOMATIC SWITCHING SYSTEM. EDWARD A. MELLINGER, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed June 12, 1922. Serial No. 567,821. Original application filed Sept. 4, 1908, Serial No. 451,674. Renewed Aug. 16, 1919, Serial No. 318,040. Original No. 1,343,462, dated June 15, 1920. 133 Claims. (Cl. 174—18.)

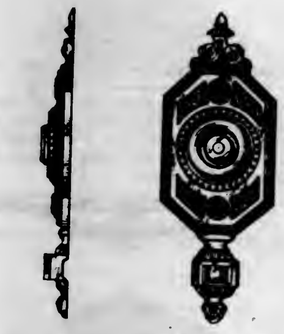


91. In a telephone system, a connector provided with a release magnet, and having quick and slow acting relays controlling said magnet, the said quick acting relay controlling the circuit of said slow acting relay, contacts on said quick acting relay for holding the circuit through said magnet open during conversation, and contacts on said slow acting relay for holding said magnet circuit open while operating impulses are being transmitted.

16,269. ELECTRIC FURNACE. EDWIN L. SMALLEY, Milwaukee, Wis., assignor to Electric Heating Apparatus Company, Newark, N. J. Filed June 22, 1925. Serial No. 38,927. Original No. 1,459,801, dated June 26, 1923, Serial No. 401,717, filed Aug. 6, 1920. 16 Claims. (Cl. 204—64.)

1. An electric furnace comprising a support of refractory material, a preformed return-bend resistor element disposed upon said support in exposed relation to the interior space of the furnace, and refractory members carried by said support and adapted to engage said resistor element to retain the same in position in close proximity to said support and to permit of the ready removal of said element, substantially as specified.

16,270. ELECTRIC PYROMETER. THOMAS W. VARLEY, New York, N. Y. Filed Feb. 16, 1922. Serial No. 537,067. Original No. 1,375,872, dated Apr. 26, 1921, Serial No. 211,959, filed Jan. 15, 1918. 6 Claims. (Cl. 73—32.)

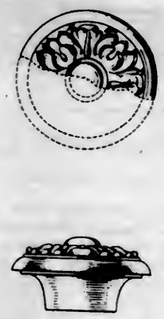


6. The combination with a source of electromotive force, of a fixed resistor, a current-indicating instrument, current-controlling means, said resistor, instrument, current-controlling means and source being connected in series relation, a shunt circuit connected to said resistor including a thermocouple and means for opening and closing said shunt circuit.

DESIGNS

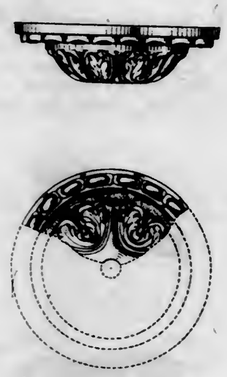
FEBRUARY 16, 1926.

69,423. BACKPLATE FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Nov. 18, 1925. Serial No. 15,451. Term of patent 7 years.



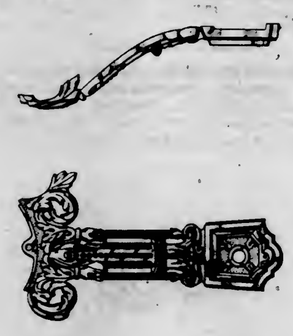
The ornamental design for a backplate for lighting fixtures, as shown.

69,424. ARM FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Nov. 18, 1925. Serial No. 15,452. Term of patent 7 years.



The ornamental design for an arm for lighting fixtures, as shown.

69,425. ROSETTE FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Nov. 18, 1925. Serial No. 15,453 Term of patent 7 years.



The ornamental design for a rosette for lighting fixtures, as shown.

69,426. CANOPY FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Nov. 18, 1925. Serial No. 15,454. Term of patent 7 years.

The ornamental design for a canopy for lighting fixtures, as shown.

69,427. ARM FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Nov. 18, 1925. Serial No. 15,455. Term of patent 7 years.

The ornamental design for an arm for lighting fixtures, as shown.

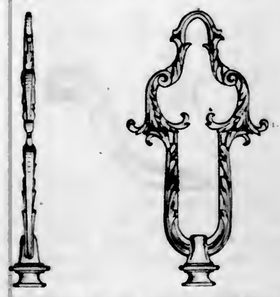
69,428. SEGMENTAL PORTION FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Nov. 18, 1925. Serial No. 15,456. Term of patent 7 years.

The ornamental design for a segmental portion for lighting fixtures, as shown.

69,429. ARM FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Nov. 18, 1925. Serial No. 15,457. Term of patent 7 years.

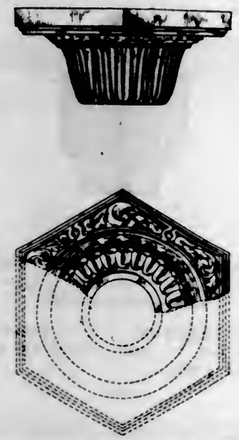
The ornamental design for an arm for lighting fixtures, as shown.

69,430. CANDLE PLATE. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Nov. 18, 1925. Serial No. 15,458. Term of patent 7 years.



The ornamental design for a candle plate, as shown.

69,431. PLATE FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Nov. 18, 1925. Serial No. 15,459. Term of patent 7 years.



The ornamental design for a plate for lighting fixtures, as shown.

69,432. LOOP FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Nov. 18, 1925. Serial No. 15,460. Term of patent 7 years.

The ornamental design for a loop for lighting fixtures, as shown.

69,433. PLATE FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Nov. 18, 1925. Serial No. 15,461. Term of patent 7 years.

The ornamental design for a plate for lighting fixtures, as shown.

69,434. GOBLET OR SIMILAR ARTICLE. JOSEPH O. BALDA, Newark, Ohio, assignor to A. H. Heisey & Co., Newark, Ohio. Filed Apr. 29, 1922. Serial No. 2,023. Term of patent 14 years.

The ornamental design for a goblet or similar article substantially as shown.

69,435. SPECTACLE FRAME. JACOB BOBROW, Brooklyn, N. Y., assignor to Bobrow Optical Mfg. Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 2, 1925. Serial No. 15,324. Term of patent 7 years.

The ornamental design for the spectacle frame, as shown.

69,436. WEDDING RING. GARDINER S. BOWDEN, Brooklyn, N. Y., assignor to J. B. Bowden & Co., a Copartnership composed of Martin L. Bowden and Gardiner S. Bowden, New York, N. Y. Filed Aug. 26, 1925. Serial No. 14,590. Term of patent 14 years.

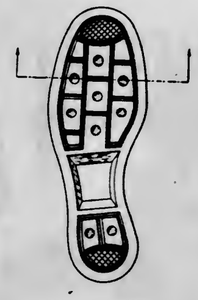
The ornamental design for a wedding ring substantially as shown.

69,437. CURTAIN TIE BACK. HUBERT J. BRAUN, Chicago, Ill. Filed Oct. 29, 1924. Serial No. 11,209. Term of patent 14 years.

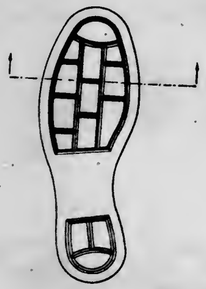
The ornamental design for a curtain tie back, as shown.

69,438. HAT. JAMES T. CARADINE and WILLIAM T. CHRISTMAS, St. Louis, Mo. Filed Dec. 19, 1925. Serial No. 15,798. Term of patent 14 years.

The ornamental design for a hat, substantially as shown and described.

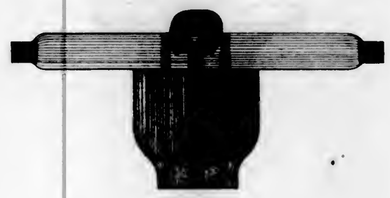


69,439. HAT. JAMES T. CARADINE and WILLIAM T. CHRISTMAS, St. Louis, Mo. Filed Dec. 19, 1925. Serial No. 15,799. Term of patent 14 years.



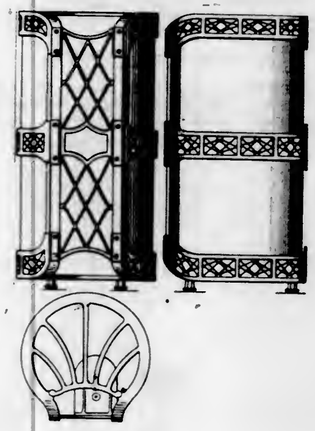
The ornamental design for a hat, substantially as shown and described.

69,440. SHOE SOLE. FRANK E. CHURCH, Scarsdale, N. Y., assignor to National India Rubber Company, Bristol, R. I., a Corporation of Rhode Island. Filed Nov. 24, 1925. Serial No. 15,533. Term of patent 14 years.



The ornamental design for a shoe sole as shown.

69,441. SHOE SOLE. FRANK E. CHURCH, Scarsdale, N. Y., assignor to National India Rubber Company, Bristol, R. I., a Corporation of Rhode Island. Filed Nov. 24, 1925. Serial No. 15,534. Term of patent 14 years.

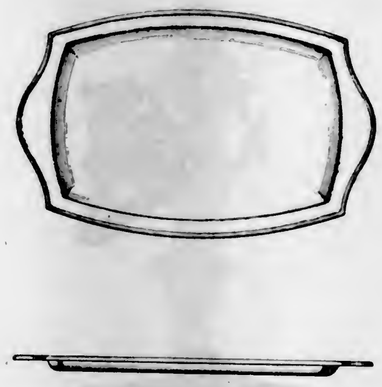


The ornamental design for a shoe sole as shown.

69,442. KNITTED SWEATER. ALFRED COHN, Milwaukee, Wis. Filed Aug. 27, 1925. Serial No. 14,614. Term of patent 3½ years.

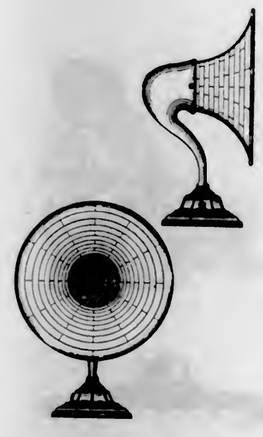
The ornamental design for a knitted sweater as shown and described.

69,443. LOUD SPEAKER. LEE DE FOREST, New York, N. Y. Filed Oct. 17, 1925. Serial No. 15,164. Term of patent 14 years.



The ornamental design for a loud speaker, as shown.

69,444. TEXTILE FABRIC. THOMAS W. ESTES, New York, N. Y. Filed Nov. 7, 1925. Serial No. 15,376. Term of patent 3½ years.



The ornamental design for a textile fabric as shown.

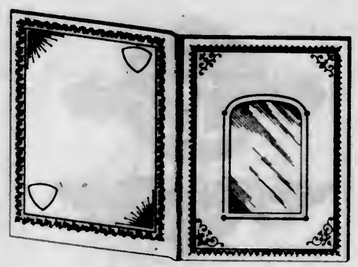
69,445. TRAY OR SIMILAR ARTICLE. EDWARD A. FARR, Meriden, Conn., assignor to Manning, Bowman & Company, Meriden, Conn., a Corporation of Connecticut. Filed Dec. 17, 1925. Serial No. 15,774. Term of patent 7 years.

The ornamental design for a tray or similar article substantially as shown.

69,446. LOUD-SPEAKER HORN FOR RADIO RECEIVING SETS. ALBERT C. FRISCH and JOHN R. FRISCH, Wilmington, Del. Filed Oct. 19, 1925. Serial No. 15,181. Term of patent 7 years.

The ornamental design for a loud speaker horn for radio receiving sets as shown.

69,447. LACE. PAUL GROEBLI, New York, N. Y. Filed Oct. 20, 1925. Serial No. 15,186. Term of patent 3½ years.



The ornamental design for lace substantially as shown.

69,448. NEEDLEBOOK. AINSWORTH J. HAGUE, Jr., Red Bank, N. J. Filed Nov. 30, 1925. Serial No. 15,586. Term of patent 3½ years.

The ornamental design for a needlebook substantially as shown.

69,449. NEEDLEBOOK. AINSWORTH J. HAGUE, Jr., Red Bank, N. J. Filed Nov. 30, 1925. Serial No. 15,587. Term of patent 3½ years.

The ornamental design for a needle book substantially as shown.

69,450. RADIATOR CAP OR SIMILAR ARTICLE. HENRY HARDISTY, Tualatin, Oreg. Filed June 20, 1921. Serial No. 479,135. Term of patent 3½ years.

The ornamental design for a radiator cap or similar article, substantially as shown.

69,451. FINGER RING OR SIMILAR ARTICLE. JOSEPH L. HERZOG, New Rochelle, N. Y. Filed Nov. 6, 1925. Serial No. 15,367. Term of patent 14 years.

The ornamental design for a finger ring or similar article substantially as shown and described.

69,452. CEILING PLATE FOR LIGHTING FIXTURES. JACOB F. KOHLER, New York, N. Y., assignor to Jonick Sirken Co., Inc., a Corporation of New York. Filed July 16, 1925. Serial No. 14,119. Term of patent 3½ years.

The ornamental design for a ceiling plate for lighting fixtures as shown.

69,453. LAMP BASE. THOMAS JEFFERSON LEAGUE, Chicago, Ill., assignor to Diversey Foundry Company, a Corporation of Illinois. Filed Aug. 12, 1925. Serial No. 14,397. Term of patent 3½ years.

The ornamental design for a lamp base, as shown.

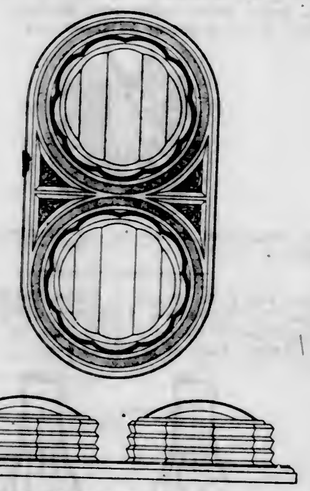
69,454. LAMP BASE. THOMAS JEFFERSON LEAGUE, Chicago, Ill. Filed Dec. 3, 1925. Serial No. 15,626. Term of patent 3½ years.

The ornamental design for a lamp base, as shown.

69,455. SPINDLE FOR LIGHTING FIXTURES. THOMAS JEFFERSON LEAGUE, Chicago, Ill. Filed Dec. 3, 1925. Serial No. 15,627. Term of patent 3½ years.

The ornamental design for a spindle for lighting fixtures, as shown.

69,456. LAMP BASE. THOMAS JEFFERSON LEAGUE, Chicago, Ill. Filed Dec. 3, 1925. Serial No. 15,628. Term of patent 3½ years.



The ornamental design for a lamp base, as shown.

69,457. LAMP BASE. THOMAS JEFFERSON LEAGUE, Chicago, Ill. Filed Dec. 3, 1925. Serial No. 15,629. Term of patent 3½ years.

The ornamental design for a lamp base, as shown.

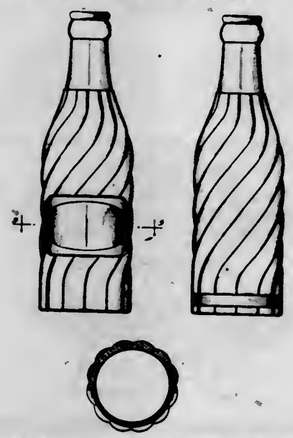
69,458. SIGNAL LENS. KENNETH D. LIGHTHIPE, East Orange, N. J., assignor to Elevator Supplies Company, Inc., a Corporation of New Jersey. Filed Sept. 25, 1925. Serial No. 14,904. Term of patent 7 years.

The ornamental design for a signal lens as shown.

69,459. EDIBLE ICE-CREAM CONTAINER. HERBERT P. PAGE, Boston, Mass. Filed Mar. 3, 1924. Serial No. 8,807. Term of patent 3½ years.

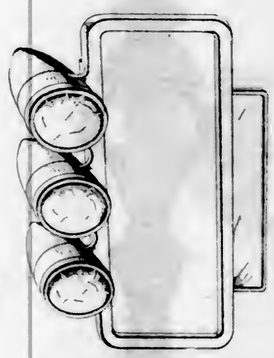
The ornamental design for an edible ice cream container as shown.

69,460. BACKPLATE FOR LIGHTING FIXTURES. HARRY PERRY, Brooklyn, N. Y., assignor to Metropolitan-Columbia Mfg. Co., Inc., a Corporation of New York. Filed Dec. 19, 1925. Serial No. 15,794. Term of patent 3½ years.



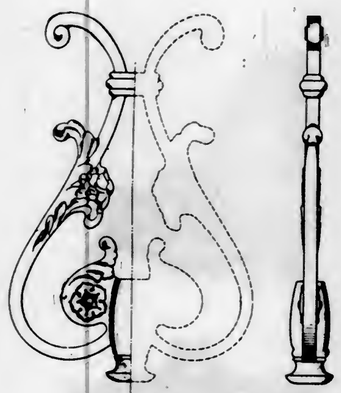
The ornamental design for a backplate for lighting fixtures, substantially as shown and described.

69,461. ILLUMINATING LENS. FRANK ROWNICK, Iron River, Mich. Filed May 24, 1923. Serial No. 6,270. Term of patent 14 years.



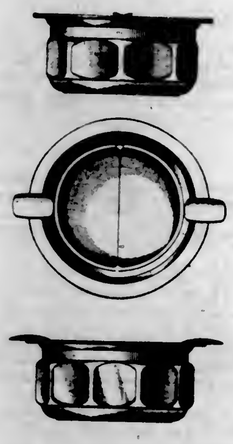
The ornamental design for an illuminating lens, as shown.

69,462. BOTTLE. CLAUD A. SEARS, Columbus, Ga., assignor to Chero-Cola Company, Columbus, Ga., a Corporation of Georgia. Filed Sept. 25, 1922. Serial No. 3,818. Term of patent 14 years.



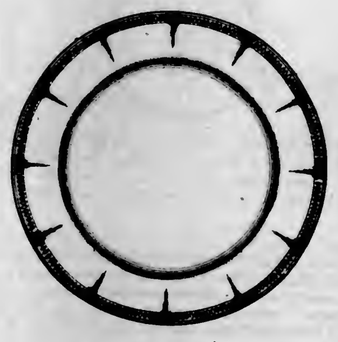
The ornamental design for a bottle, as shown

69,463. COMBINED LICENSE-PLATE HOLDER, NAME PLATE, AND SIGNAL LIGHT. GEORGE A. SCHUH and ALFRED E. SCHUH, Buffalo, N. Y. Filed Sept. 1, 1925. Serial No. 14,683. Term of patent 14 years.



The ornamental design of a combined license plate holder, name plate and signal light, as shown.

69,464. LAMP BRACKET. ARNOLD A. SCHWARTZ, Chicago, Ill. Filed Dec. 7, 1925. Serial No. 15,676. Term of patent 3½ years.

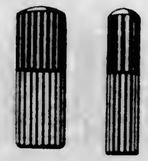


The ornamental design for a lamp bracket, substantially as shown.

69,465. SMOKER'S ASH RECEIVER. JACOB S. SHERMAN, Chicago, Ill., assignor to Universal Lamp Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 21, 1925. Serial No. 15,206. Term of patent 14 years.

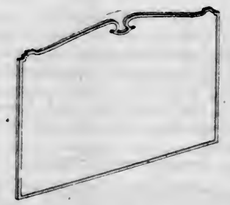
The ornamental design for a smoker's ash receiver, substantially as shown.

69,466. PLATE OR SIMILAR ARTICLE. HARRY TRISCHLER, Crooksville, Ohio, assignor to The Crooksville China Company, Crooksville, Ohio, a Corporation of Ohio. Filed Dec. 4, 1925. Serial No. 15,640. Term of patent 7 years.



The ornamental design for a plate or similar article, substantially as shown.

69,467. TEAPOT OR SIMILAR ARTICLE. HARRY TRISCHLER, Crooksville, Ohio, assignor to The Crooksville China Company, Crooksville, Ohio, a Corporation of Ohio. Filed Dec. 4, 1925. Serial No. 15,641. Term of patent 7 years.

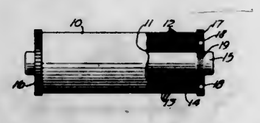


The ornamental design for a teapot or similar article, substantially as shown.

69,468. PERFUME BOTTLE. JOHN J. VOGLER, Douglaston, N. Y., assignor to Alfred H. Smith Co. Inc., New York, N. Y., a Corporation of New York. Filed Dec. 22, 1922. Serial No. 4,682. Term of patent 3½ years.

The ornamental design for a perfume bottle as shown.

69,469. SIGNBOARD. FRED G. WARNER, Narberth, Pa., assignor to Wallace & Warner, a Partnership composed of Brenton G. Wallace and Fred G. Warner, Philadelphia, Pa. Filed July 2, 1925. Serial No. 13,981. Term of patent 14 years.

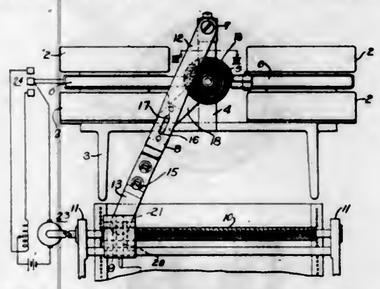


The ornamental design for a signboard, as shown.

PATENTS

GRANTED FEBRUARY 16, 1926.

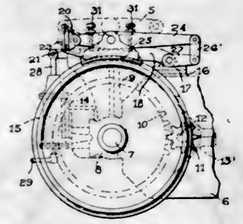
1,572,869. **ELECTROMAGNET.** ARTHUR HERMAN ADAMS, Lakeville, Conn., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 15, 1923. Serial No. 680,787. 6 Claims. (Cl. 175—21.)



1. In an electromagnet, an iron core, a paper filled coil mounted on said core, and a spool head having an aperture through which the core extends and additional apertures for receiving the paper insulation to prevent relative rotation between the coil and said core.

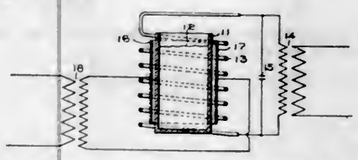
1,572,870. **CLUTCH.** EDWIN J. ARMSTRONG, Erie, Pa., assignor, by direct and mesne assignments, to Erie Steam Shovel Company, Erie, Pa., a Corporation of Pennsylvania. Filed Jan. 14, 1924. Serial No. 686,020. 15 Claims. (Cl. 192—85.)

1. In a clutch, the combination of clutch engaging members; and a lever system for said members comprising a main lever operating upon said members at one point of their circumference and extending across the axis thereof, and an auxiliary lever reversely arranged with relation to the main lever and operating upon a point in the circumference at the opposite side of the axis of the clutch.



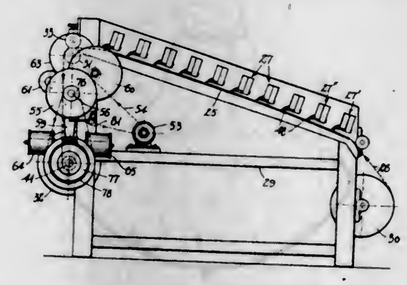
1,572,871. **GRAPHIC-METER-CONTROL MECHANISM.** CHRISTIAN AALBORG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 2, 1922. Serial No. 585,877. 7 Claims. (Cl. 234—5.5.)

7. In a measuring instrument, the combination with a horizontal screw shaft adapted for co-operation with means for rotating the same, a traveling-nut indicating member disposed on the shaft and having a vertical slot, and a Kelvin balance disposed above the shaft for controlling said rotating means, of an arm having a pivot axis vertically above the pivot of the balance, a pin carried by the lower end of the arm and extending into said slot, a second arm freely movable about the axis of the balance, a pin-and-slot connection between the outer end of the second arm and an intermediate portion of the



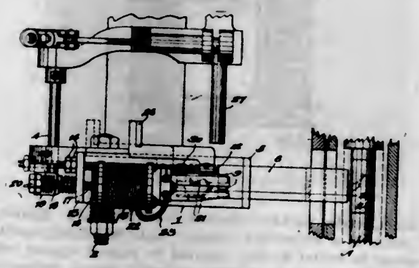
first arm, and a helical spring coiled about the pivot axis of the balance and connected, at its ends, between the second arm and the balance.

1,572,872. **DRIVER BRAKE SHOE.** FRANK L. ALBEN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 20, 1923. Serial No. 663,786. 8 Claims. (Cl. 188—153.)



1. The combination with a drive motor journalled on a wheel axle, of a brake mechanism mounted on the top of said motor frame, said brake mechanism being operatively associated with the wheels of said axle.

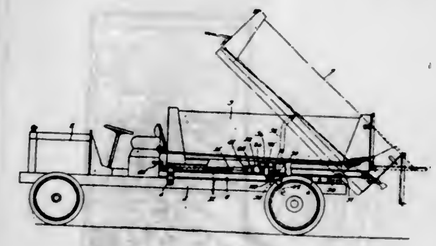
1,572,873. **HIGH-FREQUENCY DIELECTRIC AND MAGNETIC FURNACE.** CHESTER T. ALLCUTT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 29, 1923. Serial No. 683,375. 6 Claims. (Cl. 204—64.)



3. In a heating system, in combination, a mass of material to be heated, a coil, a source of high frequency current connected to said coil, and means for subjecting said mass of material to a high frequency electric field.

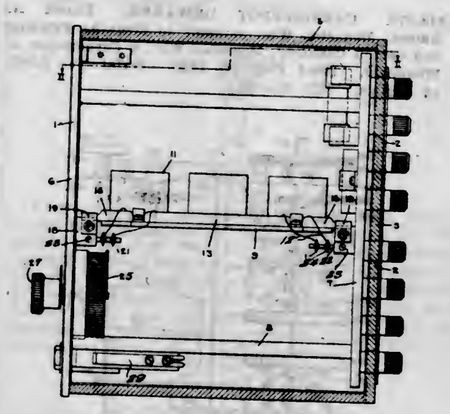
1,572,874. **ELECTRIC SIGN.** FULGENCIO ARCHILA, Bogota, Colombia. Filed Apr. 3, 1924. Serial No. 703,392. 11 Claims. (Cl. 200—46.)

1. An electric circuit controller comprising longitudinally spaced contact devices, a sheet movable longitudinally past said devices and having successive sets of longitudinally spaced zones of circuit controlling means cooperable simultaneously with said devices, actuating means for moving said sheet past said devices, and means controlled by the movement of the sheet by the actuating means for removing the control of said circuits from said devices and circuit controlling means after the zones of circuit controlling means have passed the corresponding devices until the next set of zones of circuit controlling means are brought to a position to cooperate with the corresponding devices.



1,572,875. **FILLING DETECTOR.** EUGENE H. BALLOU, Pawtucket, R. I. Filed May 29, 1925. Serial No. 33,676. 6 Claims. (Cl. 139—273.)

1. In combination with a device for removing and replacing bobbins, and bobbins having metallic ferrules thereon, a slide having spring pressed contacts for engagement with the ferrules, a coil, other contacts on the slide, contact fingers connected to the coil and engageable with said other contacts of the slide, a slideable spring pressed armature for the coil, a finger carried by the armature for operating the bobbin removing and replacing device, and withdrawing means for the slide.

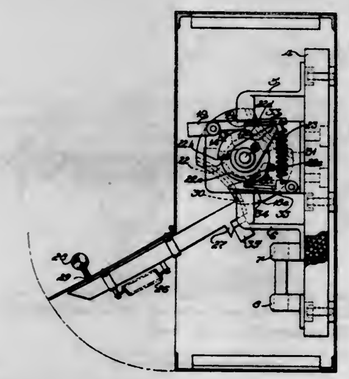


1,572,876. **DUMP TRUCK.** PERCY E. BARKER, Cleveland, Ohio, assignor to The Van Dorn Iron Works Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 14, 1921. Serial No. 500,621. 5 Claims. (Cl. 298—21.)

1. Dumping apparatus comprising a supporting frame, a dumping body mounted on said frame for raising and lowering movement, and hoisting means comprising separate sets of lever mechanism, an operating connection for each set of lever mechanism, and a single operating means for said operating connections for said lever

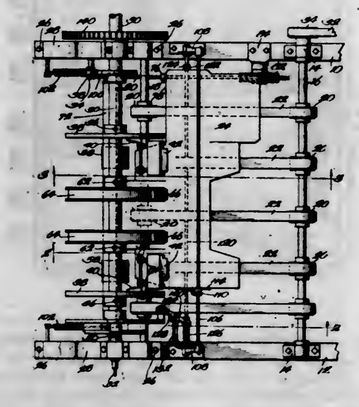
mechanisms, said parts being so constructed and arranged that the separate sets of lever mechanism are individually responsive to the load.

1,572,877. **WIRELESS RECEIVING APPARATUS.** MAX C. BATSEL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 4, 1922. Serial No. 592,234. 3 Claims. (Cl. 250—27.)



1. In combination, a pair of vertically positioned panels, means for rigidly securing said panels in such spaced relation as to provide an open space therebetween, a base-socket member horizontally positioned in said open space and having opposite ends resiliently secured to adjacent panels, a pair of members having opposite ends rigidly secured to said panels and horizontally positioned immediately adjacent to the under surface of said base-socket member to limit the motion thereof to a predetermined amount, and electrical connectors mounted on said members.

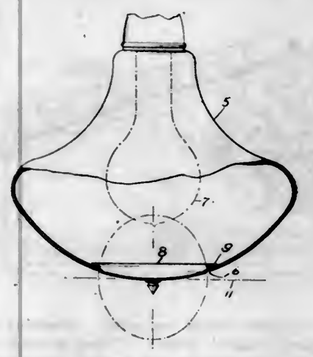
1,572,878. **SWITCH BOX.** HAROLD G. BAXTER, Baldwin, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 11, 1919. Serial No. 281,912. 5 Claims. (Cl. 200—50.)



1. The combination with a casing having an opening therein and a door for the opening, of a rotatable switch, a shaft therefor, an oscillating handle for actuating the

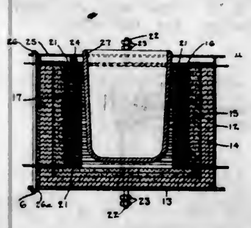
switch, a latch for the door movable with respect thereto, and a cam member mounted on the shaft and inoperable by the latch for so cooperating with the latch and the

switch that the door is prevented from being opened when the switch is closed and the switch is prevented from being closed when the door is open.



1,572,879. CARTON-SPOT DEWAXER. FRANK A. BRISEL, Menasha, Wis., assignor to Menasha Printing and Carton Company, Menasha, Wis., a Corporation of Wisconsin. Filed Feb. 14, 1925. Serial No. 9,363. 16 Claims. (Cl. 93—36.)

1. In mechanism of the class described, means feeding a waxed article along, dewaxing means to remove wax from a spot of predetermined size and location on the article, and means for adjusting the feeding means to vary the position of the dewaxed spot on the article.

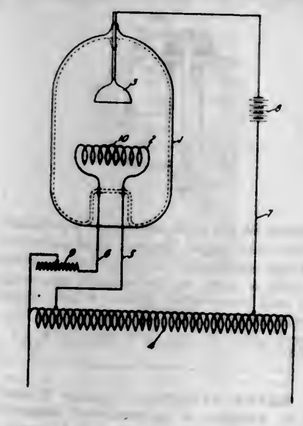


1,572,880. LIGHTING FIXTURE. WILLIAM THOMAS BLACKWELL, Westfield, N. J., assignor, by mesne assignments, to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 18, 1922. Serial No. 530,200. 6 Claims. (Cl. 240—100.)

1. A lighting unit comprising a light transmitting globe having an aperture in the light transmitting portion thereof and a flexible cover having a larger diameter than said aperture, said cover being so constructed that

it may be distorted when confined and readjusted when released, whereby said cover may be inserted through said aperture to provide a cover therefor.

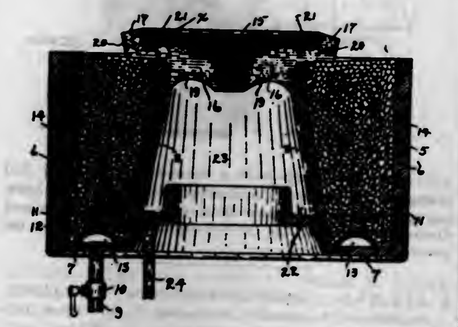
1,572,881. ELECTRIC-FURNACE RESISTOR. PORTER H. BRACE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 14, 1922. Serial No. 600,808. 1 Claim. (Cl. 204—64.)



An electric furnace resistor comprising a plurality of rings of a refractory resistor material of substantial U-shape in radial section, located in coaxial spaced relation, and a plurality of symmetrically spaced refractory electrical-conducting blocks located between adjacent rings and operatively engaging the intermediate portion only of adjacent rings.

1,572,882. HOT-CATHODE APPARATUS. EDGAR W. BREISCH, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 9, 1918. Serial No. 261,916. 13 Claims. (Cl. 250—27.)

1. In electric apparatus, a filamentary electrode adapted to be heated, means for causing an arc to impinge upon said electrode, said arc carrying a current which is a material portion of the current necessary to heat said filament, and means for, at will, modifying the point of arc impact.



3. In electric apparatus, a filamentary electrode embodying a portion of reinforced cross-section, means for causing an arc to operate upon said electrode, and potential-adjusting means for causing said arc to operate principally upon said reinforced portion.

13. The method of operating a gaseous discharge device comprising a heated filamentary cathode, which con-

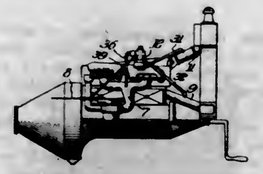
sists in controlling, at will, the current distribution in said cathode to prevent continuous impingement of the discharge upon one portion of said cathode.

1,572,883. LIQUID-FUEL BURNER. LEWIS A. COCKLIN, Griswold, Iowa. Filed Apr. 27, 1925. Serial No. 26,035. 8 Claims. (Cl. 158—96.)

6. In a liquid fuel burner, an upright receptacle open at its top having a cylindrical outer wall and an upwardly tapered inner wall providing an annular chamber and a flue, an oil distributor including an annular casting having a groove opening on its bottom and removably disposed on the bottom of the chamber, a porous filler in said chamber above the casting, a liquid supply element in communication with said groove and said chamber, a spreader cap having its bottom provided with radially arranged wings and disposed in said flue, each wing having an extension projecting beyond the edge of said cap in engagement with the filler and said inner wall, the side walls of each wing being formed outwardly divergent to the end of its extension.

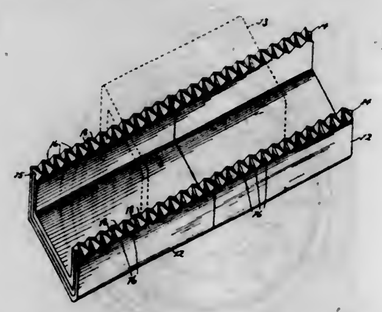
1,572,884. STOP WATCH AND DIAL. CHARLES H. COLVIN, Brooklyn, N. Y. Filed Feb. 10, 1923. Serial No. 618,347. 1 Claim. (Cl. 58—126.)

In a stop watch, in combination, a sweep second hand scale graduated to indicate time per unit of distance; another scale concentric therewith and graduated to read directly in distance per unit of time corresponding



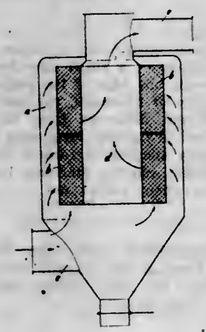
to the indicated time for a fraction of a unit of distance, and a sweep second hand cooperating with either of said scales.

1,572,885. SHAVING BRUSH. EDWARD L. CORBETT, New York, N. Y. Filed July 11, 1925. Serial No. 43,013. 1 Claim. (Cl. 15—187.)



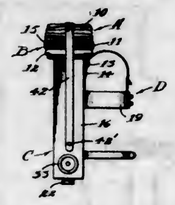
A shaving brush comprising a paper strip spirally wound into the shape of a small tube forming the body portion of the brush, one edge of the strip being serrated to form a plurality of filaments, the said filaments terminating at different distances from the body portion and being arranged in bulbous form, said filaments being coated with a soap adapted to form a lather when the filaments are wetted, and the filaments being adapted to disintegrate after their initial use.

1,572,886. HUMIDIFIER FOR GAS ENGINES. JAY E. CRANDALL, Chicago, and ALBERT OLGAY, Glen Ellyn, Ill. Filed Sept. 12, 1921. Serial No. 500,186. 15 Claims. (Cl. 123—25.)



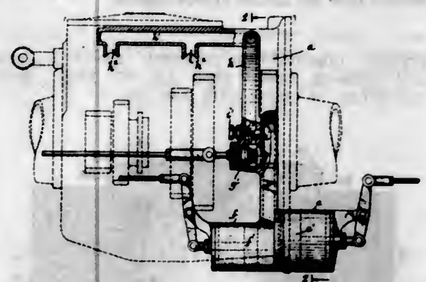
1. A humidifier for internal combustion engines comprising, a water chamber, a vaporizing chamber adjacent said water chamber, a passage connecting said chambers, an air passage entering said vaporizing chamber and means in said water chamber controlled by the temperature of the engine to open and close both of said passages.

1,572,887. BUILDING CONSTRUCTION. RICHARD DALE, Mount Carroll, Ill. Filed Mar. 26, 1923. Serial No. 627,610. 5 Claims. (Cl. 72—52.)



1. An oblong block having one of its horizontal faces comprising a plurality of triangular surfaces arranged so that a pair of adjacent triangular surfaces incline downwardly to one side of the block and intersect in a line lying in a plane perpendicular to the axis of the block, and an adjoining pair of triangular surfaces which incline downwardly to the other side of the block and intersect in a line lying in a plane perpendicular to the axis of the block with the adjacent triangular surfaces of adjoining pairs intersecting in a horizontal line which is inclined to the longitudinal axis of the block.

1,572,888. APPARATUS FOR SEPARATING SOLID SUBSTANCES FROM GASES AND VAPORS, MORE ESPECIALLY BLAST-FURNACE GASES. EMIL DÄNHARDT, Cologne-Kalk, Germany. Filed Aug. 15, 1921. Serial No. 492,494. 2 Claims. (Cl. 183—66.)

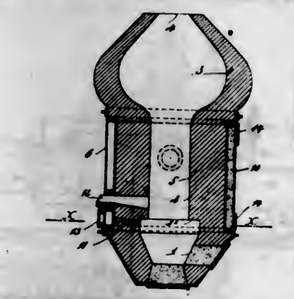


1. Apparatus for the separation of solid substances from gases and vapors, more especially from blast furnace gases, comprising a casing having a conical lower part, a stationary series of removable filter pockets disposed radially within the casing to form a central outlet within the casing for the purified gas, the said filter pockets being disposed above the said conical lower part of the said casing, means detachably to mount said filter pockets individually and collectively in position within the casing, an outlet pipe at the upper end of the said central outlet, and an inlet to the casing for dust laden gas, said inlet being transversely disposed and connected to the conical lower part of the said casing, the filter pockets being so disposed in said casing above the inlet that the cavities between the outer faces of the filter pockets are all directly accessible to the upwardly flowing dust laden gas.

1,572,889. SAFETY PARACHUTE FOR AERONAUTS. IRWIN CHARLES DEGEN, Chaska, Minn. Filed May 20, 1924. Serial No. 714,558. 4 Claims. (Cl. 244—21.)

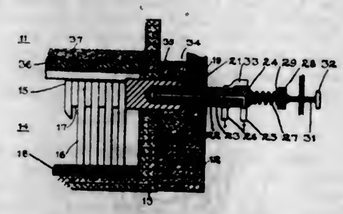
1. In a device of the class described, a parachute structure, a balloon bag caged therein, said parachute structure embodying suspension means for embracing the body of a user, a tank for compressed gas supply associated with said suspension means, a gas conduit leading from said tank to said bag and means for opening the gas supply into the bag from said tank.

1,572,890. BRAKE SYSTEM. CHARLES FROESCH, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 21, 1924. Serial No. 700,757. 20 Claims. (Cl 188—92.)



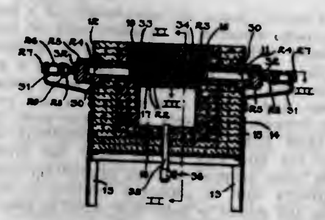
1. The combination with a transmission housing and change speed gears, of a reservoir formed in the housing and a pump to draw fluid from the reservoir and discharge it upon the interchangeable surfaces of the gears.

1,572,891. DIMPLE-PRODUCING APPLIANCE. EVANGELINE I. GILBERT, Rochester, N. Y. Filed July 11, 1921. Serial No. 483,677. 4 Claims. (Cl. 128—76.)



1. A dimple producing appliance comprising a pair of dimple producing devices and a resilient connection between such devices permitting their relative movement and supporting them at such a distance from each other that they may coopernte with the cheeks of an individual to produce pressure on such cheeks.

1,572,892. SIDE-BLAST CONVERTER FURNACE. TOUSSAINT LEVOZ, Heer, Belgium. Filed July 18, 1922. Serial No. 575,809. 1 Claim. (Cl. 266—36.)

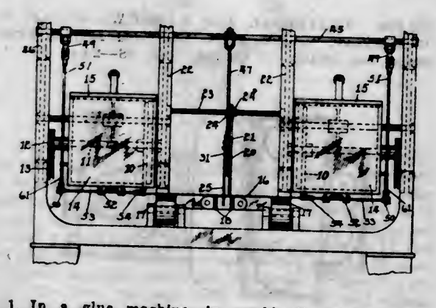


A side-blast converter comprising a drying filter arranged for instance in the blast box, through which the blast is caused to pass on its way to the twyers for the purpose of being freed from the whole of its contained moisture.

1,572,893. ELECTRIC FURNACE. GEORGE M. LITTLE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 1, 1922. Serial No. 598,316. 10 Claims. (Cl. 204—64.)

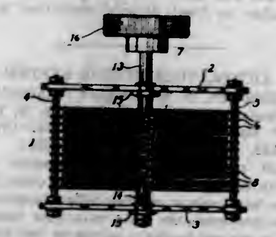
5. In an electric furnace, in combination, a heating element comprising a plurality of refractory members having integral non-current-carrying and weight-supporting extensions.

1,572,894. ELECTRIC FURNACE. GEORGE M. LITTLE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 1, 1922. Serial No. 598,317. 3 Claims. (Cl. 204—64.)



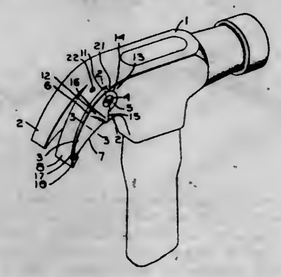
1. An electric furnace comprising a plurality of refractory walls enclosing a chamber, a refractory plate dividing said chamber into a work-receiving comportment and a heating compartment, a heating element in said heating compartment comprising a plurality of elongated, thin, flat, carbonaceous resistor elements located above said plates, and means comprising comminuted carbonaceous material covering said heating element for preventing oxidization thereof.

1,572,895. DETACHABLE LUG FOR TRACTORS AND THE LIKE. CHARLES L. LOFFLER, Des Moines, Iowa. Filed Feb. 2, 1921. Serial No. 441,895. Renewed June 3, 1925. 3 Claims. (Cl. 301—44.)



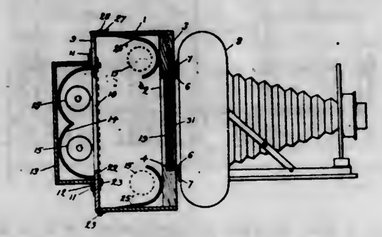
1. A detachable lug-device for tractor and like wheels, including, in combination with a perforated wheel-tread or rim, a plurality of detachable lugs, each of which includes a curved finger and a straight finger for entrance in the perforated wheel-tread, and a plurality of connecting links for connecting the lugs together on the wheel-tread or rim.

1,572,896. GLUE MACHINE. ROY W. LONGLEY and WILLIAM H. GRAY, Monroe, Mich. Filed July 3, 1924. Serial No. 723,963. 5 Claims. (Cl. 91—49.)



1. In a glue machine, in combination with a glue spreading means, means for conveying the article beneath the glue spreading means, a guide for controlling the spreading of the glue, a lever controlled by the movement of the article for moving the guide into glue spreading relation and a lever controlled by the article for removing the article from the glue spreading relation.

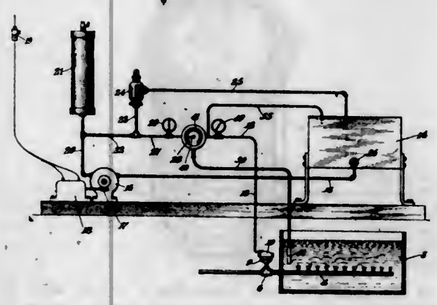
1,572,897. VARIABLE CONDENSER. RALPH E. MARBURY, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 14, 1920. Serial No. 430,619. 4 Claims. (Cl. 250—41.)



1. A condenser comprising spaced plates, corrugated washers interposed between said plates and having alined openings and a post extending through said openings and holding said plates in their relative positions.

1,572,898. COMBINED HAMMER AND KNIFE. NEIL MARTIN, Milton, Mass. Filed July 16, 1925. Serial No. 44,096. 6 Claims. (Cl. 7—8.)

6. A combined hammer and knife comprising a hammer head having a claw provided with a recess in one side face, a knife blade in said recess pivoted to the claw, the side face of the knife blade coming flush with the side face of the hammer, and said blade having a shape corresponding to that of the claw.



1,572,899. UNIVERSAL ART CAMERA. MICHAEL S. MASTRUKOFF, New York, N. Y. Filed May 5, 1925. Serial No. 28,153. 3 Claims. (Cl. 88—24.)

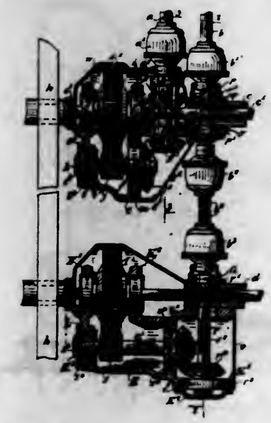
1. In an universal art camera, the combination with a chamber, the front wall of said chamber being provided with an aperture and adapted to be detachably connected to an ordinary photographic camera taking place of a rear cover of said camera, means to support a negative of a picture in said aperture, lamps on the side of said chamber, reflectors for said lamps, said lamps and said reflectors being placed so as not to obstruct said aperture, but adapted to throw the light on the rear wall of said chamber, detachable connections between said rear wall and said chamber, said rear wall being provided with an aperture, means to support a picture against said rear wall, a second chamber attached to said rear wall, and means to support said lamps in said second chamber in front of said apertures in said rear wall.

1,572,900. AUTOMATIC CONTROL SYSTEM. HERBERT MILKER, Brooklyn, N. Y., assignor to American Schaeffer & Budenberg Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 24, 1923. Serial No. 659,132. 3 Claims. (Cl. 236—20.)

1. A fluid pressure operated automatic controlling arrangements having in combination, a conduit in which the fluid is kept under substantially constant pressure, a pump for pumping the fluid into said conduit under pressure, a sump serving as a source of the fluid for said pump, a pressure releasing valve connected to said conduit and sump adapted to return fluid from the said conduit to the sump when the pressure in said conduit exceeds a predetermined value, a control valve connected to said conduit under pressure, a main valve to be operated, said last mentioned valve having pressure operating means to operate it which is connected to said control valve whereby when the control valve is open the fluid under pressure will operate said main valve, fluid

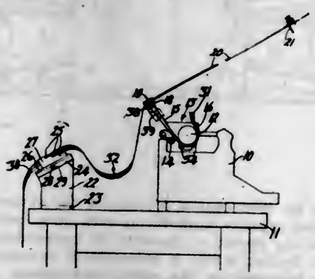
pressure operated means for operating said control valve, and a conduit containing fluid, the pressure of which is adapted to vary to operate said fluid pressure operated means.

1,572,901. DENTAL CLAMP. ROBERT E. L. MILLER, Front Royal, Va. Filed May 9, 1925. Serial No. 29,070. 4 Claims. (Cl. 32—7.)



1. In a dental clamp, the combination of a body, two arms pivotally mounted at opposite ends of said body and provided with means to engage with opposite sides of an article extending from side to side of a patient's mouth, the axes of the pivots of these arms being in the same plane, and a third arm pivoted to said body substantially between the pivots of said two arms, the axis of this third arm's pivot being substantially at right angles to the said axes of the other two pivots, this third arm being adapted to press against the under side of a patient's chin in clamping relation to the other two arms, and means to hold these arms in their clamping relation.

1,572,902. TURPENTINE SUBSTITUTE AND PROCESS OF MANUFACTURING. CLAYTON C. MONGER, Camden, Ark. Filed Jan. 6, 1925. Serial No. 802. 12 Claims. (Cl. 134—56.)



9. A process for manufacture of a turpentine substitute comprising distilling an acidulated mixture of resin and naphtha.

1,572,903. DRIVE FOR MOTOR VEHICLES. ASOR D. ROBBINS, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 6, 1925. Serial No. 48,490. 2 Claims. (Cl. 180—22.)

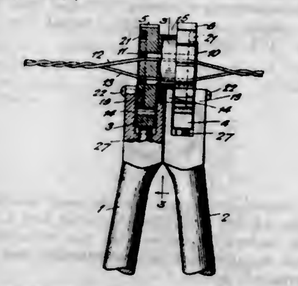
1. In a dual rear axle drive, the combination with a pair of rearwardly extending propeller shafts, of housings for the respective axles, short shaft sections journaled in one of the housings and connected with the respective propeller shafts, a transversely extending short shaft carried with the housing, a differential gear, operative connections between the transverse shaft and the differential gear, operative connections between one of the short shaft sections and the driven shaft.

1,572,904. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 25, 1922. Serial No. 563,501. 15 Claims. (Cl. 197—126.)

1. The combination in a typewriting machine having a rotary platen and a traveling carriage for moving the platen in letter-space and return directions, of a carbon-holder relatively to which the carriage travels, and means for line-feeding around the platen plies of web that are interleaved with carbons, said plies being threaded through the carbon-holder, said carbons being fastened at their rear ends to said carbon-holder, said carbon-holder and said traveling carriage being spaced apart and holding by its ends a loop or slack of web and carbons having sufficient surplus length both to provide a supply for the line-by-line feed around the platen of the leading form-section of the web during the typing operation, and also to allow for reciprocation of the carriage.

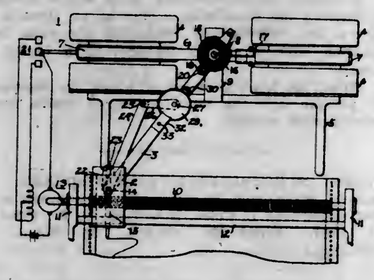
1,572,905. IMPREGNATING WOOD. OTHO V. STEWART, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 16, 1920. Serial No. 481,289. 5 Claims. (Cl. 91—68.)

2. A method of impregnating wood which consists in impregnating the same with a wax at an elevated temperature, and subsequently subjecting the same to impregnation with a gummy material at a higher temperature.



4. Wood, the inner portions of which are impregnated with paraffin and the outer layers of which are impregnated with asphalt.

1,572,906. ELECTRIC-LIGHT-GLOBE SOCKET. HERMAN L. STRONGSON, Brooklyn, N. Y., assignor of one-half to Bernard D. Colen, New York, N. Y. Filed June 23, 1921. Serial No. 479,804. 35 Claims. (Cl. 173—335.)



1. In an electric socket fixture comprising a body, said body provided with a suitable number of receptacles for receiving globes or other electric appliances, a plug made on the body by which the fixture is attached to a current supply fixture, the said receptacles having an internal wall made of non-conducting material, and the said plug made with its external surface formed of non-conducting material, and a pair of metallic contact parts within the body, one part being centrally exposed within each receptacle and centrally exposed on the end of the aforesaid plug, and the other part being exposed along the external surface of the plug and the internal surface of the receptacles.

1,572,907. TWISTING DEVICE. WILLIAM BOND TAYLOR, Carbonear, Newfoundland, assignor of one-fourth to Frank P. Pike and one-fourth to Albert E. Penney. Filed May 13, 1925. Serial No. 29,952. 4 Claims. (Cl. 140—119.)

1. In a twisting device, a hub having a pair of slots to receive wires to be twisted together, said hub also being provided on each end with a groove, a pair of handles, a collar having an opening therein and secured to each handle and running in one of the grooves in the hub to form a journal for its handle, a ratchet wheel for each handle on said hub, and a pawl carried by each handle and cooperating with one of said ratchet wheels

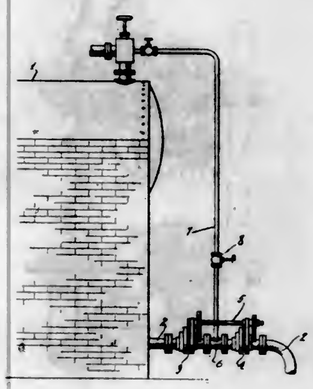
1,572,908. GRAPHIC METER. VICTOR H. TODD, Summit, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 28, 1922. Serial No. 597,542. 10 Claims. (Cl. 234—5.5.)

10. A graphic meter comprising a Kelvin balance actuated in accordance with a quantity of a circuit to be measured, a rectilinearly movable recording device controlled by said balance to move in accordance with variations in said quantity, an arm pivoted coaxially with the axis of movement of the balance and relatively movable with respect to the latter, a spring connected between said arm and said balance to oppose movement of the balance in accordance with the position of the recording device and means constituting an adjustable connection between the free end of said arm and the recording device for varying the effect on said spring of given movements of the recording device.

1,572,909. ARTIFICIAL FUEL. UDO VON PORTEN, St. Louis, Mo. Filed Feb. 24, 1925. Serial No. 11,151. 2 Claims. (Cl. 44—23.)

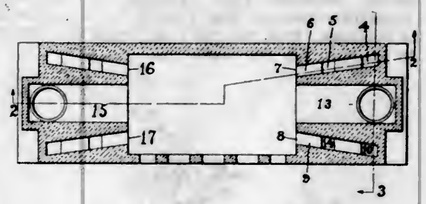
1. An artificial fuel consisting of dried organic refuse, a hydrocarbon distillate, a combustible binder, and a non-combustible diluent in substantially the following proportions by weight:

	Per cent.
Animal or vegetable refuse	75
Hydrocarbon distillate	2
Combustible binder	18
Common clay	5
Total	100



1,572,910. THERMIONIC DEVICE. ARTHUR LESLIE WILSON, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 21, 1921. Serial No. 463,231. 9 Claims. (Cl. 250—27.)

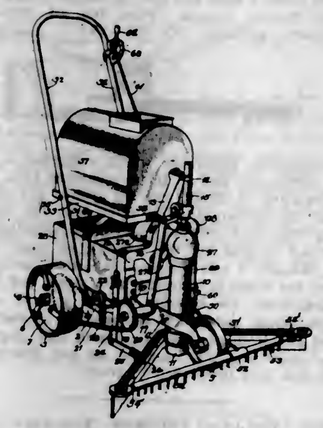
5. In a thermionic device, an enclosed envelope comprising walls of non-conducting material and a reinforcing metallic material integral with the containing walls thereof, said metallic material constituting one electrode of said thermionic device.



1,572,911. BOILER BLOW-OFF APPARATUS. WYLIE G. WILSON, Jersey City, N. J. Filed Apr. 16, 1925. Serial No. 23,502. 3 Claims. (Cl. 137—144.)

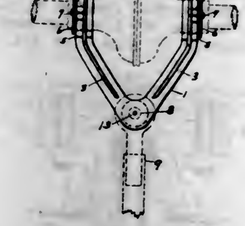
1. In a boiler blow-off system, a blow-off pipe leading from the boiler with two valves interposed in said pipe, one being nearer the boiler and the other farther removed therefrom, and means to operate said valves, means to introduce steam pressure from the boiler to the blow-off pipe between said valves, and means to control said flow of steam pressure, so that when said valves are closed

and steam pressure is introduced into said pipe between said valves, the valve nearer the boiler may be opened in balance between the water in the boiler and such steam pressure.



1,572,912. FURNACE USED IN CONNECTION WITH THE MAKING OF STEEL. NICKOLAS F. EGLER, Chicago, Ill. Filed Jan. 20, 1922. Serial No. 530,522. 13 Claims. (Cl. 263—15.)

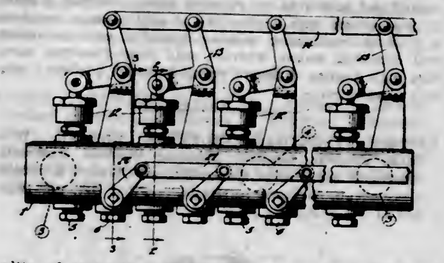
13. In an open hearth furnace of the reversible type having two opposite heads facing each other, each of said heads having therein a plurality of horizontally extending fuel feeding ports, a horizontally extending outlet chamber intermediate the ports, transversely extending air and gas flues, upwardly extending passages between each port and the flues, and a passageway extending between the air flue and the outlet chamber intermediate the air passages.



1,572,913. MOPPING AND RINSING MACHINE. WALTER S. FINNELL, Hannibal, Mo., assignor to American Scrubbing Equipment Company, Hannibal, Mo., a Corporation of Delaware. Filed Apr. 9, 1923. Serial No. 630,755. 8 Claims. (Cl. 15—98.)

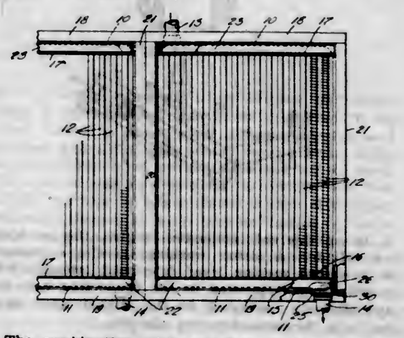
2. In a mopping machine, the combination of a wheeled truck having a base frame and an upper platform, a receiving tank on the base frame, a pump mounted at the front of the latter and discharging into said tank, a squeegee embracing the suction end of the pump, a water pipe arranged to discharge in front of the squeegee, and extending to the upper platform of the truck, and a clean water tank removably mounted upon said platform and

having an outlet registering with the end of the water pipe, with provisions for effecting a separable water-tight joint including clamping means.



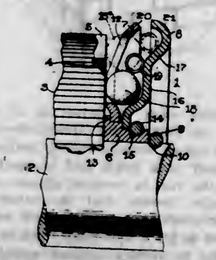
1,572,914. DRIVE-AWAY TOWING FIXTURE. WALTER P. FLEMING, Detroit, Mich. Filed May 11, 1925. Serial No. 29,452. 5 Claims. (Cl. 280—33.44.)

1. A towing fixture adapted for attaching a towing device to the rear axle housing of an automobile, comprising a V-shaped frame having both ends thereof the same length and parallel to each other, a U-socket formed on each end of said frame for hooking over the axle housing, spring clips attached to the U-sockets for holding same on the axle housing, and means for attaching a draw bar of a towing device to the opposite end of the frame.



1,572,915. DISCHARGE MECHANISM FOR BITUMINOUS DISTRIBUTORS. ANTHONY FRICKER, Lakewood, Ohio. Filed May 7, 1919. Serial No. 295,319. 8 Claims. (Cl. 299—34.)

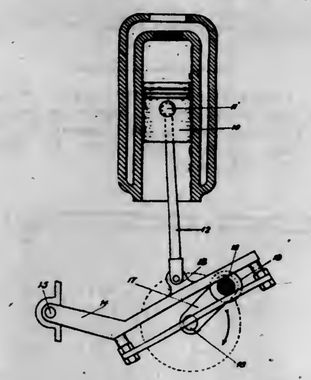
1. In a device of the character described, a distributing manifold provided with a plurality of gangs of discharge outlets, the outlets of each gang being distributed at intervals along the length of the manifold, and a plu-



rality of separate controlling means, one for all of the outlets of each gang.

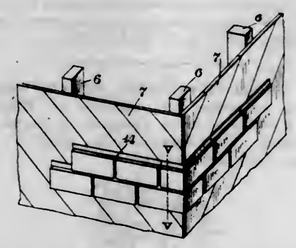
1,572,916. RADIATOR OR THE LIKE. WILLIAM J. GAMBLE, East Orange, N. J., assignor, by mesne assignments, to Carrier Construction Company, Inc., Newark, N. J. Filed Aug. 11, 1923. Serial No. 656,897. 8 Claims. (Cl. 257—154.)

8. The combination with a radiator having a flexible wall, of a pipe fitting attached to said wall and adapted for the connection of a pipe therewith, a protecting frame for said radiator, said pipe fitting having a portion with non-circular recessed sides loosely entering an opening in said frame, and members projecting into said recessed sides and adapted to be stationarily secured to said frame for holding said pipe fitting against movement in one or more directions relatively to said frame.



1,572,917. SHORT-CIRCUITING DEVICE. GEORGE H. GARCELON, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 30, 1923. Serial No. 648,714. 14 Claims. (Cl. 172—279.)

1. The combination with a rotor of a dynamo-electric machine having a plurality of circumferentially disposed contact members of a closed-circuiting device secured to



said rotor, said close-circuiting device comprising a plurality of close-circuiting members adapted to move under centrifugal action to an outward close-circuiting position in engagement with a plurality of said contact members, a yielding restraining member opposing said movement, and retaining means whereby said close-circuiting members may assume different circumferential positions relative to said rotor.

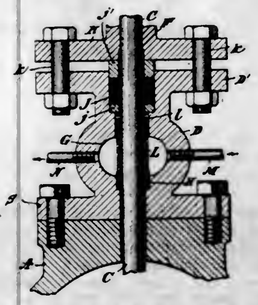
1,572,918. INTERNAL-COMBUSTION ENGINE. WILLIAM FRANCIS GEDDES, Subiaco, Western Australia, Australia, assignor of three-eighths to Walter Schofield, Bassendean, Western Australia. Filed Oct. 28, 1924. Serial No. 745,350. 4 Claims. (Cl. 74—14.)

1. In an internal combustion engine, the combination of a cylinder, a piston working therein, a connecting rod, a slotted rocking lever fulcrumed laterally left of the cylinder and pivoted to the connecting rod, and a crank slidingly connected to the slotted lever and rotated in a clockwise direction thereby.

1,572,919. TILE. CLARENCE D. GEESE, Columbus, Ohio. Filed Feb. 3, 1923. Serial No. 616,738. 1 Claim. (Cl. 72—19.)

A pair of tiles each in imitation of a plurality of ordinary brick in break joint arrangement, one of said tiles having an upper angular corner section representing the face and end of a brick and projecting beyond the main body of the tile in vertical planes coinciding with and at an angle thereto and the other of said tiles having a lower angular corner section representing the face and end of a brick and projecting beyond the main body of the tile in vertical planes coinciding with and at an angle thereto and adapted to engage the first mentioned projecting corner section to represent two laid-up corner brick.

1,572,920. COMBUSTION APPARATUS AND METHOD. GEORGE CARLETON GEROW, Ottawa, Ontario, Canada, assignor of eight-twentieths to William Joseph Press, one-twentieth to William C. Arnold, one-twentieth to James Lewis Kemp, and two-twentieths to Edith Press, all of Ottawa, Canada. Filed Jan. 16, 1925. Serial No. 2,809. 1 Claim. (Cl. 158—28.)

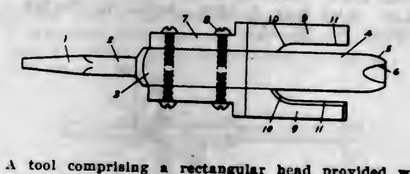


A combustion apparatus which comprises a jacketed burner having air and oil inlets separated by a baffle for the circulation of the air current around the combustion zone of the burner, and an inlet into the combustion zone in line with the oil inlet, in combination with a steam coil located in the combustion zone and connected through a steam generator with a water supply, whereby the water is converted into steam and the steam is superheated, an injector having a duct connected with the steam coil and a surrounding channel for the oil, and an oil supply connected with said channel, said injector delivering the atomized oil and steam through the oil inlet into the jacketed burner.

1,572,921. WELDING PROCESS. LAWRENCE GIZIENSKI, Curtisville, Pa. Filed Apr. 2, 1925. Serial No. 20,089. 2 Claims. (Cl. 78—92.)

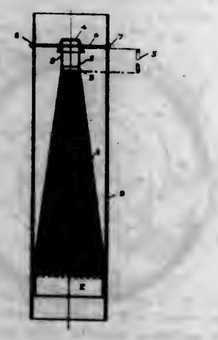
1. The process of welding rod ends and preventing oxidation of the surfaces to be welded, consisting in first coupling the two ends in relatively permanent engaging position, incasing said ends in a protective covering, heating the whole to yielding temperature, removing the covering, and finally welding the ends together without displacing them from their original coupled position.

1,572,922. BALANCED PACKING FOR SHAFTS. FRANCIS X. GOVERS, New York, N. Y., and EDWARD R. HEWITT, Midvale, N. J. Filed May 22, 1919. Serial No. 298,847. 8 Claims. (Cl. 251—50.)



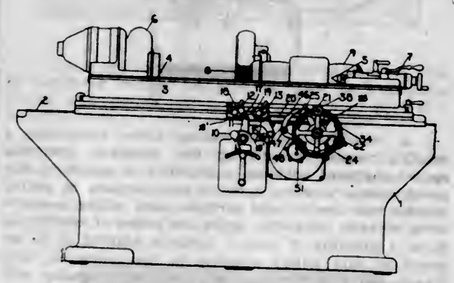
8. In combination with a valve, packing for the valve stem, a collar and a spring cooperating to hold said packing in position, a valve stem, a chamber surrounding said valve stem, a recess on the valve side of said chamber for receiving said packing and a bore for the introduction of said packing on the opposite side of said chamber, a relatively larger second packing and means to hold said second packing under predetermined pressure, and means for circulating liquid in said chamber subject to the pressure of the fluid within the valve casing.

1,572,923. STEERING WHEEL. JOHN H. HAMMES, Detroit, Mich., assignor to Sewell Cushion Wheel Company, Detroit, Mich., a Corporation of Delaware. Filed Sept. 27, 1922. Serial No. 590,780. 1 Claim. (Cl. 74—33.)



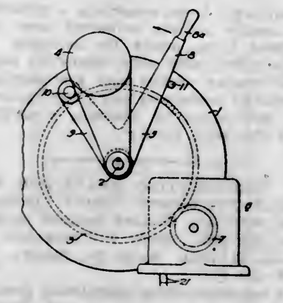
A steering wheel for automobiles and the like having an all-wood spider comprising upper and lower continuous sheets of wood veneer, and filler members between composed of a plurality of strips of wood of lesser area shaped and fitted together to conform with the shape of the outer veneer sheets, the outer sheets and filler strips being cemented to form a unitary structure and simultaneously curved to bring the extremities of the spider into a different plane from the central hub portion thereof.

1,572,924. PIPE-END-FORMING TOOL. LAWRENCE J. HAND and HENRY G. PASS, Dayton, Ohio. Filed Oct. 14, 1924. Serial No. 743,637. 1 Claim. (Cl. 77—73.5.)



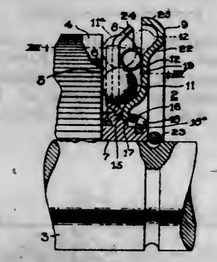
A tool comprising a rectangular head provided with a shank adapted to be received in a rotary tool holder, a reamer forming a continuation of the head, substantially L-shaped cutters disposed at diametrically opposite points of the reamer, and an attaching element carried by the shorter legs, an attaching element formed with the shorter leg of each of the L-shaped cutters and having their end faces flattened throughout their lengths and contacting with the head, fastenings detachably connecting the attaching elements with the head, the cutters being provided with continuous cutting edges, the major part of the length of such cutting edges being spaced from the reamer and their inner ends extended to the latter.

1,572,925. FIRE PREVENTER. EDITH HARTEAU, Sobieski, Wis. Filed Mar. 9, 1925. Serial No. 14,337. 1 Claim. (Cl. 183—72.)



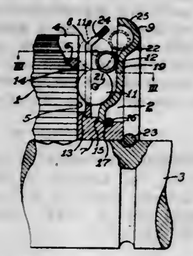
The combination in a separator, of a conical perforate member, a cylindrical imperforate member depending therefrom, a conical cap member extending above said perforate member and spaced therefrom, spacing members including supports extending from the cap member to said perforate member and from which supports said perforate member depends, and means extending through said cap member to hold the separator in position.

1,572,926. GRINDING MACHINE. JAMES N. HEALD, ALBERT TURNER, and GEORGE C. KIMMEL, Worcester, Mass., assignors to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 7, 1922. Serial No. 593,113. 6 Claims. (Cl. 51—165.)



1. In a grinding machine, wheel feeding mechanism comprising a ratchet-wheel operatively connected to the main feed screw, a hand wheel concentric with said ratchet-wheel and a rotatable pinion carried peripherally by said hand wheel and movable into and out of mesh with the teeth of said ratchet-wheel, in combination with a cylindrical member of larger diameter than said pinion and rotatable therewith, said member having a series of spaced peripheral depressions, and a spring-pressed pin adapted to enter said depressions to restrain rotation of said pinion, whereby to form a substantially positive lock between said hand wheel and said ratchet-wheel except when said pinion is seized and axially turned to overcome the friction of said pin, in the act of adjusting the hand wheel relative to the ratchet-wheel.

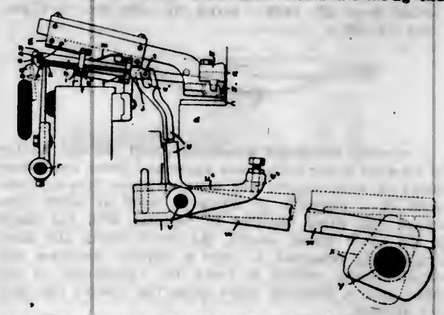
1,572,927. CONTROL APPARATUS. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 2, 1919. Serial No. 327,934. 4 Claims. (Cl. 172—288.)



4. Multi-position control apparatus comprising a rotatable shaft, an impelling weight and a gear-wheel secured to said shaft, an induction brake having a rotatable member meshing with said gear-wheel, and a handle member having a projection for restraining the impelling movement of said weight at will.

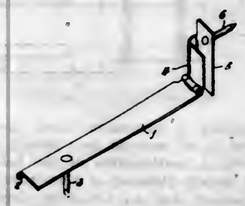
1,572,928. SHORT-CIRCUITING DEVICE. WALTER H. HIMES, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 30, 1923. Serial No. 660,120. 29 Claims. (Cl. 172—279.)

1. A centrifugal contact-making device comprising a rotating member comprising two members providing spaced abutment surfaces, a plurality of annularly disposed rolling members between said surfaces in rolling contact with one of said surfaces, said rolling members being movable outwardly under the action of centrifugal force, a plurality of contact members adapted to be engaged by said rolling members in the course of their travel, and anti-friction means yieldably engaging said rolling members in rolling engagement therewith and with the other abutment surface for yieldably opposing the centrifugal movement of said rolling members.



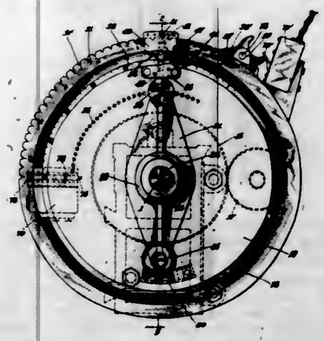
1,572,929. SHORT-CIRCUITING DEVICE. WALTER H. HIMES, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 25, 1924. Serial No. 708,903. 16 Claims. (Cl. 172—279.)

1. A centrifugal device comprising a cylindrical roller which is movable radially outwardly under the action of centrifugal force, means for providing a surface against which said roller rolls, means for providing an idler roller bearing against said first-mentioned roller and for yieldably restraining said roller against outward movement, and means for providing a surface against which said idler roller rolls.



1,572,930. WEFT-CUTTING MEANS FOR AUTOMATIC WEFT-REPLENISHING LOOMS. DENIS MACHELL HOLLINS, Blackburn, England, assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed June 14, 1924. Serial No. 720,021. 9 Claims. (Cl. 139—266.)

1. In an automatic filling replenishing loom, a temple thread cutter having relatively movable thread cutting means, means tending to place said thread cutting means in operative position, means for holding the thread cutting means in inoperative position during the normal operation of the loom, means, operable by the mechanism for changing the operation of the loom during its restoration to normal position after call for transfer, to release said thread cutting means from inoperative position and means for actuating the thread cutting means when released to cause the same to sever the filling ends

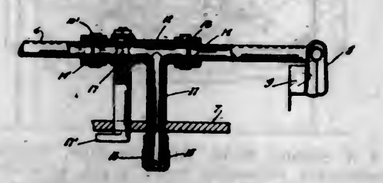


extending from the selvage upon the first pick after transfer and thereupon to restore said thread cutting means to inoperative position.

1,572,931. FASTENER FOR STAIR CARPETS AND THE LIKE. CHARLES ERNEST JOHNSON, Hale, England. Filed Sept. 3, 1924. Serial No. 735,538. 1 Claim. (Cl. 16—10.)

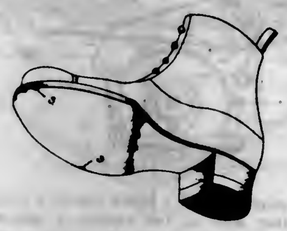
A fastener for stair carpets and the like comprising a metal strip having a longitudinal flange adapted to embrace the extreme edge of the carpet, another plate pivotally connected to one end of said first plate, a base-plate connected therewith by means of a web, a spike carried by the first mentioned plate and said base plate and a socket in the "tread" and riser for the reception of said spikes, substantially as herein described.

1,572,932. COUNTING HEAD. HARRY C. JONES, Larchmont, N. Y., assignor to Lithoprintex Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 21, 1924. Serial No. 694,194. 16 Claims. (Cl. 235—132.)



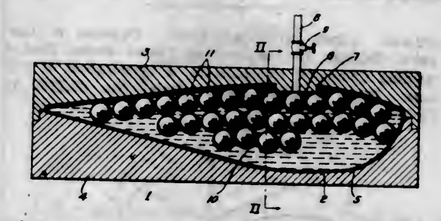
1. In a counting head, the combination of a shaft the rotations of which are to be counted, a pair of differential gears geared together, a first index member for indicating fractional revolutions connected to one of said differential gears and adapted therewith to rotate relative to the shaft, a second index member for indicating complete revolutions free to rotate with respect to said shaft and the other of said differential gears, and means for selectively locking said second index member to the other differential gear, whereby with said first index member connected to its gear and when said second index member is locked to its gear, and said second index member is rotated, the two index members are caused to be moved angularly one with respect to the other for the fractional setting of the index members.

1,572,933. PROCESS FOR THE MANUFACTURE OF CERTAIN ALBUMINS AND FATTY MATTERS. MAURICE KAHN, Paris, France, assignor to Société Française des Produits Alimentaires Azotés, Paris, France. Filed Apr. 14, 1925. Serial No. 23,146. 3 Claims. (Cl. 99—11.)



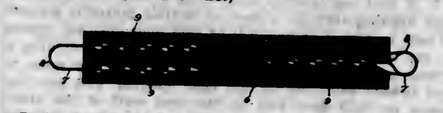
3. A process for obtaining certain albuminous and fatty matters from products of animal or vegetable origin which consists in adding 10 per thousand by weight of toluene and a like weight of chloroform to such products, and subjecting such mixture to autolysis.

1,572,934. OIL TUBE FOR MOTOR VEHICLES. HENRY C. KARSTENS, Shelby County, near Avoca, Iowa. Filed Mar. 24, 1924. Serial No. 701,435. 2 Claims. (Cl. 137—70.)



1. An oil tube for a crank case comprising a member having a T-head interposed in said tube and having coupling sleeves for removably mounting said member in said tube, an integral branch pipe extending from said T-head and having its outer end arranged for attachment to an air hose, covering means on the outer end of said pipe, and a cut off valve mounted in said member at one side of said branch pipe and having a handle outside of said crank case to direct all air through said pipe in one direction through said tube.

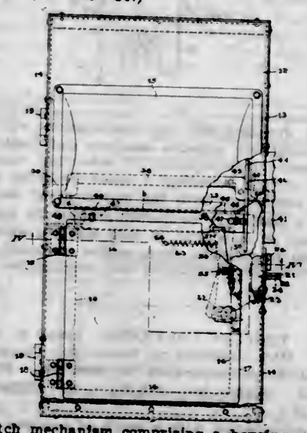
1,572,935. SHOE-SOLE PROTECTOR. LE ROY D. KREHN, Chicago, Ill. Filed May 31, 1924. Serial No. 716,960. 1 Claim. (Cl. 36—74.)



A shoe having a sole provided with an obliquely inclined opening extending from the lower edge of the sole, in combination with a wear resisting means comprising a stud fitting said opening and having a conform head at one end of its shank and a split point at the other end adapted to spread apart in a final driving operation on the stud.

1,572,936. METHOD OF MOLDING. ROBERT KEMP, Chicago, Ill., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 23, 1921. Serial No. 494,517. 4 Claims. (Cl. 18—55.)

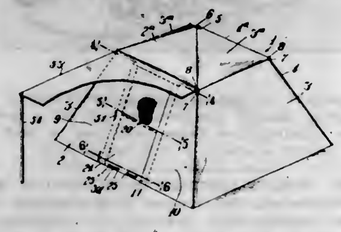
1. Apparatus for use in molding comprising a pressure-applying member composed in part of a material having a relatively low fusing point and in part of a material having a relatively high fusing point.



1,572,937. STRAIN INSULATOR. WILLARD H. KEMPTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 10, 1918. Serial No. 249,848. 7 Claims. (Cl. 173—28.)

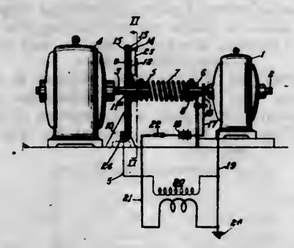
5. A strain insulator comprising a rod formed of superimposed layers of sheet material impregnated with a hardened binder and wires bent to form loops and having their ends twisted and molded into the ends of the rod.

6. An insulator comprising a hard molded insulating body including elements therein having portions extending substantially parallel to its load axis and portions, constituting longitudinal continuations of said first portions, that are laterally waved or bent, and a terminal member embodying an intermediate loop portion and ends having laterally-extending portions disposed between said waves or bends for interlocking the insulating body and terminal member against the load forces.



1,572,938. SWITCH MECHANISM. HUBERT K. KRANTZ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 18, 1922. Serial No. 555,140. 6 Claims. (Cl. 200—50.)

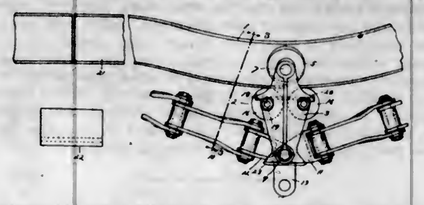
6. Switch mechanism comprising a housing, a movable switch member, a movable door for the housing, an interlock member movably mounted on the housing for alter-



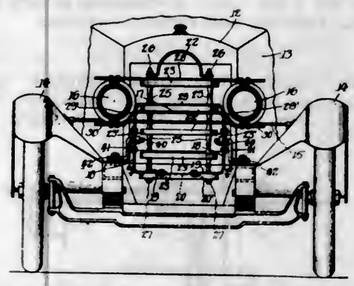
nately preventing predetermined movements of the door and switch member, a latch carried by the door and means actuated by the closing movement of the door for moving the latch into operative engagement with the interlock member.

1,572,939. TENT CONSTRUCTION. CHARLES B. LEFFERT, Chicago, Ill., assignor to United States Tent & Awning Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 9, 1925. Serial No. 67,713. 11 Claims. (Cl. 135—14.)

1. A tent construction embodying a tent wall having a door opening therein, a door of flexible material secured to said tent wall at one side of said door opening, means at the top and bottom of said door opening providing a sliding bearing for said door which permits the same to fold toward said side of said door opening, and coacting means on said door and on the tent wall of the other side of said door opening for securing the free margin of said door thereto in a manner closing said door opening.



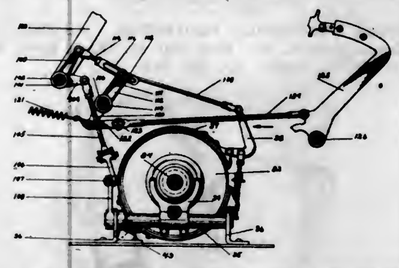
1,572,940. TRANSMISSION DYNAMOMETER. JOSEPH W. LEGG, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 14, 1921. Serial No. 437,171. 7 Claims. (Cl. 265—25.)



1. In a dynamometer, the combination with a plurality of relatively movable members and yieldable connecting means therebetween, of indicating means comprising a circuit including a space-discharge electrode moved in accordance with the movement of one of said members, a stationary co-operating electrode conforming to the path of movement of said movable electrode in spaced relation thereto, and means actuated by the other member for controlling the energization of said circuit.

1,572,941. TROLLEY CONVEYER. JESSE E. MCBAIDE, Detroit, Mich., assignor to Palmer-Bee Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 2, 1923. Serial No. 610,331. 17 Claims. (Cl. 105—154.)

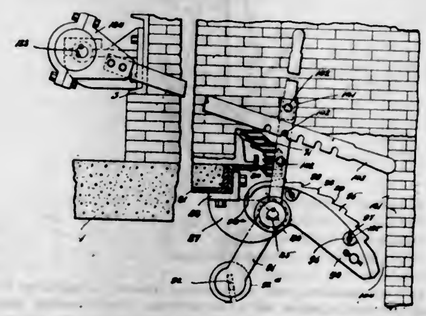
2. The combination with a track, of a power propelled trolley suspended from said track at one longitudinal point in its length, means secured to said trolley for propelling the same, and means upon said trolley, offset from the vertical plane through the point of suspension of said trolley and engageable with said track for limiting the upward movement of said trolley relative to said track.



1,572,942. RADIATOR AND LAMP FENDER FOR AUTOMOBILES. ROBERT ROY MCGREGOR, Chicago, Ill. Filed Apr. 10, 1925. Serial No. 22,039. 13 Claims. (Cl. 293—54.)

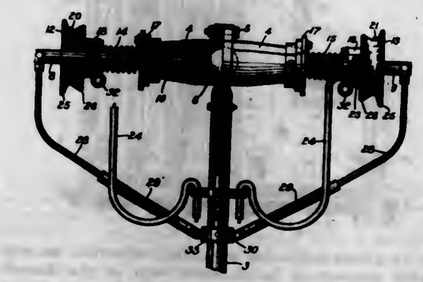
3. A radiator fender for automobiles, comprising a substantially rectangular frame, a pair of vertical tie-rods mounted in the upper and lower members of said frome equally spaced inwardly from the side members thereof, a group of forwardly bowed spring fender bars having rearwardly looped end portions terminating in eyes encircling said tie-rods, and spacing sleeves on said tie-rods between adjacent fender bars.

1,572,943. TRACTOR. CHARLES W. MCKINLEY, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 22. 1920. Serial No. 425,769. 4 Claims. (Cl. 180—9.2.)



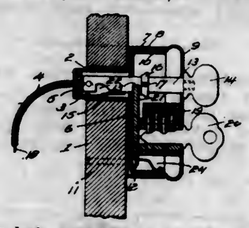
1. In a motor vehicle, a power source, a traction member on either side of the vehicle, a separate clutch adapted to connect either of said traction member to the power source, a pair of independently movable transverse rock shafts adapted to operate said clutches, a brake for each traction member, a second pair of independently movable shafts adapted to operate said brakes and a connection between each of the first pair of rock shafts and one of the second pair of rock shafts.

1,572,944. PROCESS OF SOFTENING WATER. MARTIN F. NEWMAN, Oakmont, Pa., assignor to Wm. B. Scaife & Sons Company, Oakmont, Pa., a Corporation of Pennsylvania. Filed Apr. 19, 1924. Serial No. 707,770. 5 Claims. (Cl. 210—23.)



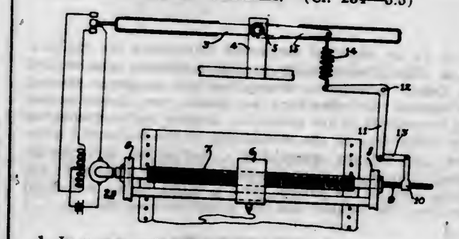
1. The process of treating feed water for boilers, comprising the steps of first with suitable reagents neutralizing acids and precipitating hardening substances, and thereafter adding to such a treated water an acid sulphate to reduce the alkalinity further.

1,572,945. AUTOMATIC-STOKER DUMPING GRATE. OSCAR O. NYGAARD, Boston, Mass., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Original application filed June 15, 1918, Serial No. 240,160. Divided and this application filed Apr. 12, 1919. Serial No. 289,681. 11 Claims. (Cl. 110—32.)



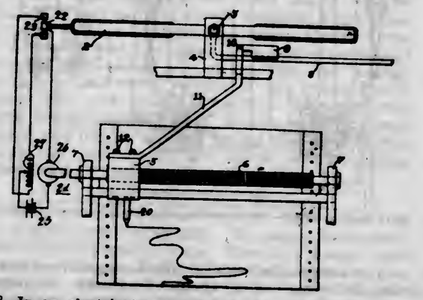
9. In a stoker furnace having fuel feeding and grate actuating means, an automatic rocking dumping grate for use therein, a wall, said dumping grate and wall defining a refuse discharge opening at one end of the grate, and means for adjusting the amount of rocking motion, the angular tilt of said dumping grate, and the size of the refuse discharge opening, without alteration of the amount of movement or speed of the fuel feeding or grate actuating means in the stoker when making such adjustments.

1,572,946. TROLLEY POLE. CHARLES C. OWENS and RALPH L. HERMANN, Detroit, Mich., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 17, 1921. Serial No. 523,097. 5 Claims. (Cl. 191—57.)



1. The combination with a trolley pole, of a cross-head pivotally supported thereon, two current collectors disposed at opposite sides of the trolley pole, and a guard arm extending from each end of the cross-head to a point upon the trolley pole, said guard arms each comprising two telescopic sections.

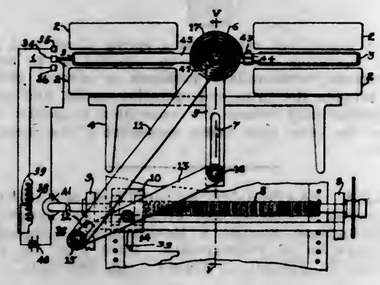
1,572,947. MOTOR LOCK. JOHN D. PARDOE, Memphis, Tenn., assignor of one-half to Robt. T. Cameron, Memphis, Tenn. Filed Jan. 30, 1925. Serial No. 5,903. 5 Claims. (Cl. 251—6.)



3. A motor lock comprising a spring closed fuel feed valve, operating means therefor adapted to be locked in various predetermined positions, a pivoted connection between the valve and operating means, and means to automatically release the connection to permit closing of the valve upon undue movement of the operating means.

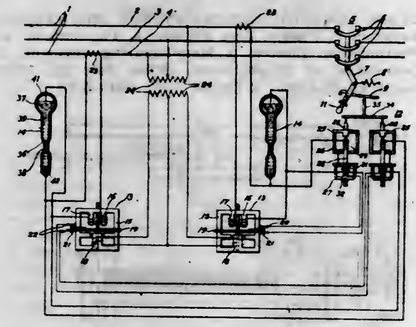
1,572,948. GRAPHIC-METER-CONTROL MECHANISM. RAYMOND T. PIERCE, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 11, 1922. Serial No. 574,259. 5 Claims. (Cl. 234—5.5)

1. In a measuring instrument, the combination with a rotatable shaft and a Kelvin balance to be energized in accordance with a circuit to be measured for controlling the operation of the shaft, of means for opposing movement of the balance, including a spring and an auxiliary rotatable member responsive to rotation of the shaft.



1,572,949. GRAPHIC-METER-CONTROL MECHANISM. RAYMOND T. PIERCE, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 11, 1922. Serial No. 574,260. 8 Claims. (Cl. 234—5.5.)

8. In an electrical measuring instrument, the combination with a rectilinearly-movable indicating member and a Kelvin balance for controlling the movement thereof, of means including a lever-arm projecting from the

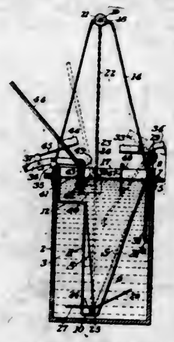


balance from a position adjacent to the pivot axis thereof, and a weight member movable along the arm for opposing forces caused by movement of the balance by proportionately varying forces in accordance with the direction and extent of movement of the indicating member.

1,572,950. GRAPHIC-METER-CONTROL MECHANISM. RAYMOND T. PIERCE, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 11, 1922. Serial No. 574,261. 9 Claims. (Cl. 234—5.5)

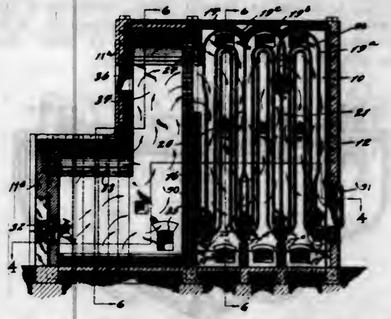
9. In an electrical measuring instrument the combination with a rectilinearly-movable indicating member and a Kelvin balance for controlling the operation thereof, of means for affecting the balance by forces caused by movements of the indicating member and compensating for differences in the movements of the indicating member and balance comprising a lost-motion link mechanism including a member loosely pivotally related to the pivot axis of the balance, and a spiral spring connected between the balance and the loosely-pivoted member.

1,572,951. RELAY-TRIPPING SYSTEM. RAYMOND T. PIERCE, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 5, 1923. Serial No. 672,884. 16 Claims. (Cl. 175—294.)



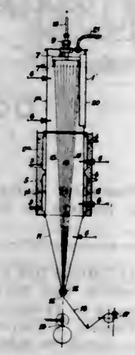
1. The combination with an alternating-current power-directional relay, of a circuit interrupter controlled thereby, direct-trip means for said interrupter and means including a time-limit relay co-operating with the tripping means for delaying the action of said circuit interrupter under conditions of reversed power.

1,572,952. DRYING CALCIUM HYPOCHLORITE COMPOUNDS. GUSTAV PISTOR, Griesheim-on-the-Main, Germany, assignor to Chemische Fabrik Griesheim-Elektron, Frankfort-on-the-Main, Germany. Filed Mar. 26, 1925. Serial No. 18,628. 8 Claims. (Cl. 23—86.)



1. The method of drying calcium hypochlorite compounds, consisting in preliminarily drying the said compounds by treating them with heat to a small percentage of water and then mixing them with hygroscopic substances which are incapable of reacting with calcium hypochlorite under mutual decomposition.

1,572,953. GALVANIZING APPARATUS. CARL PLETSCH, Bad-Nauheim, Germany. Filed May 15, 1924. Serial No. 713,459. 7 Claims. (Cl. 91—12.5.)



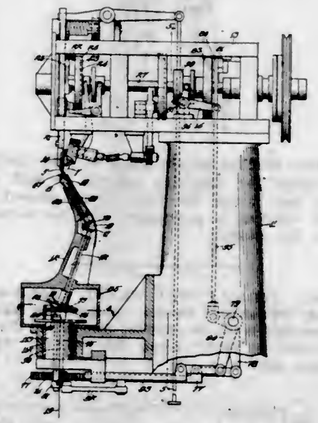
4. An apparatus for galvanizing sheets, comprising a tank for the spelter bath, a skimmer for removing the zinc ashes from the portion of the bath where the sheets emerge, means for operating said skimmer, and means engageable with the lower edge of a sheet immersed in said bath for raising said sheet through the skimmed portion of the bath, said skimmer comprising a trough through which the sheets emerge.

1,572,954. SUPERHEATER AND SETTING THEREFOR. ARTHUR D. PRATT, Short Hills, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed July 27, 1921. Serial No. 487,857. 4 Claims. Cl. 122—485.)

1. In a fluid heater and its setting, transverse headers located adjacent to an enclosing wall of the heater, groups of U-shaped tubes connected at their ends to adjacent headers, the adjacent ends of adjacent groups being connected to a common header, some of the tubes of each group being arranged side by side to form a baffle but bent away from each other at alternate ends in successive groups, whereby the gases are directed in series over said groups of tubes.

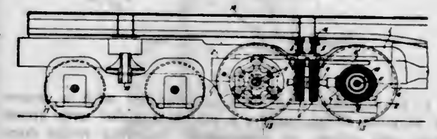
1,572,955. PROCESS AND APPARATUS FOR THE MANUFACTURE OF ARTIFICIAL THREAD. EDMOND PAINCE, Lyon, France, assignor to La Société pour la Fabrication de la Soie "Rhodiaseta," Paris, France, a Corporation of France. Filed Oct. 11, 1923. Serial No. 667,872. 5 Claims. (Cl. 18—8.)

1. An apparatus for dry spinning artificial filaments, comprising, a die unit, means for supplying a viscous material to said die unit, a drying chamber below said die unit, and a funnel-shaped member in communication with the lower end of said drying chamber and provided with a outlet orifice at its apex for discharging the filaments issuing from the die unit, the organization being such that the filaments will be dry before reaching the funnel-shaped member.



5. In a dry-spinning of artificial filaments, the process of collecting isolated filaments, which consists in causing said filaments in dry condition to fall on a conical wall thereby causing the filaments to slide toward each other.

1,572,956. STOCKING. ARTHUR G. RAFFAPORT, New York, N. Y., assignor to Goodman Bros., New York, N. Y., a Copartnership composed of Herbert M. Goodman, Arthur H. Goodman, Joel B. Goodman, and Benson H. Goodman. Filed Mar. 6, 1925. Serial No. 13,507. 1 Claim. (Cl. 2—239.)

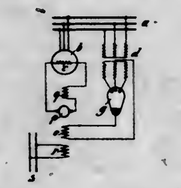


A stocking having a body portion and a normally down-turned cuff portion, said cuff portion being seamed at its upper and lower edges to said body portion to reinforce the latter and being provided with a suitable design, the circumferential line of union at one edge of the cuff portion being adjacent the top of the stocking when the latter is extended with the raw edges of the material disposed between the cuff portion and the body portion, the circumferential line of union at the other edge of the cuff portion being within the body of the stocking, whereby in the normal down-turned position of the cuff portion said design is exposed to view, and when said cuff portion is extended to prolong the stocking, said design is invisible.

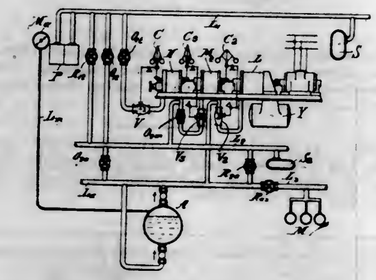
1,572,957. SHOE-SEWING MACHINE. JAMES H. REED, Swampscott, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Jan. 22, 1921, Serial No. 439,255. Divided and this application filed Aug. 12, 1921. Serial No. 491,694. 5 Claims. (Cl. 112—62.)

1. In a shoe sewing machine and in combination, a looper, operating mechanism therefor including a pair of intermeshing bevel gears, and a takeup finger located between said bevel gears.

1,572,958. TURBINE-DRIVEN LOCOMOTIVE. HUGH REID and JAMES MACLEOD, Glasgow, Scotland. Filed May 5, 1925. Serial No. 28,172. 4 Claims. (Cl. 105—38.)



4. In a turbine driven locomotive, the combination with a rotor, of hollow shafts having driving gear connections with said rotor, disks fixed to said hollow shafts, driving elements mounted on said disks, wheeled axles passing loosely through said hollow shafts and provided with longitudinal grooves, disks loosely mounted on said axles and carrying driven elements, flexible connections between said driving and driven elements, and pins carried by said last-named disks and entering said grooves in said axles; whereby endwise and angular movements of said axles, relative to said hollow shafts, are permitted, said flexible connections comprising telescoping tubular members, and springs encircling said members, said tubular members having semi-spherical end portions and said driving and driven element having concave seats in which said end portions fit.

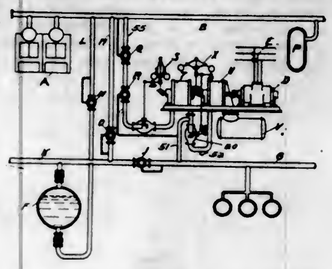


1,572,959. RAPID REGULATION OF THE VOLTAGE IN CONDUCTOR SYSTEMS. REINHOLD RÜDENBERG, Berlin-Charlottenburg, CARL TRETTIN, Berlin, and GERHARD KÖHLER, Berlin-Wilmersdorf, Germany, assignors to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a German Corporation. Filed Jan. 16, 1923. Serial No. 613,026. 6 Claims. (Cl. 171—119.)

1. Arrangement for rapidly regulating the voltage in mains supplied by an alternating current generator, com-

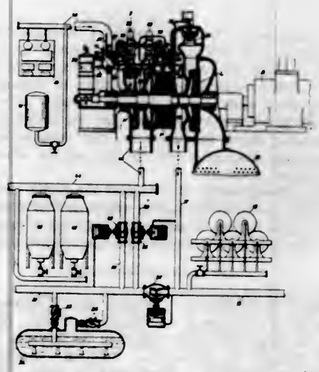
prising an alternating current generator, and exciting machine for said generator having a series field winding and a magnet system adapted to permit the exciting machine to operate at an indifferent equilibrium, an auxiliary field winding on the poles of said exciting machine, means for supplying current to said auxiliary winding, and means for varying the current in said auxiliary winding, in accordance with the voltage variations in the mains.

1,572,960. STEAM-POWER PLANT. JOHANNES KARL RUTHS, Djursholm, Sweden, assignor to Aktiebolaget Vaporackumulator, Stockholm, Sweden, a Corporation. Filed Nov. 1, 1919. Serial No. 335,112. 35 Claims. (Cl. 60—94.)



1. In a steam plant, the combination with a source of variable steam supply, a motor supplied with steam from said source, an accumulator receiving steam from said motor, and a consumer supplied by said accumulator, of pressure responsive means controlling flow of steam from said source to said motor so that steam pressure in said source is maintained constant.

29. A steam plant comprising in combination, a steam generator, a steam conduit system connected thereto, a steam consumer adapted to receive steam from said steam generator, a steam motor connected in said conduit system to receive steam from the generator, a steam accumulator connected to the motor to receive steam therefrom, a steam consumer, supplied with steam from the accumulator, means connected in the conduit system and operated by the pressure in the conduit supplying steam to the motor to increase the steam flow to the motor upon an increase of said pressure above a predetermined value, and a consumer adapted to receive steam from the said motor.

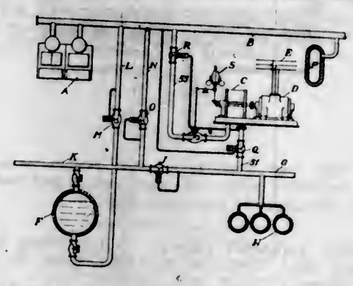


1,572,961. STEAM-ACCUMULATOR APPARATUS FOR STEAM PLANTS. JOHANNES RUTHS, Djursholm, and NILS PERSSON, Brevik, Lidingon, Sweden, assignors to Aktiebolaget Vaporackumulator, Stockholm, Sweden, a Corporation. Filed July 10, 1922. Serial No. 574,089. 22 Claims. (Cl. 60—94.)

5. In a steam plant, the combination with a source of steam, a motor and an accumulator supplied from said source, a consumer supplied both from the motor and the accumulator of automatic means to control flow

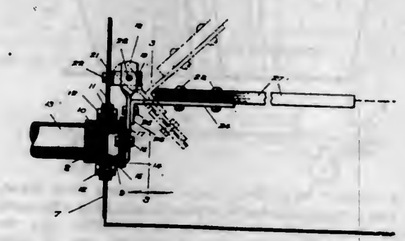
of steam from the accumulator to the consumer responsive to variations of pressure in the steam supplied from the motor.

1,572,962. STEAM-ACCUMULATOR PLANT. JOHANNES KARL RUTHS, Djursholm, and NILS PERSSON, Stockholm, Sweden, assignors to Aktiebolaget Vaporackumulator, Stockholm, Sweden, a Corporation of Sweden. Filed Jan. 23, 1925. Serial No. 4,343. 9 Claims. (Cl. 60—67.)



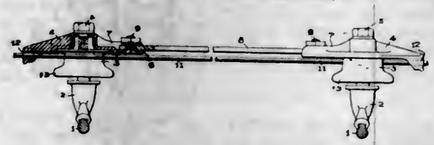
1. In a steam plant, a primary source of steam supply, a motor, a secondary source of steam supply, a consumer, a conduit to lead steam from said motor to said consumer, a conduit to lead steam from said secondary source of steam supply to said consumer, means to conduct steam in a path parallel to said motor from said primary source of steam supply to the second mentioned conduit and means to control the flow through the parallel path operated by changes of pressure in the first mentioned conduit.

1,572,963. STEAM-ACCUMULATOR PLANT. JOHANNES KARL RUTHS, Djursholm, and NILS PERSSON, Stockholm, Sweden, assignors to Aktiebolaget Vaporackumulator, Stockholm, Sweden, a Corporation of Sweden. Original application filed July 10, 1922, Serial No. 574,089. Divided and this application filed Feb. 4, 1925. Serial No. 6,884. 5 Claims. (Cl. 60—94.)



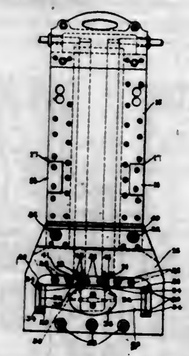
1. In combination, a steam generator, a conduit system connected therewith, a steam motor connected in said conduit system, a supply conduit in said conduit system to supply steam to said motor, a second conduit in said system, connecting means conducting steam from said motor to a point in said second conduit, an accumulator connected to said second conduit at a second

point, a reducing valve in said second conduit between said points, automatic pressure operated means to conduct steam in parallel to said motor from said generator to said accumulator, a consumer connected to said sec-



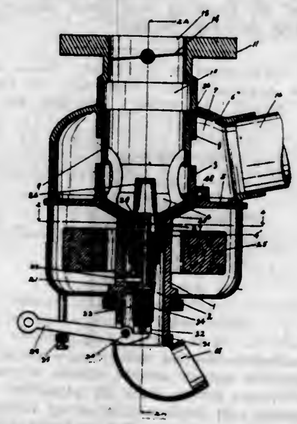
ond conduit, a valve controlling supply of steam to said motor and operated in response to the pressure in said connecting means and a valve in said connecting means operated in response to the pressure in said supply conduit.

1,572,964. SHUT-OFF DISCHARGE VALVE. WILLIAM WALTER SANDERS, Griffin, Ark. Filed Aug. 12, 1924. Serial No. 731,621. 1 Claim. (Cl. 137—68.)



The combination with a tank having an outlet, of an arm pivoted within the tank above said outlet and extending downwardly, a second arm carried by the aforesaid arm and projecting in a direction away from said outlet, a float comprising a bar overlapping and secured to said second arm to swing to a horizontal position above the horizontal plane of said outlet and adapted to swing upwardly, and a valve member carried by the first named arm and seatable across said outlet when said float moves downwardly to a horizontal position and movable away from the outlet when said float swings upwardly from horizontal position.

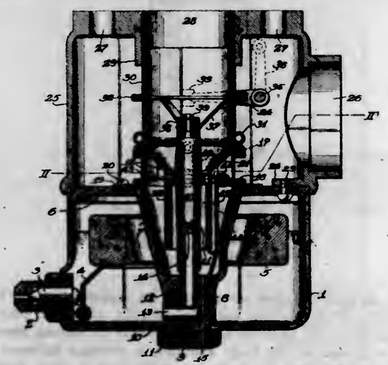
1,572,965. TROLLEY-CONDUCTOR DEVICE. WILLIAM SCHAAKE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 13, 1922. Serial No. 529,002. 3 Claims. (Cl. 191—40.)



1. In a trolley-suspension device, the combination with a plurality of suspension members, each having a recessed portion, of means comprising a connecting bar positioned in said recesses for spacing said suspension members.

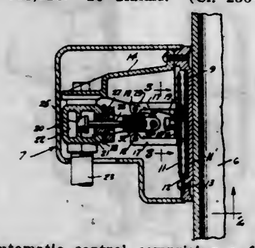
1,572,966. CONDUIT PLOW. WILLIAM SCHAAKE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 5, 1922. Serial No. 573,033. 5 Claims. (Cl. 191—48.)

1. A conduit plow comprising, in combination, a body portion of insulating material within which a pair of conductors are imbedded, a detachable mounting secured to each side of the body member, a yielding support detachably secured to each mounting and a shoe detachably secured to each yielding support and having electrical connection with one of the said conductors, said mountings being insulated from said body portion and conductor members.



1,572,967. CARBURETOR. WILLIAM SCHMID, Bronson, Mich. Filed May 28, 1920. Serial No. 384,824. 4 Claims. (Cl. 261—45.)

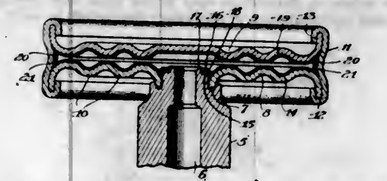
1. In a carburetor, the combination of a tubular bottom body member having a primary air inlet chamber at its lower end and a cylindrical mixing chamber above said primary air chamber and adapted to receive a secondary supply of air, a fuel nozzle disposed centrally within said primary air inlet chamber, a carbureting nozzle to which said fuel nozzle delivers having an upwardly tapered tip delivering centrally within the mixing chamber, said carbureting nozzle being adjustable relative to said fuel nozzle and provided with a plurality of air inlet ports at the base of its tapered portion adjacent the tip of the fuel nozzle, an annular primary air inlet valve slidable within said tubular body member and coacting with the tapered part of said carbureting nozzle, a suction actuated member by which said primary air valve is carried mounted within said cylindrical



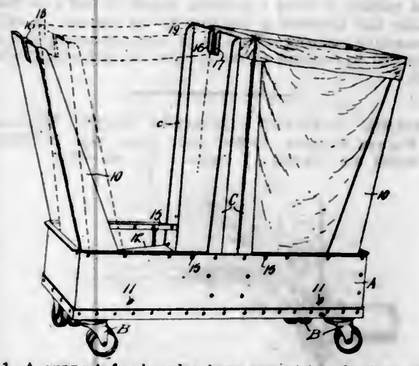
mixing chamber member which constitutes a cylinder therefor, and means operatable in the primary air inlet chamber of said tubular body member adapted for adjusting said carbureting nozzle.

1,572,968. CARBURETOR. WILLIAM SCHMID, Bronson, Mich. Filed Aug. 12, 1921. Serial No. 491,657. 1 Claim. (Cl. 261—45.)

A carburetor having a nozzle chamber with a nozzle therein, an air intake member over said nozzle chamber and having a sleeve about said nozzle, an adjustable tubular throttle movable to and from said air intake member, an apertured tube supported axially of said throttle and slidable on said nozzle, a choke member slidable in the sleeve of said air intake member, and means in said air intake member and extending into said nozzle chamber and to the lower end of said choke member adapted for adjusting said choke member in the sleeve of said air intake member.



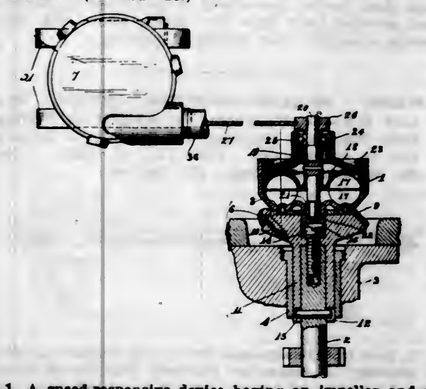
1,572,969. THERMOSTAT CONTROL. OSCAR SCHWIMMER, Los Angeles, Calif. Filed Apr. 23, 1924. Serial No. 708,420. 10 Claims. (Cl. 236—48.)



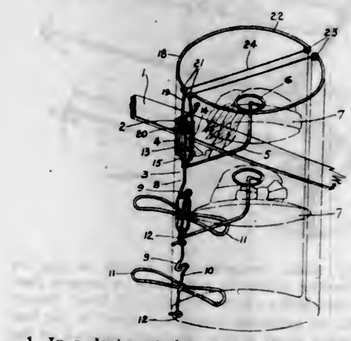
1. An automatic control comprising a frame, a thermally expansible member secured thereto, a yoke mounted on said frame having arms, an adjustable tie member connecting said arms, a leaf spring interposed between said arms so as to confine said spring in bowed position whereby it may be snapped over center in either direction, motion transmitting means connecting said expansible member and said spring whereby said spring is moved over center in either direction by said member after given points in the expansion and contraction of the latter have been reached, and means to connect said spring to a device to be operated thereby.

1,572,970. FLUID-PRESSURE DIAPHRAGM. FREDERICK W. STALKER, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Dec. 7, 1923. Serial No. 679,280. 6 Claims. (Cl. 297—9.)

1. A capsular diaphragm comprising an outer pair of resilient supporting discs of relatively heavy sheet metal having their peripheries secured together, and an inner pair of resilient pressure containing discs of relatively light sheet metal having their peripheries in fluid tight connection with each other and backed and supported throughout by said outer discs.

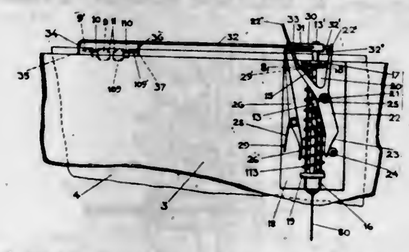


1,572,971. LAUNDRY TRUCK. PAUL R. SYERS, Indianapolis, Ind. Filed Jan. 22, 1925. Serial No. 4,125. 10 Claims. (Cl. 83—26.)



1. A support for laundry bags comprising fixed standards, and pivoted standards adjacent said fixed standards movable by gravity into position to cooperate with the fixed standards in supporting a laundry bag in open and suspended position said standards being bifurcated at their upper ends for supporting bags of different sizes, substantially as set forth.

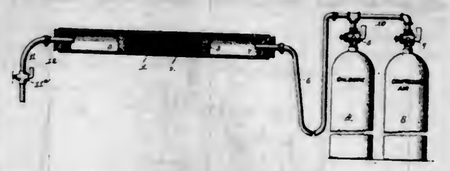
1,572,972. SPEED REGULATOR. WARNER T. TABB, Brooklyn, N. Y., assignor to Duplex Engine Governor Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 7, 1921. Serial No. 450,261. 13 Claims. (Cl. 264—13.)



1. A speed-responsive device having an impeller and a member to co-operate therewith and cup shaped elements carried by said impeller and said member, said elements each having one or more sides and a closed back, with an open mouth, the elements providing vanes for the impeller and said member.

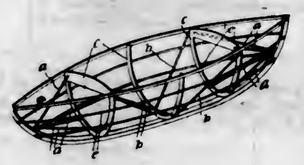
1,572,973. HAT HANGER. CHARLES TAIT, Vancouver, British Columbia, Canada. Filed Dec. 6, 1923. Serial No. 678,951. 5 Claims. (Cl. 45—13.)

1. In a device of the character described the combination of a plurality of article supports detachably linked together to form a chain, a bracket member permanently carried by the upper end member of the chain and adapted to be fastened to a wall or other support, curtain means for enclosing said chain and the articles supported thereby, and means supporting the curtain means from the said bracket.



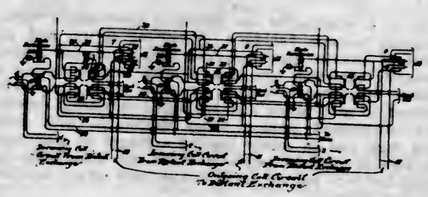
1,572,974. MUSIC-LEAF TURNER. AXEL JULIUS TUNÉR, Gottenborg, Sweden. Filed July 25, 1924. Serial No. 728,233. 3 Claims. (Cl. 84—520.)

1. In a music leaf turner, in combination, hooks on the leaves, a book shaped turning arm provided to coact with said hooks, a screw threaded member carrying said turning arm, an axially movable nut cooperating with said screw threaded member so as to revolve said member, a double armed lever pivotable around a fulcrum and connected with said nut, the one end of said lever formed as an inclined plane, a stationary member coacting with said inclined plane so as to swing the lever around its fulcrum, the other arm of said lever coacting with the turning arm so as to slide the same transversely of the axis of the screw threaded member, and means operable by the leg of the performed for imparting axial movement to the nut to effect operation of the turning arm.



1,572,975. METHOD OF HEATING METAL, GLASS, OR OTHER MATERIAL TO RENDER THE SAME WORKABLE. JAMES W. VAN METER, San Rafael, Calif. Filed June 5, 1922. Serial No. 566,204. 3 Claims. (Cl. 148—17.)

1. The herein described method of heating metal, glass and other materials to render the same workable, consisting in exposing such material to the action of heat generated in a non-oxidizing atmosphere by the

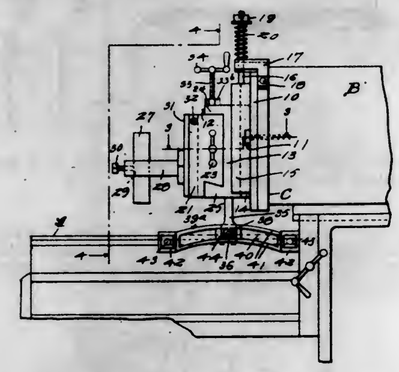


chemical reaction of a reaction causing agent on a body of initially inert material.

1,572,976. CONSTRUCTION OF SAILING CRAFT. FRANZ FREIHERR VON HOININGEN-HUENE, Schloss Thorn, near Talzern, Germany. Filed June 30, 1924. Serial No. 723,338. 6 Claims. (Cl. 9—1.)

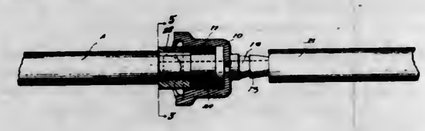
1. A sailing craft comprising a plurality of transverse ribs; and a plurality of rods secured at one end to one of the ribs and the other ends secured together to form a rigid pyramid-like structure.

1,572,977. TELEPHONE SYSTEM. ERICH VON NOSTITZ, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 14, 1923. Serial No. 680,718. 4 Claims. (Cl. 179—41.)



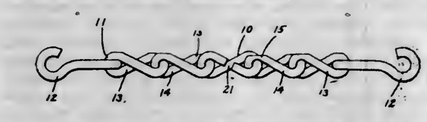
4. A telephone system comprising a plurality of telephone exchanges, a tandem office having a plurality of positions, incoming call circuits from the telephone exchanges to the tandem office positions, outgoing call circuits from the tandem office positions to a plurality of outlying telephone exchanges, means at each position for answering an incoming call circuit, means at each position for establishing a connection with an outgoing call circuit, switching means at each position for transferring incoming calls to a grouped position, and means associated with each position for connecting tone to incoming call circuits seeking connection with any position included in the group during the interval said grouped position is connected to an outgoing call circuit.

1,572,978. TOOL-OPERATING ATTACHMENT FOR PLANERS OR SHAPERS. HARRY W. WATSON, Memphis, Tenn. Filed Sept. 16, 1922. Serial No. 588,620. 6 Claims. (Cl. 90—24.3.)



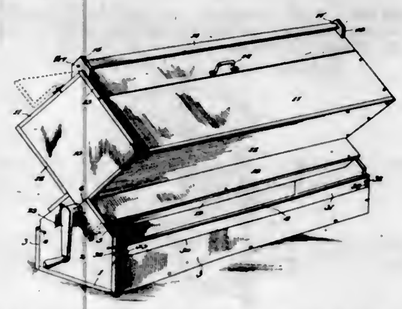
6. In a shaper, a slidable carriage, a slider movable transversely thereof, a securing plate on said carriage for said slider a guide plate, a rod extending from said

slider and through said guide plate, a spring on said rod engaging said guide plate, an abutment on said rod engaged by said spring, said spring being expansive,



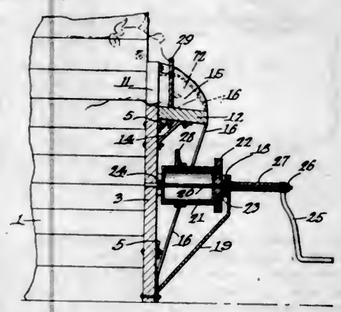
an arm extending from said slider, a stud on said arm, a slide block engaged by said stud, a cam means for said slide block, and a tool carried by the slider.

1,572,979. COUPLING. ERNST ADISON WHYBREW, Collingwood, Ontario, Canada. Filed Feb. 28, 1921, Serial No. 448,488. Renewed July 9, 1925. 2 Claims. (Cl. 285—176.)



2. In a coupling of the character described, a socket coupling member having a cylindrical cavity, and an enlarged annular flange provided with extensions having inwardly extending lock lugs, a head member having a piston operatively received in said cavity, a sleeve splined on said piston and having an outwardly extending interrupted locking flange cooperable with said lock lugs, and an elastic bushing arranged on said head between said piston and said sleeve and adapted to be expanded into sealing contact with said socket member by said piston.

1,572,980. EMERGENCY LINK. CHARLES M. YOUNG, New Britain, Conn. Filed June 9, 1923. Serial No. 644,457. 1 Claim. (Cl. 152—14.)



A chain coupling in the tread member of an anti-skidding device comprising a pair of endless links positioned in spaced relation and an emergency link for coupling said endless links and having a gap in one side, said endless links being substantially similar, each thereof being made of wire, and having the outside of one of the bends or corners appreciably reduced in thickness relatively to the adjacent portions of said wire, said emergency link being made of wire of substantially the same size as that of the endless links, and said endless links and emergency link being individually of curved or twisted form.

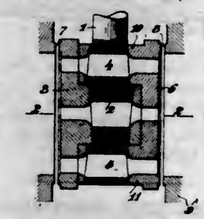
1,572,981. POULTRY FEEDER. GEORGE H. ALDRICH and ALFRED L. GILBO, Westmoreland Depot, N. H. Filed Mar. 18, 1925. Serial No. 16,516. 5 Claims. (Cl. 119—56.)

1. A poultry feeder comprising a trough having its end walls extending above its side walls, a hopper resting upon the end walls of the trough and freely removable therefrom, an agitating chamber secured to the bottom of the hopper to fit within the upper portion of the trough and freely removable from the trough with the hopper, the ends of the agitating chamber being open and fitting between the end walls of the trough to prevent endwise movement of the hopper and the agitating chamber upon the trough, and an agitator extending longitudinally of the agitating chamber and removable through the open ends thereof when the hopper and the agitating chamber are removed from the trough.

1,572,982. DEHORNING MECHANISM. NEWTON A. BARGER and HARVEY F. BARGER, Cedar Vale, Kans. Filed Apr. 29, 1925. Serial No. 26,708. 2 Claims. (Cl. 119—99.)

1. In a device for holding animals during dehorning, a gate having a nose seat, a nose trough projecting forwardly from the gate and disposed about the seat, the trough comprising a platform and side wings, the wings having lateral shoulders, means for securing the trough to the gate, braces having their upper ends connected to the gate, the braces being extended downwardly over the shoulders, and rearwardly to the gate, means for connecting the rear lower ends of the braces to the gate, and holding means within the trough.

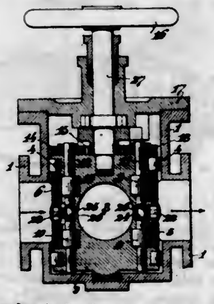
1,572,983. CASING-PULLING DEVICE. WILLIAM A. BARRIER, Frederick, Okla. Filed Nov. 12, 1923. Serial No. 674,299. 1 Claim. (Cl. 294—97.)



In a casing pulling device, an elongated plate having a downwardly curved lower end edge and provided with a pair of longitudinally spaced and aligned transverse

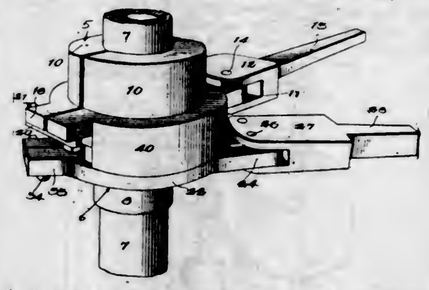
slots in the lower end portion thereof, a horizontal pivot pin carried by the bar and extending across each slot parallel with the plane of the plate, and a pair of oppositely projecting pawls having their inner ends in contiguous side by side relation and pivoted on the inter-

mediate portion of each pivot pin within the slots thereof so as to be freely swung upwardly and toward each other upon lowering of the plate into a well casing by engagement with the latter and to be caused to swing apart and downwardly into gripping engagement with the inner surface of such casing when the plate is elevated.



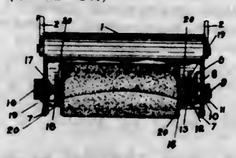
1,572,984. GATE VALVE. ARNO BÖTTNER, Sudenburg, near Magdeburg, Germany, assignor to the Firm Polte, Magdeburg, Germany. Filed May 4, 1925. Serial No. 27,920. 6 Claims. (Cl. 277—32.)

4. A device for operating a valve and for the purpose and character set forth, comprising a casing, two shutting plates adapted to be moved vertically in respect to and in said casing, a spindle connected with the said two plates for moving the same, superposed eccentrical enlargements of conical shape at the lower end of said spindle, transverse bores or passages in the said conical enlargements, and lugs with bores projecting inward from the said plates for the reception of the said enlargements, substantially as and for the purpose set forth.



1,572,985. STEAM-CUT-OFF VALVE OR STOP VALVE. ARNO BÖTTNER, Sudenburg, near Magdeburg, Germany, assignor to the Firm Polte, Magdeburg, Germany. Filed May 5, 1925. Serial No. 28,122. 16 Claims. (Cl. 277—25.)

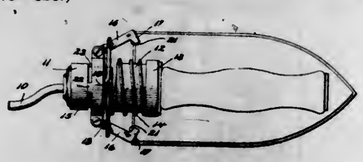
3. A stop valve of the character set forth comprising a casing, a rotary valve body fitted in said casing and having a transverse bore, two cut-off plates attached to the said valve body diametrically opposite each other in parallelism to the bore thereof, a spindle adapted to be turned but not moved axially, for moving the said valve body and controlling the said cut-off plates, two shafts mounted in the said valve body, cam-like formations on the said shafts, auxiliary valves in the said cut-off plates and connected with the said shafts for controlling purposes, a toothed gearing for transmitting motion from the spindle to the said shafts, and coupling means connecting the said spindle with the said valve body, substantially as and for the purpose set forth.



16. A rotary valve body for a cylindrical cut-off valve comprising a plurality of rollers arranged in recesses in the upper and lower parts of the body and which are adapted to roll against the inside of the casing of the valve in order to reduce the friction and to center the body in the casing.

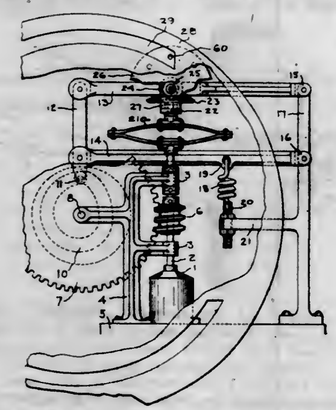
1,572,986. PIPE TONGS. HARRY C. BREWSTER, Shreveport, La. Filed June 28, 1922, Serial No. 571,350. Renewed Oct. 3, 1925. 4 Claims. (Cl. 81—66.)

1. A wrench of the character described comprising upper and lower wrenches, each of which is provided with semi-circular jaws having their rear ends formed with shanks provided with diagonal slots, handles having ears provided with pivot pins received in said slots, one of the wrenches being provided with semi-circular flanges having grooves, and the other wrench being provided with semi-circular flanges received in said grooves whereby to connect the wrenches for rotation with relation to each other.



1,572,987. COMBINED FLOOR WAXER AND POLISHER. JOHN ROBERT CAMPBELL, Regina, Saskatchewan, Canada. Filed July 31, 1922. Serial No. 578,722. 1 Claim. (Cl. 91—37.)

In a floor waxer and polisher, the combination with a rotatable drum, of a flat pad adapted to be rolled around the drum, loops at the corners of the pad, flanges on the



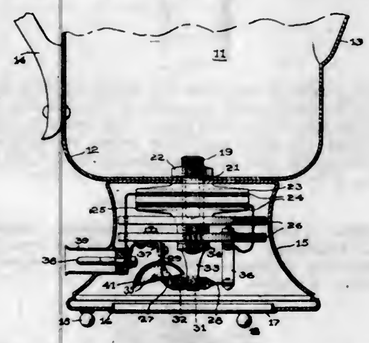
ends of the drum, hooks on the inner faces of the said flanges, said pad adapted to be rolled around the drum and the loops at the inner and outer ends thereof hooked over the respective hooks.

1,572,988. SAFETY DEVICE FOR ELECTRIC IRONS. RONALD ELISON CAMPBELL, Columbia, S. C. Filed Dec. 16, 1920. Serial No. 431,079. 6 Claims. (Cl. 173—328.)

1. A circuit breaking attachment for electrically heated irons having separable electric connectors, comprising a coil spring insertable between the iron and the movable member of the separable connection, and means for normally holding said spring against expansion including a spring locking device circumferentially surrounding said spring and temperature controlled means for releasing said locking device when the iron becomes overheated so that the connector is bodily separated from the iron by the action of the spring.

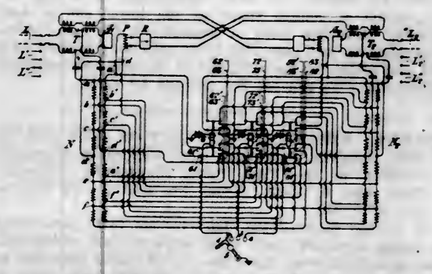
1,572,989. APPARATUS FOR THE ELECTRICAL TRANSMISSION OF VISUAL IMAGES. PAUL I. CLARK, Brooklyn, N. Y. Filed Aug. 1, 1923. Serial No. 655,027. 4 Claims. (Cl. 178—6.)

1. In an apparatus for the transmission of visual images, a transmitter comprising optical means for focusing the image of the device to be transmitted upon a given focal plane, an opaque disk having uniformly spaced light-transmitting apertures of equal area in said focal plane and equidistant from the axis of said disk, means for simultaneously rotating and vertically reciprocating said disk in said focal plane, each of said apertures traversing successive adjacent arcs of the view to be transmitted, and a light sensitive cell disposed to receive the rays passing through the apertures in said disk.



1,572,990. THERMAL SWITCH. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 10, 1922. Serial No. 559,724. 2 Claims. (Cl. 200—122.)

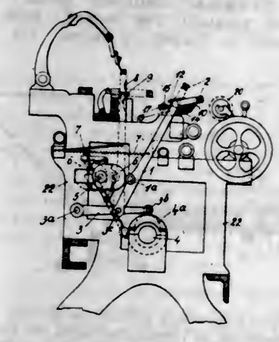
1. In a fluid circuit interrupter for an electrically heated device, in combination, a closed, evacuated tube of insulating material having a main portion of substantially U-shape and an integral lateral extension connected to one end of said main portion, electric circuit terminals extending into said tube at the ends of the main portion, a conducting fluid filling substantially all of said main portion, and an auxiliary electric heating means connected in series-circuit relation to said circuit



interrupter and surrounding an end portion thereof to cause vaporization of the conducting fluid in said end portion by heat generated thereby when added to that of the electrically heated device thermally influencing said end portion surrounded by the auxiliary heating means, to thereby interrupt the circuit.

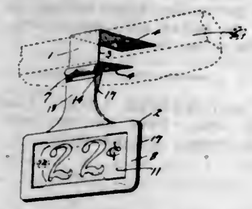
1,572,991. FLUID CUT-OUT FOR PERCOLATORS. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 10, 1922. Serial No. 567,446. 5 Claims. (Cl. 200—141.)

1. In a circuit interrupter for an electrically heated device, in combination, an elongated closed evacuated tube of insulating material, a column of conducting fluid in said tube, and a heat-conducting member for supporting said tube and for placing it under the direct thermal influence of said device.



1,572,992. ADJUSTABLE ELECTRICAL NETWORK. GEORGE CAISSON, Hackensack, N. J., and LEE L. GLEZEN, New Brighton, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 15, 1922. Serial No. 607,190. 11 Claims. (Cl. 179—170.)

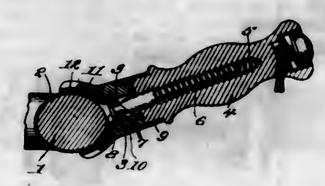
1. A network with a pair of input terminals and a pair of output terminals and symmetrical with respect to said pairs of terminals and comprising a series element



and a shunt element, in combination with means to adjust those elements simultaneously to vary the attenuation between input and output and keep the characteristic impedance unchanged.

1,572,993. KNITTING MACHINE. HANS FÖRSTER, Nieder-Zwönitz, Erzgebirge, Germany. Filed Mar. 20, 1925. Serial No. 17,075. 7 Claims. (Cl. 66—28.)

1. In a flat knitting machine means for forming the welt comprising in combination: upwardly extending arms arranged to swing in vertical planes; short arms hinged to said swingable arms, a needle holder arranged to slide upon said short arms; and means for moving all said arms forward and rearward, as well as up and down.

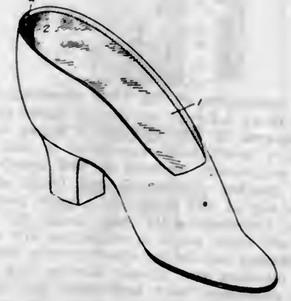


1,572,994. PRICE-TAG HOLDER. DAVID GARFINKLE, Alameda, Calif. Filed Aug. 5, 1924. Serial No. 730,227. 1 Claim. (Cl. 40—11.)

A device of the class described comprising a clamp struck from a single piece of sheet material to provide two relatively diverging arms, a connecting portion between said arms, a loop at the joinder of said connecting portion with one of said arms, the said loop being open at one side, and a tag holding member having a tongue upstruck on itself and rolled to provide a trunnion detachably engaged in the loop and adapted to freely turn therein, and portions formed on the tongue coacting with the ends of the loop to hold the trunnion against longitudinal displacement from the loop, the holding member serving to hang downwardly from the loop when the clamp is adjusted to one position and to extend upward from the loop in an inclined direction and against one of the arms of the clamp when the latter is in another position.

1,572,995. STEERING-WHEEL GRIP. PAUL F. GATES, Portland, Oreg. Filed Mar. 16, 1925. Serial No. 15,986. 1 Claim. (Cl. 74—33.)

A steering wheel and a grip extending outwardly and angularly from the rim thereof, said grip comprising a handle having a threaded bore, a yoke with which the handle is revolubly associated, and said yoke designed to be arranged on the rim of the wheel and having a bore communicating with the threaded opening in the handle, a split spring clip having beaded ends and designed to be arranged around the wheel rim and to be received in the yoke, a lag screw threaded in the handle and having

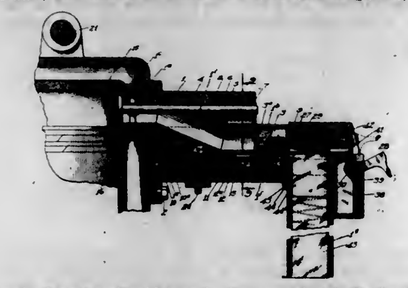


its outer portion non-threaded, the sides thereof rounded inwardly and terminating in a flat head which is designed to engage the beads of the clip and to bind the latter between the rim and yoke, when the handle is turned to move the screw therein.

1,572,996. ALLOY. PIERRE GIRIN, Paris, France, assignor to Société Anonyme de Commentry, Fourchambault & Decazeville, Paris, France. Filed Dec. 9, 1920. Serial No. 429,544. 2 Claims. (Cl. 75—1.)

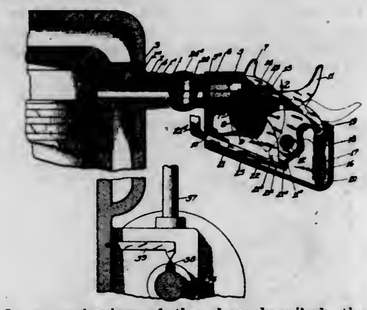
1. That alloy of iron, chromium, nickel, tungsten and manganese comprising nickel 50 to 80 percent, chromium 8 to 25 percent, tungsten 0.5 to 8 percent, manganese 1 to 5 percent, and carbon 0.3 to 1 percent.

1,572,997. NONSLIP DEVICE FOR HEELS OF LOW SHOES. MURRAY BERTRAM HAMILTON, Toronto, Ontario, Canada. Filed Apr. 10, 1925. Serial No. 22,169. 1 Claim. (Cl. 36—58.5.)



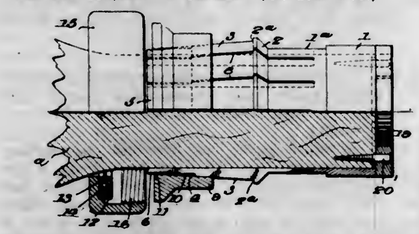
In a low shoe, the combination with the shoe lining divided centrally of the heel back and having the divided ends spaced apart, and an insert piece having a roughened outer surface located and permanently held between the divided ends of the lining and having its outer surface flush with the outer surface of the lining.

1,572,998. INTERNAL-COMBUSTION-ENGINE-STARTING MECHANISM. REX HARRIS, San Diego, Calif. Filed Apr. 16, 1923. Serial No. 632,356. 13 Claims. (Cl. 123—183.)



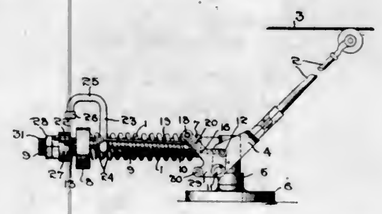
7. In a mechanism of the class described, the combination with an internal combustion engine cylinder, a piston and the cam-shaft for actuating the valves of said cylinder, of a frame supported contiguous to said engine cylinder and provided with a bore adapted to receive a cartridge and communicating with said engine cylinder, a breech reciprocally mounted on said main frame, a means in connection with said breech and said main frame for

firing said cartridge, a cartridge extracting and ejecting means, a magazine in connection with said main frame, and means in connection with said magazine, said



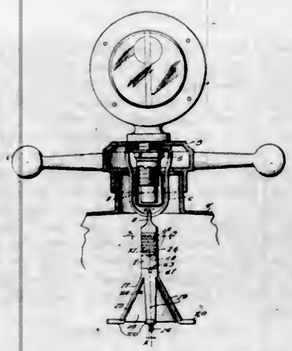
main frame and said breech, for removing individual cartridges from said magazine and positioning the same in the bore of said main frame.

1,572,999. INTERNAL-COMBUSTION-ENGINE-STARTING MECHANISM. REX HARRIS, San Diego, Calif. Filed Apr. 3, 1924. Serial No. 703,911. 11 Claims. (Cl. 123—183.)



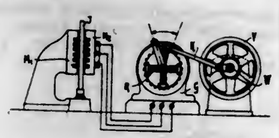
4. In a mechanism of the class described, the combination with an internal combustion engine cylinder of a barrel secured to said cylinder, a frame secured to said barrel, a breech member mounted in said frame, a firing pin reciprocally mounted in said breech member, a hammer member mounted in said frame adapted to engage one end of said firing pin, a valve positioned in said barrel intermediate its ends, means for manually operating said valve, means in connection with said valve and said hammer member for simultaneously opening said valve and releasing said hammer member, and automatic means in connection with said valve for closing the same.

1,573,000. PROPELLER-BLADE MOUNTING. SPENCER HEATH, Baltimore, Md. Filed July 20, 1921. Serial No. 486,206. 8 Claims. (Cl. 170—173.)



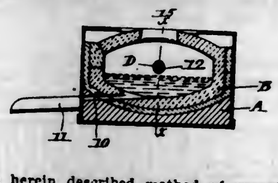
1. The combination with a propeller blade shank, of a ferrule in which said shank is fitted, said ferrule comprising a plurality of longitudinally disposed spaced yieldable portions having tapering outer surfaces, a tapered ring surrounding said surfaces, whereby, when said ring is driven longitudinally of the ferrule, said spaced yieldable portions are pressed together, and caused to tightly grip the shank, and means for preventing reverse movement of the ring after it has been driven up to its extreme position.

1,573,001. TRAMWAY TROLLEY POLE. MATTHEW HENDERSON, Auckland, New Zealand. Filed Mar. 29, 1924. Serial No. 702,932. 6 Claims. (Cl. 191—88.)



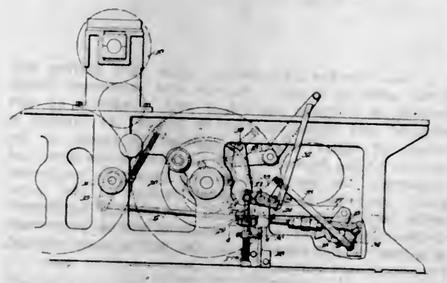
1. A trolley pole safety release for electric trams and the like, consisting, in combination with the usual tension springs and trolley pole, of a stirrup piece fulcrumed to a revoluble base pivoted to an upright column, of a pair of tension rods to hold the pole on the overhead wire, the rods each having one end pivoted to the stirrup piece at the foot of the pole and the other end detachably fixed to the sliding crosshead by nuts on the rods, one of the said nuts on each rod having a conical shaped projection thereon to seat in a recess at the end of the slots in the crosshead so that when the trolley leaves the wire and the pole is jerked upwards, it is released from tension and allowed to fall clear of the overhead wire by releasing the tension rods from the crosshead immediately the tension spring strikes the stop nut on the end of the spring arm, substantially as described and as shown in the drawings.

1,573,002. MOTORMETER LOCK. ALBERT J. HESS, Springfield, Ohio. Filed Mar. 27, 1925. Serial No. 18,834. 5 Claims. (Cl. 70—90.)



1. A motormeter lock comprising a yoke to be secured to the body of the motormeter, a sleeve suspended upon the yoke, an anchoring member including a locking rod engageable within the sleeve, and permutation elements carried by the sleeve and engageable with said locking rod.

1,573,003. INSTALLATION FOR OPERATING RECIPROCATING ELECTRIC MOTORS. NICOLAS JAPOLSKY and MICHAEL KOSTENKO, London, England. Filed Mar. 19, 1923. Serial No. 626,196. 6 Claims. (Cl. 172—126.)

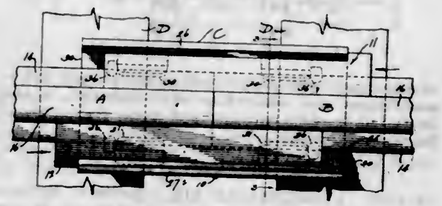


1. An electromagnetic installation for operating a reciprocating working element, comprising an armature forming part of said reciprocating working element, a stationary element, a multiphase winding thereon adapted, when supplied with multiphase alternating current, to produce a moving magnetic field acting upon the armature, and means for applying to the multiphase winding a multiphase alternating electromotive force of varying periodicity, in order to impart acceleration to the said moving magnetic field.

1,573,004. METHOD OF MANUFACTURING OPEN-HEARTH STEEL. JAMES DYER JONES, Sault Ste. Marie, Ontario, Canada, and EARL EWING LITZ, East Chicago, Ind. Filed Dec. 6, 1921. Serial No. 520,393. 3 Claims. (Cl. 75—27.)

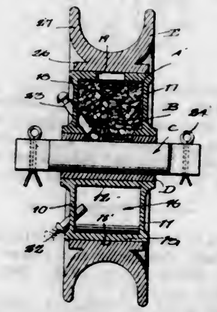
1. The herein described method of operating an open hearth furnace, which comprises heating the bath by a plurality of simultaneously operated and separated high velocity flames, circularly arranged equidistantly from each other and radiating from the wall towards the centre of the furnace.

1,573,005. IMPRESSION THROW-OFF. WILLIAM M. KELLY, Westfield, N. J. Filed Apr. 5, 1923. Serial No. 630,166. 13 Claims. (Cl. 101—284.)



1. In a printing press, in combination, an impression cylinder, means for raising and lowering said cylinder in timed relation to the operation of the press including a shaft operatively connected to said cylinder and a releasable connection between said shaft and the press operating mechanism, means for releasing said connection, and means for preventing operation of said releasing means when said cylinder is down, including a lost-motion connection between said shaft and said releasing means.

1,573,006. POLYCHROMATIC SECURITY PRINT. ROSI LAMP'L, Berlin, Germany. Filed Apr. 27, 1921. Serial No. 465,052. 3 Claims. (Cl. 41—26.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

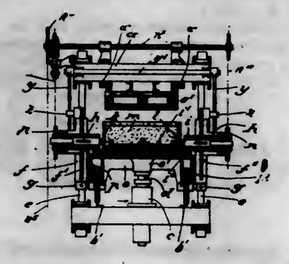


1. A polychromatic security print and the like comprising adjoining designs, each in a distinctive color, said colors producing about the same degree of blackening of the negative, when photographing the print without and with any color filtering means.

1,573,007. RAIL JOINT. WILLIAM R. MCPHETRIDGE, Pittsburgh, Pa. Filed Feb. 20, 1925. Serial No. 10,664. 11 Claims. (Cl. 238—208.)

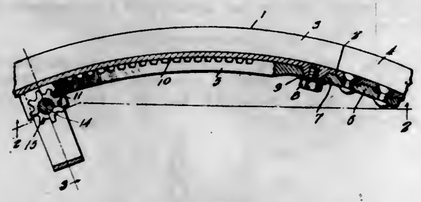
1. As an article of manufacture a base plate for rail joints comprising a flat body portion having upwardly extending bendable attaching flanges formed in laterally spaced relation therein and inwardly of the longitudinal edges thereof.

1,573,008. TROLLEY WHEEL. DONALD MACLEAN, North Vancouver, British Columbia, Canada. Filed Apr. 17, 1923. Serial No. 632,728. 1 Claim. (Cl. 308—111.)



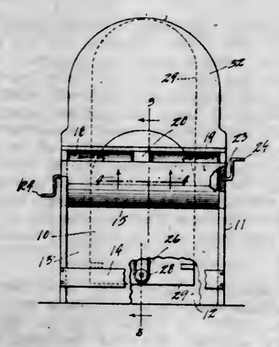
A trolley wheel comprising a hollow sleeve, an annular felly, and side plates connecting the hub sleeve and felly together, radially extending partitions connecting the felly, the hub sleeve and end plates together forming a relatively large and a relatively small compartment, the relatively large compartment constituting an oil reservoir, the relatively small compartment constituting a receptacle for the reception of an absorbent, means introducing the absorbent into the first mentioned compartment, the hub sleeve having an opening therein, means for pushing the absorbent through said opening, means for introducing a lubricant into the oil reservoir, and means connecting the compartments together.

1,573,009. MOLDING MACHINE. OTTO MÜLLER, Esslingen-on-the-Neckar, Germany. Filed Apr. 20, 1925. Serial No. 24,594. 5 Claims. (Cl. 22—32.)



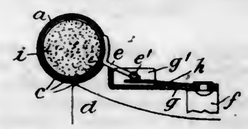
4. Molding machine comprising connected upper and lower heads, a presser plate secured to said upper head, a table on said lower head adapted to be run in and out of the machine, means for raising and lowering said table with regard to said presser plate, a turn-over plate

adapted to be placed on said table, eyes on opposite sides of said turn-over plate, frames adapted to be displaced in conformity with the raising and lowering of said table, a pin secured to each frame, hooks pivoted



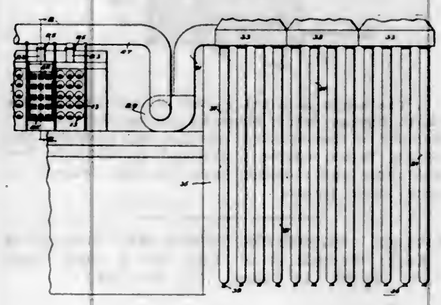
to said upper head and adapted to engage said pins on said frames, pins adapted to be reciprocated in each frame and to enter said eyes and means for reciprocating said pins in said eyes.

1,573,010. DEMOUNTABLE RIM. OLIVER P. MUNSON, Clinton, Ind., assignor, by mesne assignments, of one-half to Opal Harrison, Cayuga, Ind. Filed Aug. 13, 1923. Serial No. 657,070. 2 Claims. (Cl. 301—33.)



1. The combination with a transversely split tire rim; of a longitudinally extending strap secured at one end to one end of said rim and overlapping the other end, said strap being provided with a rack and at its free end with a beveled tooth for engagement by a releasing element, to lift the rack to separate said rim ends.

1,573,011. ROAD LOG AND MAP DISPLAY DEVICE. DAVID S. NASH, Corsicana, and JAMES E. LETT, Jr., Dallas, Tex. Filed Apr. 2, 1925. Serial No. 20,201. 9 Claims. (Cl. 40—28.)

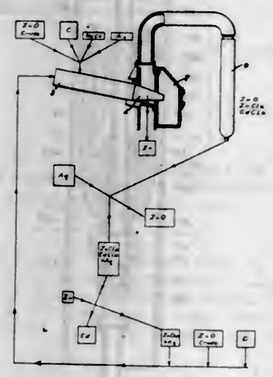


1. In a road log and map display device, a cabinet, a housing carried by the cabinet, a drum in the housing having a road log on its surface, means for revolving the drum, a vertically movable map slide normally concealed in the cabinet, and means actuated by the drum for raising the slide out of the cabinet when the drum is revolved.

1,573,012. TELEPHONE-MOUTHPIECE DISINFECTOR. PATRICK SHAUGHNESSEY O'DONNELL, London, England. Filed Jan. 3, 1924. Serial No. 684,236. 5 Claims. (Cl. 179—185.)

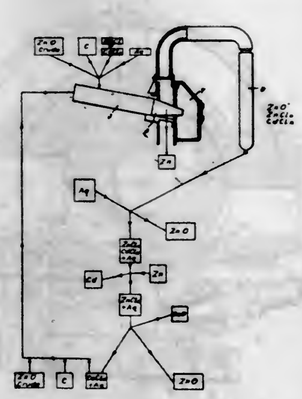
1. Apparatus for disinfecting telephone mouth-pieces comprising a cylindrical container and a spring clip adapted to embrace the neck portion of a telephone mouth-piece and to support the container in a horizontal position above the front edge thereof.

1,573,013. PROCESS OF SMELTING ORES OF VOLATILE METALS. WILLIAM A. OGG, Newton, Mass. Filed Feb. 7, 1925. Serial No. 7,561. 22 Claims. (Cl. 266—19.)



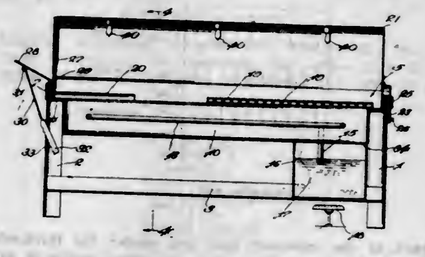
1. That method of smelting crude zinc bearing material utilizing a retort furnace and condenser, which consists in charging the retort with a mixture of said material and reduction fuel in amount to produce a volume of metal vapors in substantial excess of the capacity of the condenser fully to condense the same and conducting the vapors discharged from the condenser, which comprise a considerable fraction of the metal values in the material treated, for recovery by deposit of the metal values therein while obtaining a recovery of spelter in the condenser to the full capacity thereof.

1,573,014. SMELTING VOLATILIZABLE METALS. WILLIAM A. OGG, Newton, Mass. Filed May 18, 1925. Serial No. 30,914. 15 Claims. (Cl. 75—153.)



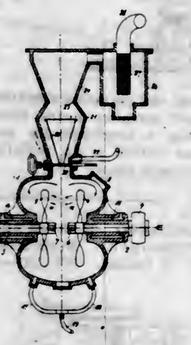
15. That method of smelting crude zinc-bearing material utilizing a retort furnace and condensor which comprises:—charging the retort with a mixture of said material and reduction fuel together with a quantity of chloride in substantial excess of the capacity of the condensor to condense fully the resultant metal vapors,

collecting by a deposit as a fume product the vapors escaping from the condensor, leaching the chloride from



said fume product, mixing the wash water with fresh crude material and fuel and briquetting the mixture to provide a charge for a subsequent volatilizing operation.

1,573,015. SMELTING VOLATILIZABLE METALS. WILLIAM A. OGG, Newton, Mass. Filed May 25, 1925. Serial No. 32,563. 13 Claims. (Cl. 75—153.)

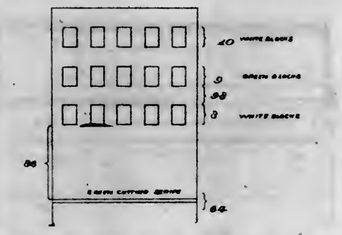


13. That method of recovering metal values from crude zinc-bearing material utilising a retort furnace and condenser which comprises charging the retort with a mixture of said material and reduction fuel in amount materially in excess of the capacity of the condenser whereby a substantial proportion of the metal values vaporized is discharged in the form of vapor from the condenser mouth, said mixture also including a quantity of fluxing haloid, collecting said discharged vapor by deposit as a fume containing a considerable proportion of the halogen, leaching the fume, precipitating the zinc from the wash water and mixing the remaining haloid-bearing liquid with fresh crude material and reduction fuel to provide a charge for a subsequent volatilising operation.

1,573,016. VAPOR-BATH CABINET. ROSS A. PEDROSS, Chicago, Ill. Filed July 7, 1923. Serial No. 650,067. 1 Claim. (Cl. 4—168.)

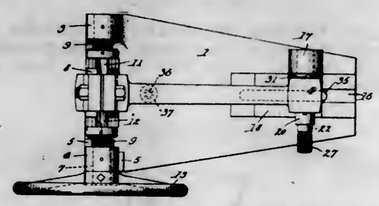
In a device as set forth, a supporting structure comprising a plurality of corner posts, and angle irons connecting said corner posts at their upper ends, a cabinet body, and substantially inverted U-shaped hangers formed about the sides and ends of the cabinet body and engaging over the vertical portions of the angle irons.

1,573,017. PROCESS OF OBTAINING POWDERS OF GREAT FINENESS. EMIL PODSZUS, Berlin-Friedrichshagen, Germany. Filed July 1, 1922. Serial No. 572,340. 7 Claims. (Cl. 83—46.)



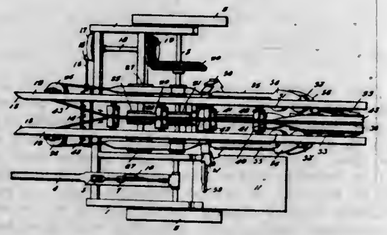
1. The process of converting hard materials to a finely powdered state, which consists in producing mutually impinging high-velocity whirling currents of gas or air in a closed space arranged to prevent said currents from passing each other, and causing said currents to circulate within said closed space in all directions at the rate of several thousand times, or more, per minute, thereby causing the particles of the material to continually impinge upon each other with great force.

1,573,018. KNITTING MACHINE. JOSEPH PARKS PRIMM, Rome, Ga., assignor of one-third to Henry B. Berry and of one-third to John M. Berry, both of Rome, Ga. Filed June 19, 1925. Serial No. 38,268. 2 Claims. (Cl. 66—21.)



1. A knitting machine having a normally operative two-color yarn feed to produce a fabric in which said colors alternate, a normally inactive third-color yarn feed, a drum having cams to control the action of the individual feeds, a cam shaft from which is derived power to turn the drum, continuously acting means in readiness to operate the cam shaft, and a pattern chain associated with the cam shaft; in combination a special

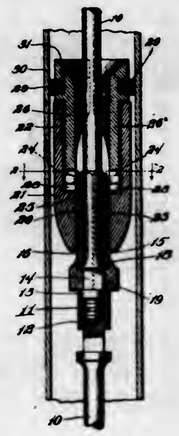
lug on said pattern chain causing action of said continuously acting means thereby to operate the cam shaft and turn the cam drum to render inoperative one color



yarn of the two-color feed and render the third-color yarn feed operative to produce a cutting stripe in said fabric.

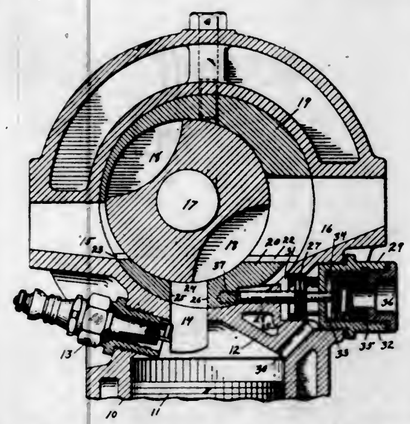
1,573,019. BEARING SCRAPING AND BURNISHING TOOL. ALBERT M. RUTTER and CLARENCE R. BENSON, Baltimore, Md. Filed May 18, 1922. Serial No. 561,963. 6 Claims. (Cl. 29—90.)

1. A device of the character described including scraping means, said scraping means including a rotatable member carrying a longitudinally movable blade, said rotatable means having a pin radially disposed therein in contact with said blade.



1,573,020. TOBACCO HARVESTER. RICHARD B. SCRUGGS, Willsburg, Ky. Filed Sept. 12, 1924. Serial No. 737,398. 5 Claims. (Cl. 131—21.)

5. In a tobacco harvester, the combination with a rearwardly extended spear including a shank and a head, there being a socket in the butt end of the head, of a stick removably mounted in the socket and extended alonng the shank, a support for the shank, stalk cutting means, and means for inverting the stalks and conveying them forwardly to the spear for engagement with the shank and stick.

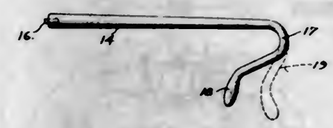


1,573,021. RELIEF VALVE FOR DEEP WELLS. CHARLES S. SWAIM, Long Beach, Calif. Filed June 30, 1925. Serial No. 40,707. 6 Claims. (Cl. 103—225.)

1. In combination with a sucker rod having an enlargement provided with a wrench square, a two part yoke adapted to be assembled about and fit the sucker rod and the enlargement and wrench square and when

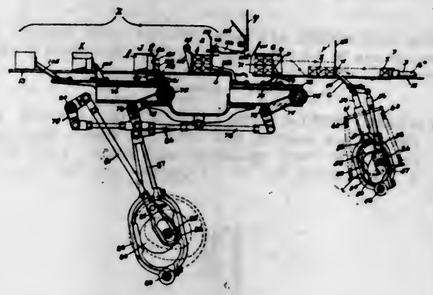
in its assembled relation held against rotation with relation to the sucker rod by such wrench square and means for holding the sections of the yoke in assembled relation.

1,573,022. ROTARY VALVE. RUDOLPH WEHR, Los Angeles, Calif. Filed Jan. 27, 1925. Serial No. 5,090. 15 Claims. (Cl. 123—190.)



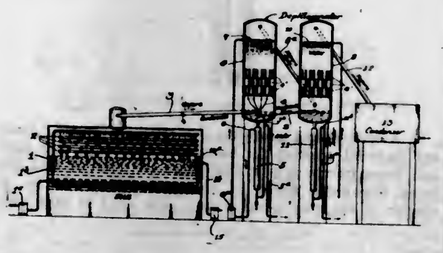
1. The combination with a rotary valve and its valve casing of a wedge member engaging with the valve and movable through a limited distance in respect to the casing, and a piston member having one surface exposed to the pressure of the fluid controlled by said valve and operatively connected to said wedge member.

1,573,023. PROCESS FOR PRODUCING OPHTHALMIC MOUNTINGS. WILLIAM J. WRIGHTON, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Sept. 2, 1924. Serial No. 735,427. 2 Claims. (Cl. 18—51.)



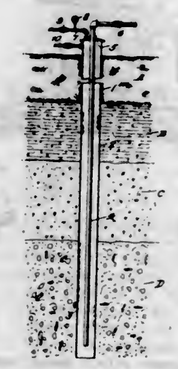
1. The process of shaping a celluloid part of an ophthalmic mounting comprising heating the part, bending

the heated portion to a position beyond the required position and subjecting the bent part to heat until the bent



part assumes the desired position through the action of the heat, said heat being higher in temperature than that to which the part is subjected during use.

1,573,024. STACKING MACHINE. JOHN P. ALDRICH and HOWARD A. MORRIS, Toledo, Ohio, assignors to The Automat Molding & Folding Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 9, 1925. Serial No. 1,352. 23 Claims. (Cl. 226—14.)

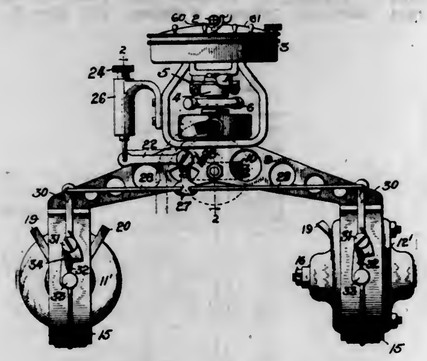


1. In a machine of the class described, means to advance a plurality of articles to form a row, and mechanism operable to engage and carry a predetermined number of said articles to the remaining articles of the row to form a stack.

1,573,025. APPARATUS FOR SEPARATING HYDROCARBONS. WILLARD C. AVERILL, Jr., Houston, Tex. Filed Oct. 7, 1922. Serial No. 593,084. 3 Claims. (Cl. 196—139.)

1. A petroleum distilling and refining apparatus comprising in combination, a still, a dephlegmator, a vapor line connecting said still with the lower portion of said dephlegmator, a draw-off and water separator connected with the lower end of said dephlegmator, means for withdrawing condensate from said separator and spraying the same into the upper part of said dephlegmator, and means for withdrawing vapor from the upper portion of said dephlegmator.

1,573,026. PROCESS OF MINING SULPHUR. WILLARD C. AVERILL, Jr., Houston, Tex. Filed Dec. 30, 1924. Serial No. 758,892. 6 Claims. (Cl. 166—21.)



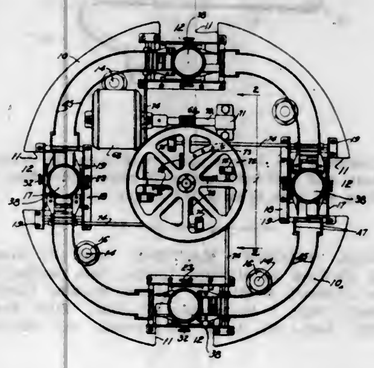
1. The process of mining sulphur which comprises drilling through to the sulphur bearing stratum and causing sand to flow from an intermeditae stratum to fill the channels and cavities in the sulphur bearing stratum and retard the escape of hot water from the vicinity of the well.

1,573,027. DEMOUNTABLE DISPENSER FOR PAPER CUPS. CESARE BARBIERI, New York, N. Y., assignor to The Vortex Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 31, 1923. Serial No. 628,952. 6 Claims. (Cl. 211—29.)

1. A dispenser for flat cups comprising a removable slotted container shaped to fit the cups, a back plate therefor, a slotted supporting plate, and fastening means for holding the back plate on the container and also serving to hold the container and back plate on the supporting plate.

1,573,028. STABILIZED BOMB SIGHT. MORTIMER F. BATES, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company. Filed Sept. 30, 1921. Serial No. 504,470. 8 Claims. (Cl. 74—78.)

1. The combination with a bomb sight, of stabilizing means therefor comprising a pair of gyroscopes, a universally supported frame for supporting the gyroscopes and sight, separate means for locking each gyroscope and a common means for simultaneously unlocking the same.

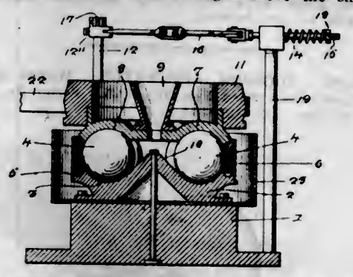


1,573,029. BUILDING MATERIAL. JOHN P. BEARDALL, Brooklyn, N. Y. Filed Jan. 27, 1922. Serial No. 532,154. 8 Claims. (Cl. 20—4.)

1. A building board or slab of the class described comprising a suitable frame, a plurality of logs mounted in said frame and secured thereto to form said board or slab, a filler and binder in said frame between said logs, and spaced metal strips on the inner and outer faces of said board or slab.

1,573,030. SLIDE PROJECTOR. EMERICK W. BERGERS, Bridgeport, Conn., assignor to Frank Howard, New York, N. Y. Filed June 28, 1924. Serial No. 722,988. 19 Claims. (Cl. 88—28.)

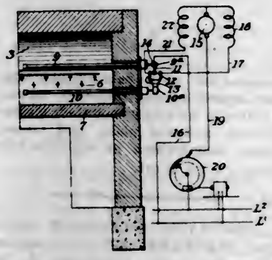
1. In a machine of the character described, a plurality of slide holders each adapted to carry a lantern slide, a plurality of slide projecting stations at each of which all of the slides are adapted to be successively projected upon a screen, mechanism for feeding the slides to and



from each station, and means whereby slides adjacent a station can be fed independently of all other slides in the machine.

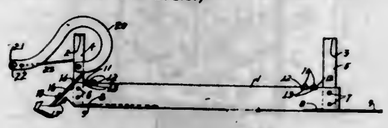
1,573,031. WELL-CASING PROTECTOR. WILLIAM I. BETTIS, Los Angeles, and LEROY H. PERRY, Gardena, Calif.; said Perry assignor to said Bettis. Filed Jan. 5, 1925. Serial No. 707. 6 Claims. (Cl. 308—4.)

1. A well casing protector comprising a ring of resilient material adapted for being sprung over a tool joint, and thereafter to grip a drill pipe; the bore of said ring being outwardly flared at one end, and the outer diameter of the ring being greater than that of said joint.



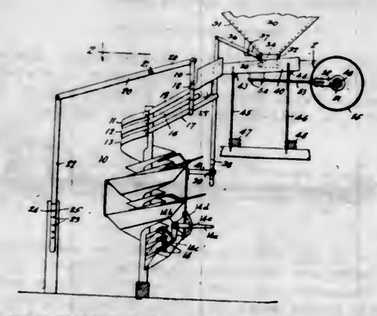
1,573,032. ORE-GRINDING MILL. WILLIAM N. BRYERLS, Mesa, Ariz. Filed Mar. 4, 1924. Serial No. 696,891. 2 Claims. (Cl. 83—45.)

1. A mill of the class described comprising a lower member having an annular trough therein and an annular groove surrounding the trough, a screen carried by the lower member, balls in the trough, an upper member resting upon the balls, a hopper carried at the center of the upper member, a weighted fly-wheel carried by the upper member and arranged above the balls, a



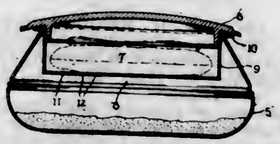
pair of posts pivotally connected with the base, wheels carried thereby and engaging the fly-wheel and means for yieldingly holding the wheels against the fly-wheel.

1,573,033. METHOD AND APPARATUS FOR ANNEALING AND COOLING SHEET GLASS. FREDERIC L. BISHOP, Pittsburgh, Pa., assignor to Window Glass Machine Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Sept. 4, 1924. Serial No. 735,789. 13 Claims. (Cl. 49—47.)



1. In the method of annealing and cooling sheet glass, the steps consisting in passing sheet glass through a leer, passing gaseous fluid through the leer in streams above and below the glass, and adjusting the relative cooling effect of the streams to maintain a predetermined relative temperature condition between a plurality of points in the leer, substantially as described.

1,573,034. WEED CUTTER. ROBERT F. BLACK, San Jose, Calif. Filed Aug. 30, 1923. Serial No. 660,207. 1 Claim. (Cl. 97—144.1.)



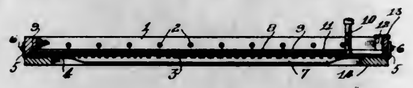
In a weed cutter, a runner comprising a pair of parallel, vertically arranged elements having angularly arranged recesses formed in the bottom thereof in the form of a triangle and extending crosswise of said runner, one side of said triangle lying flush with the bottom of said runner, cutting blades arranged in said recesses and having transverse cross-sections similar thereto, bolts piercing one end of each of said blades and extending upwardly between said elements, and plates arranged on said bolts and engaging the upper edges of said elements, said blades having similarly spaced but oppositely arranged orifices formed in their opposite ends whereby to permit their reversal in said recesses.

1,573,035. ADJUSTABLE APPARATUS FOR FEEDING AND SEPARATING COAL AND LIKE MATERIALS. FRANCIS H. BLATCH, Hazleton, Pa., assignor to Anthracite Separator Company, Hazleton, Pa. Filed Nov. 4, 1920. Serial No. 421,644. 1 Claim. (Cl. 209—117.)

In an apparatus of the class described, the combination of a multiple thread spiral separator, separate inclined chutes for feeding the material to each thread of the separator and means for simultaneously adjusting the inclination of the feed chutes so as to vary the velocity at which the material is fed to the separator, certain of said inclined feed chutes having openings formed therein to permit the passage of material from an upper to a lower chute and a shaking table for intermittently feeding material to the uppermost chute.

1,573,036. FACE-POWDER BOX. ANNIE BOWMAN, Los Angeles, Calif. Filed Mar. 12, 1924. Serial No. 698,649. 1 Claim. (Cl. 132—82.)

A face powder box for dressers comprising a receptacle adapted to hold powder and a tray; a tray removably mounted in the top of said receptacle, said tray having a perforated bottom; and a cover for said tray, the vertical distance between the center of the cover and the bottom of the tray when the cover is positioned thereon being equal to the thickness of the powder puff adapted for use therewith.

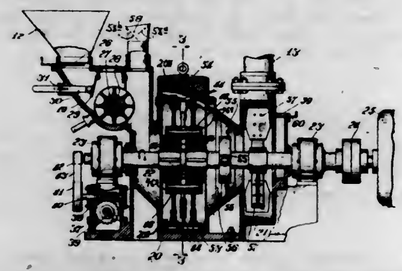


1,573,037. VENDING MACHINE. RICHARD C. BRADLEY, New York, N. Y., assignor, by direct and mesne assignments, to Benj. W. Gammon & Company, New York, N. Y. Filed Mar. 5, 1924. Serial No. 697,017. 12 Claims. (Cl. 211—8.)

1. A vending machine comprising a casing having a magazine for receiving a stack of elongated articles, the said casing having a wall provided with a discharge opening, rotatable mechanism in said casing operative for selecting the articles individually from said magazine, for carrying the same to a position for discharge

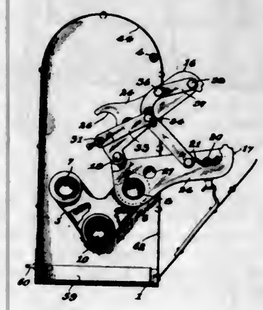
thru said opening and for holding the same in said discharge position, means operative against an end of the so-positioned article for positively ejecting the same thru the discharge opening in a direction lengthwise of the article, and means for coordinately operating the selecting mechanism and the ejecting means.

1,573,038. EGG TRAY FOR INCUBATORS. EDWIN O. BRANINGTON, Rochester, N. Y., assignor of one-half to Oscar A. Peters, Rochester, N. Y. Filed Feb. 15, 1924. Serial No. 693,142. 5 Claims. (Cl. 119—44.)



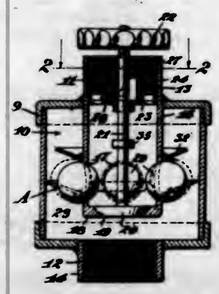
5. In an egg tray for incubators, the combination of two superposed rectangular frame members of like outside dimensions, the frame pieces of the bottom member being of greater width than those of the top member, the inner bottom edge of the top member being undercut, a perforated bottom interposed between the two frames and forming the bottom of a channel in the under face of the top frame, a perforated egg supporting slide transversely movable over said bottom and being of less width than the inner width of the top frame, such slide being guided in opposite sides of said channel, means for operating said slide, regularly spaced longitudinally extending partition members secured to said top frame, and supporting members for said bottom, such members comprising strips interposed between the two frames with their ends secured to opposite outer side faces of one frame and having intermediate portions bent to form angle bars, substantially as set forth.

1,573,039. PROCESS OF MENDING RUBBER ARTICLES. WILLIAM H. BUSCHELL, Indianapolis, Ind., assignor of one-fourth to J. D. Eastman, Indianapolis, Ind. Filed Nov. 21, 1924. Serial No. 751,400. 4 Claims. (Cl. 18—53.)



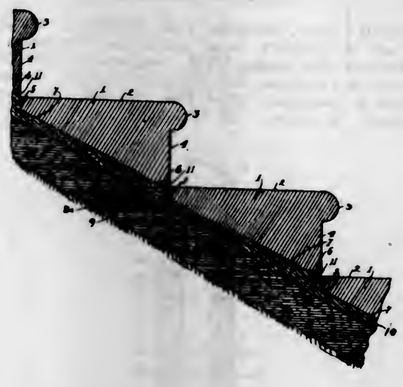
4. The process of repairing rubber articles, which process consists in heating the portion of the rubber article to be repaired, applying to said part a chemical compound obtained by a natural valence combination of turpentine and sulphur, and subjecting the same to heat and pressure.

1,573,040. MEANS FOR PULVERIZING, FEEDING, AND BURNING FUEL. JOE CRITES, Lakeside, Ohio, assignor to Raymond Brothers Impact Pulverizer Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 8, 1924. Serial No. 697,894. 27 Claims. (Cl. 83—11.)



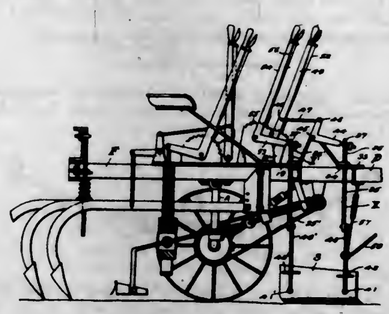
1. A pulverizing mill comprising a beater chamber, rotary means in said chamber for pulverizing material fed thereto, and a breaker plate in diagonal position with respect to the direction of rotation of the pulverizing elements adapted by contact with the partially pulverized particles to direct such particles toward the feed side of the chamber.

1,573,041. COOKING APPARATUS. WAYNE DAVIES, Atlanta, Ga. Filed Feb. 10, 1925. Serial No. 8,288. 16 Claims. (Cl. 126—41.)



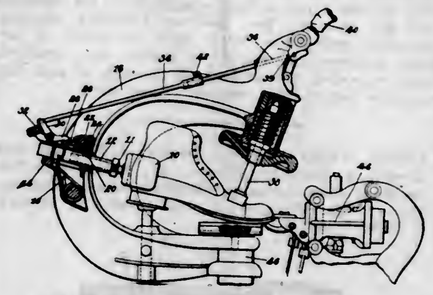
1. The combination of a pair of oppositely disposed and mutually hinged heating plates, a support on which one of said plates is pivotally mounted, means for swinging the pivotally mounted plate, and means for opening said plates book-fashion as the pivotally mounted plate is swung on its pivot.

1,573,042. AUTOMATIC OVERFLOW OUTLET FOR PLUMBING FIXTURES, ETC. CLARENCE L. DAWSON, Los Angeles, Calif. Filed Aug. 6, 1925. Serial No. 48,479. 7 Claims. (Cl. 4—194.)



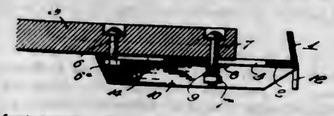
1. In a combined overflow and drain outlet of the character described, a housing having an inlet and an outlet, a tubular extension leading into the housing from the inlet formed with a side wall port, an inclined runway, a ball closure for said port arranged in said runway adapted to automatically open under the influence of the pressure of liquid delivered to the inlet, and manually operated means extending through said inlet for opening said closure.

1,573,043. STAIR CONSTRUCTION. SALVATORE DE COLA and VERNE E. CLIFT, San Jose, Calif. Filed Apr. 25, 1925. Serial No. 25,839. 3 Claims. (Cl. 72—96.)



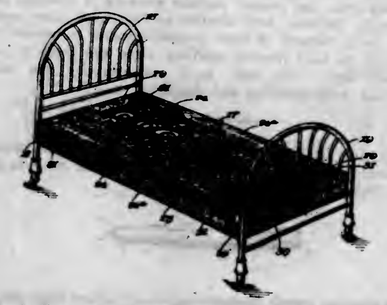
1. A step element comprising an irregular polygonal slab of suitable material having two of its sides lying at right angles to each other to form a riser and tread, and having a third side having a portion arranged at an acute angle to said tread side and converging toward the end of said tread remote from the side forming the riser and a portion arranged at right angles to the riser and connected therewith.

1,573,044. AGRICULTURAL IMPLEMENT. RUBIN L. DIAMOND, McHenry, Miss., assignor of one-half to John S. Adkison, McHenry, Miss. Original application filed Sept. 6, 1924, Serial No. 736,341. Divided and this application filed May 14, 1925. Serial No. 30,332. 2 Claims. (Cl. 97—170.)



1. An agricultural implement comprising a portable body, a pair of members supported by the body for vertical movement, means for moving one of said members independently of the other, a pair of transversely spaced scrapers carried by the lower portions of said members, each of said members being substantially in the form of an inverted U, the side arms of which being pivotally secured to the scrapers, said members being spaced apart lengthwise of the implement and inwardly disposed guide members carried by the portions of the blades through which the side arms of the members are directed.

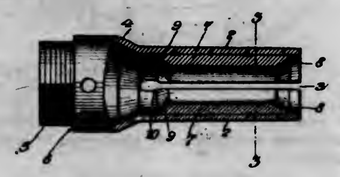
1,573,045. WORK SUPPORT. THOMAS DURRANCE, Leicester, England, assignor to United States Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 2, 1920. Serial No. 414,224. 12 Claims. (Cl. 12—123.)



1. In a machine of the class described, a support for a shoe, a forepart clamping member and a heel clamping member for positioning the edge of a shoe sole in the proper relation to an operating tool, and interconnecting mechanism controlling the positioning of said clamping members.

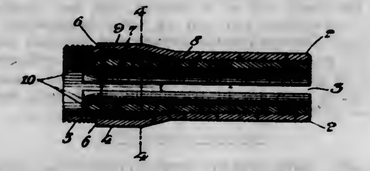
1,573,046. DISAPPEARING FOOT SCRAPER. PETER ENDRES, Independence, Kans. Filed Feb. 19, 1925. Serial No. 10,374. 3 Claims. (Cl. 15—237.)

1. A foot scraper comprising a horizontally elongated scraping plate, a pair of parallel arms rigidly secured to said plate and projecting horizontally therefrom to engage the lower side of a support, each arm having an inner longitudinal slot and an outer longitudinal slot, attaching fasteners passing through said slots and adapted also for passage through a support, and a compression spring on at least one fastener of each arm for exerting a yieldable pressure to frictionally hold such arm in contact with the lower side of the support.



1,573,047. BOX-SPRING STRUCTURE. BENJAMIN B. ENGLANDER, Brooklyn, N. Y., assignor to Englander Spring Bed Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 6, 1924. Serial No. 697,187. 2 Claims. (Cl. 5—354.)

1. A three-part spiral spring mattress bed structure comprising a head, a foot, a detachable spiral spring mattress connected to the head and foot, and forming the sole connection therebetween, said head and foot and

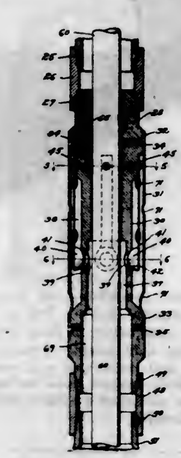


the mattress having connecting means extending therebetween at the ends of the mattress, and a detachable cover for said mattress having depending flap extensions at all sides thereof, the said extensions being detachably connected to said spring mattress to permit the detachment of said cover without separation of the mattress from the head and foot, and the depending end flap extensions having less length than the width of the spring mattress top, thereby to permit the connection means to project therethrough at the ends of said flap extensions and the free removal of the cover.

1,573,048. FEED COLLET. CHARLES J. FANCHER, and ROBERT A. JOHNSON, Windsor, Vt., assignors to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 1, 1923. Serial No. 672,057. 9 Claims. (Cl. 29—62.)

1. A feed collet comprising a body portion having a slotted portion extending therefrom, and filler means for gripping the work and having a length substantially as long as said slotted portion and secured to said slotted portion substantially along its entire length.

1,573,049. FEED COLLET. CHARLES J. FANCHER and ROBERT A. JOHNSON, Windsor, Vt., assignors to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 23, 1924. Serial No. 694,465. 9 Claims. (Cl. 29—62.)



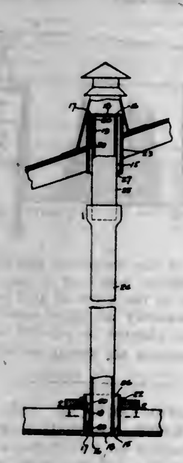
1. A feed collet comprising a body portion and a slotted portion extending therefrom, filler means secured within the collet for gripping the work and having a length greater than the slotted portion whereby it extends into the body portion, said slotted portion and filler means both being formed of heat treatable metal to permit the same to be heat treated whereby when the same is heat treated they will both have substantially the same yielding characteristics and resiliency.

1,573,050. RIVETING PUNCH. EUGENE FREY, Mount Vernon, N. Y. Filed Apr. 24, 1923. Serial No. 634,317. 1 Claim. (Cl. 218—19.)

A riveting punch comprising an elongated body having a blunt end adapted to receive a blow from a striking implement and terminating at its other end in a conical face, an approximately cylindrical lug extending from the apex of the conical face for insertion into the open end of a hollow rivet, and radially disposed V-shaped cutting blades on the conical face, the cross section of each of the cutting blades being substantially uniform from the periphery of the body to that of said lug.

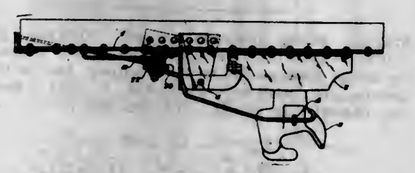
1,573,051. GAS ANCHOR FOR PUMPING WELLS. JOHN R. GIGNOUX, Long Beach, and THEODORE E. SWIGART, Los Angeles, Calif., assignors to Shell Company of California, San Francisco, Calif., a Corporation of California. Filed June 17, 1925. Serial No. 37,697. 6 Claims. (Cl. 103—203.)

1. In combination: a pump; an eduction tube extending from said pump; a shell supported by said pump around said eduction tube; a cup secured in said shell into which said eduction tube extends, there being a space between said cup and said shell through which oil passes through said shell, and there being gas openings near the upper end of said shell through which gas escapes from said shell; and means for preventing a reverse flow through said gas openings.



1,573,052. VEHICLE SPRING. JOSEPH C. GILARDONE, Fleetwood, Pa. Filed Mar. 6, 1925. Serial No. 13,449. 1 Claim. (Cl. 267—49.)

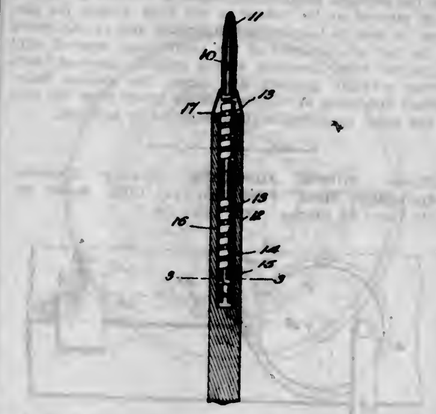
In a vehicle spring, a plurality of super-imposed plates of spring metal, each plate having both of its ends turned downwardly away from the surface of the plate next above it, a strip of relatively soft metal, equal in length to the width of the plates, secured to the upper surface of each turned end by means of a pair of screws, and adapted to bear against the surface of the plate next above it.



1,573,053. FLUE-PIPE SUPPORT AND INSULATOR. FRANK H. GILBERTSON, Los Angeles, Calif. Filed Dec. 10, 1924. Serial No. 755,014. 2 Claims. (Cl. 126—316.)

1. A support for flue pipes comprising a hollow body having one end bent over to form a collar and inwardly to provide an annular lip on the inner periphery of the collar, said collar formed with circumferentially spaced openings, resilient members for movably holding the pipe

in said body, a heat insulating jacket enclosing said body and the opposite end of the body being split at intervals to form bendable tongues.

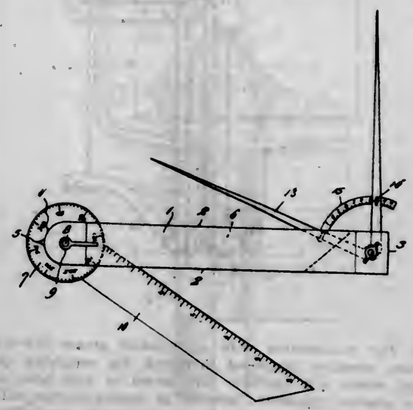


1,573,054. UNCOUPLING DEVICE FOR CAR COUPLERS. GARTH G. GILPIN, Riverside, Ill., assignor, by mesne assignments, to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 4, 1921. Serial No. 458,501. 13 Claims. (Cl. 213—164.)

2. A release rigging for railroad car couplers comprising an operating lever, a coupler lock pin lifting lever, a fulcrum for said levers upon the car, a combined connecting and bearing block which passes through apertures in said levers, means thereon allowing pivotal movement of the pin lifting lever thereon horizontally independent of the operating lever, and means limiting rotative movement of said block.

1,573,055. MECHANICAL PENCIL. BYRON B. GOLDSMITH, New York, N. Y. Filed May 21, 1921. Serial No. 471,319. 3 Claims. (Cl. 120—18.)

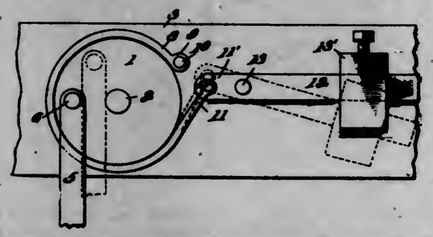
1. A mechanical pencil comprising an external casing having a central cylindrical cavity open at the forward end and closed at the rear and having a longitudinal internal channel, a lead tube having a cylindrical surface fitting within said cylindrical cavity and projecting out of the forward end of said cavity to permit it to be grasped in operation, said lead tube having a spiral slot through it, a lead snugly fitting for all its length in said



lead tube, and a pusher rod fitting said lead tube and having a portion extending through the spiral slot and into the longitudinal channel in said casing.

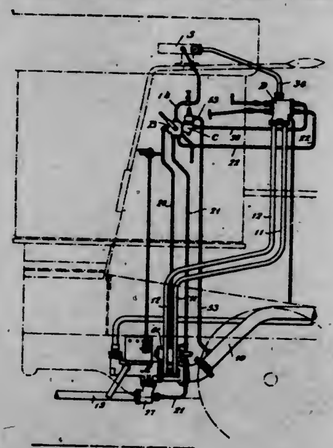
1,573,056. PROCESS OF PREPARING 1,8-AMINONAPHTHOL SULPHONIC ACIDS. IVAN GUBELMANN and JOHN M. TINKER, South Milwaukee, Wis., assignors to The Newport Company, Carrollville, Wis., a Corporation of Delaware. Filed May 9, 1925. Serial No. 29,215. 4 Claims. (Cl. 260—129.)

1. The method of preparing 1,8-aminonaphthol sulphonic acids and salts, which consists in fusing 1-naphthylamine sulphonic acids and salts containing a sulphonic acid group in the 8-position with caustic alkalies in the presence of ammonia.



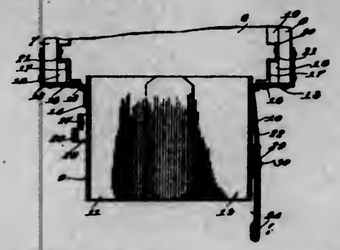
1,573,057. COMBINATION INSTRUMENT. MELBURN B. HANCOCK, Mount Meigs, Ala. Filed May 20, 1924. Serial No. 714,632. 1 Claim. (Cl. 33—75.)

An instrument comprising a body which is rectangular in transverse section, said body having parallel straight longitudinal edges, and an arcuate end edge, said body being provided with a point located at its arcuate end



edge, said point being alined with the median longitudinal dimension of the body, said body provided with a longitudinally extending slot intersecting the arcuate end edge and the straight longitudinal edges, a circular protractor plate pivoted at its center to the body within the slot upon its median longitudinal dimension and at the center of the arc of curvature of the curved edge thereof, said protractor being provided with a radially disposed blade having straight parallel side edges, the median longitudinal dimension of the blade being alined with the axis of the pivot upon which the protractor is mounted.

1,573,058. SHOCK ABSORBER. PARMLY HANFORD, Springfield, Mass. Filed July 14, 1919. Serial No. 310,716. 13 Claims. (Cl. 188—130.)



1. A shock absorber for motor vehicles including a friction drum connected to the chassis and axle whereby said drum is operated by the relative movement between said drum and axle, a friction strap operatively arranged with respect to the drum, a vertically movable weight, and connections from said weight to said strap to operate the latter upon the occasion of a sudden movement of said chassis.

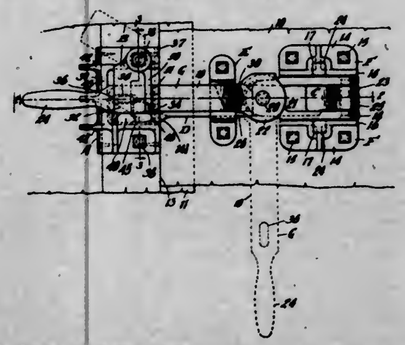
1,573,059. STEAM INJECTOR. MALCOLM HARD, Flushing, N. Y., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 27, 1924. Serial No. 740,193. 19 Claims. (Cl. 162—1.)

1. The combination with an exhaust steam injector having conduits connected therewith for supplying exhaust steam and auxiliary live steam to said injector, of a pressure responsive member, in communication with the exhaust steam conduit for automatically controlling the admission of live steam through the auxiliary live steam conduit when the exhaust steam being delivered to the injector is below a predetermined minimum pressure.

1,573,060. END GATE. WALTER H. HARRISON, Highmore, S. Dak. Filed July 22, 1925. Serial No. 45,296. 3 Claims. (Cl. 296—50.)

1. In a device of the character described, the combination with a vehicle body, of a pair of end gates hingedly connected to the sides of said body, and extensions projecting inwardly at right angles to the lower edges of said gates adapted to provide an extension for the body when the gates are swung outwardly.

1,573,061. ABRASIVE ARTICLE AND METHOD OF MAKING THE SAME. MINER L. HARTMANN, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed Jan. 24, 1923. Serial No. 614,683. 7 Claims. (Cl. 51—279.)

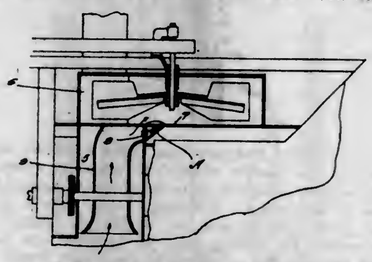


1. An abrasive article having voids containing a finely divided solid lubricating material which is infusible under the heat normally created by the abrasive action and a binder for the lubricant, substantially as described.

1,573,062. SPINNING VISCOSE. JACQUES CONRAAD HARTOGS, Arnhem, Netherlands. Filed June 30, 1924. Serial No. 723,364. 4 Claims. (Cl. 18—54.)

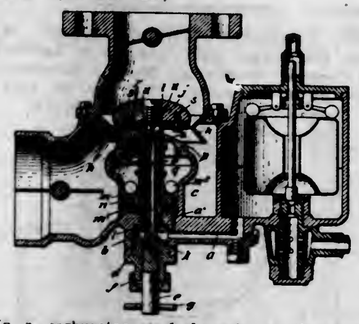
1. In the process of spinning viscose, the step which consists in adding a ferric salt to an acid spinning bath to prevent evolution of sulphureted hydrogen.

3. An acid spinning bath for viscose containing a ferric salt in addition to the usual constituents.



1,573,063. DOOR OPERATING AND LOCKING DEVICE. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Jan. 7, 1924. Serial No. 684,691. 12 Claims. (Cl. 292—210.)

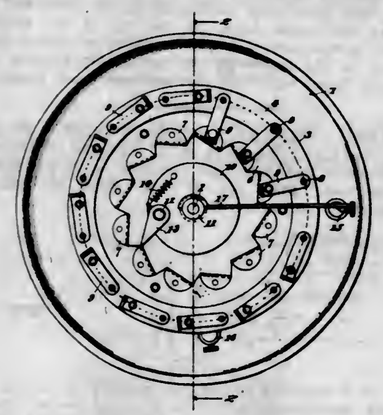
1. In an operating and locking mechanism for a sliding door, the combination with a slidable, pulling member; of an abutment adapted to coact with said member to effect movement of the door when said member is operated; a lever for operating said member; a swingable latch plate mounted on said abutment and adapted



to engage over said lever when the door is in closed position; and co-operating means on said plate and lever whereby the same may be interlocked.

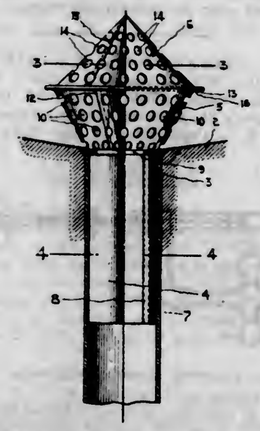
1,573,064. ATTACHMENT FOR CORN SHELLERS. EMANUEL HEITZMAN, Alexandria, S. Dak. Filed Oct. 13, 1925. Serial No. 62,279. 1 Claim. (Cl. 130—6.)

A corn sheller including, in combination, a concave, a hood extending through the concave, a blower having an opening partially communicating with the upper end of the concave, the rear wall of the concave provided with an opening adjacent the opening in the blower, said hood casing communicating with the openings, and a baffle plate comprising a body plate having rectangularly disposed right triangular ends with the hypotenuse edges merging with the end edges of the body plate, one leg edge of each end merging into an outwardly disposed lateral flange adapted to be fixed to the rear wall of the concave adjacent the opening therein.



1,573,065. CARBURETOR. WILLIS C. HESS, Toledo, Ohio. Filed July 28, 1919. Serial No. 313,798. 7 Claims. (Cl. 261—44.)

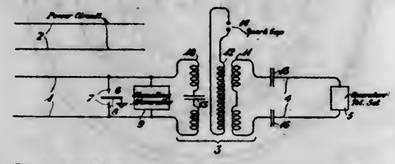
1. In a carburetor, a fuel-nozzle, a throat-ring, a floating air-valve supported over the exit-end of said fuel-nozzle and adapted to regulate the supply of air passing through said throat-ring, and means for initially weighting the floating air-valve and relieving it of the weight when the valve is opened to high-speed position.



6. In a carburetor, a mixing-chamber and means for supplying fuel thereto, said means comprising a stationary tube extending up through the bottom of said mixing-chamber and exteriorly screw-threaded, a toothed rotary stop screwed on said externally-threaded portion of the tube, a shaft journaled in a wall of the mixing-chamber and provided with a pinion on its inner end engaging the teeth of said stop to rotarily adjust the same on the screw-threads, an air-valve provided with a depending hollow stem fitting and surrounding said tube, auxiliary means for normally holding the valve closed with the lower end of said tube in abutting relation to said stop, and a fuel-valve one member of which depends from the air-valve and the other member of which extends up through said tube.

1,573,066. ELECTRIC TIME SWITCH. DELBERT HITCHCOCK, Millersburg, Ohio. Filed Mar. 26, 1923. Serial No. 627,889. 2 Claims. (Cl. 200—35.)

1. In a time switch, a rotary spindle, a disc mounted thereon, a metallic annulus arranged concentric with said spindle, an insulated annulus secured to the metal annulus, the inner periphery of said insulated annulus extending within the periphery of the first mentioned annulus, a plurality of metallic segments mounted on the inner periphery of said insulated annulus, a plurality of pivoted levers carried on said metallic annulus and adapted for contact respectively with the aforesaid segments, a pivoted dog carried on said disc and having its free end in the path of said segments to contact with the latter as the disc is rotated, a coil spring having one end connected with the dog and its other end connected with said disc to normally urge said dog in a predetermined direction, and a connecting element engaged with said spindle and projecting radially therefrom to a point beyond the outer periphery of said metallic annulus, as and for the purposes described.

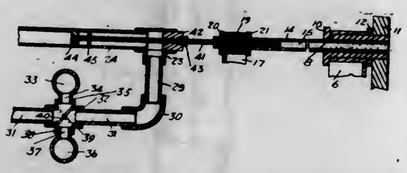


1,573,067. DRAIN-PIPE STRAINER. NORMAN HOLLAND, Westmount, Quebec, Canada. Filed July 13, 1923. Serial No. 651,405. 1 Claim. (Cl. 210—170.)

A sheet metal strainer of the type described consisting of a tube and a hollow perforated top secured upon one end of the tube, said top consisting of a perforated portion of inverted truncated conical form secured upon

the tube and a perforated conical top portion secured upon the inverted conical top portion, said top being reinforced at its middle by a continuous circumferential bead, said bead being constituted by an outwardly projecting continuous flange on the top of the inverted conical portion and a continuous flange of channel cross-section on the bottom of the conical top portion, said channel flange embracing the first-mentioned flange.

1,573,068. VOLTAGE-LIMITING DEVICE. RICHARD K. HONAMAN, Bloomfield, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 6, 1922. Serial No. 550,072. 5 Claims. (Cl. 179—78.)



1. In a signaling system, the combination with a line circuit inductively exposed to a power circuit capable of inducing abnormal potentials in the said line circuit, of a switch-board circuit, and a transformer having main windings connected with and adapted to inductively relate said line circuit to said switchboard circuit, and having an auxiliary winding in series with a spark gap adapted to operate at a definite potential in said auxiliary winding.

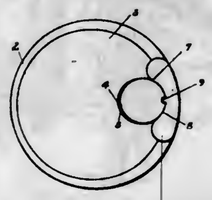
1,573,069. FURRING NAIL. ANTON M. JENSEN, Los Gatos, Calif. Filed Aug. 27, 1924. Serial No. 734,474. 3 Claims. (Cl. 72—118.)

1. A furring element comprising a sheet metal body having an attaching shank and stop fingers on opposite sides of the shank extending in opposite directions therefrom, and fabric-attaching fingers extending from the opposite edge of the body and curved outwardly and over the said edge in opposite directions.

1,573,070. CORE-REMOVING MACHINE FOR HOLLOW-DRILL STEEL. ARTHUR DORMAN JOHNSON and FREDERICK AUGUST SCHULZE, Welland, Ontario, Canada, assignors to Atlas Alloy Steel Corporation, Dunkirk, N. Y., a Corporation of New York. Filed Nov. 9, 1923. Serial No. 673,791. 7 Claims. (Cl. 137—70.)

1. A core removing machine comprising a support for holding a hollow steel having a sand core and in which such steel is rotatably mounted; means for rotating the hollow steel; means for bearing against the end of the core for dislodging the same, means for supplying fluid for carrying such dislodging means longitudinally of the hollow steel and for simultaneously removing the dislodged particles as they are loosened from the core.

1,573,071. COLLAPSIBLE BARREL. JOHN ARTHUR KAYE, Sault Ste. Marie, Ontario, Canada. Filed June 28, 1923. Serial No. 648,384. 5 Claims. (Cl. 220—8.)

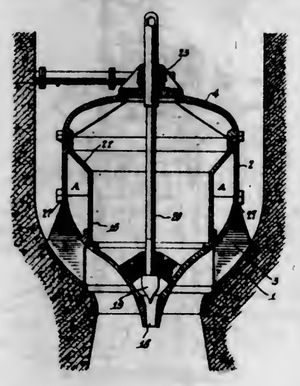


1. A collapsible container comprising a tubular middle section, an end section adapted to telescope within the middle section, a hinged plate permanently mounted upon one of the sections, and toggle levers carried by the hinged plate and adapted to detachably engage the other section for forcing the two sections into an expanded relation, the mounting of the toggle levers upon the hinged plate enabling them to be swung into an out of the way position when the container is collapsed.

1,573,072. REFRACTORY CEMENT AND CONCRETE. PAUL JEAN FREDERIC KESTNER, Boulogne-sur-Seine, France. Filed Mar. 12, 1925. Serial No. 15,139. 1 Claim. (Cl. 106—9.)

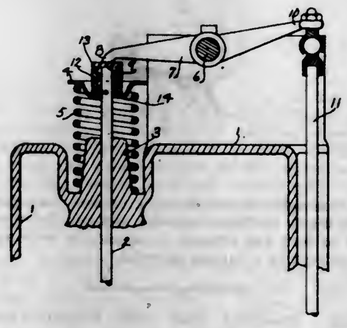
A composition of matter constituting a refractory cement, consisting of a mixture of 1 to 10 parts of bauxite which has been calcined at a temperature above the point of transformation of alumina, and 2 parts of a calcium aluminate cement containing at least 30% of alumina, the said calcined bauxite and calcium aluminate cement being mixed in the form of powder.

1,573,073. LENS-PRODUCING APPARATUS. MAX A. LAABS, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Dec. 15, 1921. Serial No. 522,671. 3 Claims. (Cl. 49—14.)



2. A device of the character described comprising a base portion, a post rising from the base portion, a head slidable and tiltable on the post having an inner bifocal segment engaging and positioning member and an outer weighted operating portion for controlling the position of the member on the supporting post, said post having a roughened or serrated portion for engagement by the sliding head.

1,573,074. VALVE. CHESTER W. LARNER, Philadelphia, Pa., assignor, by direct and mesne assignments, to The William Cramp & Sons Ship & Engine Building Company, a Corporation of Pennsylvania. Filed Dec. 8, 1921. Serial No. 521,059. 1 Claim. (Cl. 137—139.)



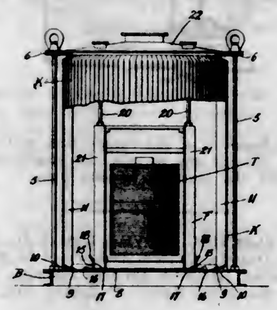
In a hydraulic valve structure the combination with the vertical wall of a fluid way gradually tapering downward to form a valve seat, of a fixed cylinder supported from said wall, a vertically movable valve plunger sliding in said cylinder and having a piston portion between an inner chamber and a surrounding annular

chamber A within the cylinder and a nose portion subjected to the floating action of vertically upward fluidway pressure and tapered to form a smoothly contracting annular passage with the fluid way wall and provide a region of permanently low pressure adjacent the end of said plunger, and means for reducing the interior

pressure above the plunger to float it open to any desired position consisting of a single valve opening through the end of the plunger to the fluid way and means for controlling said opening to vary said interior pressure and move the valve to any position and hold it there solely by hydraulic pressure and without the exertion of mechanical force on the plunger.

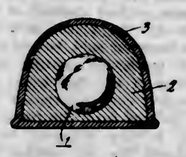
1,573,075. VALVE-STEM SILENCER. GEORGE LEHMANN, Jr., San Jose, Calif. Filed Apr. 24, 1923. Serial No. 634,257. 1 Claim. (Cl. 123—90.)

As an article of manufacture, an open ended tubular metallic casing, and a non-metallic bushing fitted in said casing and having a head portion overlying one end thereof, said bushing having an orifice formed in its other end in concentric relation to said casing whereby to slidably engage one end of a valve stem.



1,573,076. AERIAL PROJECTILE TOY. MERRILL D. LOVE, Los Angeles, Calif. Filed Oct. 20, 1924. Serial No. 744,833. 1 Claim. (Cl. 46—40.)

A toy formed from a pliable material to simulate an aeroplane and consisting of an elongated body, studs rising from the upper front end of said body in row formation to simulate engine cylinders, wings extending from the body, said body being provided with a recess extending upwardly therein adjacent the rear end thereof, said recess communicating with an opening of smaller diameter than the recess and extending through said

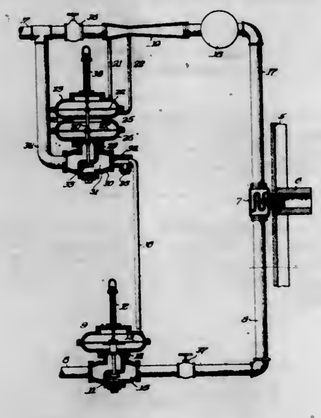


body, an elastic cord having a knotted end received in said recess, and said elastic cord passing through said opening and adapted to be grasped by the operator of the toy for controlling the same.

1,573,077. TRANSFORMER. LEWIS G. MCCLINTOCK, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Oct. 11, 1921. Serial No. 507,122. 5 Claims. (Cl. 175—361.)

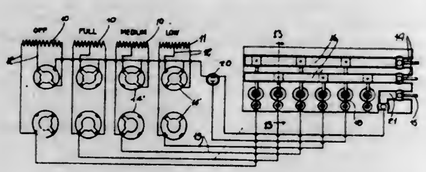
1. The combination with a transformer, of a tank therefor having a sheet metal body formed of sides and an imperforated bottom plate and separate stop members fastened on said plate and adapted to retain said transformer spaced from the sides of said tank, said stop members also being spaced from the sides of said tank and being adapted for attachment to said plate in positions to accommodate various sizes of transformers.

1,573,078. CONFECTION AND METHOD OF MAKING THE SAME. WILLIAM A. MCCOOL, Traverse City, Mich. Filed June 11, 1924. Serial No. 719,387. 2 Claims. (Cl. 99—16.)



2. The herein described method of producing candies having centers of natural sour red cherries which includes placing fresh pitted cherries in sugar to produce a syrup, treating the cherries and syrup with an agent for neutralizing the fruit acid, providing each cherry with a coating of fondant, and providing each fondant coating with an outer coating of hard non-porous edible material.

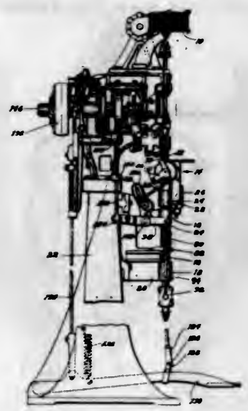
1,573,079. APPARATUS FOR PROPORTIONATELY MIXING AIR AND GAS. GARNET W. MCKEE, Rockford, Ill. Filed Apr. 16, 1924. Serial No. 707,010. 9 Claims. (Cl. 48—184.)



1. In an apparatus for proportionately mixing air and gas, an air supply line, means for producing a pressure

differential in said air line, an intermediate pipe, means for varying the fluid pressure in said pipe in accordance

with said differential, a gas supply line, and means for varying the flow of gas in said gas supply line in accordance with the pressure in said pipe.



1,573,080. ELECTRIC STOVE. ROBERT H. MACINNES, Hamilton, Ontario, Canada, assignor to D. Moore Company, Limited, Hamilton, Ontario, Canada. Filed Feb. 9, 1925. Serial No. 7,906. 3 Claims. (Cl. 219—35.)

3. In an electric stove, a series of heating elements, a neutral lead to which each of said elements is connected and forming the common return therefor, a fuse lock, feed bus bars carried thereby, a series of fuse receptacles carried by the block, said receptacles being equally balanced between said bus bars single feed connections between respective heating elements and fuse receptacles, a series of switches equal in number to the heating elements and each interposed between one such heating element and its fuse, the connection between the neutral and the heating elements being through said switches, an unfused bus bar carried by the block and having the neutral lead connected thereto, and line wire connections on said fuse block for connecting line wires to the respective bus bars.

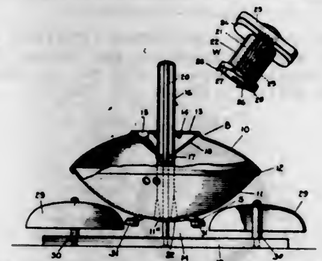
1,573,081. FASTENING-INSERTING MACHINE. FRED L. MACKENZIE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 3, 1922. Serial No. 565,765. 43 Claims. (Cl. 1—41.)

1. In a fastening inserting machine having a guiding member through which the fastenings are driven, the combination of a roller mounted on the guiding member in position to engage the work to serve as a movable abutment therefor, a work support, a feed roll mounted on the work support to co-operate with the roller for feeding the work across the upper end of the work support, spring means operative to maintain the roll con-

stantly in contact with the work during a series of fastening inserting operations, and power means for retracting the work support against the opposition of the spring to work receiving position.

1,573,082. STENCIL. HARRY DE FOREST MADDEN, Newark, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Sept. 16, 1921 Serial No. 501,126. 6 Claims. (Cl. 101—127.)

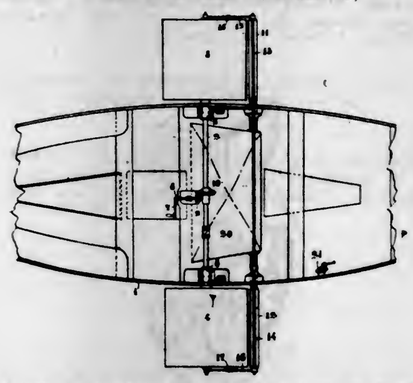
1. A removable stencil having a pattern formed therein and having a resilient material adjacent to the edges of said pattern and adapted to arrest the wearing away of the pattern by a cutting material.



1,573,083. PROCESS FOR THE PRODUCTION OF METALS. JOHN WESLEY MARDEN and CLETUS CLINTON VAN VOORHIS, East Orange, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed June 13, 1921. Serial No. 477,267. 30 Claims. (Cl. 75—17.)

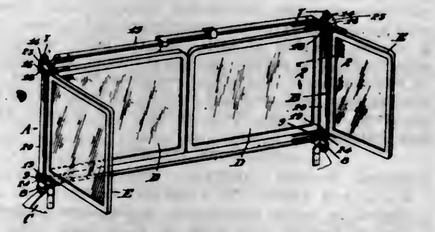
1. The method of producing refractory metals which consists in heating a metallic oxide, an alkali metal and either an alkali metal halide or an alkaline earth halide the base of which is a metal other than the alkali metal employed.

1,573,084. SOUNDING SPINNING TOP. LOUIS MARX, New York, N. Y. Filed Dec. 18, 1924. Serial No. 756,654. 7 Claims. (Cl. 46—32.)



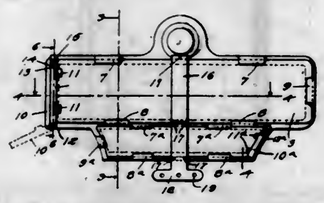
1. A sounding spinning top comprising a rotatable spinning top body, a winding means therefor, a stationary

mounting for the top body, and sounding means having complemental parts comprising a sounding element on the mounting and a hammer device on the spinning top



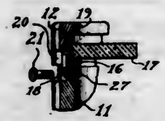
body, the said complemental parts of the sounding means coacting to produce sound when the top body is spun on the mounting.

1,573,085. APPARATUS FOR RECOVERING NAPHTHA FLOATING ON THE SURFACE OF WATER. ALESSANDRO MEIANI, Spezia, Italy. Filed Aug. 23, 1924. Serial No. 733,855. 1 Claim. (Cl. 210—1.)



A boat for recovering naphtha floating on the surface of water, provided with rotary cylinders partially dipping into the water, so as to carry the naphtha adhering to their surface, in combination with a brush slightly contacting with the lateral surface of the cylinders so as to remove the naphtha conveyed upward and conduits arranged to receive the naphtha wiped out by the brushes and to deliver it into a collecting tank.

1,573,086. TONNEAU WINDSHIELD. CLYDE L. MILLER and JOHN F. MILLER, Los Angeles, Calif. Filed May 6, 1924. Serial No. 711,335. 7 Claims. (Cl. 296—85.)

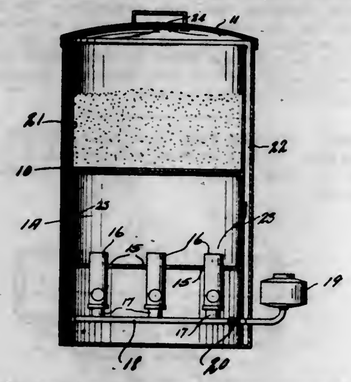


1. In a tonneau windshield, a standard including a vertical rod, a fixed bracket engaging the lower end portion of the rod, a windshield wing having a pair of brackets pivotally engaging said rod, a spring interposed between the fixed bracket and the lowermost bracket on said windshield wing, a second windshield wing having ears pivotally engaging said rod intermediate the pivoted brackets on the other windshield wing, stationary elements encompassing the rod intermediate the pivoted ears and brackets, and means for affording a frictional contact between each of said stationary elements and the contiguous ears and brackets.

1,573,087. HOLDER FOR LICENSE AND CITY NAME PLATES. PATRICK F. MORRISSEY, Auburn, N. Y. Filed Oct. 14, 1924. Serial No. 743,616. 2 Claims. (Cl. 40—125.)

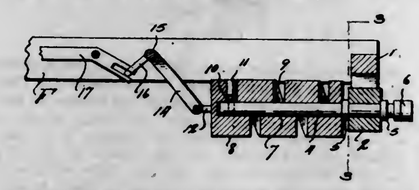
1. A holder for an automobile license plate, comprising an open frame having integrally formed top, bottom and end bars, license plate retaining lugs on the top, bottom and one end bar, and a latch carried by the other end bar and provided with license plate retaining lugs.

1,573,088. GOGGLES. EDMOND PELOQUIN, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Mar. 31, 1924. Serial No. 703,082. 3 Claims. (Cl. 2—14.)



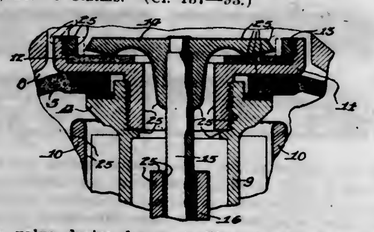
1. In a device of the character described, an annular eye cup having a portion adapted to conform to the face, and a reduced portion on the opposite end thereof, a plurality of screw members having projecting heads in the reduced portion, an annular cap adapted to fit over the reduced portion of the eye cup, having a plurality of apertures adapted to slip over the body portion of the screws under the projecting portion so that the projecting portion of the screws will engage the section of the cap surrounding the apertures, whereby the cap may be frictionally held on the reduced portion by tightening up the screws after the cap is slipped in place.

1,573,089. MOLD CONSTRUCTION FOR CENTRIFUGAL CASTING MACHINES. JOHN RICE, Burlington, N. J., Filed Jan. 10, 1924. Serial No. 685,443. 19 Claims. (Cl. 22—65.)



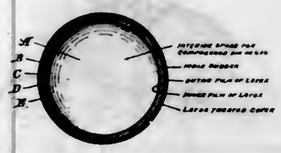
1. An apparatus for centrifugally casting pipes comprising a mold, a liner, and means for assembling the liner within the mold to permit of uniform diametrical and linear expansion of the same throughout its length with respect to the mold.

1,573,090. FEED COOKER AND HEATER. JERRY ROWLETT, Mound City, Mo. Filed Feb. 12, 1925. Serial No. 8,856. 1 Claim. (Cl. 126—350.)



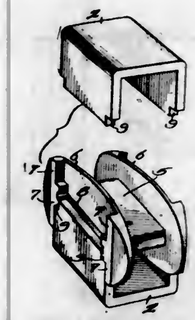
A cooker and heater of the character described comprising an outer casing of sheet metal having a bottom and a nemovable lid, an oven removably disposed within the casing, the side wall of the oven extending down to the bottom of the casing and resting thereon, the bottom of the oven having apertures and being spaced from the bottom of the outer casing, a lamp disposed in the bottom of the casing and having a plurality of burners, chimneys on the burners extending upward through the apertures in the bottom of the oven, and a cooking container open at the top and adapted to rest on the top of the oven and to be disposed within the casing, the container having a diameter less than the diameter of the casing.

1,573,091. MARKER FOR CORN PLANTERS. JERRY ROWLETT, Mound City, Mo. Filed Apr. 9, 1925. Serial No. 21,898. 3 Claims. (Cl. 111—30.)



1. In combination with a planter frame, a shaft rotatably supported thereby, a marker carried by the shaft, a member telescopically receiving an end portion of the shaft, means for reciprocating said member, and coacting means carried by said shaft and member for rotating the shaft upon reciprocation of the member.

1,573,092. VALVE. IRVING H. RUSSELL, Chicago, Ill., assignor to Sloan Valve Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 28, 1921. Serial No. 518,116. 6 Claims. (Cl. 137—93.)

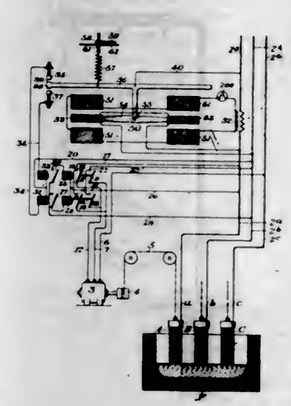


3. A valve device for controlling the flow of liquids comprising a casing, a main valve therein, an auxiliary valve mounted on said main valve and a deposit preventing coating on said auxiliary valve for preventing the deposit of hard material thereon.

1,573,093. TENNIS AND OTHER PLAYING BALL. ROBERT RUSSELL, Manchester, and HERBERT BROOMFIELD, Stockport, England. Filed Mar. 31, 1924. Serial No. 703,126. 5 Claims. (Cl. 273—61.)

1. As a new article of manufacture a playing ball composed of sections of vulcanized india rubber and provided on at least one side with a film of precipitated latex solids.

1,573,094. POLARIZED ELECTROMAGNET. HENRY G. SAAL, Chicago, Ill. Filed Mar. 20, 1925. Serial No. 17,082. 8 Claims. (Cl. 175—21.)



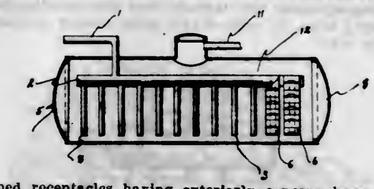
1. In a polarized electromagnet, the combination with a permanent magnet; of two polar extensions of U form, each end of the permanent magnet being provided with one of these extensions which are symmetrically arranged with the ends of each facing and spaced apart from the ends of the other to define a space for the winding and armature of the magnet; a winding spool comprising a body portion and two flanges, one at each end of the body portion, said flanges having, each, two symmetrically related pairs of L shaped shoulders on opposite sides of the spool, the shoulders of each pair being symmetrically related and inwardly facing to define spaces in which said polar extensions are received, the spool being formed with an opening extending therethrough and between the L shaped shoulders of each pair, the polar extensions being formed with angular recesses at each of their corners in which adjacent sides of the shoulders are received; a winding upon said spool and between its flanges; and an armature within the spool opening and between said polar extensions.

1,573,095. POWER CONTROL. BYRAMJI D. SAKLATWALLA and ARTHUR N. ANDERSON, Crafton, Pa., assignors, by mesne assignments, to Vanadium Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Apr. 24, 1919. Serial No. 292,286. 36 Claims. (Cl. 204—64.)

36. The combination with a device for consuming or transforming electric power, of an automatic regulator

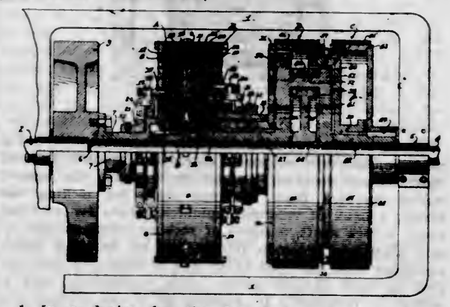
comprising relatively movable co-acting current and voltage coils and responsive to variations in the wattage

consumption for maintaining a substantially constant wattage consumption, substantially as described.



1,573,096. RETAINING DEVICE FOR RADIATOR CAPS. HERMAN SCHLAICH, Long Island City, N. Y. Filed Mar. 24, 1922. Serial No. 546,438. 14 Claims. (Cl. 220—24.)

1. A retaining device for use with a radiator cap equipped with an instrument having a threaded stem projecting through a hole in said cap, comprising a toggle member having a body portion and a plurality of automatically operable fingers movably connected thereto, and means connecting said toggle member with said instrument stem, said fingers being effective to prevent removal of the toggle member from the radiator.



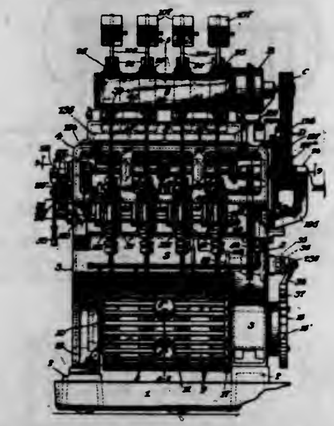
1,573,097. BOILER. JOHN B. SCHLOSSER, Detroit, Mich. Filed Nov. 3, 1923. Serial No. 672,476. 2 Claims. (Cl. 122—35.)

1. A device of the class described, adapted for positioning in a receptacle in communication with a boiler, and adapted for being surrounded by the water of the boiler, comprising a plurality of separate rectangularly

shaped receptacles having exteriorly concave bases, said receptacles being filled with a metal of a low melting point.

1,573,098. MULTIPLE-SPEED PLANETARY-GEAR TRANSMISSION MECHANISM. FRED F. SMALL and CARL E. NAGEL, Oakland, Calif. Original application filed May 29, 1924, Serial No. 716,559. Divided and this application filed Dec. 16, 1924. Serial No. 756,210. 3 Claims. (Cl. 74—34.)

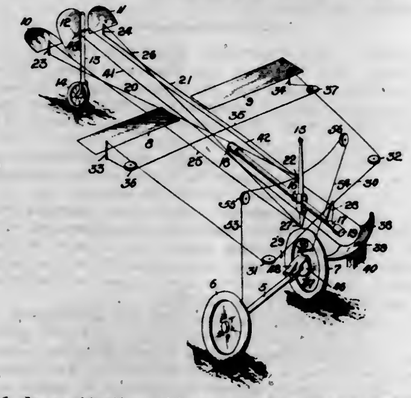
1. In a device for the described purpose, a driven shaft; a driving member journaled thereupon; a rotatable drum journaled upon said shaft; a plurality of coaxial gears housed within said drum; means mounted about said shaft and positioned exteriorly to said drum at one end thereof for selectively connecting two of said gears with said driving member; means for releasably holding one of said gears stationary; and a planet pinion member carried by the shaft and adapted to mesh with and connect said coaxial gears.



1,573,099. NUT-TAPPING MACHINE. OSCAR A. SMITH, East Cleveland, and GEORGE J. LEBER, Cleveland, Ohio, assignors to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 17, 1922. Serial No. 529,948. 108 Claims. (Cl. 10—130.)

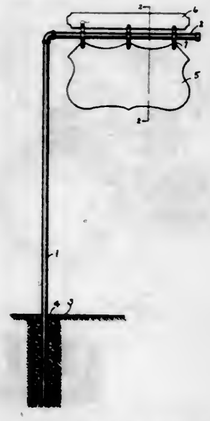
8. In a metal working machine, the combination of a rotary blank holding turret having means for discharging the chips therefrom, means for operating the turret, tool carrying spindles, means for operating the spindles, and automatic means for simultaneously stopping the turret operating means and a part of the spindle operating means, said automatic means being timed to permit a predetermined number of operations of the turret and of the spindles.

11. In a metal working machine, the combination of a drive shaft, a rotary turret having a series of spaced blank holder recesses extending lengthwise of the turret, means connected to said shaft for indexing and locking the turret, a spindle adapted to carry a tool, means controlled by the shaft for rotating the spindle, means for reciprocating the spindle, and automatic means for simultaneously stopping the reciprocation of the spindle and the indexing of the turret without stopping said shaft.



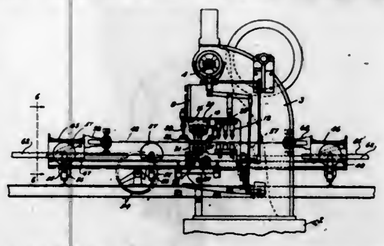
39. A rotatable blank carrying turret comprising a shaft, a drum mounted thereon, said drum having a se-

ries of spaced blank holder receiving recesses extending lengthwise thereof and also having one or more ship receiving openings therethrough, and tapered filler rings extending from the ends of said drum toward the center of said shaft.



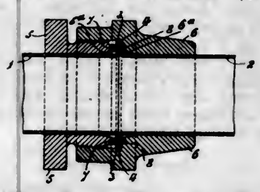
65. In a metal working machine, the combination of a rotary horizontally supported blank holding turret, a cam shaft, means operated thereby for indexing the turret, means operated from the cam shaft for locking the turret, a bank of rotatable spindles, means for rotating them, a rock shaft, a series of rocking levers carried by said shaft one for each spindle and all operated simultaneously from the cam shaft, and a cushioned dog carried by each of said levers, each cooperating with a spindle to reciprocate it, whereby all of the spindles are reciprocated simultaneously from the cam shaft.

1,573,100. MEANS FOR GUIDING AEROPLANES ON THE GROUND. LAWRENCE B. SPERRY, Farmingdale, N. Y.; The Bank of America, New York, N. Y., and Winifred Allen Sperry, Hempstead, N. Y., executors of said Lawrence B. Sperry, deceased. Filed June 8, 1922. Serial No. 566,702. 9 Claims. (Cl. 244—2.)



1. In combination with an aeroplane having forward landing wheels and a pivotally mounted trail wheel, of separate brakes on said forward wheels, and a common means for differentially applying said brakes and turning said trail wheel whereby the aeroplane may be steered on the ground by the cooperative action of the trail wheel and differential application of the brakes.

1,573,101. SIGN SUSPENSION. HARRY STECKOL, Houston, Tex. Filed Aug. 8, 1925. Serial No. 48,982. 1 Claim. (Cl. 40—128.)

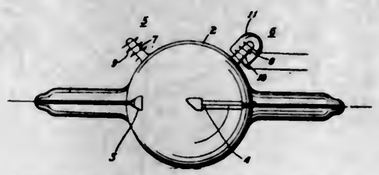


A display device comprising a post, a lateral arm thereon, a sign board below said arm, a smaller sign board above said arm, and opposite clamping plates secured at their ends to said boards and including said arm loosely between them to allow a swinging movement of said boards thereon.

1,573,102. PLATE-FABRICATING MACHINE. WILLIAM J. TANGERMAN, Hammond, Ind. Filed Jan. 27, 1922. Serial No. 532,240. 22 Claims. (Cl. 164—110.)

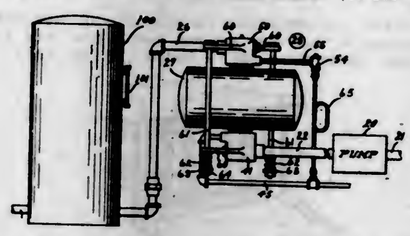
1. A machine of the class described, embodying therein a movable punch holder, a movable die block, a stripper element interposed between but supported independently of said punch holder and die block, and means for synchrononsly moving said stripper element, movable punch holder and co-operative die block.

1,573,103. COUPLING FOR METAL TUBES. FREDERICK TOMLINSON, Salford, England. Filed Feb. 28, 1924. Serial No. 695,630. 2 Claims. (Cl. 285—127.)



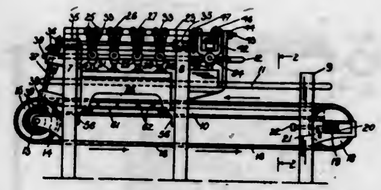
1. In a coupling for metal tubes having radially flanged abutting ends, a sleeve loosely fitting upon each of the tubes adapted to abut against the flanges thereof, one sleeve having an annular recess in the end thereof, a projection on the end of the other sleeve, and means for forcing said sleeves together, said flanges, annular recess and projection, having a double line contact between the same formed by forcing said sleeves together.

1,573,104. ART OF SHOEMAKING. FRED E. TOOTHAKER, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 2, 1925. Serial No. 27,502. 5 Claims. (Cl. 12—142.)



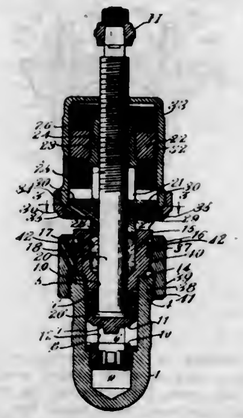
4. The method of making stitchdown shoes which consists in providing a counter having the major portion of its sole attaching flange inturned and portions adjacent to the counter wings outturned, placing the counter between the outer layer and lining of the shoe upper, positioning the upper on a last having an innersole thereon, lasting the lining inwardly and securing it to the innersole, applying a middle sole, and lasting and securing the upper and outturned portions of the counter to the margin of the middle sole.

1,573,105. X-RAY TUBE. CLETUS C. VAN VOORHIS, Wilkinsburg, Pa., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Jan. 5, 1921. Serial No. 435,077. 16 Claims. (Cl. 250—34.)



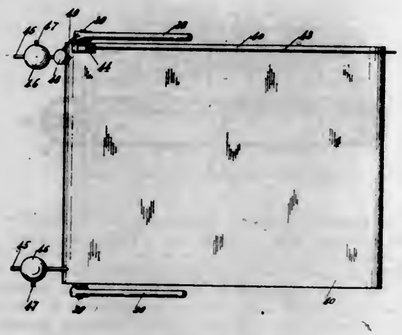
1. The method of regulating the vacuum of a glass vacuum tube, which consists in introducing a gas into said tube by applying a gas to the surface of said tube and heating said surface.

1,573,106. PUMPING APPARATUS. CLARENCE WARNER, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Sept. 4, 1923. Serial No. 660,723. 21 Claims. (Cl. 103—6.)



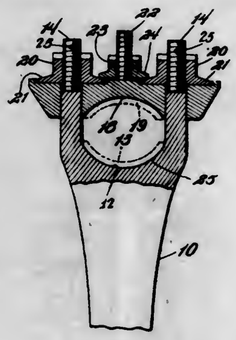
1. In a water system, the combination with a pump and a pressure storage tank; of a main passage connecting the pump and storage tank; an auxiliary tank; and means controlled by movement of the auxiliary tank for introducing air into the auxiliary tank and for causing air to be forced from the auxiliary tank into the storage tank.

1,578,107. CAN-SIDE-SEAMS-SOLDERING MACHINE. CHARLES HORACE LEONARD WILKINS, Crows Nest, near Sydney, Australia. Filed Feb. 26, 1924. Serial No. 695,157. 8 Claims. (Cl. 113—60.)



1. A soldering machine, comprising, in combination, a frame provided with a track bar adapted to support a can longitudinally thereof, means for engaging the can at different points on its outer periphery thereby to retain and guide said can on said track bar, a traveling member adapted to move the can continuously in one direction between said engaging means, brackets pivotally mounted on the frame at opposite sides thereof and adapted to swing toward said frame, a counterbalancing weight carried by each of said brackets and adapted to urge the same toward the frame, a soldering roller mounted for rotation in each bracket and disposed in position to contact with the can along a line parallel with its longitudinal axis, means for operating said traveling member, and means for transmitting rotary motion from said operating means to said soldering rollers.

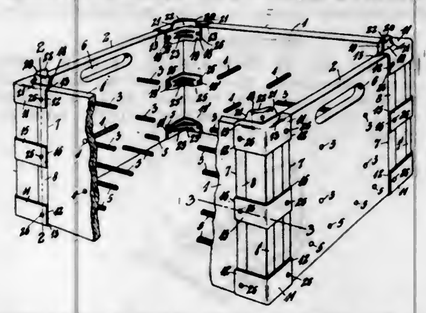
1,573,108. STOP VALVE. BELVIN T. WILLISTON, Somerville, Mass., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed Mar. 30, 1925. Serial No. 19,284. 3 Claims. (Cl. 251—49.)



3. In a valve, a valve body having a seat therein, a valve adapted to cooperate with said seat, a valve stem connected to the valve, a bonnet surrounding said stem, said bonnet having at its upper end an annular rim surrounding said stem, a gland reciprocable relatively to said bonnet, and means for adjusting said gland including a hollow cylindrical cap having threaded engagement with said bonnet rim and having a connection with said gland including means providing an annular groove coaxial with said stem on said cap, and means fixed relatively to said gland seated within said groove, said cap having an unbroken peripheral wall extending between said groove and said bonnet rim.

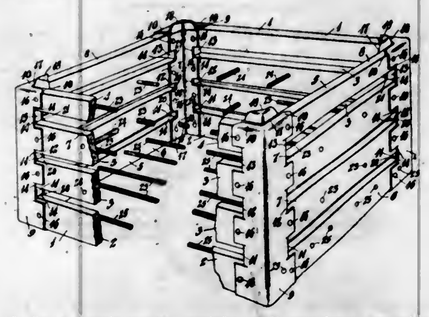
1,573,109. STABILITY AND STEERING DEVICE FOR AIRCRAFT. HERMAN J. ZOTTEL, Milwaukee, Wis. Filed July 5, 1916, Serial No. 107,579. Renewed Mar. 7, 1924. 31 Claims. (Cl. 244—29.)

22. In an aircraft a vertical rudder located near the end thereof, an air-vane connected for operating the rudder, manually operative means capable to set the air-vane into alignment with the general direction of cross currents, while the rudder may remain set in alignment with the longitudinal axis of the aircraft, for the purpose specified.



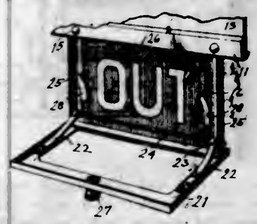
1,573,110. SHIMLESS BEARING. ARTHUR M. ALLEN, Mesa, Wash., assignor of one-fourth to Eugene Kirby and one-fourth to Logan L. Long, Connell, Wash. Filed Aug. 1, 1925. Serial No. 47,585. 3 Claims. (Cl. 308—67.)

3. In a bearing, a main bearing section including spaced arms, a cap therefor having openings receiving and fitting the arms, the arms having studs projecting through said openings, nuts upon the studs abutting the cap and means adjustably engaged with the cap and said nuts for drawing the cap forcibly against the nuts.



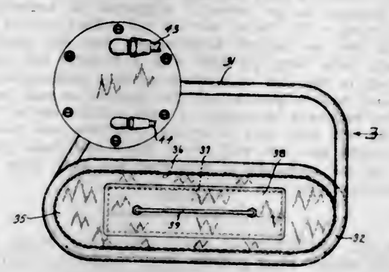
1,573,111. BOTTLE CRATE. HERBERT H. GERDING, Newport, and EDWARD A. GERDING, Fort Thomas, Ky. Filed Feb. 13, 1925. Serial No. 8,906. 14 Claims. (Cl. 217—69.)

5. In a bottle crate, upright wall members meeting to form a corner of the crate, each having an upright groove in its outer side near said corner, upright tie members in the respective grooves, corner members lapping around said corner and outside said tie members, near the tops and bottoms, respectively, of said wall members, and lapping across the edges of said wall members, and fastening means extending from the corner



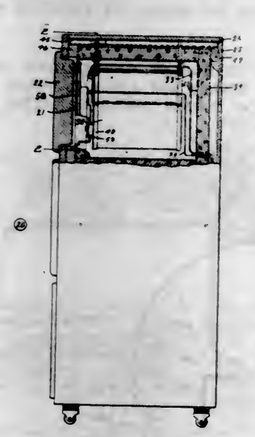
members through the respective tie members to the respective walls, each tie member having an opening elongated up and down where a certain one of said fastening means passes through said tie member.

1,573,112. BOTTLE CRATE. HERBERT H. GERDING, Newport, and EDWARD A. GERDING, Fort Thomas, Ky. Filed Mar. 30, 1925. Serial No. 19,401. 5 Claims. (Cl. 217—69.)



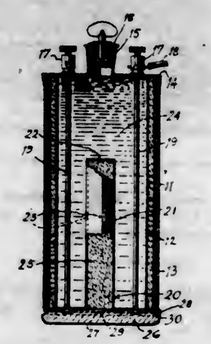
1. In a bottle crate, upright wall members assembled to form a corner of the crate, each of oblong vertical cross-section with its narrow edges horizontal and having a transverse recess in one of said horizontal edges near said corner, said recess terminating short of the opposite narrow edge, and a corner member lapping around the corner outside said wall members and having extensions in the respective recesses.

1,573,113. AUTOMOBILE LICENSE-PLATE HOLDER. GEORGE G. IRIB, Los Angeles, Calif. Filed Aug. 11, 1925. Serial No. 49,566. 4 Claims. (Cl. 40—125.)



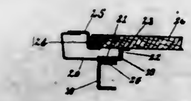
1. A license plate holder comprising a main frame portion adapted to hold a regular license plate, an auxiliary frame portion integral with the main frame portion, a detachable and collapsible auxiliary license plate inscribed with characters corresponding to the main license plate, and mounted in the auxiliary frame portion, a back plate integral with the auxiliary frame portion and bearing a signal, said auxiliary license plate covering the signal when in position in the auxiliary frame, a cover hinged to the auxiliary frame portion and adapted to retain the auxiliary license plate in its operative position, and means for maintaining the cover in its operative position.

1,573,114. REFRIGERATING APPARATUS. JESSE G. KING, Dayton, Ohio, assignor, by mesne assignments, to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 30, 1923. Serial No. 642,366. 4 Claims. (Cl. 62—95.)



4. Cooling apparatus for refrigerators comprising the combination with an evaporating tank, and a plurality of contiguous pipe coils connected therewith, said coils providing a pigeon hole; and a brine tank supported by said coils within said pigeon hole and removable therefrom.

1,573,115. REFRIGERATING APPARATUS. JESSE G. KING, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed May 30, 1923. Serial No. 642,367. 6 Claims. (Cl. 62—95.)

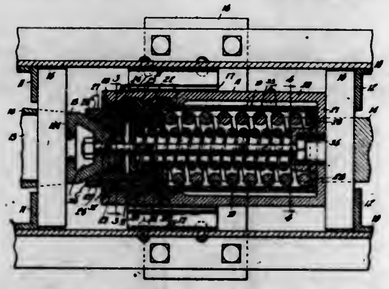


6. Refrigerating apparatus comprising the combination with a cabinet having a cooling compartment; of a cover for said compartment and having an opening therein; of a cooling unit adapted to be located within the compartment and having an opening adapted to be arranged to register with the opening in said cover; of a support for said cooling unit, said support comprising means for resiliently securing the cooling unit in position with respect to said cover.

1,573,116. THERMATOLOGIC ELECTRODE. TSURUKICHI KOBAYASHI, Los Angeles, Calif. Filed Sept. 2, 1924. Serial No. 735,423. 3 Claims. (Cl. 174—89.)

1. In a thermatologic electrode, the combination with a body and a liquid content therein, of a cap forming the upper extremity of the body, an inner container member forming the opposite end of the body and extending axially therein, an absorbent filler for the inner container member, said container member having a series of minute apertures, metal rods extending through the body and connecting the cap and inner container member, terminal binding posts on said rods and on the exterior of the cap, and a contact pad of absorbent material detachably secured to the lower extremity of the body, and arranged in contact with the absorbent filler.

1,573,117. MOTOR VEHICLE. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 18, 1920. Serial No. 431,732. 5 Claims. (Cl. 296—28.)

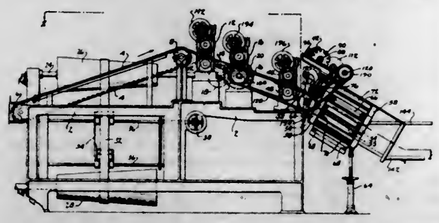


1. In a motor vehicle, the combination with the chassis frame having side members, and a body member having a body shell with an inwardly-extending flange at each side of the body at the lower side edges of said shell, said lower side edges of the body shell being longitudinally curved, of substantially straight longitudinally-extending body sills secured to said inwardly-extending flanges and spaced from the curved lower side edges of the body shell to rest longitudinally over and be secured to the side members of the chassis frame.

1,573,118. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Mar. 12, 1923. Serial No. 624,812. 12 Claims. (Cl. 213—32.)

1. In a friction shock absorbing mechanism, the combination with a follower acting shell; of a spring resistance; tapering friction elements within the shell, said elements and shell having co-acting wedge faces; a

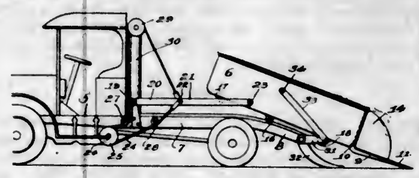
plurality of friction shoes co-acting with said elements, said shoes being movable inwardly of the shell during compression of the mechanism; and a wedge pressure



creating means co-acting with the shoes for spreading the same apart and forcing the same inwardly of the shell during a compression stroke.

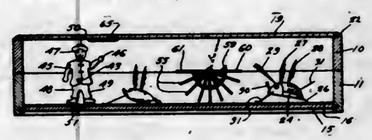
1,573,119. SHOE-LACE HOOK. HENRY E. PAMBIANCO, Stockton, Calif. Filed Feb. 14, 1925. Serial No. 9,126. 1 Claim. (Cl. 24—146.)

A shoe lace hook comprising a hook member adapted to be placed against the outer side of the shoe material, a screw adapted to be screwed into the hook member from the face thereof which rests against the shoe material, said head having opposed sockets inwardly of its outer periphery, and a key member having projections to enter the sockets.



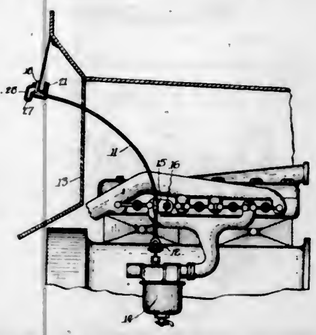
1,573,120. SHEET PRODUCING AND STACKING APPARATUS. BENJAMIN S. PENLEY, Philadelphia, Pa., assignor to Beech-Nut Packing Company, Canajoharie, N. Y., a Corporation of New York. Filed June 29, 1925. Serial No. 40,189. 20 Claims. (Cl. 226—16.)

1. In a machine for handling sheets of gum, the combination of means for delivering severed sheets of gum, comprising a forwardly and downwardly inclined delivery table, and means for receiving said severed sheets comprising a forwardly and downwardly inclined tray, the angle of inclination being such that the sheet will be substantially stopped by friction at the desired point.



20. In a machine for handling sheets the combination of means for delivering severed sheets, and means for receiving said severed sheets comprising a forwardly and downwardly inclined tray, said machine having means for delivering said sheets to said tray in a downwardly and forwardly inclined direction, and means for angularly adjusting said tray for varying conditions of the sheets delivered thereto.

1,573,121. SNOW-REMOVING APPARATUS. JUSTUS POTTER, Richmond Hill, N. Y., assignor of one-half to William T. Stevenson, Woodside, Long Island, N. Y. Filed Feb. 2, 1925. Serial No. 6,230. 10 Claims. (Cl. 37—5.)



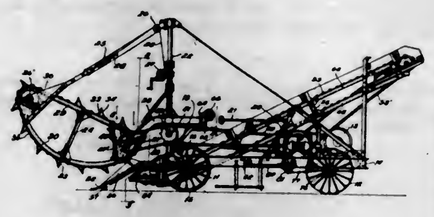
1. An apparatus of the class described comprising a motor vehicle, a body movably disposed on said vehicle and adapted to be normally supported in horizontal position upon the frame work of the vehicle and to be moved into an inclined position, the rear end portion of said body being provided with a movable end wall adapted to function as a scoop whereby predetermined material may be passed into the chamber of said body in the backward movement of said vehicle, means for moving said body into its several positions, and means for moving said end wall into a raised and closed position in the operation of returning the body from an inclined position to a horizontal position.

1,573,122. ELECTRICAL TOY. HERMAN J. RANK, St. Paul, Minn. Filed Feb. 13, 1922. Serial No. 536,085. 7 Claims. (Cl. 46—49.)

1. A toy adapted to be attracted by static charges comprising a support, an axis attached thereto, a plurality of leaves independently and hingedly connected to said axis, stop members for holding said leaves in spaced relation to one another and means adapted to receive electric charges for successively attracting said leaves.

1,573,123. AUTOMOBILE CARBURETOR ADJUSTER. GEORGE H. REPKOW and JAMES T. BUNDO, Waukegan, Ill. Filed Oct. 9, 1924. Serial No. 742,510. 3 Claims. (Cl. 137—139.)

2. A carburetor adjuster adapted to be mounted on an automobile, comprising in combination a spring rod having a contracted fork at one end designed to be expanded after mounting on the automobile for connection



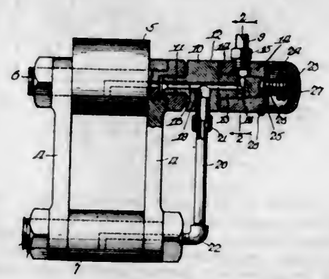
with its carburetor valve, a rod-supporting bracket on the rod designed to be mounted adjacent to the carburetor, and a clamp on the rod intended to straddle the lower edge of the automobile dashboard, the end of the rod adjacent to said clamp being bent to form an operating handle and the clamp adjacent to said handle being supplied with means to indicate the position of the handle, said bracket and clamp affording bearings for the flexed rod the turning of which by its handle is designed to adjust the carburetor valve.

1,573,124. MANUFACTURE OF SHOES. FRED RICKS, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 31, 1922. Serial No. 598,218. 11 Claims. (Cl. 12—146.)

1. That improvement in methods of making shoes which consists in assembling with an upper a heel stiffener having a molded contour confined to a limited area substantially midway between its opposite ends and corresponding substantially to the contour of the rear end face only of a form over which the upper is to be shaped, positioning the assembled upper and stiffener in such relation to the form that the molded intermediate portion of the stiffener substantially fits the rear end face of the form, and shaping over said form the upper and the remaining portions of the stiffener.

1,573,125. AUTOMATIC LOADER. HUGH P. ROBBINS, Chicago, Ill. Filed July 17, 1920. Serial No. 397,072. 7 Claims. (Cl. 198—8.)

1. In a machine for loading piled, loose material, the combination of a frame, an inclined conveyor extending lengthwise to the frame, a digger pivoted adjacent to the receiving end of the conveyor to swing horizontally and vertically, and an apron between said digger and said conveyor and pivotally mounted independently of the digger.

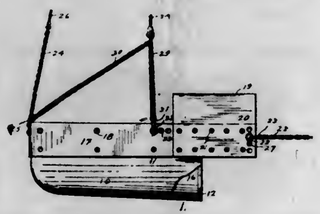


1,573,126. DIRECTORY BOARD. BRYANT L. AKINS, Brooklyn, N. Y. Filed Apr. 11, 1925. Serial No. 22,255. 8 Claims. (Cl. 40—63.)

4. A directory board comprising a frame, an arcuate shaped name strip holding element therein, a door removably associated with said frame and normally urged outward by said element, a lip on the top of said door adapted to engage the frame, and a locking member in

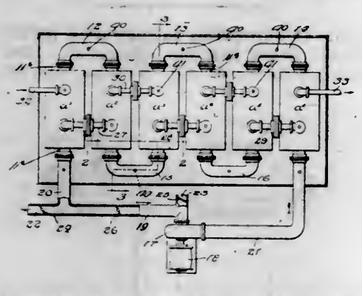
the bottom of said door adapted to cooperate with the lip for preventing premature removal of the door from said frame.

1,573,127. LUBRICATING SYSTEM FOR MOTOR VEHICLES. FRANK L. BAKER, Chicago, Ill. Filed Mar. 5, 1923. Serial No. 622,787. 5 Claims. (Cl. 64—27.)



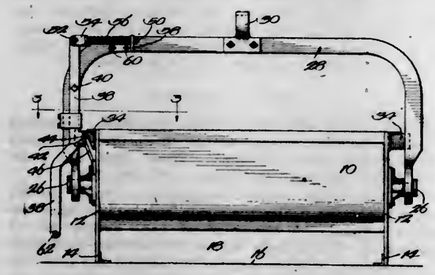
1. In a lubricating device, the combination of a shackle bolt, a member at one end of and connected to said bolt having a conoidal periphery, a sleeve rotatable relatively to said member and having a correspondingly conoidal socket fitting around said periphery, a supply pipe connected to deliver oil into the sleeve, an oil duct leading from the sleeve through said member and bolt, and spring means to hold the conoidal peripheries of the member and sleeve in fluid-tight relation to prevent escape of oil between said member and said sleeve.

1,573,128. BUCKET FOR EXCAVATORS. WALTER BAKER, Fairfield, Iowa, assignor to Speeder Machinery Corporation, Fairfield, Iowa. Filed Mar. 24, 1924. Serial No. 701,465. 2 Claims. (Cl. 37—135.)



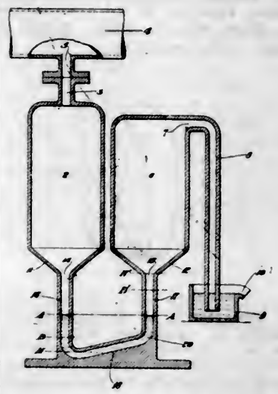
1. An excavator bucket comprising a body portion having a bottom, a back and side members, a band extending around the top edge of said bucket having forwardly extending ends, means for securing said band to said bucket, an arch member for supporting said forwardly extending portions against lateral movement, the forward ends of said forwardly extending portions of said band being provided with a series of openings arranged in a vertical line, the central portion of the side of said band being provided with a series of openings

arranged in a substantially horizontal plane, a clevis detachably secured with each set of the first said openings, a clevis for each set of the second said openings, a chain for the first said clevis, and a chain for the sec-



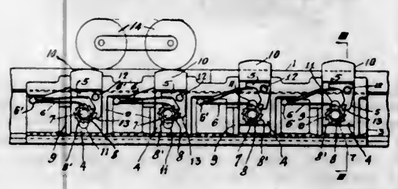
ond said clevis, a third chain in connection with the second said chain mounted on the rear end of said bucket, and a tilting chain secured to the back edge of said bucket.

1,573,129. PROCESS AND APPARATUS FOR FRACTIONAL CONDENSATION. JOHN E. BELL, Brooklyn, N. Y., assignor to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Mar. 23, 1922. Serial No. 545,951. 16 Claims. (Cl. 196—94.)



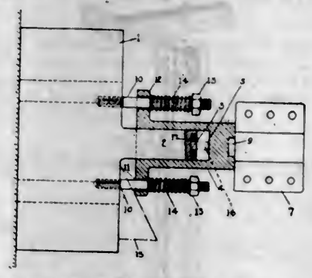
1. A process of the class described which comprises passing the vapors to be condensed into heat exchange relationship with a cooling medium moving through a closed circuit, and regulating the temperature of the medium by replacing a portion thereof with fresh cooling medium.

1,573,130. SELF-RIGHTING BUCKET. HOMER W. BENTON, Harvey, Ill., assignor to Whiting Corporation, Harvey, Ill., a Corporation of Illinois. Filed Oct. 6, 1924. Serial No. 741,843. 2 Claims. (Cl. 294—73.)



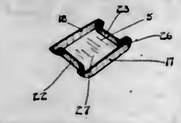
1. In mechanism of the class described, a bucket carrying an end trunnion, a bail above the bucket extending down and pivoting on the trunnion, a stop on the bucket engaging one side of the bail, curved cam track on the bucket on the opposite side of the bail, a latch lever pivoted to the bail, having a dog traveling over the cam track and enterable between the stop and cam track and a compression spring operatively connected between the lever and bail urging the lever to said locked position for said dog.

1,573,131. STEAM TRAP. JAMES L. BERNARD, Beaver, Pa. Filed May 1, 1923. Serial No. 635,951. 3 Claims. (Cl. 137—103.)



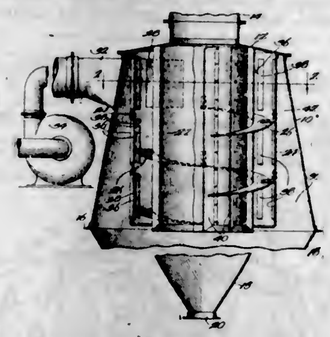
1. A trap for removing the liquid condensates from containers containing gaseous and vaporous fluids, comprising a pair of vessels having a reduced communicating passage at their lower ends, one of said vessels being of a greater height than the other and being provided with an inlet opening at its upper end adapted to be in communication with the container from which the condensate is to be removed, the other of said vessels being provided with an outlet opening in the communicating passage between said vessels, said seal being of greater specific gravity than the condensates, and normally closing said communicating passage.

1,573,132. AUTOMATIC RAIL-JOINT FASTENING. MICHAEL BETKE, Denver, Colo. Filed Jan. 12, 1925. Serial No. 2,022. 5 Claims. (Cl. 238—262.)



1. In an automatic rail joint fastening, the combination of ratcheted nut members, spaced operating plates severally located adjacent thereto and adapted to project at times above normal positions, and means carried by the several operating plates adapted to engage and rotate said nut members.

1,573,133. PROCESS AND APPARATUS FOR MEASURING KINETIC ENERGY. ALBIN H. BEYER, New York, N. Y. Filed Mar. 8, 1910, Serial No. 281,864. Renewed Apr. 10, 1924. 6 Claims. (Cl. 265—1.)

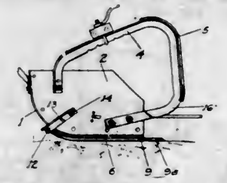


1. A measuring device comprising, in combination, a pair of jaws, one having approaching and receding movements relative to the other, a deformable gauge between said jaws, and means adapted to hold an energy producing device in fixed relation to a movable jaw.

1,573,134. WATCHCASE AND PROCESS FOR MAKING SAME. CARL W. BIESER, Cincinnati, Ohio, assignor to The Gruen National Watch Case Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 12, 1923. Serial No. 631,737. 2 Claims. (Cl. 58—88.)

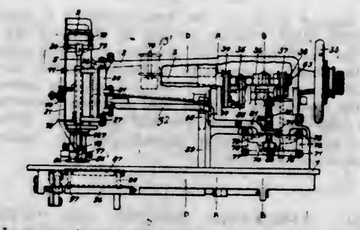
1. As a new article of manufacture a sheet metal watch case stamping comprising a base and peripheral flanges extending from the base and integral lugs formed at the periphery, connecting the flanges and lying wholly outwardly beyond one pair of opposite flanges.

1,573,135. DUST COLLECTOR. RALPH H. BOURNE and AUBREY J. GRINDLE, Chicago, Ill., assignors to Grindle Fuel Equipment Company, Harvey, Ill., a Corporation of Illinois. Filed Nov. 22, 1924. Serial No. 751,482. 8 Claims. (Cl. 183—83.)



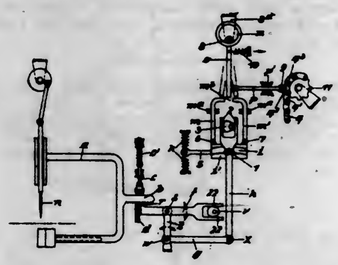
1. In mechanism of the class described, in combination, an outer case, a pair of concentric spaced cylinders inside the outer case connected together by a spiral partition forming a spiral passage extending from top to bottom of said cylinders, there being in the outer of said concentric cylinders a multiplicity of vertically disposed elongated perforations opening into said spiral passage, means introducing dust laden air from outside the device to the upper end of said spiral passage in a direction tangential to the inner surface of the larger of said two concentric cylinders, means conducting cleaned air from the bottom of said spiral passage out of the top of the machine and means conducting dirt from the bottom of machine.

1,573,136. PULLEY-HANGER BRACKET FOR DRAW-CURTAIN FIXTURES. JAMES H. BOYE, Chicago, Ill., assignor to James H. Boye Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 27, 1925. Serial No. 71,522. 4 Claims. (Cl. 156—20.)



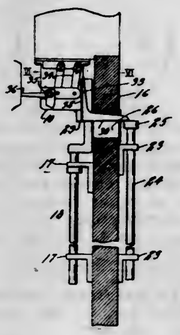
1. A pulley hanger bracket for draw curtain fixtures, comprising a metal strip formed at its upper end with a hook to engage over the upper edge of a curtain rod and at its lower end with a pulley bearing and pulley, and a spring attached to said strip with a free portion thereof projecting rearwardly of the latter and adapted to snap beneath and behind the lower edge of the rod.

1,573,137. TULE AND SOD SCRAPER. EMMITT E. BRANNON, Turlock, Calif., assignor of one-half to Louis H. Rickenbacker, Turlock, Calif. Filed Feb. 14, 1925. Serial No. 9,319. 8 Claims. (Cl. 37—14.)



1. A scraping attachment for a scraper of the type having a bowl which includes a bottom plate, and a back plate, comprising a toothed plate mounted in connection with and projecting forwardly from said bottom plate, and braces extending from said toothed plate ahead of the bottom plate to the back plate at an angle to the other plates.

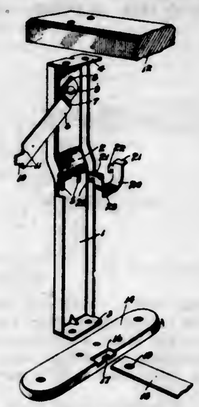
1,573,138. SEWING MACHINE. WILHELM BRASE, Berlin, Germany. Filed Oct. 12, 1923. Serial No. 668,250. 15 Claims. (Cl. 112—98.)



1. In a sewing-machine, the combination of a needle mechanism capable of moving across the sewing direction, a fabric feeding mechanism reciprocating to and fro in sewing direction, and a jacquard device indirectly controlling said needle mechanism and fabric feeding mechanism, as and for the purpose specified.

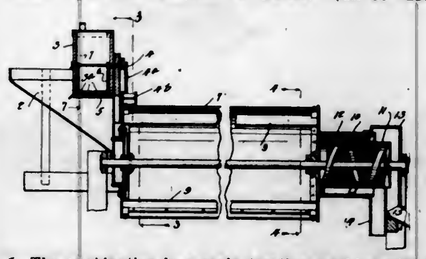
1,573,139. SEWING MACHINE. WILHELM BRAAS, Berlin, Germany. Original application filed Oct. 12, 1923, Serial No. 668,250. Divided and this application filed Apr. 21, 1925. Serial No. 24,767. 5 Claims. (Cl. 112—98.)

1. In a sewing-machine, a needle guide carrying frame formed with a rack, a stationary knife edge on which said rack is displaceably supported, a constantly swinging dog capable of alternately engaging and disengaging said rack, and means for displacing said frame, including a constantly swinging lever operatively connected to said dog and an adjustable track in which said lever is positively guided and a jacquard mechanism controlling the adjustment of said track, so as to vary the movement of said lever and dog and consequently the stitches.



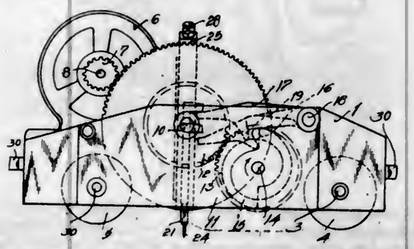
1,573,140. LANDING DOORLOCK. JOHN A. BAUBAKER, Toledo, Ohio, assignor to The Haughton Elevator & Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 18, 1924. Serial No. 744,338. 12 Claims. (Cl. 187—31.)

5. A door, a jamb for the door providing a catch, a reciprocable latch member carried by the door for engaging the catch for holding the door in closed position as to the jamb, a manually shiftable member carried by the door away from said latch member, a normally ineffective connection between said members including a member rockably mounted on said manually shiftable member, and an abutment providing device rendering said connection effective.



1,573,141. PAPER-ROLL HOLDER AND CUTTER. ELVAH O. BULMAN, Grand Rapids, Mich. Filed Apr. 27, 1923. Serial No. 634,985. 5 Claims. (Cl. 211—32.)

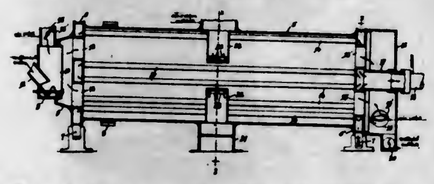
1. In a device of the class described a pair of spaced, vertical legs consisting of channel bars and provided in the channels between the walls thereof with spaced slots, socket members arranged in the said channels and each formed of a single piece of metal bent into substantially semicircular form and provided at opposite



sides with lugs secured in the said slots and a rod disposed between the legs and seated in the socket members.

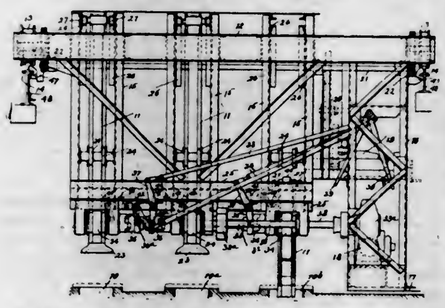
1,573,142. MACHINE FOR TREATING SEED GRAIN. CLAUDE C. CALKINS, Spokane, Wash. Filed June 28, 1923. Serial No. 648,330. 2 Claims. (Cl. 83—28.)

1. The combination in a grain treating machine with a rotary drum and a main hopper, of a powder hopper disposed within the main hopper and having means for adjusting the area of an opening in the bottom of said powder hopper, an agitator in the powder hopper, and means carried by the drum for operating the agitator.



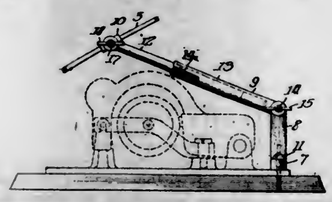
1,573,143. PORTABLE PUNCHING MACHINE. DANIEL J. CHICKERING, Spokane, Wash., assignor of fifty-one per cent to Eggers Pole & Supply Company, Parkwater, Wash. Filed Apr. 2, 1925. Serial No. 20,146. 5 Claims. (Cl. 144—2.)

1. The combination in a portable punching machine with a carriage, of a punch frame supported in the carriage and a series of reciprocable punches in said frame,



an operating shaft and a motor on the frame, power transmission mechanism between said motor and shaft for lifting said punches, and means for automatically operating said punches on their downward working stroke.

1,573,144. METHOD AND APPARATUS FOR DRYING. JULIUS CREDO, Louisville, Ky., assignor to Louisville Drying Machinery Co. Inc., Louisville, Ky., a Corporation of Kentucky. Filed May 24, 1924. Serial No. 715,503. 15 Claims. (Cl. 34—6.)

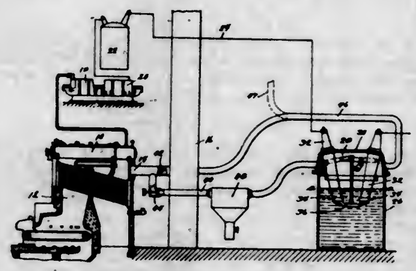


5. In a method of drying, steps which consist in causing a progression of the material to be dried, subjecting the material to regulate currents of air flowing in opposite directions and heating the material and air currents.

1,573,145. COKE-RELEASING DEVICE FOR VERTICAL RETORTS. PAUL H. DOUGLAS and IVOR D. THOMAS, Cleveland Heights, Ohio, assignors to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 10, 1923. Serial No. 679,585. 13 Claims. (Cl. 214—18.)

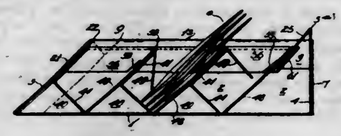
1. The combination with a vertical retort, of a coke loosener comprising a vertically movable member adapted to be extended into the top of the retort, and power means for lowering and forcing the member downward to disengage the coke from the side walls of the retort.

1,573,146. SHIELD. GERTRUDE DEEPSE, Neenah, Wis., assignor of one-half to Milan G. Hoyman, Neenah, Wis. Filed Feb. 9, 1924. Serial No. 691,859. 4 Claims. (Cl. 82—34.)



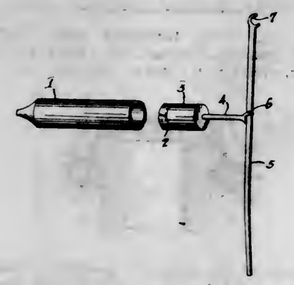
1. In a protecting shield, a guard plate of substantially transparent material, and means for supporting said plate comprising upright posts, telescoping arms mounted on said posts and angularly adjustable relative thereto, and members on the outer extremities of said arms for engaging opposite edges of said plate.

1,573,147. CAP FOR BOTTLES AND THE LIKE. JOHN W. DEBWITZ, Chicago, Ill. Filed Dec. 3, 1923. Serial No. 678,167. 6 Claims. (Cl. 215—46.)



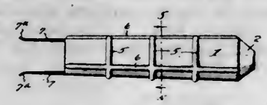
1. A device of the character described, comprising a cap member provided with a skirt having flexible portions adapted to form gripping relation with the neck of the bottle, and a controlling member rotatable on the skirt of the cap member, the controlling member and the flexible portions of the skirt being provided with coacting surfaces whereby said flexible portions are forced into bottle-neck gripping position when said controlling member is rotated in one direction and said portions forced out of gripping position when the controlling member is rotated in the opposite direction.

1,573,148. ELECTRICAL GENERATING AND DISTRIBUTION SYSTEM AND APPARATUS THEREFOR. WILLIAM S. EDSALL, Boston, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 28, 1924. Serial No. 752,731. 18 Claims. (Cl. 200—150.)



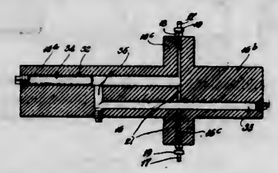
12. The combination of a casing, an electrical apparatus contained in said casing, a fuel-burning furnace, and means to conduct the products of combustion from said furnace into said casing.

1,573,149. DISPLAY BOX. ALBERT W. ENGEL, Chicago, Ill. Filed Oct. 9, 1922. Serial No. 593,273. 12 Claims. (Cl. 229—28.)



1. A display box of folded pasteboard or the like having a rearwardly and upwardly sloping front wall and a horizontal bottom with partitions forming pockets having inclined back walls, each extending downwardly to the bottom of the box and substantially parallel to said sloping front thereof.

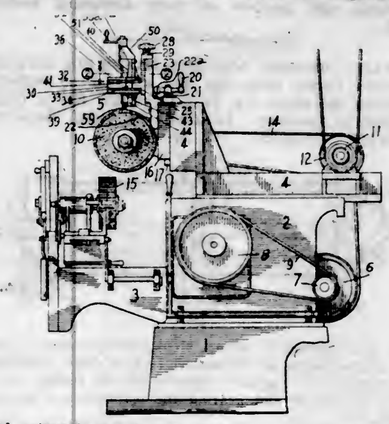
1,573,150. GREASE GUN. HARRY FAY, Millersburg, Ky. Filed June 25, 1925. Serial No. 39,410. 1 Claim. (Cl. 221—47.3.)



An open ended grease container having one end formed for insertion into a receptacle to be filled and the other end to receive a piston to expel the grease in the gun, the piston being readily removable from and insertable in the grease container, a rod connected to the piston, and a long handled lever pivoted to the rod and having a claw on its end to form with some fixed support a fulcrum for the lever.

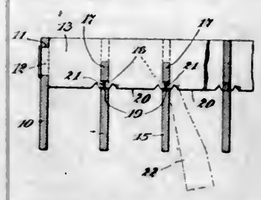
1,573,151. SOCKET FOR EXPANSION-BOLT SHIELDS. ALVIN S. FISHEL, Cleveland, Ohio. Filed Mar. 17, 1924. Serial No. 699,738. 17 Claims. (Cl. 72—105.)

1. A socket for the purpose set forth comprising a hollow body having one or more prongs projecting from one end thereof, the opposite end thereof having a head of smaller diameter than said body.



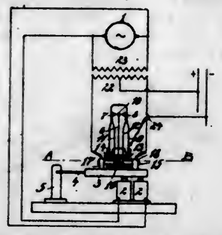
1,573,152. TIME SWITCH FOR ALARM SYSTEMS. PATRICK A. FRIEL, Richmond Hill, N. Y. Filed Mar. 20, 1924. Serial No. 700,535. 4 Claims. (Cl. 200—33.)

1. In switch mechanism, the combination of a movable fluid-containing member, electrical contact means borne by said fluid-containing member and spaced from each other along a passage way therein, another passage way spaced from the first mentioned passage way, a plurality of spaced passage ways intersecting the first and the second mentioned passage ways, whereof one extends beyond the first mentioned passage way, and the other in substantially opposite direction beyond the second mentioned passage way.



1,573,153. GEAR GRINDER. ORLANDO GARRISON, Dayton, Ohio. Filed Sept. 4, 1923. Serial No. 660,804. 21 Claims. (Cl. 125—11.)

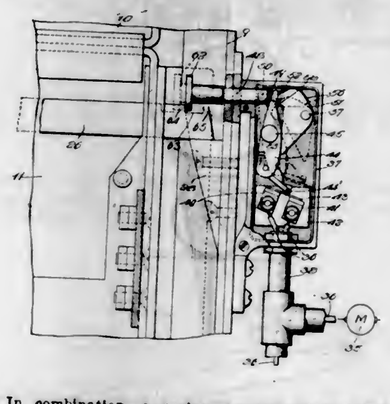
20. A grinder wheel dresser including in combination with a ram having a grinder wheel mounted thereon, a member supported on the ram and adapted to be rotated at right angles to the plane of rotation of the grinder wheel, a member mounted and adjustable angularly on



said rotatable member, and a dresser tool operable in said angular member into engagement with the grinder wheel.

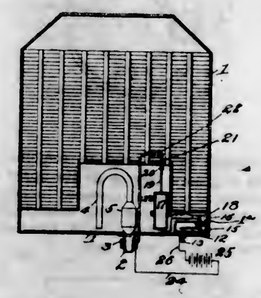
1,573,154. GRATING. IRVING L. GELDER, Brooklyn, N. Y. Filed Oct. 24, 1925. Serial No. 64,516. 3 Claims. (Cl. 189—82.)

1. In an interlocking grating, a supporting member provided with a slot and an aperture, a cross member also provided with a slot and joined at its slotted portion with the slotted portion of said supporting member, the edges of the slots of said cross member engaging the aperture in said supporting member.



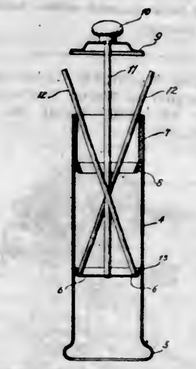
1,573,155. RECTIFIER WITH A CHANGE-OVER SWITCH. HANS GERDIEN, Berlin-Grunewald, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a German Corporation. Filed Apr. 4, 1922. Serial No. 549,630. 5 Claims. (Cl. 175—365.)

1. A rectifier for alternating current comprising an electromagnet structure adapted to be energized by the alternating current to be rectified, a base carrying said electromagnet structure, a permanently polarized magnet armature for said structure yieldingly supported on said



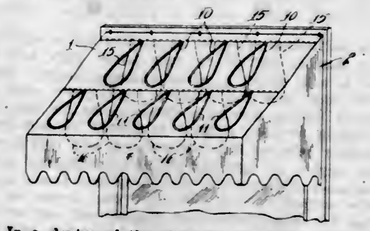
base and adapted to oscillate at a periodicity determined by the frequency of said alternating current, a pair of rectifier contact elements rigidly fixed to said armature and a flexible contact element attached to said armature and disposed between said rigid contacts to alternately cooperate with them when the armature oscillates.

1,573,156. INTERLOCK FOR ELEVATOR DOORS AND THE LIKE. WAINWRIGHT B. GERVAIS and JOHN C. WILMOT, Chicago, Ill., assignors to Variety Fire Door Company, Chicago, Ill., a Corporation of Illinois. Filed June 7, 1924. Serial No. 718,448. 6 Claims. (Cl. 187—31.)



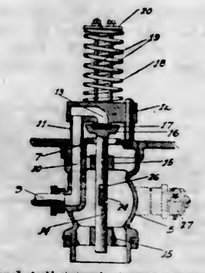
5. In combination, a casing, an arm pivoted within said casing, a pair of contacts within said casing, a bridging contact for said pair of contacts connected to one end of said arm, means adjacent each end of said arm for normally urging said bridging contact away from said pair of contacts, and manually operative means mechanically connected to one end of said arm for positively moving said bridging contact into or out of engagement with said pair of contacts.

1,573,157. SELF-EMPTYING MOTOR-VEHICLE RADIATOR. VICTOR P. GIDDINGS, Jr., Beaumont, Tex. Filed Oct. 1, 1925. Serial No. 59,840. 6 Claims. (Cl. 137—34.3.)



4. In an apparatus of the class described the combination of a radiator provided with a valve controlled discharge, electrical means for operating said valve of said discharge, means for heating said discharge, and a thermostatic controlled means for operating said electrical means and said heating means of the discharge.

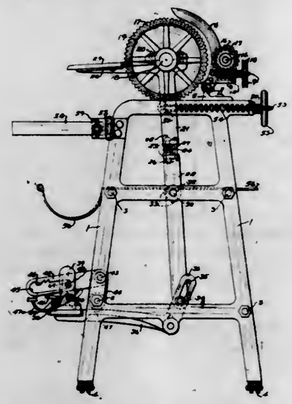
1,573,158. STRAW DISPENSER. RAYMOND B. GILCHRIST, Newark, N. J., assignor to The Gilchrist Company, Newark, N. J., a Corporation of New Jersey. Filed Feb. 2, 1920. Serial No. 355,844. 8 Claims. (Cl. 211—8.)



1. In a dispenser, the combination of a container comprising a lower metallic section and an upper transparent section, a cover, a handle, and means operable by the handle for lifting the upper section.

1,573,159. VENTILATED SUNSHADE. LOUIS N. GROSS, Cleveland Heights, Ohio. Filed May 7, 1923. Serial No. 637,153. 10 Claims. (Cl. 156—15.)

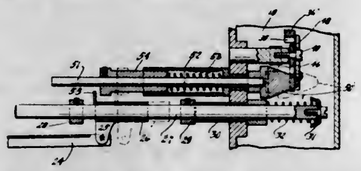
1. In a device of the class described, the combination of a fabric shade having a series of separated openings therein, and a series of fabric flaps securely affixed to the shade above the respective openings and depending behind them, said flaps being independently movable and being spaced apart sufficiently to permit the passage of air between adjacent flaps.



1,573,160. SEAT-CONTROLLED TOILET FLUSH AND INTAKE VALVE. CHARLES H. GUNN, Oakland, Calif. Filed June 16, 1924. Serial No. 720,211. 5 Claims. (Cl. 4—21.)

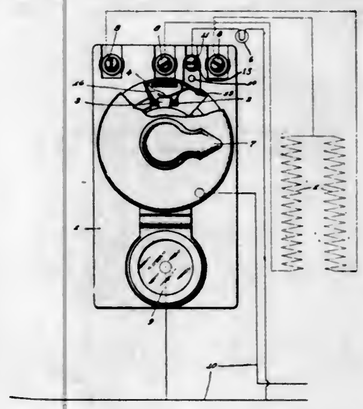
1. A combined toilet-tank intake and flush valve comprising a casing, an orificed wall across the upper end thereof, said upper end being adapted for direct connec-

tion to a tank whereby the orifice will open into the latter, a discharge outlet at the lower end of the casing, intake passage means extending inside the casing from one side thereof below the tank to a point above the end wall and facing the orifice therein, and a closure member interposed between said orifice and the adjacent end of the intake passage.



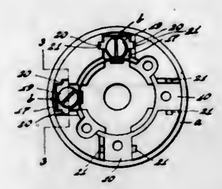
1,573,161. IRONING MACHINE. AXEL R. GUSTAFSON, Chicago, Ill., assignor to Walter J. Conlon, Oak Park, Ill. Filed Jan. 17, 1919. Serial No. 271,634. 10 Claims. (Cl. 68—9.)

5. In an ironing machine, in combination, a stationary ironing member carried by said frame, rock bars fulcrumed to said frame, a movable ironing member carried by said rock bars for yielding engagement with said stationary ironing member, driving means for said movable ironing member, rockers fulcrumed to said frame, connections between said rockers and said rock bars, a treadle carried by said rockers, a longitudinally slotted and serrated link pivotally carried by said frame, spaced castings carried by said treadle, a dog carried by said castings for engagement with the slotted and serrated portions of said link, a foot pedal fulcrumed in said castings for operative engagement with said link, a spring yieldingly retaining said foot pedal inoperative, and a foot rest carried by said castings.



9. In an ironing machine, the combination of a frame, an ironing shoe thereon, a pair of levers pivoted intermediate their lengths at opposite ends of said frame, a presser roll journaled between the corresponding ends of said levers, a rock shaft having crank arms to directly engage the other ends of the respective levers, means for rotating said rock shaft, and means for rotating said presser roll.

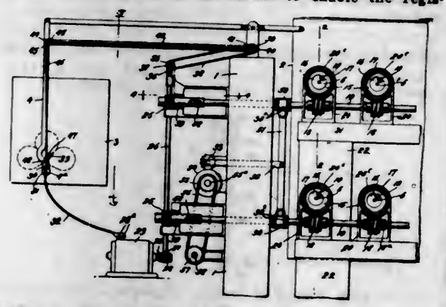
1,573,162. LAUNDRY-COUNTING DEVICE. ANGUS F. HANNEY, Chicago, Ill., assignor to Gammell-Hanney Manufacturing Co., Chicago, Ill. Filed May 5, 1924. Serial No. 711,056. 6 Claims. (Cl. 235—98.)



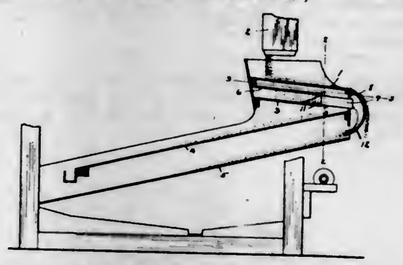
1. In combination with a wheel and a register controlled thereby, of a plunger and means adapted to actuate said wheel in one direction; a second plunger and means adapted to cause the operation of said wheel reversely; a guide; means operative by articles moving on said guide for actuating the first plunger; and means operative by articles moving reversely on said guide for actuating said second plunger, substantially as described.

1,573,163. ELECTRIC SWITCH. GEORGE HEGEMAN HART, West Hartford, Conn. Filed Mar. 8, 1923. Serial No. 623,630. 2 Claims. (Cl. 200—6.)

1. In an electrical switch, a contact member having a pair of opposed contact faces, a switch blade arranged to be engaged between said faces, and a contact disposed between the side edges of said faces and insulated therefrom and arranged to contact with said blade when the latter is engaged by said pair of faces.



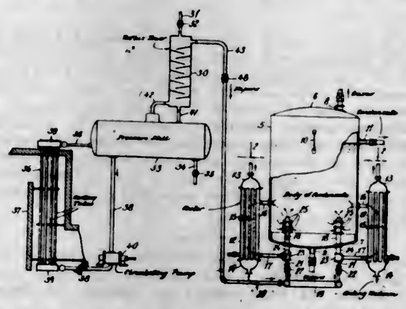
1,573,164. ELECTRIC SWITCH. GEORGE HEGEMAN HART, West Hartford, Conn. Filed Jan. 17, 1925. Serial No. 3,198. 2 Claims. (Cl. 200—166.)



1. In an electric switch and in combination, a base provided with a groove having at its upper end and at each side a recess, a terminal mounted in said groove and having on opposite sides laterally extending projections fitting in said recesses, and means securing the lower end of said terminal to said base.

1,573,165. EMBROIDERY MACHINE. JACOB HOHL, Weehawken, and ERNEST G. KELLER, New Durham, N. J. Filed Nov. 10, 1923. Serial No. 674,050. 15 Claims. (Cl. 112—83.)

1. In an embroidery machine having stitching mechanism including horizontally-reciprocated needles, guiding elements for ornamental material to be sewed by the needles to the fabric, power-actuated means for moving the said guiding elements in arcuate paths about the needles in the plane of the fabric to enable the registration of such guiding elements with the design, and means for manually controlling the extent and direction of said power-actuated movement.

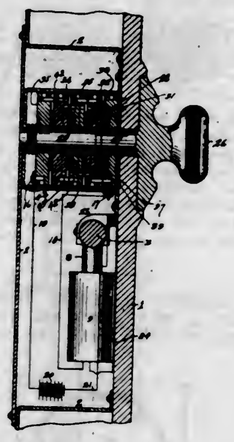


1,573,166. GRAIN SEPARATOR. THOMAS C. HUTCHINSON, Duluth, Minn. Filed July 17, 1925. Serial No. 44,204. 2 Claims. (Cl. 209—315.)

2. The combination with a separator of the type described including a scalping sieve and successively therebeneath a blank, a wheat sieve, and a fine seed sieve, of an auxiliary sieve intermediate of the scalping sieve and the blank for performing an initial separation of the wheat from the oats.

1,573,167. CONDENSATION OF HYDROCARBON VAPORS. EDWARD W. ISOM, Winnetka, Ill., and JOHN E. BELL, Brooklyn, N. Y., assignors to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Aug. 13, 1923. Serial No. 657,177. 7 Claims. (Cl. 196—93.)

2. The improvement in the condensation of hydrocarbon vapors from pressure stills which comprises circulating a stream of condensate of the vapors through a cooler from and to a relatively large body of the condensate and cooling the circulating condensate and injecting the vapors from the pressure still into this stream between the cooler and the large body of condensate.



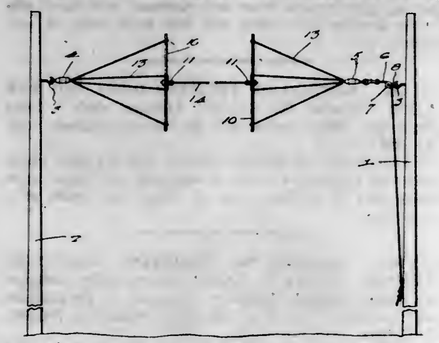
1,573,168. METHOD OF STRIPING DUCO AND THE LIKE. SAMUEL E. KAYLER, Alliance, Ohio. Filed Sept. 26, 1925. Serial No. 58,751. 3 Claims. (Cl. 41—26.)

1. The method of striping "duco" and the like which consists in applying a stripe of one color of "duco" upon a body coat of another color of "duco" by means of a ruling pen.

1,573,169. PROCESS OF PURIFYING GAS-HOUSE LIQUOR. EDWARD W. KEITH, Denver, Colo., assignor to General Metals Recovery Company, a Corporation of Colorado. Filed Sept. 30, 1924. Serial No. 740,881. 2 Claims. (Cl. 23—135.)

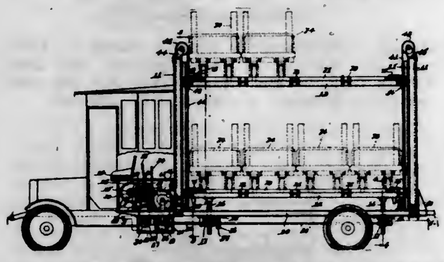
1. The process of purifying gas house liquor for hydrometallurgical use by charging this solvent menstruum with zinc oxide in amount sufficient to react on the ammonium sulphide contained, freeing the combined ammonia with the formation of zinc sulphide, separating the purified gas house liquor from the zinc sulphide so formed and recovering the liquid in its resulting condition substantially as described.

1,573,170. COMBINATION LOCK. CLAUDE C. KNOTTINGHAM, WILLIAM S. KNOTTINGHAM, and JOHN FOSTER OTIS, Roxboro, Wash. Filed Nov. 26, 1923. Serial No. 676,941. 5 Claims. (Cl. 200—43.)



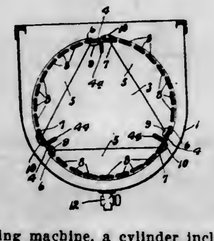
1. In a circuit making device a rotatable disk having spaced contact points located transversely of the disk and an annular peripheral groove exposing said points, and an electrical connector spanning the space between said points and located in said groove.

1,573,171. RADIOANTENNA. FRANK ROBERT KRONFOTH, Amsterdam, N. Y. Filed Feb. 12, 1925. Serial No. 8,767. 1 Claim. (Cl. 250—33.)



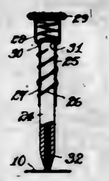
In an antenna structure, a pair of discs, each disc provided with a central opening and a plurality of aper-

tures adjacent its periphery, eye bolts in the central openings, a wire having its ends attached to the eye



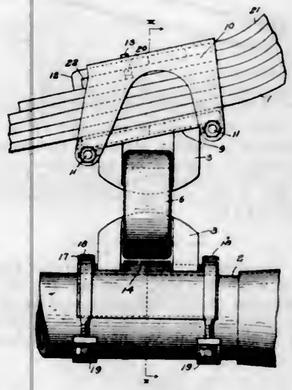
bolts, a pair of insulators, guy wires passing through the apertures of the discs and engaged with the insulators.

1,573,172. ADJUSTABLE PLURAL-DECK TRUCK. WILLIAM J. LAFFEY, Chicago, Ill. Filed July 22, 1925. Serial No. 45,179. 7 Claims. (Cl. 214—38.)



1. A motor truck comprising superposed decks adapted to carry freight-house trucks, means for adjusting the upper deck level with the freight-house platform to receive freight-house trucks on said deck, said means being arranged for elevating said deck with said trucks thereon sufficiently to receive freight-house trucks on the succeeding deck, and lever operated means for selectively moving either of said decks by the power of the truck motor.

1,573,173. WASHING MACHINE. HERMAN W. LANDWEBR, Holland, Mich. Filed Aug. 10, 1925. Serial No. 49,190. 6 Claims. (Cl. 68—18.)

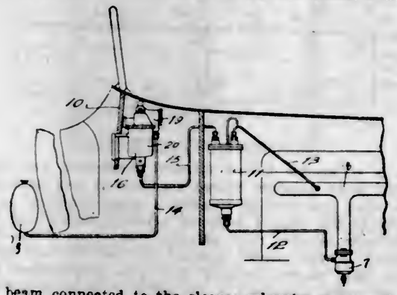


1. In a washing machine, a cylinder including an open frame having two spaced apart end members of triangular shape, bars connecting the end members at the apices of the triangles, and cylinder segments each comprising two ends each having a straight edge and an edge curved in the arc of a circle and bars connecting the ends, said cylinder segments being located with said straight edges of their ends against the edges of the end members of the frame, and means for detachably connecting said cylinder segments to said frame, substantially as described.

1,573,174. RECORD-FORMING DEVICE. WILLIAM W. LASKER, Jr., Brooklyn, N. Y. Filed Mar. 4, 1924. Serial No. 696,821. 2 Claims. (Cl. 91—67.4.)

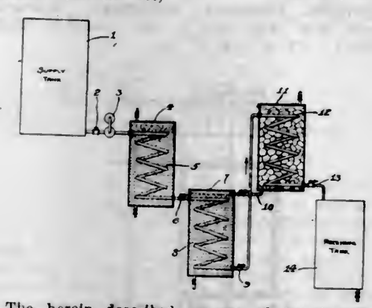
1. In data compiling means employing an insulated surface member and an electric circuit with terminals and a work member controlled by the circuit, means for applying electric conducting material to said surface in spots or portions, comprising a carrier, a holder for conducting material mounted on the carrier, and means connecting the carrier and holder whereby on the carrier being advanced to engage the holder with the said surface and the carrier thereupon being further advanced, the holder will rotate in the carrier and turn on said surface to effect a deposit or coating of the conducting material on the surface.

1,573,175. SHOCK ABSORBER. SENECA G. LEWIS, Greensburg, and GEORGE W. DAUM, Jeannette, Pa. Filed Apr. 11, 1924. Serial No. 705,774. 2 Claims. (Cl. 267—30.)



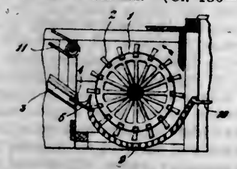
1. A shock absorber for a vehicle including a block of elastic material, such block consisting of a basal plate and an arch springing therefrom, the basal plate being encased in metal and the metal case being provided externally and at opposite ends with bolt channels, a saddle-like member adapted to be applied to a vehicle spring with its ends protruding on either side beyond the body of the spring, and bolts adapted to extend between and to engage the ends of the saddle-like member, and when the parts are assembled to extend within the channels of said case.

1,573,176. REGISTERING METER. WILLIAM A. LIEBING and EDWIN H. LOUGHRIDGE, Cleveland, Ohio. Filed Feb. 24, 1922. Serial No. 538,924. 10 Claims. (Cl. 73—28.)



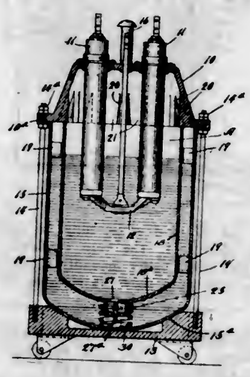
1. In a liquid meter, the combination with a pair of measuring compartments, each having aligned inlet and outlet ports therefor, a valve stem extending between

the ports in each compartment, valves mounted on the stems and so positioned that one inlet valve is open when the corresponding outlet valve is closed, a sleeve slidable on each of said stems, a float loosely embracing the sleeves, said floats being adapted to shift the sleeves relatively to the stems, for actuating said stems, a walk-



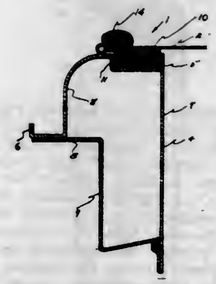
ing beam connected to the sleeves whereby movement of one stem in one direction effects movement of the other in the opposite direction, and a member disposed intermediate the stems and operatively connected therewith for holding the valve stems in relative position, so that an inlet valve in one compartment and the outlet valve in the other compartment are always open.

1,573,177. PROCESS FOR THE STERILIZATION AND CLARIFICATION OF LIQUIDS. WILLIAM MCCOMB, New York, N. Y., and WILBERT A. HEYMAN, Habana, Cuba. Filed Apr. 6, 1922. Serial No. 550,012. 3 Claims. (Cl. 99—15.)



3. The herein described process of treating liquids, which consists in forcing the liquid through a zone heated to at least 145° F., and under a pressure of at least 200 pounds to the square inch, and then admitting the liquid into a zone heated to a temperature of not over 70° F., and simultaneously reducing the pressure thereon to a pressure not exceeding 25 pounds, and then finally introducing said liquid into a zone having a temperature not exceeding 36° F., and reducing the pressure upon said liquid to not more than atmospheric pressure.

1,573,178. THRASHING MACHINE. WILLIAM C. MCCULLOUGH, Fernwood, Ohio. Filed Jan. 21, 1924. Serial No. 687,492. 3 Claims. (Cl. 130—27.)

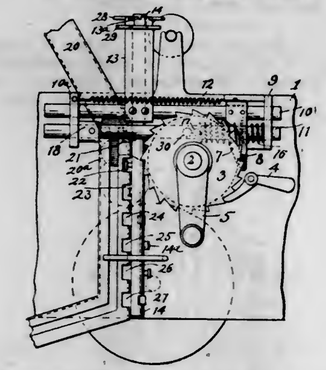


1. A thrashing machine including a rotary spiked cylinder, a plate at one side of the cylinder, having a single row of teeth substantially tangential to the periphery of the cylinder, and arranged to cooperate with the spikes upon the cylinder, and a curved toothless grate adjacent to the toothed plate and extending substantially half way around the cylinder.

1,573,179. ELECTRIC SWITCH. JOSEPH N. MAHONEY, Brooklyn, N. Y., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed July 28, 1921. Serial No. 488,150. 32 Claims. (Cl. 200—150.)

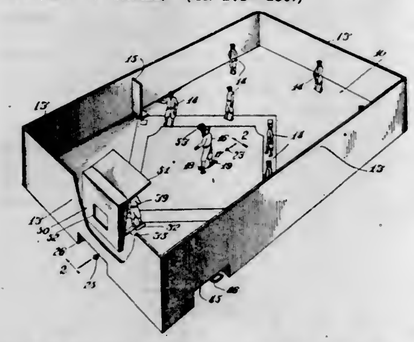
32. An electric switch including separable switch-members and two fluid-containing receptacles, one of which surrounds said switch-members and is movable with respect to the other receptacle and is constructed to move and displace fluid in said other receptacle upon circuit interruption.

1,573,180. VEHICLE-TOP CONSTRUCTION. WILLIAM MARSHALL, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 25, 1924. Serial No. 734,128. 8 Claims. (Cl. 296—137.)



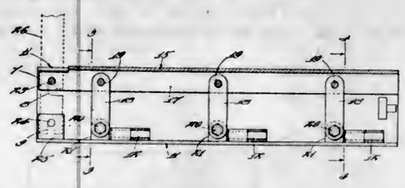
1. In a vehicle top, the combination with a channel-shaped frame member, of a deck above the frame member, and a rail bridging the channel of the frame member and supporting the deck, said rail having a channel-shaped frame member, of a deck above the frame member, receiving and conveying away the water draining from said deck.

1,573,181. COIN-CONTROL MECHANISM. GEORGE H. MATCHETT, Cleveland, Ohio. Filed Sept. 26, 1919. Serial No. 326,640. 5 Claims. (Cl. 194—69.)



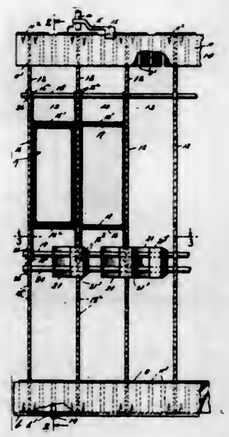
1. In a device of the character described, the combination with an actuating member, a locking member therefor, a movable member adapted to be operatively connected with said locking member by the interposition of

a coin, a coin trackway, a portion of said trackway being provided with a plurality of openings, a member provided with a plurality of stops, said member mounted



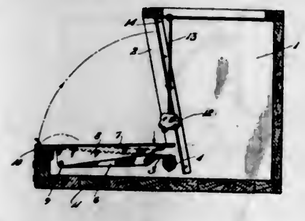
so that any one of said stops may be presented to a corresponding opening in the coin trackway, said member carrying the stops being movably mounted and movable when the aforesaid movable member is moved.

1,573,182. BASEBALL GAME APPARATUS. ALBERT MATHA, Chicago, Ill. Filed Jan. 26, 1924. Serial No. 688,636. 9 Claims. (Cl. 273—189.)



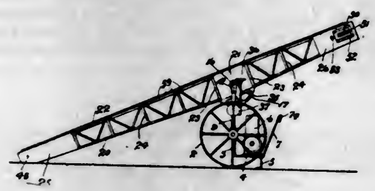
1. A game apparatus of the character described, comprising a playing board provided with the outline of a base-ball diamond, with openings through said board adjacent to the "pitcher's box" and "home-plate," a bracket secured on the board adjacent the opening at the "pitcher's box," a "pitcher" manikin fulcrumed at one foot on said bracket to tilt rearwardly, the "pitcher" manikin being provided with a ball-holding pocket, the base of the "pitcher" manikin being provided with an extension disposed through the adjacent opening in the playing-board, tension-applying means secured to said extension and to the bottom of the playing board, adapted to return the "pitcher" manikin to normal upright position, adjustable means whereby the degree of return movement and the normal position by the "pitcher" manikin may be determined, means, operable from the edge of the playing-board, whereby the "pitcher" manikin may be actuated, a "batter" manikin provided on the bottom with an extension disposed through the opening adjacent to "home-plate" and rotatably mounted beneath the playing-board, a link secured to said extension beneath the board, tension-applying means secured to said link for returning the "batter" manikin to normal position, and means, operable from an edge of the playing-board whereby the "batter" manikin may be rotated against the action of the tension-applying means.

1,573,183. COLLAPSIBLE MANDREL. CASPER MEHLUM, Waltham, Mass. Filed July 29, 1925. Serial No. 46,919. 3 Claims. (Cl. 242—72.)



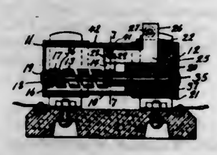
1. A collapsible hollow mandrel comprising two segmental body members hinged together at two adjacent side edges and forming together a semi-cylindrical body somewhat less than a complete hollow cylinder with an open space between their adjacent free edges, a movable segment shaped member adapted to close the said open space, said closure member having a longitudinal rib on its inner periphery, a plurality of links extending transversely across the interior of the mandrel and pivotally connected at one end with said rib member and at the other end with one of said body members, said links being normally at right angles to the axis of the mandrel to maintain the closure member in operative position, said rib and closure member being movable both longitudinally and radially inward, thereby turning the links into an inclined position relative to the axis and moving the closure member out of closure position.

1,573,184. FABRIC FRAME FOR EMBROIDERING MACHINES. CHRISTIAN MUENTENER, Weehawken Heights, N. J. Filed May 4, 1925. Serial No. 27,634. 3 Claims. (Cl. 112—90.)



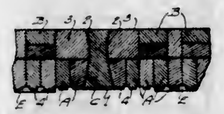
1. In an embroidering machine of the character described, a device consisting of a single frame adapted to extend vertically the entire length of the machine and divided longitudinally by cross members into a plurality of stalls or compartments, a set of parallel rods extending longitudinally of the machine and borne in said cross members, sets of individual tambour frames adapted to snugly fit in said stalls, each set comprising an outer rectangular frame formed with longitudinal end extensions adapted at their opposite ends to removably engage said parallel rods, and an inner rectangular frame capable of frictionally engaging a piece of material between itself and said outer frame, and a locking member for locking said outer frame of each set in operative position.

1,573,185. ANIMAL TRAP. JACOB NEY, Canton, Ohio. Filed May 11, 1925. Serial No. 29,469. 3 Claims. (Cl. 43—61.)



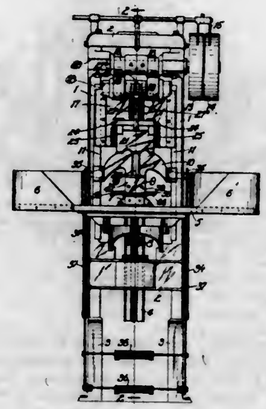
1. A trap including a cage open at one side, a platform pivotally attached at the open side of the cage, means for normally urging the platform toward the open side of the cage, a pivoted portion of the platform and a releasable catch arranged to engage the outer end of said pivoted portion of the platform to hold the platform in open position.

1,573,186. PORTABLE CONVEYER. OSCAR P. NYSTROM and MARTIN DE LIN, Holland, Mich., assignors to Holland Furnace Company, Holland, Mich., a Corporation of Michigan. Filed June 30, 1924. Serial No. 723,375. 9 Claims. (Cl. 198—233.)



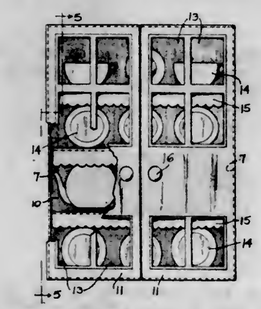
1. In combination with an axle, wheel at the ends of the axle, two spaced apart bars mounted on and extending upwardly from the axle, an elongated beam pivotally mounted between its ends at the upper ends of said bars, an endless conveyer on said beam, a gear segment fixed to said beam, a pinion mounted on one of said bars and meshing with said gear segment, and means for manually rotating said pinion and for holding it nonrotative whereby pivotal adjustment of the beam on the arms is accomplished.

1,573,187. THERMAL ELECTRIC-CIRCUIT CONTROLLER. GEORGE W. O'KEEFFE, Dorchester, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 28, 1922. Serial No. 557,055. 11 Claims. (Cl. 200—122.)



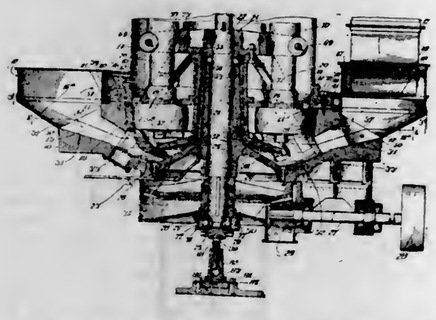
1. A thermal electric circuit controller including the combination of an enclosing casing, metal end caps disposed on the ends of the casing, a movable thermally expansible element contained within the casing and an insulated fixed contact member disposed within the casing in operative relation with said thermally expansible element and extended laterally beyond the casing and through and insulated from one of said end caps and having connecting means for a circuit lead carried by its extended end.

1,573,188. BOILER WALL. GEORGE M. PARKER, St. Louis, Mo. Filed June 30, 1924. Serial No. 723,214. 2 Claims. (Cl. 110—86.)



1. A furnace wall, comprising a back portion constructed as a unit, a front portion constructed as an independent unit, key tile arranged at separated points in the front portion of the wall and provided at their front ends with integral portions which tend to prevent said front portion from moving forwardly away from said back portion, said key tile corresponding in length to the combined thickness of said front and rear portions, elements in the back portion of the wall with which the rear end portions of said key tile are interlocked, and openings in the back portion of the wall arranged adjacent said locking elements and disposed so as to permit said key tile to be disengaged from said locking elements without disturbing said locking elements during the operation of reconstructing the front portion of the wall.

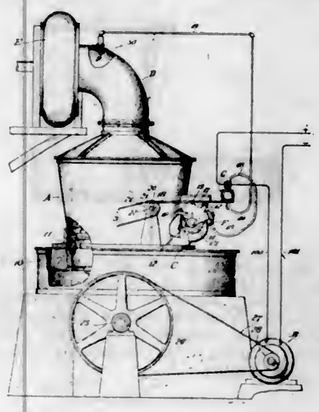
1,573,189. METHOD OF AND MACHINE FOR RANDING HEEL BLANKS. DENNIS PARKS, St. Louis, Mo. Filed Aug. 23, 1923. Serial No. 658,853. 26 Claims. (Cl. 12—50.)



1. In a power-driven machine for randing heel blanks, the combination of a holder for receiving the heel blanks, a presser foot movable to engage and hold a pasted rand placed on a heel blank in said holder, a shaping device movable into engagement with said rand to force it to conform to the curvature of the heel blank, and means operating automatically thereafter to cause the machine to force the presser foot downward against the rand, thereby pressing the same upon the heel blank and forcing the randed heel blank downward in the holder.

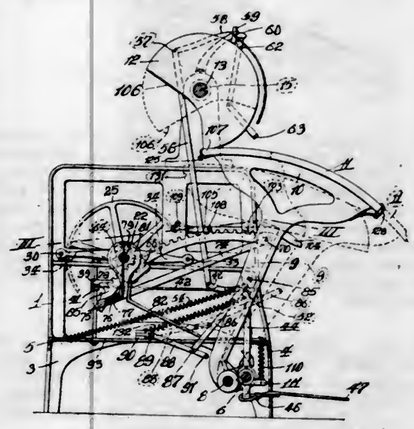
1,573,190. TOY DISH PLAYING SET. CHARLES S. RAIZEN, Brooklyn, N. Y. Filed Mar. 5, 1925. Serial No. 13,022. 4 Claims. (Cl. 46—37.)

1. A toy dish set comprising a box having shelves therein, dish retaining units between said shelves and a cover for the container having openings therein to represent the windows of a dish closet or cupboard, and affording display of the contents of said container, said retainers, doors hingedly associated with said box having openings therein to serve as windows, the outer surface of said doors being decorated to give the appearance of a cupboard, a cover for said box having handles therein and means whereby said cover when removed can be arranged to serve as a table.



1,573,191. PULVERIZING MILL. FRED I. RAYMOND, Evanston, Ill., and WILLIAM B. SENSEMAN, Los Angeles, Calif., assignors to The Raymond Brothers Impact Pulverizer Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 18, 1925. Serial No. 16,543. 55 Claims. (Cl. 83—45.)

1. A pulverizing mill comprising a bull ring, rollers operating against the same, air ports below the bull ring and plows having rotary movement over the bottom of the mill to deliver material between the rollers and bull ring, the bottom of the mill between said air ports and plows having a downwardly inclined surface toward the plows and extending under said plows.



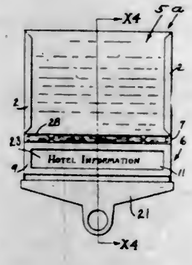
1,573,192. FEED-CONTROLLING MECHANISM. FRED I. RAYMOND, River Forest, Ill., assignor to The Raymond Brothers Impact Pulverizer Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 24, 1925. Serial No. 25,562. 50 Claims. (Cl. 83—44.)

1. In combination with a mill, an electric motor to drive the same, means for feeding material to the mill, a feed regulator comprising an electric device responsive to changes in intensity of the motor current, and a

pneumatically actuated mechanism governed by said electrical device for controlling the feeding means.

1,573,193. IRONING MACHINE. CHARLES RIESENWEBER, St. Louis, Mo., assignor, by mesne assignments, to Universal Ironing Machine Company, a Corporation of Missouri. Filed May 31, 1921. Serial No. 473,674. 10 Claims. (Cl. 68—9.)

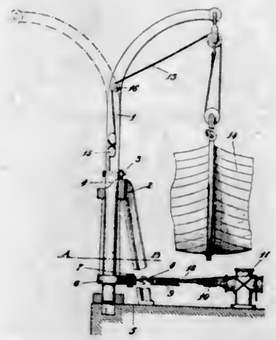
1. In an ironing machine, the combination of a throw arm bearing an ironing board, means for swinging said arm, a braking beam provided with resilient means, and drawing means comprising a pair of pivoted together links each being respectively connected to said beam and said arm.



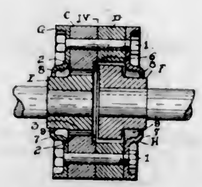
1,573,194. DOOR. BRADLEY ROE, Chicago, Ill., assignor to Roe Door and Window Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 25, 1924. Serial No. 708,851. 19 Claims. (Cl. 20—36.)

1. A door comprising, in combination, a main frame bounding a panel portion, and three barriers in said panel portion, one barrier interrupting air but not light, a second barrier foraminated but of a mesh to exclude insects, and a third barrier having apertures larger but too small for passage of a human hand, said third barrier being fastened permanently in place, said second

barrier being removable, and said first barrier being in two sections, each pivoted to the same side of the main frame to open and close, the upper section overlapping the lower section where they abut to permit it to be opened with the lower section closed.



1,573,195. HOTEL CODE AND INFORMATION CHART HOLDER. JOHN FRANKLIN RUSSELL, Santa Monica, Calif. Filed June 15, 1925. Serial No. 37,032. 9 Claims. (Cl. 40—85.)

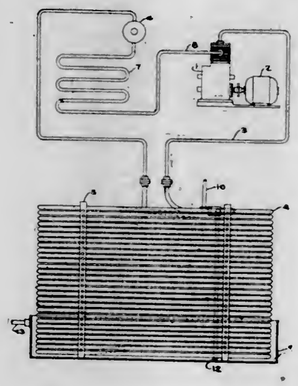


1. A hotel code and information holder comprising a housing, a strip in said housing on which information is printed, means to mount said strip in said housing, and a tray extending upwardly from said housing and adapted to receive a card on which the code is printed.

1,573,196. APPARATUS FOR LOWERING LIFE-BOATS. ANE PIETER SCHAT, Wassenaar, Netherlands. Filed June 16, 1920. Serial No. 389,446. 7 Claims. (Cl. 9—22.)

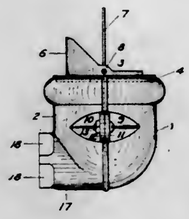
1. In a device of the character described, the combination with a davit having upper and lower portions disposed at an angle to each other and adapted to rotate outboard by gravity on the longitudinal axis of the lower portion to swing a lifeboat to outboard position, of a flexible member for controlling the rotation of the davit, said davit having means connected with its lower portion adapted to be engaged by the flexible connection at a point outside the periphery of said lower portion and below the level of the top side of the boat when the same is at rest on deck.

1,573,197. FLEXIBLE COUPLING. ROBERT W. SCHUETTE, Munhall Borough, Pa. Filed Apr. 7, 1924. Serial No. 704,659. 5 Claims. (Cl. 64—91.)



1. In a flexible coupling, the combination with a pair of shaft ends which are to be flexibly connected together and each provided on two opposite sides with a pair of alined flat bearing surfaces with a recessed portion separating the same, the bearing surfaces on opposite sides being parallel, and a coupler member provided with openings in its opposite sides, said openings being provided on two parallel sides with flat bearing surfaces, the bearing surfaces of one opening being disposed at right angles to the bearing surfaces of the other opening, one of the shaft ends being inserted into each of said openings and the bearing surfaces of the coupler member mating in flat sliding surface contact with the bearing surfaces of the shaft ends.

1,573,198. REFRIGERATING SYSTEM. LEWIS L. SCOTT, St. Louis, Mo. Filed June 8, 1922. Serial No. 566,802. 1 Claim. (Cl. 257—2.)



In a refrigerating system, a condenser for condensing the refrigerant having coils arranged one above the other, a box-like pan arranged aronnd the lower coils of the condenser, a valve located above said pan through which water is supplied to the pan for cooling coils located in the pan, a valve member having a stem slidably mounted in said valve for controlling its operation.

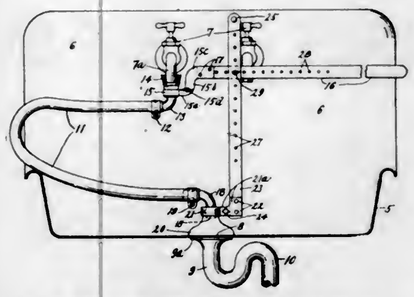
a thermostatic bar rigidly secured at one end to a coil of said condenser and having a movable end secured to the end of said stem, whereby, according to the tempera-

ture around the condenser, said stem will be moved by the thermostatic bar to control the flow of water through said valve to said box-like pan.

1,573,199. WATER CONDUCTOR. TIMOTHY J. STEBBINS, Davenport, Iowa, assignor to Red Jacket Manufacturing Company, Davenport, Iowa, a Corporation of Iowa. Filed Mar. 18, 1925. Serial No. 16,537. 3 Claims. (Cl. 285—204.)

3. In a water conductor a body comprising two parts one of which has a hollow boss projecting from the lower portion thereof, the same being adapted to receive a conducting pipe, the two parts of the conductor having meeting faces which contact in a substantially axial plane transverse to the direction of the boss, and means for securing the parts together, said parts having indentations on their lateral sides adjacent the meeting faces and webs extending laterally in these indentations, parallel to and adjacent the meeting plane, said webs being perforated for the passage of the aforesaid securing means.

1,573,200. PROCESS OF BLEACHING AND DYEING FURS AND THE LIKE. HYMAN STEIN, Arverne, WILLIAM E. AUSTIN, New York, and IRVING LIEBOWITZ, Brooklyn, N. Y., assignors to Stein Fur Dyeing Co., Inc., New York, N. Y., a Corporation of New York. Filed May 3, 1924. Serial No. 710,829. 24 Claims. (Cl. 8—2.)

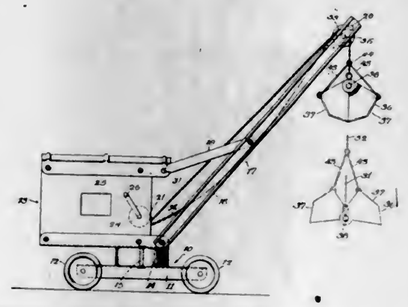


24. The method of dyeing animal fibres, particularly fur skins and the like, which comprises bleaching such fibres with a solution of hydrogen peroxide in the presence of a fibre-protecting agent comprising ferrous sulphate, and thereafter dyeing the bleached product.

1,573,201. METHOD OF PRODUCING BAGS OR THE LIKE. JULIUS STEINER, West New York, N. J., assignor of one-half to R. Dalla Rovere, a Partnership of Woodcliff, N. J., composed of Richard Dalla Rovere and Alfred Pietrobelli. Filed Nov. 7, 1925. Serial No. 67,617. 1 Claim. (Cl. 150—1.)

A method of producing a plurality of bags or the like at a time, consisting first in embroidering a series of designs at predetermined intervals and of predetermined patterns on a single layer of fabric, the embroideries in each series being parallel and spaced apart to permit subsequent separation from each other, then applying a second layer of fabric to the back of the first layer, then producing embroideries at predetermined intervals and of predetermined patterns on the composite fabric around the first embroideries by passing the stitches through both of the layers, these second embroideries being made to encircle said first embroideries and serving as marginal borders, then dividing the composite piece of fabric through the intervals between adjacent second embroideries and trimming around the latter and finally slitting the first layer of fabric between each two parallel borders to form openings.

1,573,202. SEWER TRAP AND PIPE CLEANING DEVICE. ALBERT O. STENWICK, Red Wing, Minn. Filed May 9, 1925. Serial No. 29,091. 3 Claims. (Cl. 4—256.)



1. A pipe cleaning device of the class described comprising a tubular element, a funnel shaped intake member at one end of said tubular element, a bell shaped member of soft material at the discharge end of said tubular element, all said members having a continuous uninterrupted passage, said funnel shaped member adapted to be pressed into frictional contact with the discharge means of a source of liquid under pressure and said bell shaped member adapted to be pressed into communicative position with the exposed end of a pipe to be cleared of obstruction, and means for holding said funnel shaped member and the bell shaped member in operative positions simultaneously.

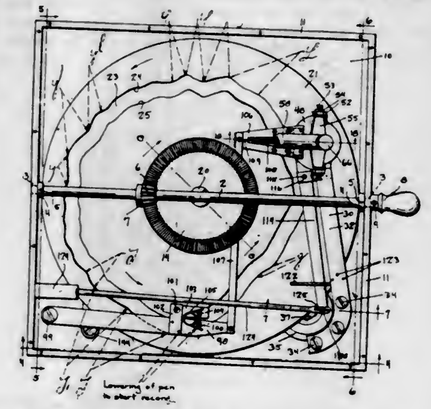
1,573,203. GRAB-BUCKET-CRANE TOY. LOUIS STROHACKER, Freeport, Ill., assignor to Structo Manufacturing Company, Freeport, Ill., a Corporation of Illinois. Filed Apr. 25, 1924. Serial No. 709,046. 4 Claims. (Cl. 212—42.)

1. A toy comprising, in combination, a bucket having two relatively movable parts, whereby the bucket may

be opened and closed, a bucket hoisting chain therefor, and a bucket opening chain therefor, a bucket hoisting drum, a hand crank therefor, a bucket opening drum, a lost motion clutch connection between said drums, and a friction element continuously engaging said bucket opening drum and acting to continuously apply a brak-

ing action thereto, said chains being secured to their respective drums at such places thereon, when clutched together, that the bucket opening chain is fully unwound from its drum while the bucket hoisting chain is partly wound thereon, whereby the bucket may be opened, lowered from its raised position, closed and raised, by turning the hand crank continuously in one direction.

1,573,204. LIQUID-TREATING APPARATUS. INOS B. TANNER, Chicago, Ill., assignor to Joseph E. Nelson & Sons, Chicago, Ill., a Firm composed of John E. Nelson and William H. Nelson. Filed Aug. 4, 1924. Serial No. 730,053. 1 Claim. (Cl. 210—16.)



Liquid treating apparatus including a chamber; piping for conveying liquid to be treated to said chamber; a source of chemical discharging into said chamber; a horizontally elongated settling chamber, alongside of the treatment chamber, there being a passage establishing communication between the bottom portions of said chambers; and an outlet trough at an upper part of the settling chamber and surrounding the liquid body in this chamber.

1,573,205. WRITING MACHINE. FREDERICK L. TAYLOR and CARL E. LUNDBERG, Spokane, Wash. Filed Feb. 6, 1922. Serial No. 534,626. 31 Claims. (Cl. 33—18.)

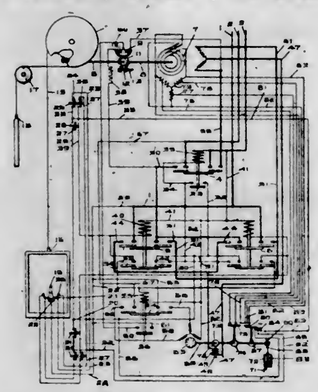
19. In a reproducing machine including a paper supporting table, a marking member superposing said table, and a record carrying member having cam actuating shoulders formed by grooving said record carrying member, said shoulders conforming to the writing to be formed, cam following means projecting into said grooves, means co-acting with the other shoulder formed by said grooving and adapted to hold said cam following means in contact with said cam actuating shoulders.

21. A reproducing machine comprising paper holding means, a pen, and mechanism adapted to actuate said pen to reproduce a signature including a cam having a

cam groove provided with primary and secondary undulated walls, a portion of said mechanism having nonyielding and yielding members engaging said walls respectively to operate said mechanism.

1,573,206. PRESSED-METAL HOOK AND METHOD OF MAKING THE SAME. HENRY G. THOMPSON, Cleveland, Ohio. Filed May 31, 1922. Serial No. 565,004. 12 Claims. (Cl. 113—116.)

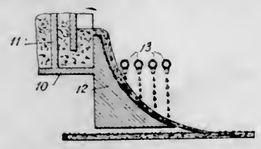
1. The method of forming a hook-like article which comprises blanking out of sheet metal a blank having a central portion and an extending arm, the central portion of the blank being wider than the arm, forming said blank by moving the edges of the arm portion toward each other to assume a U-shape, and simultaneously moving the marginal parts of the central portion to form flanges for the central portion which are continuous with the sides of the arm, and subsequently rolling over the edges of the U-shaped arm into substantial contact thereby forming a hollow tubular arm and a flanged central portion.



6. As an article of manufacture, a device of the character described made of sheet metal, comprising a base portion having inturned side flanges and an integral tubular arm extending from said base portion, the flanges on the base portion merging into the tubular arm, said arm being curved away from the plane of the base.

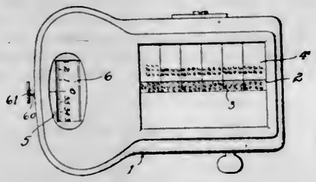
1,573,207. ELEVATOR MOTOR CONTROLLER. ERNEST B. THURSTON, Toledo, Ohio, assignor to The Haughton Elevator & Machine Co., Toledo, Ohio, a Corporation of Ohio. Filed Aug. 23, 1919. Serial No. 319,373. 22 Claims. (Cl. 172—152.)

2. An elevator, a step set brake therefor, main and auxiliary limit switches independently operable by the elevator in effecting independent settings of the brake, and a controller for releasing the brake between said settings.



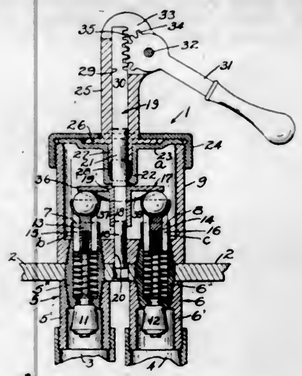
9. An elevator, an alternating electric current motor, a controller for the motor having main and direction

switches, said controller having at a single position connections effecting closing of the main and a direction switch, near each end of elevator travel main and auxiliary limit switches successively operable by the elevator in its



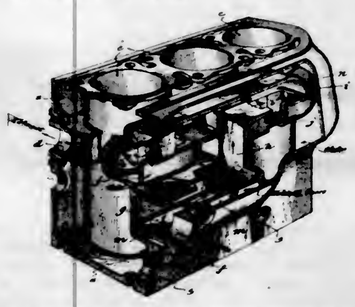
travel, and connections for the auxiliary limit switch to open the main controller switch and for independent operation of the main limit switch to open the main controller switch and a direction switch.

1,573,208. METHOD AND APPARATUS FOR MAKING COLOR-BLENDED WALL PAPER. JOHN J. WARREN, Brownville, N. Y. Filed May 8, 1923. Serial No. 637,423. 7 Claims. (Cl. 92—4.)



1. The method of making a blended wall paper which comprises flowing a pulp blending stock onto the web, the blending stock flowing over an inclined apron as it approaches the web, and applying a color solution to the blending stock as it flows over the apron.

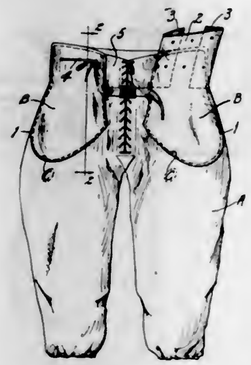
1,573,209. GOVERNOR FOR MEASURING AND COST-COMPUTING MACHINES. JOHN L. WHEELER, St. Louis, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation of Delaware. Filed July 7, 1921. Serial No. 482,981. 2 Claims. (Cl. 235—144.)



1. In a machine of the character described, having indicating mechanism, means for returning the indicating mechanism to zero, a governor brake connected with the indicating mechanism and having weights affected by centrifugal force, means for stopping the indicating mechanism at zero, and means for effecting a disconnection between the governor and the indicating mechanism to avoid the shock of stopping the governor.

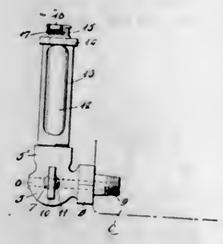
1,573,210. VARIABLE FLUID-CONTROLLING DEVICE. AUSTIN C. WHIDDEN, Los Angeles, Calif. Filed Aug. 2, 1924. Serial No. 729,731. 7 Claims. (Cl. 277—18.)

1. A fluid controlling device comprising passages; valves for said passages respectively each having valve stems; means to operate said valves comprising a disc adapted to engage said stems and approximately one-half of which is provided with a continuous cam surface having a high spot approximately in the middle of said surface, and the other half of which is flat; and means to move said disc in one direction to open one of said valves, and in another direction to open another of said valves; and in a third direction to cause simultaneous operation of said valves.



1,573,211. MANIFOLD CONSTRUCTION. D'ORSAY McCALL WHITE, Detroit, Mich. Filed May 18, 1923. Serial No. 639,802. 8 Claims. (Cl. 123—52.)

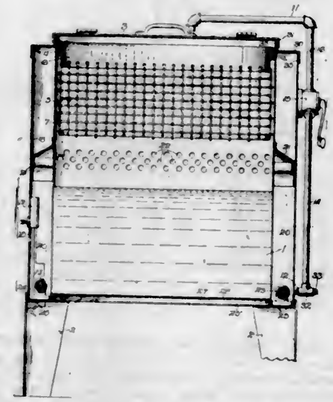
1. In a motor block, a unit casting providing a motor block having a plurality of cylinders, and an integral manifold comprising a lower gallery, an upper gallery and a plurality of intermediate galleries, the lower gallery connecting at its ends with the intermediate points of the upper gallery and the intermediate gallery connecting at intermediate points of such intermediate gallery with the upper gallery.



1,573,212. FOOTBALL TROUSERS. WILLIAM P. WHITLEY, St. Louis, Mo., and ROBERT C. ZUPPKE, Champaign, Ill., assignors to Rawlings Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 19, 1925. Serial No. 10,301. 3 Claims. (Cl. 2—23.)

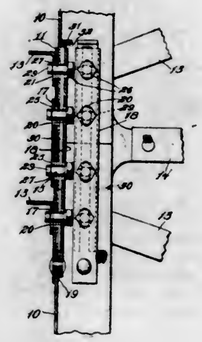
3. A pair of football trousers provided with outside pad pockets arranged on the front side of the trousers in the zone of the wearer's abdomen and each formed from a pocket piece of fabric secured to the trousers by stitching and provided at its upper end with an extension and flaps that virtually form a tubular casing which is adapted to be folded inwardly and downwardly over the

upper edge or waist band portion of the trousers, pads in said pockets, and lacings passed through said folded portions, through the waist band portion and through the pads for securing the pads in operative position in the pockets.



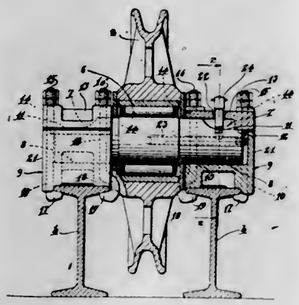
1,573,213. COMBINED CRANK-CASE DRAIN VALVE AND OIL GAUGE. GEORGE S. WOLF, West Dover, Ohio. Filed Nov. 17, 1924. Serial No. 750,338. 1 Claim. (Cl. 73—54.)

In combination, a crank-case having a threaded opening in one side wall, a valve casing having a transverse bore, three radial passage-ways extending from the bore through said valve casing, a rotatable valve body arranged in the bore and having passage-ways alineable at times with the aforementioned passage-ways, a threaded nipple carried by the valve casing and threaded into the opening in said crank-case, a cup-like internally threaded socket integrally formed at one side of the casing and having one of said passageways opening centrally thereinto, a sight tube having one end set into the socket, a tubular frame about said sight tube and having one end threaded into the socket, and a hinged spring actuated closure fixed to the frame at the end remote from said socket.



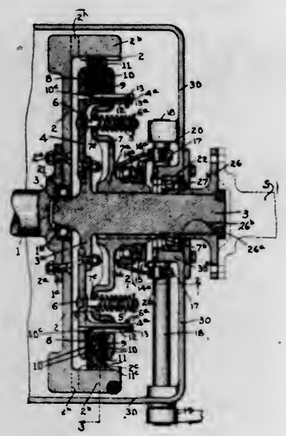
1,573,214. METHOD OF AND MEANS FOR LUBRICATING WASTE. ANDREW D. WYCKOFF, Oak Park, Ill. Filed Feb. 26, 1923. Serial No. 621,143. 18 Claims. (Cl. 91—46.)

1. In a waste-soaking tank, a combination of a receptacle forming an oil storage compartment in the bottom thereof, a basket adapted for the reception of waste, means for maintaining the viscosity of the oil constant during saturation of the waste and thereafter serving to condition the saturated waste to a substantial dryness, and means for supporting said basket over said oil storage compartment during saturation and conditioning, thereby permitting the saturation and conditioning of the waste to be substantially continuous in action.



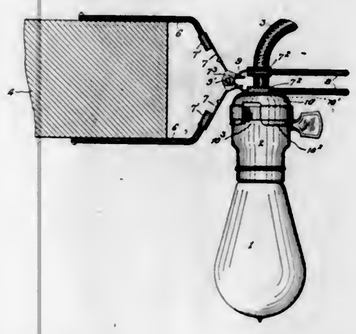
13. In a device for saturating waste with a suitable lubricant, a tank having a body of lubricant therein, a carrier for waste to be saturated, means for circulating the lubricant over the waste in said carrier, means for providing a heating chamber to heat said body of lubricant, temperature control means for said heating chamber, said tank having openings therein, said openings being disposed above the level of said body of lubricant, and baffle means for diverting the heated air in said chamber through said openings and into said tank.

1,573,215. DERRICK. PATRICK YORKE, Washington, Pa. Filed Sept. 5, 1925. Serial No. 54,821. 8 Claims. (Cl. 189—9.)



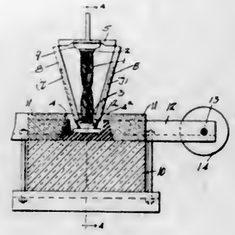
7. A metallic derrick comprising separable overlapping sections, double headed securing elements extended through the overlapped portions of the sections for connecting the sections and wedges for tensioning said securing elements.

1,573,216. PULLEY SUPPORT FOR CROWN BLOCKS. LEWIS E. ZERBE, Moneta, Calif., assignor to Union Tool Company, Torrance, Calif., a Corporation of California. Filed May 19, 1925. Serial No. 31,347. 3 Claims. (Cl. 308—59.)



1. A pulley support for a crown block, comprising a shaft having recesses in the upper side at its opposite ends, bearings having concave seats for the shaft to rest in and having bolt holes, caps provided with internal shoulders engaging in the recesses, said caps having bolt holes registering with the first mentioned bolt holes, and bolts extending through the bolt holes and having shoulders to engage beneath the flanges of I-beams on which the bearings rest.

1,573,217. FRICTION CLUTCH. JOSEPH R. ZETWO, Jr., Pittsburgh, Pa. Filed Mar. 21, 1925. Serial No. 17,206. 11 Claims. (Cl. 192—69.)



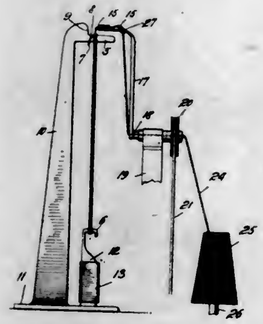
1. In a friction clutch, a spider having a series of fingers; a plurality of friction rings axially movably mounted on said spider; each said finger having a longitudinally disposed groove therein; and a stop bar in the groove of each finger adapted to engage a ring when the clutch is "out."

1,573,218. LAMP HOLDER. HERMAN BIEDER, Cleveland, Ohio. Filed Aug. 20, 1919, Serial No. 318,736. Renewed Dec. 24, 1921. Serial No. 524,744. 9 Claims. (Cl. 240—53.)

1. A lamp holder comprising a body member formed of two sections centrally hinged together, each of said sections having sockets formed at its opposite ends, means carried by one of said sections for seating the lamp, clamping means fitted in the sockets formed at one end of the body portion, and finger pieces fitted in the sockets formed at the opposite end of said body portion.

1,573,219. MANUFACTURE OF RAIL BONDS. CHARLES A. CADWELL, Cleveland, Ohio, assignor to The Electric Railway Improvement Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 18, 1922. Serial No. 530,133. 9 Claims. (Cl. 22—204.)

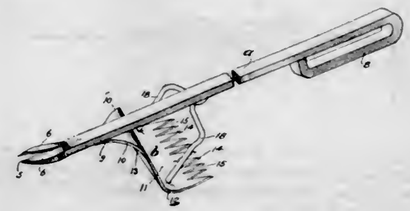
1. The method of making a rail-bond of the character described, as a separate article of manufacture, which consists in inserting the end of a conductor in a recess in a suitable mold, also placing in such recess adjacent such conductor-end a piece of metal, and then heating such mold and introducing a quantity of braze in such recess, the temperature of the mold being sufficient to melt such braze whereby such conductor-end and piece of metal are firmly united together.



1,573,220. SKEIN HOLDER. MAX OTTO CLAUSS, New York, N. Y., assignor to The Clark Thread Company, Newark, N. J., a Corporation of New Jersey. Filed Mar. 13, 1925. Serial No. 15,208. 6 Claims. (Cl. 28—21.)

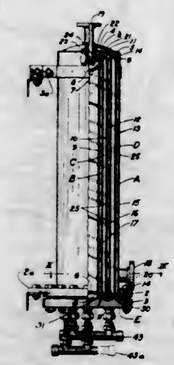
1. A skein holder for winding machines comprising a flat, elongated member consisting of a single piece for supporting the thread loops during the skein winding operation, and means for supporting the skein holder near one of its extremities to permit a tubular band to

be slipped longitudinally onto and over the threads while the skein is still on the holder at the completion of the winding operation.



1,573,221. SKEIN HOLDER. MAX OTTO CLAUSS, New York, N. Y., assignor to The Clark Thread Company, Newark, N. J., a Corporation of New Jersey. Filed Mar. 13, 1925. Serial No. 15,209. 3 Claims. (Cl. 28—21.)

1. A skein holder for winding machines comprising two thread supporting fingers spaced apart, each finger being adapted to receive and hold the opposite ends of the loops constituting the skein, one of said fingers being provided with a shank for holding a tubular band to be slipped over the finger and onto the skein threads on the completion of the winding operation.

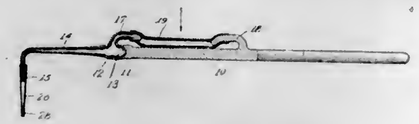


1,573,222. WEED PULLER. MANUEL T. CORLHO, Redwood City, Calif. Filed July 13, 1925. Serial No. 43,369. 3 Claims. (Cl. 55—65.)

1. A weed puller comprising a body having a longitudinal cleft end portion adapted to be inserted into the ground and engage the root of a weed to be pulled, a rigid support rigidly secured at one end to the body and extending outwardly and upwardly when the engaging end is within the ground, said support having one end secured to the body and its opposite end portion curved to provide a receding fulcrum on which the device is adapted to turn upon the surface of the ground and elevate the engaging end therefrom when the end portion of the body above the ground is turned in one direction.

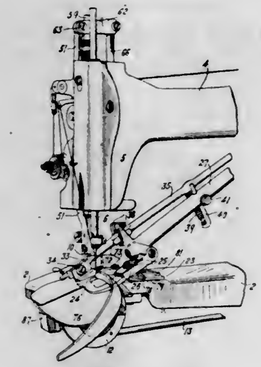
2. A weed puller comprising a body having an engaging end portion provided with oppositely disposed claws having pointed ends and a longitudinally disposed intervening V-shaped cleft, the opposite end portion of said body being provided with a handle, and a support connected to one end of the body adjacent to the engaging end thereof and curving outwardly and toward the handle, and having its free end provided with a row of angular shaped teeth.

1,573,223. LIQUID HEATER. GARNET W. COBB, Pasadena, Calif. Filed Feb. 9, 1924. Serial No. 691,676. 7 Claims. (Cl. 257—243.)



1. A liquid heater comprising an inner shell closed at the top and bottom, an exterior shell spaced therefrom and closed at the top, a bottom head member forming a closure for the lower end of the exterior shell and also forming a support for both shells, a pair of annular shells interposed between the inner and outer shells and also supported by the bottom head member, said annular shells being closed at the top and bottom, means maintaining a predetermined annular spacing between the annular shells and the outer and inner shells respectively to form annular passages therebetween, means for circulating a heating medium through the annular shells and the inner shell, and means for directing a flow of liquid through the annular passages formed between the several shells.

1,573,224. LIQUID APPLICATOR. PARK N. CONDIT, Boston, Mass. Filed Mar. 31, 1924. Serial No. 703,182. 7 Claims. (Cl. 128—230.)

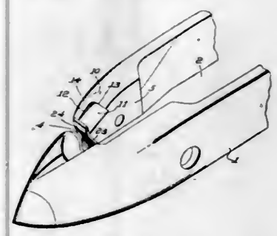


1. A liquid applicator comprising a solid rod having a chamber at one end, a contracted conical tube leading therefrom, said tube being bent at an angle near its end,

a rearwardly turned tube communicating with the mentioned chamber disposed adjacent said rod, a forwardly turned projection on said rod in register with the last

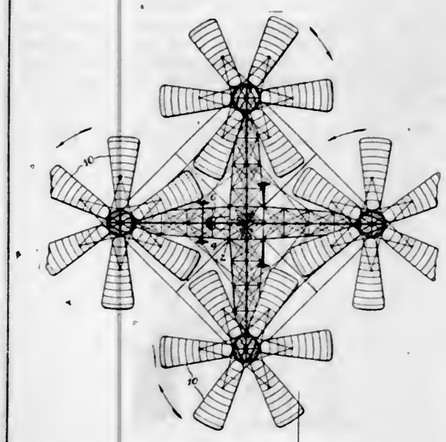
named tube, and a flexible tube connected at its ends with the last named tube and said projection respectively, said flexible tube being substantially parallel with and in contact with said rod.

1,573,225. SEWING MACHINE. HERBERT CORRALL, Helensburgh, and BERTRAM AMBROSE STEVENS, Clydebank, Scotland, assignors to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Feb. 23, 1924. Serial No. 694,492. 10 Claims. (Cl. 112—203.)



1. In a sewing machine, in combination, a needle, means for effecting reciprocating movements of said needle, a throat-plate including a portion obliquely disposed relatively to the path of the needle, said portion having an aperture penetrable by said needle, a clamping and feeding device above the throat-plate, means for imparting feeding movements to said device while the needle is above the throat-plate, and means for imparting rising and falling movements to said device in the interval between the penetration of the aperture by the needle and the completion of the downstroke of the needle.

1,573,226. PROCESS FOR THE CONCENTRATION OF OXIDIZED ORES. STUART CROASDALE, Denver, Colo. Filed Jan. 8, 1923. Serial No. 611,473. 5 Claims. (Cl. 83—85.)

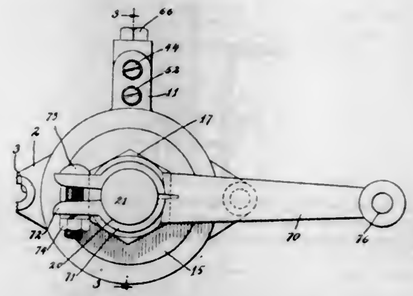


1. The process of concentrating by flotation ores containing oxidized minerals to more completely recover the same, the flotation being accomplished without forming any visible film of metallic sulfide on the surfaces of the mineral particles, comprising treating the ore-pulp in the presence of calcium penta sulfide, a frothing agent, a relatively large amount of a hydrocarbon containing a substantial percentage of unsaturated hydrocarbons of the olefine series and recovering the concentrates.

1,573,227. AUTOMATICALLY-THREADING LOOM SHUTTLE. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Sept. 9, 1925. Serial No. 55,274. 7 Claims. (Cl. 139—223.)

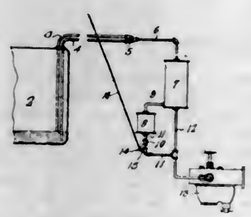
1. An automatically threading shuttle for looms, having a side delivery eye and provided with a recess in the wood of the shuttle leading towards the eye to form inclosing shoulders, and a threading block secured to the shuttle and having a thread directing apron provided with a rabbeted edge portion to fit within the shouldered area of the recess to cover the joint.

1,573,228. HELICOPTER. GEORGE DE BOTHEZAT, Dayton, Ohio. Filed June 27, 1923. Serial No. 648,051. 5 Claims. (Cl. 244—19.)



1. A helicopter comprising in combination, a body portion having four radial arms, a lifting propeller at the outer end of each arm, the axes of rotation of all said lifting propellers intersecting at a point far above the said body portion, a vertical stick control lever pivoted about a plurality of horizontal axes, and means for increasing the pitch of the blades of a lifting propeller on one side of the helicopter and decreasing the pitch of the blades of an opposite lifting propeller when said lever is pivoted about one of said axes, and a second control device for increasing or decreasing the pitch of all of said lifting propellers simultaneously.

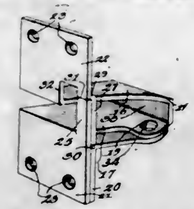
1,573,229. SHOCK ABSORBER. MANUEL D. DOMINGUEZ, New Orleans, La. Filed Dec. 5, 1924. Serial No. 754,182. 15 Claims. (Cl. 188—89.)



1. An appliance of the class described, comprising a cylinder, a piston therein, means for moving the piston

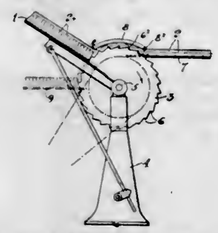
to and fro, a passage around the piston between the cylinder ends, an adjustable, normally-fixed valve partly obturating said passage, another passage around the

piston between the cylinder ends, and a check valve in said passage permitting flow of liquid through the passage in only one direction.



1,573,230. EMERGENCY SUPPLY FOR FUEL-COMBUSTION ENGINES. CHARLES M. DONOVAN, Wichita, Kans. Filed May 29, 1923. Serial No. 642,200. 1 Claim. (Cl. 158—46.5.)

In an emergency supply for fuel combustion engines, a fuel tank, an internal combustion engine having a carburetor thereon, a vacuum tank, a pipe line connecting said vacuum tank with said engine, an emergency supply tank positioned between the base of said vacuum tank and said engine carburetor, a pipe line connecting said emergency tank with the base of the vacuum tank and the pipe line between said vacuum tank and the carburetor, a valve positioned in the pipe line between said emergency tank and the pipe line leading from the vacuum tank to the carburetor, means for rotating said valve, two pipes extending into the fuel tank, one terminating in proximity to the bottom thereof, and the other at a substantial distance above the bottom, a valve for selectively placing either of said pipes in communication with the vacuum tank, a rod to operate the valve and a dial finger on the rod adapted to indicate the position of the valve.



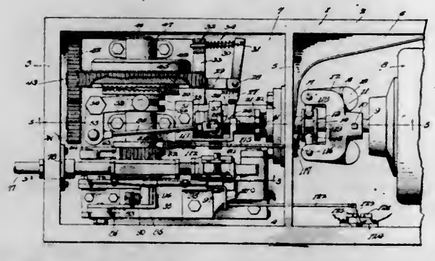
1,573,231. HINGE. MICHAEL J. ECONOMIDES, Brooklyn, N. Y. Filed June 19, 1924. Serial No. 721,010. 1 Claim. (Cl. 16—135.)

A hinge structure comprising a plate having alined end portions and angularly disposed intermediate, spaced, parallel portions, said parallel portions being connected with each other at one end by the intermediate portion of the plate and the end portions of the plate at the other end of the parallel portions being provided with extensions which overlap each other and bridge the space

between the parallel portions of the plate and a hinge arm pivotally mounted between the parallel portions of the plate.

1,573,232. TRANSPORTING DEVICE FOR BOXES OR THE LIKE. GUNNAR CHRISTIAN EKSTRÖM, Stockholm, Sweden, assignor to Aktiebolaget Gehr Arehns Mekaniska Verkstad, Stockholm, Sweden, a Corporation of Sweden. Filed July 2, 1923. Serial No. 649,149. 1 Claim. (Cl. 198—211.)

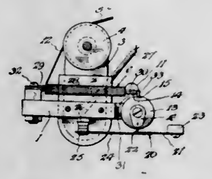
In a device for transferring boxes or the like and changing their position from a substantially upright to a horizontal position or vice versa the combination with two supports for the boxes which are located in substantially the same plane and on which the boxes are placed in rows, of a rotary, circular member, which is located between the said supports and is provided with shelves each having two plane surfaces forming a substantially right angle with one another, the position of the rotary member being so adapted with relation to the said supports, that one of the said surfaces will catch a box while the shelf passes one of the said supports, and then together with the other surface carries the box, resting freely on the surfaces in an unvariable position relatively to the same, while transferring the box from the one support to the other support, each of the plane surfaces being able to push forwards on the support the box delivered on the same, so that the said rotary member is able to operate in both motion directions.



1,573,233. PROCESS FOR TREATING ZINC-SULPHATE SOLUTIONS. ROBERT B. ELDRIDGE, Denver, Colo. Filed Oct. 13, 1924. Serial No. 743,474. 8 Claims. (Cl. 23—125.)

1. The berein described process of treating impure zinc sulphate solutions, comprising the precipitntion of inorganic impurities in the solution by the action of a soluble hydrosulphite, and separnting the precipitate from the solution.

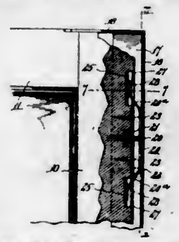
1,573,234. AUTOMATIC RAILWAY SWITCH. CHARLES S. EPPLEY, York, Pa. Filed July 25, 1923. Serial No. 653,760. 7 Claims. (Cl. 246—240.)



1. In switch operating mechanism of the class described, a prime mover, a shaft, operative connection between the prime mover and the shaft for rotating the latter, a second shaft, a switch rod, means actuated

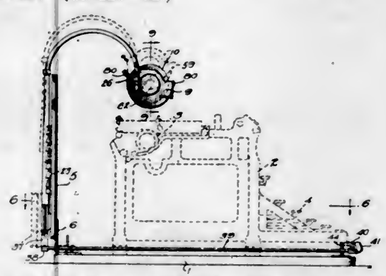
through rotation of the second mentioned shaft for operating the switch rod to adjust the switch, a clutch for connecting the said shafts for rotation in unison, a shiftable member, a lever supported upon the shiftable member, means yieldingly urging the shiftable member

in one direction, operative connection between the lever and the clutch for actuating the clutch when the lever is rocked, a member engaged by the lever and constituting a fulcrum for the lever when the shiftable member is shifted, and means actuated through operation of the prime mover for shifting the said shiftable member.



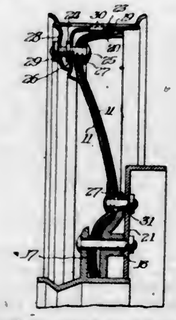
1,573,235. CIRCUIT BREAKER. CHARLES S. EPPLEY, York, Pa. Original application filed July 27, 1923, Serial No. 654,223. Divided and this application filed Mar. 10, 1924. Serial No. 698,231. 2 Claims. (Cl. 200—122.)

1. A circuit breaker comprising a base, a fixed contact thereon, a disc rotatably mounted upon the base and having a peripheral shoulder, a spring urging the disc rotatably in the direction in which the shoulder is presented, thermostatic element comprising mutually united strips, one having a relatively low coefficient of expansion and the other a relatively high coefficient of expansion, the strips being secured at one end to the base, the free end of one strip having an angularly directed abutment engaged by the shoulder upon the disc, the free end of the other strip engaging behind the abutment of the first mentioned strip, a coil surrounding the strips and in circuit with the disc, and a contact comprising a blade secured between its ends to the periphery of the disc and having a contact point at one end engaging the fixed contact, and a finger button upon the other end of the blade.



1,573,236. ATTACHMENT FOR DOORS. WILLIAM FIZZELL, Jr., Bradford, Pa. Filed Apr. 15, 1925. Serial No. 23,292. 2 Claims. (Cl. 20—35.)

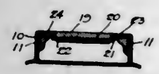
1. In combination with a door of wooden construction provided with spaced apart recesses in its outer edge, of a metal strip U-shape in cross-section presenting side pieces embracing the sides of the door and a connecting portion beyond the adjoining edge thereof; together with a metal plate secured to the edge of the door and having a lug with a threaded aperture seated in one of the aforesaid recesses and slots in the end portions of the plate in alinement with the other of said recesses, a flat metal bow-spring interposed between the metal strip and edge of the door with the inturned ends of said spring extending through the slots in the plate to bear on the bottom of the cooperating recesses, and a bolt extending through the metal strip and spring and threaded in



the apertured lug, whereby the metal strip is securely connected to the edge of the door and is adjustable laterally thereon to vary the width of the door structure.

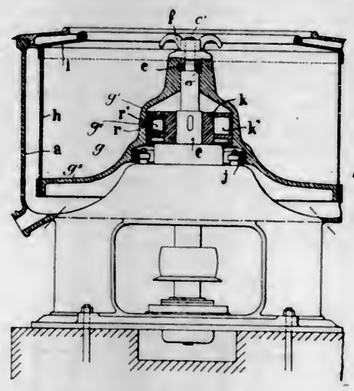
1,573,237. COPYHOLDER. ELWOOD W. FORNEY, Joplin, Mo. Filed Apr. 25, 1924. Serial No. 709,058. 10 Claims. (Cl. 120—32.)

1. In a device of the character described, a supporting member adapted to be secured to the foot board of a typewriter, said supporting member comprising a vertically disposed plate, a rod mounted on the rear of said supporting member, said rod being provided with an arcuate shaped upper end extending forwardly of said supporting member, a roll carried by said rod and adapted to receive a sheet to be copied, an operating bar arranged at the front of the foot board, and connections between said bar and said roll to rotate said roll upon actuation of said operating bar.



1,573,238. DISK WHEEL. GEORGE H. FORSYTH, Chicago, Ill., assignor to Motor Wheel Corporation, Lansing, Mich., a Corporation of Michigan. Filed Mar. 3, 1922. Serial No. 540,678. 12 Claims. (Cl. 301—63.)

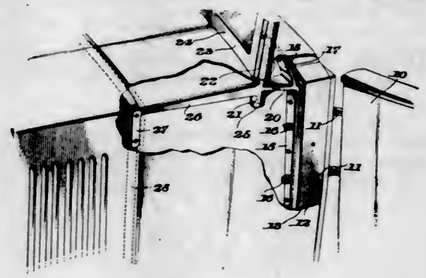
1. In a wheel, the combination with the hub portion and the tire-carrying peripheral portion, of an intermediate disk portion comprising sheet material having



a co-efficient of elasticity substantially lower than steel, the said disk assembled with the hub and peripheral portions of the wheel and maintained under radially reacting stress.

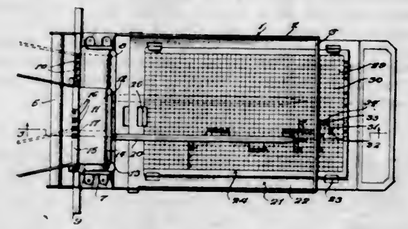
1,573,239. BATHER'S ARTICLE. ROBERT EDWARD GILLILAND, Los Angeles, Calif. Filed Sept. 20, 1924. Serial No. 738,937. 3 Claims. (Cl. 220—39.)

1. A waterproof container comprising a receptacle having a body section and a closure section, the body section having a concentric series of shoulders, said closure section being threadedly connected with the body section, gaskets interposed between said shoulders and mating parts of the closure sections to seal the joints between both sections and render same waterproof, one of said gaskets carried by the closure section, a mirror on the under side of the closure section, and portions upstruck from said closure section and respectively coacting with the mirror and said one gasket to secure same in applied positions.



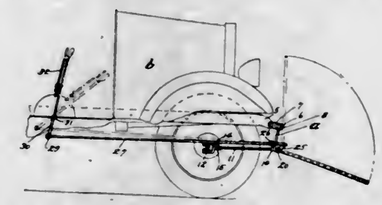
1,573,240. CENTRIFUGAL DRYING APPARATUS. GEORGES GRAUSS, Paris, France. Filed Mar. 7, 1924. Serial No. 697,643. 2 Claims. (Cl. 210—71.)

1. A centrifugal drying apparatus comprising a fixed container, a vertical power shaft arranged in the container, and a basket in the container, said basket having a bottom member forming a casing and also forming a hub above the casing, the said shaft extending upwardly through the hub and having an upwardly extending spindle, a collar arranged in said hub, around the lower portion of said spindle and bearing on the shoulder formed by said shaft around the base of said spindle and whereby said basket is suspended;—centrifugally acting clutch mechanism in said casing to connect said basket to said shaft for rotation by the latter and means on the upper end of said hub to facilitate the lifting of said basket from said shaft.



1,573,241. MOTOR VEHICLE. JACOB HAMMERL, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 24, 1919. Serial No. 278,777. 4 Claims. (Cl. 296—30.)

1. In a motor vehicle, the combination with the pillar, the cowl reinforcement supported thereby and the dash, of a bracket having an arm secured to said pillar, a second arm secured to said cowl reinforcement and a third arm extending forwardly under the cowl and ter-



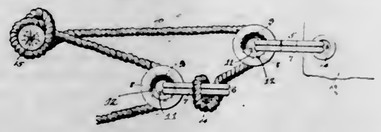
minating in a downward extension secured to the dash, said third arm having a socket receiving the wind shield support.

1,573,242. ATTACHMENT FOR HARMONICAS. WALTER A. HAND, Brooklyn, N. Y. Filed Nov. 7, 1923. Serial No. 673,309. 12 Claims. (Cl. 84—377.)

7. A harmonica attachment comprising a support for the harmonica, a mouth piece movable transversely of the support and having an opening for selective registration with the reed openings of the harmonica, a music leaf holder mounted upon the support and movable in a direction longitudinally of the support, a finger piece extending below the holder and providing means whereby the holder may be so adjusted, and an indicating pointer extending forwardly from the said mouth piece for cooperation with a music leaf supported by the leaf holder.

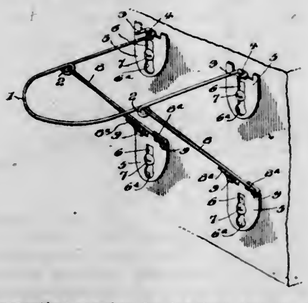
1,573,243. VEHICLE FENDER. JAMES B. HENRY, Burlingame, Calif. Filed May 12, 1925. Serial No. 29,799. 3 Claims. (Cl. 293—45.)

1. In a vehicle fender a rear portion comprising a frame and a series of spaced strips secured to opposite portions of the frame, a rock shaft carried by the frame, means for fixedly securing the said rear portion to the front end of a vehicle frame, a projector fixedly secured to the rock shaft and including a frame having a series of spaced transverse strips, and means adapted to be operated from the driver's seat of the vehicle and con-



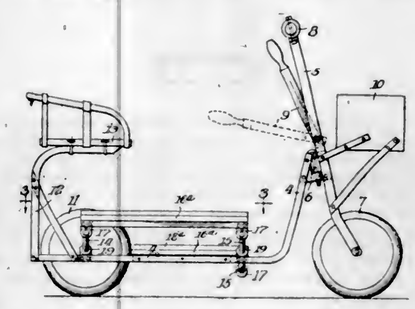
nected to the rock shaft for operating the same to turn the projector to a position downwardly and forwardly from the said rear portion and vertically upward to a position in front of the frame of the vehicle.

1,573,244. RAZOR BLADE. DENNIS E. HICKEY, Chicago, Ill. Filed Jan. 5, 1922. Serial No. 527,130. 1 Claim. (Cl. 30—12.)



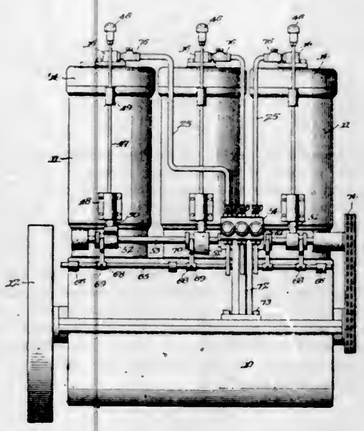
A razor blade comprising an approximately triangular body having the corners thereof formed with slots flared substantially at their outer portions for the reception of one's fingers and defining a plurality of cutting members the side walls of said slots having their inner portions parallel and their outer portions curved longitudinally and disposed at substantially right angles to the cutting edges of said cutting members, the ends of each cutting member being located beyond and a substantial distance rearwardly of the ends of the adjacent cutting members and projections placed at the centre of each blade upon both sides of the blade for holding the body of the blade in spaced relation to a support so that grasping of the blade is facilitated.

1,573,245. TACKLE. WILLIAM F. HOHORST, Monrovia, Calif. Filed Nov. 27, 1922. Serial No. 603,701. 2 Claims. (Cl. 254—194.)



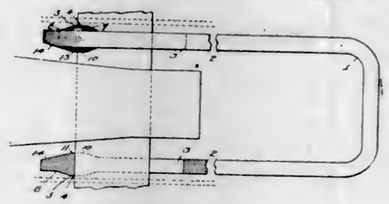
1. A tackle element comprising a sheave having a central through opening, and a sheave holder embodying two open sided link-like members hooked through said sheave with their open sides reversely disposed.

1,573,246. BRACKET. HENRY TUFFTS HOLLAND, Winfield, N. Y. Filed Nov. 17, 1923. Serial No. 675,399. 5 Claims. (Cl. 248—18.)



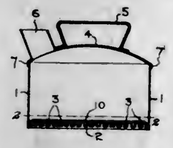
1. A supporting member for brackets and the like having an elongated recess therein adapted to receive a headed wall or other support carried stud, and wall engaging means projecting laterally from the wall engaging face of said plate in parallelism with said recess and said means decreasing in depth toward one of its ends.

1,573,247. SCOOTER. WILLIAM T. JAMES, Chicago, Ill. Filed Jan. 14, 1925. Serial No. 2,328. 4 Claims. (Cl. 208—30.)



1. A two-wheel vehicle having two substantially horizontal supporting side bars with one end bent upward, and having a platform between said side bars, said side bars supported by a wheel at one end, and by a pivoted joint at the bent end, two crank shafts with journaled bearings adapted to revolve on the said side bar frame structure, the said supporting wheel located on one of said crank shafts between the said side bars, and said crank shaft connected to the other crank shaft by a connecting pedal platform having a uniform motion at both ends, and the said connecting platform adapted to impart motion to revolve the wheel on the crank shaft, when the two crank shafts are revolved together by the said platform.

1,573,248. FUEL INJECTION DEVICE. PETER JOHNSEN, New Orleans, La., assignor of one-half to Claude L. Johnson, New Orleans, La. Filed Dec. 8, 1924. Serial No. 754,641. 15 Claims. (Cl. 123—32.)



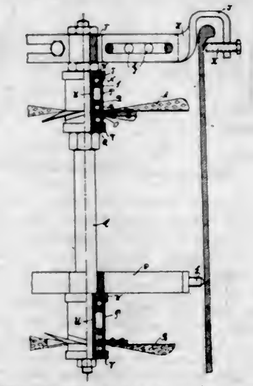
1. In combination with a cylinder of an internal combustion engine, of an inspirator communicating with the interior of said cylinder, a reciprocating plunger in said inspirator for forcing the fuel into said cylinder, a fuel pump delivering to said inspirator, a common drive means operatively associated with said fuel pump and inspirator for delivering fuel to the engine at predetermined intervals, and means for simultaneously varying the quantity of fuel to the inspirator and the stroke of the plunger.

1,573,249. YOKE. BYERS W. KADEL, Baltimore, Md., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed Apr. 26, 1923. Serial No. 634,832. 9 Claims. (Cl. 213—67.)

1. A yoke for railway draft rigging comprising spaced arms, a key slot provided in each of said arms at the forward end thereof, said key slot having a bearing portion at the front end thereof, and means for reinforcing said bearing portions between the front end of the adjacent slot and the forward end of the yoke arm by progressively increasing the metal on both sides of the center lines of said arms in cross sectional area from points relatively close to the front end of each yoke arm to points arranged within a relatively large area adjacent the bearing portion of the respective key slot.

1,573,250. KETTLE. ARTHUR PERCY KAY, Auckland, New Zealand. Filed Nov. 19, 1925. Serial No. 70,165. 2 Claims. (Cl. 53—9.)

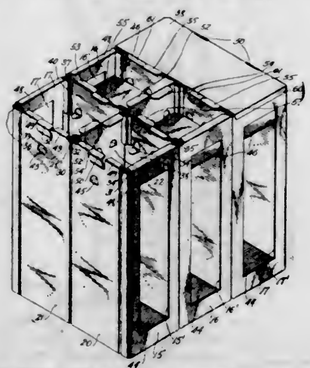
1. A kettle, comprising, a bottom and sides in one piece, the bottom having an upwardly dished portion, the dished portion being provided with parallel corrugations having upwardly turned tapered ends and extending substantially from edge to edge of the dished portion, and a disk of slightly less diameter than the length of the longest corrugation, the disk being centrally positioned on the corrugations inside of the kettle so as to leave the upturned ends of the corrugations open.



1,573,251. PROCESS OF ORNAMENTING LEATHER. WILLY KNOLL, Stuttgart, Germany. Filed Oct. 6, 1925. Serial No. 60,908. 1 Claim. (Cl. 41—26.)

A process for the production of a colored design on leather which consists in the successive steps of applying a background on leather; placing a pattern on the leather conforming to the desired design in order to cover portions of the leather; and then applying a color containing a fixing means on the background on the uncovered portions of the leather, in order to form a decorative design on the leather.

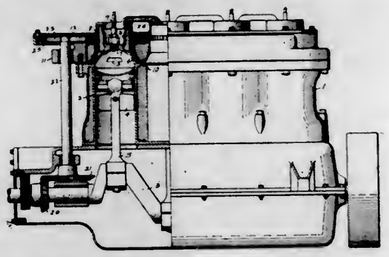
1,573,252. PROCESS FOR PRODUCING SHADING-OFF ORNAMENTATION ON LEATHER. WILLY KNOLL, Stuttgart, Germany. Filed Oct. 12, 1925. Serial No. 62,174. 4 Claims. ((Cl. 41—29.)



1. A process for producing a shading-off color effect on leather, which consists in the steps of covering a portion of the leather by means of a pattern; and then applying a color containing a fixing means over the edge of the pattern to produce a shading-off effect.

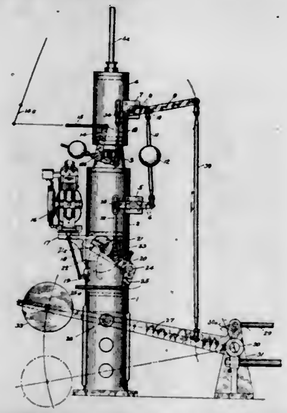
1,573,253. REGULATOR FOR AIR OR GAS CURRENTS. LORENZ KUJAWA and OTTO KOOK, Magdeburg, Germany. Filed Jan. 9, 1923. Serial No. 611,669. 2 Claims. (Cl. 183—77.)

1. A regulator for air and gas currents comprising a pair of elements mounted for rotation independently of each other and arranged to be placed in a flue, each of said elements having fan plates provided throughout their extent with perforations, the plates of one of said elements being reversely shaped to those of the other element so that said elements are caused to rotate in reverse directions, the lower element being of less diameter than the upper element and the diameter of the upper element being nearly equal to that of the flue.



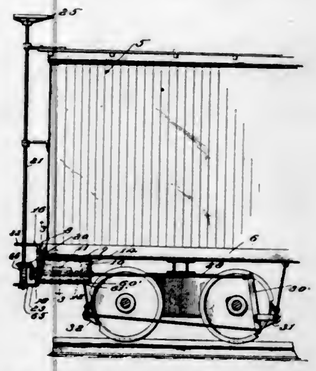
1,573,254. MULTIPLE METAL CABINET. JOSEPH LACHAINE, Lowell, Mass. Filed June 29, 1925. Serial No. 40,443. 5 Claims. (Cl. 45—2.)

1. A multiple cabinet having compartments arranged in opposed adjacent pairs, each compartment being rectangular and comprised of vertical plates so arranged that the inner plates act as walls for adjacent com-



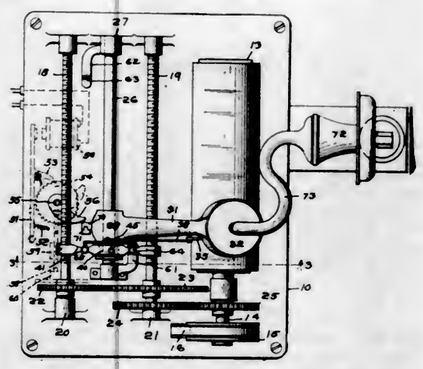
partments, opposed seamed longitudinal edges formed on each plate, the seams of one plate being slidably engageable with the seams of juxtaposed plate, and means formed with the edges of the inner plates engageable with each pair of adjacent outer plates by which they are interlocked together.

1,573,255. INTERNAL-COMBUSTION MOTOR. HOARD LEE, Shreveport, La. Filed Apr. 5, 1921. Serial No. 458,782. 2 Claims. (Cl. 123—59.)



1. In an internal combustion motor, the combination with a cylinder whose outer end is convex in general contour and formed with an upstanding annular flange forming a spark plug housing, of a rotary member around said outer end of said cylinder, the upper part of said member being sleeve-like in form and fitting around said housing, and the lower part thereof being flared forming a valve which works around the convex end of the cylinder, a cylinder head fitted onto said cylinder and provided with a bearing for said sleeve, an enclosing cap bolted onto said head and inclosing and protecting the working parts, said head being provided with oppositely disposed intake and exhaust ports, and said valve having a single port adapted to register with the head ports successively, an intake and an exhaust manifold formed in the head, said head being provided with conduits, said manifolds being connected with the cylinder through said ports and conduits, and operative connections between the motor crank shaft and valve to rotate the latter.

1,573,256. HOIST-CONTROL UNIT. HENRY H. LOGAN, Chicago, Ill. Filed Jan. 17, 1924. Serial No. 686,850. 5 Claims. (Cl. 192—140.)

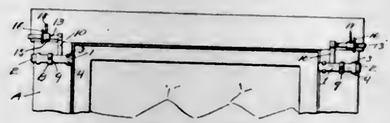


3. In a hoist control unit of the character described, a brake engine, a valve for operating the brake engine, a manually operated lever for controlling said valve, and automatic means arranged for synchronism with a hoist drum for actuating said valve to operate said brake engine independent of the actuation of said manually operated lever, said manually actuated lever being arranged to operate said valve entirely independent of said automatic means.

1,573,257. RAILWAY BRAKE MECHANISM. GEORGE N. LOOMIS, Ruth, Nev. Filed Aug. 11, 1925. Serial No. 49,571. 5 Claims. (Cl. 74—120.)

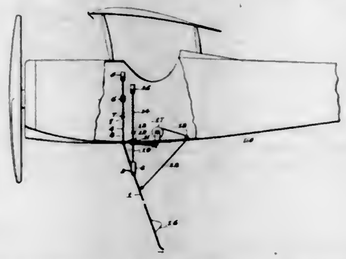
1. A railway brake equipment comprising a frame having means whereby the same may be attached to a railway car, said frame being provided with depending flanges defining guides, a block positioned between said guides, a screw connected to said block, a yoke having side members slidably connected to said block, said block being provided with openings extending out through the sides thereof for the reception of the sides of said yoke, and nuts threaded on said yoke at one side of said block.

1,573,258. COMBINED PHONOGRAPH AND TELEPHONE. JOHN C. LOWE, Minot, N. Dak. Filed Aug. 7, 1924. Serial No. 730,639. 4 Claims. (Cl. 179—6.)



4 The combination with sound reproducing mechanism including a self-starting motor, a brake element controlling the action of the motor, a co-acting brake element to engage with the first named brake element, means to move the co-acting brake element including a ratchet wheel, a pawl to engage the ratchet wheel, electrical means to reciprocate the pawl, a telephone ringing circuit connected with the electrical means, and a telephone talking circuit associated with the sound reproducing mechanism, and means actuated by a movable part of the sound reproducing mechanism to move the co-acting brake element.

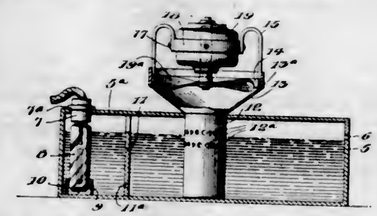
1,573,259. PROCESS FOR PRODUCING BORAX AND SODIUM BICARBONATE FROM LAKE BRINES. MORRIS V. LOWRY, Santa Maria, Calif., assignor to West End Chemical Company, Oakland, Calif., a Corporation of California. Filed Apr. 10, 1923. Serial No. 631,216. 1 Claim. (Cl. 23—39.)



The process of producing crystal borax which consists in concentrating a brine by evaporation, in carbonating the concentrated brine, in cooling the mixture whereby crystal borax and sodium bicarbonate are precipitated, as a sludge, in mixing the sludge with colemanite and heating the same to substantially boiling temperature.

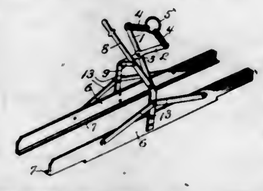
1,573,260. ADJUSTABLE WINDOW SHADE AND CURTAIN BRACKET. ANDREW LUKE, Zeigler, Ill. Filed July 7, 1924. Serial No. 724,661. 3 Claims. (Cl. 156—24.)

1. In a curtain fixture, clamping means for attachment to a window frame, an upwardly extending arm secured thereto, a horizontally extending bar secured at one end to the upper end of the arm, a shade bracket slidably supported on said arm, and a curtain pole bracket threaded into the shade bracket and adapted to engage the bar for holding the shade bracket in various adjusted positions.



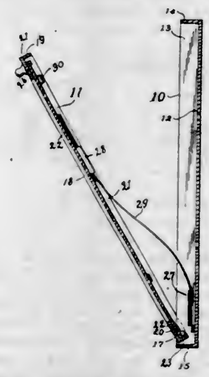
1,573,261. SOUNDING DEVICE. CORLEY P. MCDARMENT, Mayfield, Ky. Filed Sept. 28, 1922. Serial No. 590,071. 5 Claims. (Cl. 244—31.)

1. In combination with an aircraft, a sounding device carried thereby and adapted by contact with the landing surface to indicate the proximity of the aircraft to such surface, said device embodying a trailer arm mounted under the body of the aircraft and adapted to swing in a fore and aft direction and also arcuately laterally.



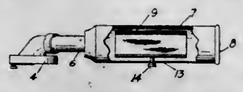
1,573,262. HUMIDIFIER. JAMES B. MCDEVITT, Chicago, Ill. Filed Nov. 23, 1923. Serial No. 676,628. 1 Claim. (Cl. 261—30.)

An air moistener for tobacco cases comprising a water container, a tubular support extending vertically through said container to the bottom thereof and having a flared open upper end located above and exteriorly of the container, arms carried by the flared upper end of said tubular support, and a motor carried by said arms and having a fan located entirely within and protected by said flared upper end and said arms, said tubular



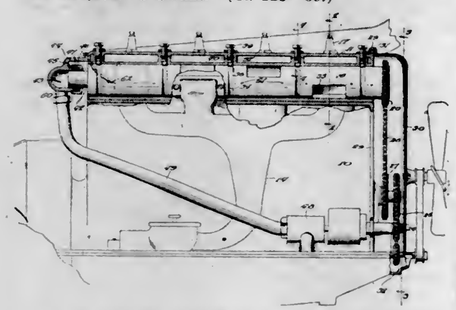
support being provided with openings within said container whereby water laden air may be drawn from said container through the openings in said tubular support and the flared open upper end of the same.

1,573,263. LIFTING TONGS. JEREMIAH MADDEN, Kansas City, Mo. Filed May 11, 1925. Serial No. 29,354. 3 Claims. (Cl. 72—121.)



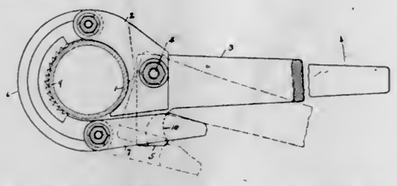
1. Lifting tongs comprising two crossed bars pivoted to each other, and two parallel clamping members fastened respectively transversely to said bars and provided each on its inner side with a longitudinal rib spaced from the lower edge of the member.

1,573,264. SELF-CLOSING CASE. HARRY A. MANKAMEYER, Kansas City, Mo. Filed Mar. 15, 1924. Serial No. 699,549. 3 Claims. (Cl. 220—35.)



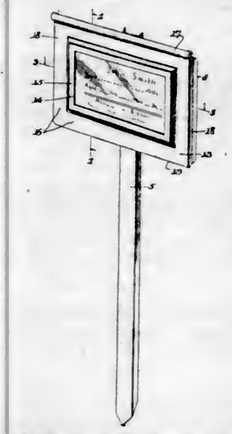
1. A case and a closure therefor movable to and from closed position, a leaf spring element, a mounting for the spring comprising a bearing on the case and another bearing on the closure each having the spring slidably engaged therein and being spaced apart longitudinally of the spring when the cover is in closed position.

1,573,265. MEANS FOR INTENSIFYING REPRODUCED TONES. JOSEPH MERSMAN, Ottawa, Ohio. Filed Jan. 10, 1922. Serial No. 528,155. 7 Claims. (Cl. 181—27.)



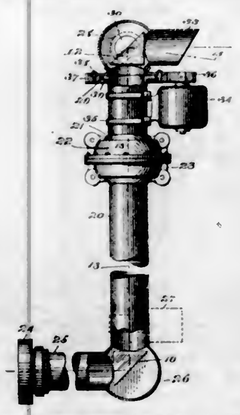
1. The combination with a reproducer, and a diaphragm, of a resonating tube communicating at one end with the reproducer, and a longitudinally positioned vibrator in the resonating tube of the same material as the diaphragm of the reproducer.

1,573,266. INTERNAL-COMBUSTION ENGINE. HAROLD N. MOORE, Kearney, Nebr. Filed May 5, 1924. Serial No. 711,173. 8 Claims. (Cl. 123—59.)



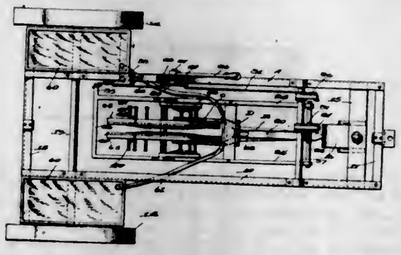
1. In an internal combustion engine, a cylinder head, rotatable tubular intake and exhaust valves carried thereby and projecting at one end of the head, an oil distributing chamber common to the valves, and means for delivering oil to said chamber to circulate through the valves, the chamber being provided with means supporting said chamber in spaced relation to the said end of the head to communicate with the projecting ends of the valves and forming a cover overlying said ends.

1,573,267. TONG. JEDDY D. NIXON, Houston, Tex., assignor to Howard F. Smith, Harris County, Tex. Filed Mar. 6, 1922. Serial No. 541,609. 1 Claim. (Cl. 81—66.)



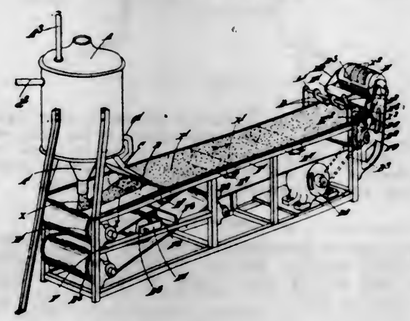
A pipe tong including a head having a deep slot at one side, an arcuate lateral extension carried by the other side of the head, a single handle one end of which is pivoted in said slot, a lateral projection carried by the pivoted end of the handle and projecting out beyond the slotted end of the head, an arcuate clamp one end of which is pivoted to the free end of said extension, a U-shaped latch pivoted to the other end of said clamp and working substantially parallel with the handle and adapted to engage over said projection, the inner side of said head and extension being arcuate and forming a jaw adapted to conform to the contour of the pipe, and a toothed pipe-engaging grip carried by the inner side of said clamp.

1,573,268. GRAVE MARKER. WILLIAM F. NORMAN, Nevada, Mo. Filed July 6, 1925. Serial No. 41,656. 2 Claims. (Cl. 40—124.5.)



1. A grave marker including a rear plate having a hinging bead upon its upper edge throughout the length thereof, an apertured covering plate having a cooperative hinging bead throughout the length of its upper edge whereby when the plates are fitted together a tight joint is provided at the hinge, and two locking lugs carried at the respective ends of the bead of the latter plate for extending across the ends of the head of the first plate to hold the plates against longitudinal displacement, and cooperating friction gripping flanges carried by each plate for holding the plates coextensive and against accidental displacement.

1,573,269. VERTICAL FINDER FOR AIRCRAFT. CHARLES L. FAULUS, ROBERT KAUCH, and HENRY B. INGLIS, Dayton, Ohio. Filed July 17, 1924. Serial No. 726,525. 5 Claims. (Cl. 88—2.4.)

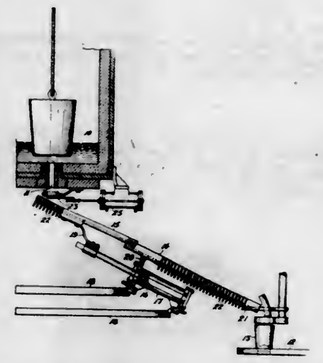


1. In a vertical finder for aircraft, a laterally viewing reflector, means for mounting said reflector to rotate about a substantially vertical axis, revolving means for said reflector for constantly revolving the same at a rapid speed to secure a continuous image of the horizon, and a stationary sighting means vertically arranged relative to said reflector for viewing the image of the horizon on the reflector.

1,573,270. PLANT SETTER. ELIHU C. PEARSON, Stillwater, Okla. Filed Aug. 4, 1924. Serial No. 730,080. 2 Claims. (Cl. 111—3.)

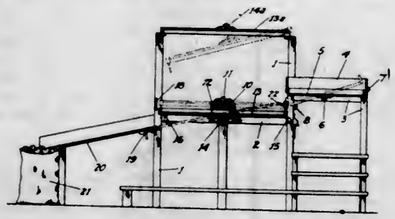
1. A plant setting device comprising a wheeled frame, a plant depositing wheel carried by the frame having a pair of solid plates, resilient sector arms secured to the inner faces of the plates, padded rims secured to the outer ends of the arms, spring means for normally holding the rims in engagement with their respective plates, and means for urging the flexible rims toward one another against the tension of said springs at predetermined times.

1,573,271. MANUFACTURE OF GOLF BALLS. ALBERT ERNEST PENFOLD, Birmingham, England, assignor to The Dunlop Rubber Company, Limited, London, England, a British Company. Filed Nov. 26, 1923. Serial No. 677,075. 9 Claims. (Cl. 18—57.)



1. In the manufacture of golf balls, a method of preparing gutta percha for use in the construction of the ball, comprising preparing a solution of gutta percha, and forming the solution into a thin layer.

1,573,272. ANTIGLARE SHIELD. GEORGE E. PHILLIPS, Imola, Calif. Filed July 7, 1924. Serial No. 724,645. 1 Claim. (Cl. 296—97.)

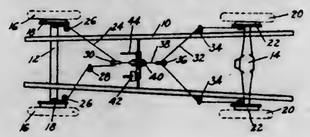


A glare shield comprising a sheet of anti-glare material having a rigid supporting rod along one edge with an extension beyond the material at one end and a ball joint at the other, a clip for supporting the extension adapted to be attached to an automobile windshield framing and a socket for receiving the ball joint adapted to be attached to the windshield framing, said socket being adapted to be positioned at the corner windshield framing of the vehicle and being slotted, to allow the glare shield to be swung from a position in front of the driver to a position at the side of the driver.

1,573,273. GLASS-FLOWING DEVICE. CLAUDE W. PLEUKHARP, San Francisco, Calif., assignor to Illinois-Pacific Glass Co., San Francisco, Calif., a Corporation of California. Filed Feb. 23, 1922. Serial No. 538,528. 6 Claims. (Cl. 49—5.)

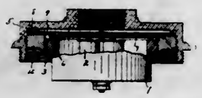
1. In a glass flowing machine a charging vessel, a mold carrying device, an inclined chute arranged between, said chute having a reciprocating upper portion and a stationary lower portion, and a compressed air cylinder and piston for actuating the reciprocating portion.

1,573,274. POTATO-SORTING DEVICE. THOMAS PRESCOTT, Stockton, Calif. Filed Nov. 28, 1924. Serial No. 752,602. 11 Claims. (Cl. 209—123.)



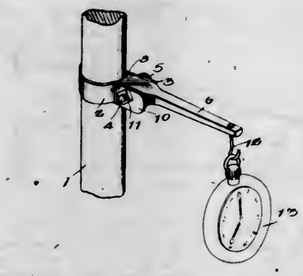
1. A potato sorting device including a sorting table onto which the potatoes to be sorted are deposited, another sorting table adapted to be lowered into engagement with the potatoes on the first table, and turnable members mounted in a fixed position relative to each other and in which both said tables are mounted only when said tables are in potato engaging relation whereby to enable the tables to be turned as a unit with the axis of said members as the center of rotation.

1,573,275. BRAKE-OPERATING CONNECTION. JACOB L. PRICE, Chicago, Ill., assignor to Bendix Brake Company, a Corporation of Illinois. Filed July 16, 1925. Serial No. 43,933. 12 Claims. (Cl. 188—204.)



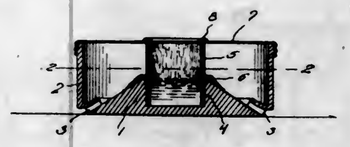
1. A vehicle having, in combination, a pair of front brakes, a pair of rear brakes, a continuous tension ele-

ment arranged to operate each pair of brakes, a pulley engaging each tension element, a block and tackle con-



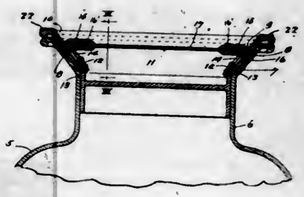
necting the pulleys, and means for operating the block and tackle to draw the pulleys toward each other to apply all four brakes.

1,573,276. DIAPHRAGM FOR TELEPHONE RECEIVERS. EARL H. ROLLINSON, Lyon Farms, N. J. Filed Feb. 26, 1924. Serial No. 695,191. 6 Claims. (Cl. 179—116.)



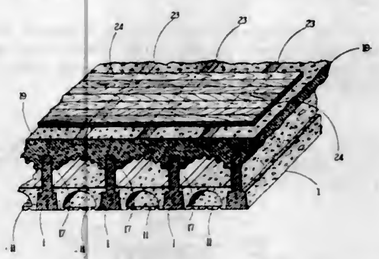
1. In a telephone receiver, the combination of a receiver cup and magnet system, a receiver cap having an annular projection therein, an armature supported upon the margin of said cup, a diaphragm within said cap and a single ball separating the diaphragm and armature at their centers.

1,573,277. BRACKET FOR ALARM CLOCKS AND WATCHES. CHARLIE W. SAGER, Superior, Ariz. Filed Aug. 10, 1922. Serial No. 580,953. 1 Claim. (Cl. 248—20.)



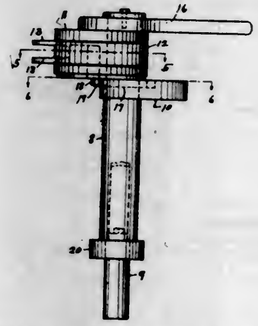
In a bracket of the character described comprising a split annular band formed of resilient material adapted to be sprung about a supporting post, a pair of apertured ears formed on the terminals of the band, a supporting arm having an enlarged end of greater height than the width of said ears disposed therebetween for engaging the supporting post, means extending through the ears and the enlarged end of the arm for urging the ears in frictional contact with the sides of the enlarged end of the arm, and an arcuate thumb piece formed on the outer terminal of one of the ears and extending beyond the enlarged end of the arm.

1,573,278. POISON-LIQUID CONTAINER. ANTHONY W. SCHLESINGER, Beaumont, Tex. Filed Aug. 10, 1925. Serial No. 49,388. 6 Claims. (Cl. 43—131.)



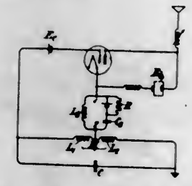
6. A device of the class described including a base having an upper conical surface provided with a recess at its apex, an annular wall upstanding from the base, the juncture of the wall and the base being provided with openings, a wick of cylindrical construction having its lower end seated in the recess and provided with a fringe resting on the conical surface, and a cover detachably engageable with the upper edge of the wall and provided with an annular channel for receiving the upper edge of the wick.

1,573,279. SELF-LOCKING COVER. ISAURO V. SILVEIRA, Fallon, Nev. Filed Dec. 1, 1924. Serial No. 753,275. 2 Claims. (Cl. 220—55.)



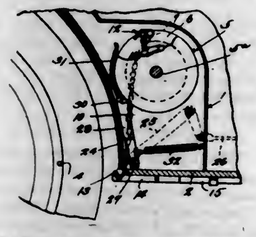
1. A can having an opening therein, a cover fitting the can, a rocking latch device carried by the cover, and a normally flat spring handle carried by the cover and connected with said latch device to respectively project same into and retract same from said opening.

1,573,280. REENFORCED-FLOORING CONSTRUCTION. FRED EARNEST SIMPSON, Toronto, Ontario, Canada. Filed May 31, 1923. Serial No. 642,520. 1 Claim. (Cl. 72—66.)



A reenforced flooring comprising parallel concrete joists having tapering base portions and reduced upper portions forming shoulders at the upper ends of said bases, tubular concrete elements having flat upper sides projecting over said shoulders and tapering walls fitting between said joist bases and flat floors with grooves in the under sides, metal arches supported on the flat upper sides of said tubular elements, a concrete bed submerging the upper ends of said joists and supported on said metal arches.

1,573,281. PIPE-ROTATING ATTACHMENT FOR ROTARIES. HOWARD F. SMITH, Houston, Tex. Filed Mar. 12, 1923. Serial No. 624,590. 5 Claims. (Cl. 255—35.)

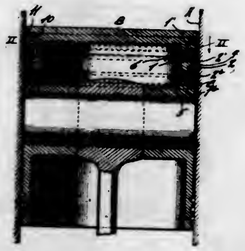


5. In combination a tong, a back up post, a support connected to the back up post and supporting the tong, an eccentric mounted on said post, means connecting said eccentric to the tong handle, and means for rotating the eccentric.

1,573,282. THERMIONIC MODULATOR. JOHN STONE STONE, San Diego, Calif., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 23, 1923. Serial No. 676,625. 2 Claims. (Cl. 179—171.)

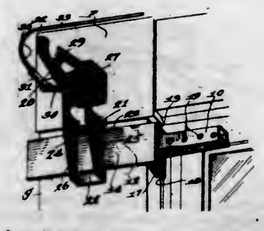
1. A modulating system comprising a three-electrode thermionic vacuum tube with input and output circuits and a common conductor connected to the tube filament, a resistance amplifying loop interposed in said conductor, a telephone transmitter interposed in one side of said loop and a resistance shunting said transmitter.

1,573,283. MUD-CHAIN-APPLYING MECHANISM. ROBERT L. SUTTER, Falls City, Nebr. Filed Sept. 13, 1923. Serial No. 662,546. 1 Claim. (Cl. 152—14.)



The combination with a vehicle wheel having lateral projections adjacent its perimeter, of a chain carrying drum located adjacent said wheel, said chain having headed studs releasably engaged with said drum, hooks carried by said chain for engaging said lateral projections, projectable means releasably supporting said hooks, means operable from within the car for actuating said projectable means to position the hooks in the path of said projections whereby the hooks will be engaged with the projections on the turning of the wheel, and means for transferring the stud carried end of the chain into engagement with said projections to secure the chain to the wheel.

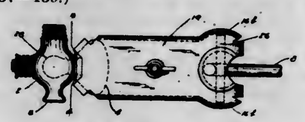
1,573,284. COMPOSITION FOR ABSORBING AND PURIFYING THE WASTE PRODUCTS OF COMBUSTION. JOHN C. TATE, Oakland, Calif. Filed Nov. 16, 1922. Serial No. 601,394. 2 Claims. (Cl. 252—2.5.)



1. A composition lacking a moisture content for purifying waste gaseous products of combustion comprising solely a hard porous mass consisting of a mixture of lime capable of absorbing and retaining moisture, gases and the disagreeable odors resulting from the combustion of animal and vegetable matter, in combination with burned gypsum for holding the lime.

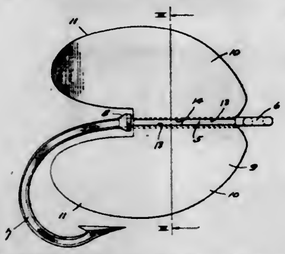
1,573,285. PISTON AND PISTON RING. JESSE M. THOMAS, Pine Lawn, Mo., assignor of one-third to William D. Gruelle, St. Louis, Mo. Filed Nov. 16, 1921. Serial No. 515,436. 10 Claims. (Cl. 74—109.)

1. A piston having an annular piston ring groove, a wall of which is inclined, a piston ring having an inclined face located within said piston ring groove and a peripheral face adapted to bear against the inside face of the cylinder within which said piston operates, said piston ring being provided with a groove and the piston being provided with a rib which lies within the last mentioned groove, and a secondary ring having inclined faces interposed between the inclined wall and the inclined face of said piston ring, whereby a radial movement of said secondary ring will impart radial movement to said piston ring.



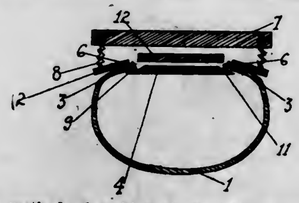
1,573,286. SUPPORTING BRACKET FOR WINDOW HANGINGS. KARL H. WHITNEY, Kirksville, Mo. Filed Feb. 3, 1925. Serial No. 6,579. 1 Claim. (Cl. 156—23.)

A window hanging support comprising a bracket member having angularly disposed end portions, means for slidably holding the bracket member, a resilient pad applied to the inner surface of one end portion of the



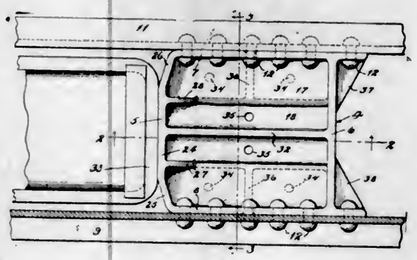
bracket member, the said end portion being provided with parallel slots, and a rail section having an end portion passing through the slots whereby the rail section is pivotally connected with the bracket member, the said end portion of the rail section engaging in the side surface of the pad.

1,573,287. DISTANT-OPERATED VALVE. JOHN M. WILLIAMS, Jr., and RICHARD F. FISCHER, Dayton, Ohio. Filed Aug. 4, 1922. Serial No. 579,634. 4 Claims. (Cl. 137—139.)



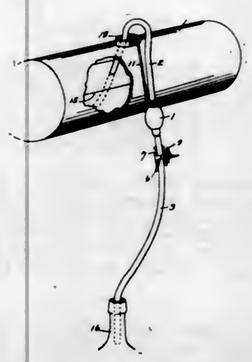
1. A universal joint comprising a U-shaped body member having a hole through the center of its curved portion and hemispherical depressions on opposite sides of said hole, a rod having an eye projecting through said hole, said eye fitting into said depressions, and a pin positioned between the sides of said body member and extending through the eye of the rod.

1,573,288. TROLLING GEAR. ALBERT W. WILSON, San Francisco, Calif. Filed Dec. 15, 1924. Serial No. 756,028. 5 Claims. (Cl. 43—45.)



5. As a new article of manufacture, a spinner for fish hooks embodying a structure having a blade terminating in a bearing for the free reception of the shank of a hook and including axially resilient walls capable of movement relatively toward and away from each other on the application of pressure thereto.

1,573,289. METHOD OF MANUFACTURING SHOES. WILLIAM A. WITHERS, Elizabethtown, Pa., assignor to W. A. Withers Shoe Company, Elizabethtown, Pa., a Corporation of Pennsylvania. Filed Feb. 11, 1924. Serial No. 691,886. 4 Claims. (Cl. 12—142.)

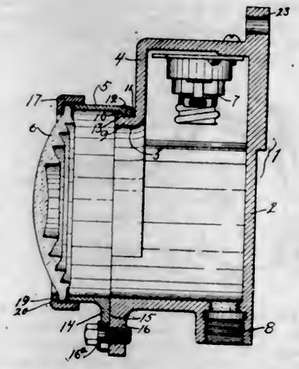


1. A method of making shoes that includes securing an inner portion of a shoe upper to an inner edge of a welt, placing the united portions over a channeled inner sole having a lip formed thereon, and then securing the lip on the inner sode to the united upper and welt portions.

1,573,290. DRAFT RIGGING. DONALD S. BARROWS, Rochester, N. Y., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed Mar. 16, 1925. Serial No. 15,858. 18 Claims. (Cl. 213—56.)

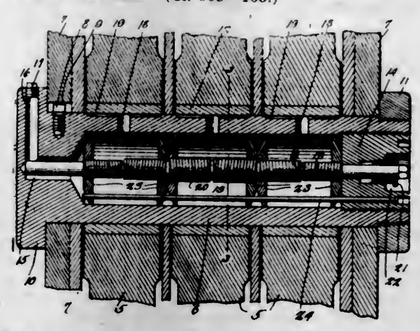
1. A draft rigging back stop comprising side walls adapted to be secured to spaced car sills, a forward end wall united to said side walls and adapted to serve as an abutment for a movable part of a draft rigging, and longitudinally disposed transversely diverging webs uniting the side walls and forming a V-shaped section for reinforcing said forward end wall.

1,573,291. SIPHON. LOUIS BIANCHI, Redding, Calif. Filed Oct. 13, 1925. Serial No. 62,232. 2 Claims. (Cl. 137—20.)



1. A siphon comprising a soft rubber bulb with a tube extending from opposite ends thereof and provided with means for suspending the bulb directly from a container when siphoning therefrom and whereby the siphoning tube above the bulb is relieved from the weight of the bulb.

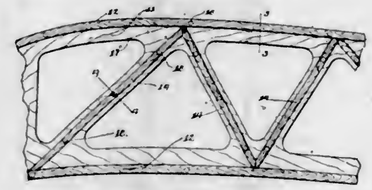
1,573,292. INCANDESCENT-ELECTRIC-LAMP HOUSING. CARL H. BISSELL and ELDA G. SMITH, Syracuse, N. Y., assignors to Crouse-Hinds Company, Syracuse, N. Y., a Corporation of New York. Filed Jan. 9, 1923. Serial No. 611,577. 4 Claims. (Cl. 240—7.1.)



1. An electric lamp, comprising a body having a box portion formed with an opening in its front side, and an extension at its top, the extension having closed top, side, front and rear walls, and opening at its bottom into the box, the box being formed with an outwardly extending flange around said opening, a detachable collar

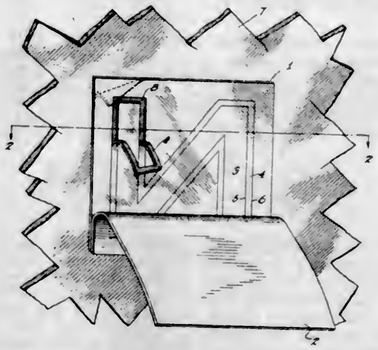
mounted on the flange, the flange and the collar having means for interlocking upon a lateral movement of the collar relatively to the flange, said collar having means

for carrying a lens and a lamp socket mounted in the extension and in such position that the lamp is in line with the opening, lamp socket and lens.



1,573,293. LUBRICATING DEVICE. LEE J. BLACK, Beaumont, Tex. Filed Nov. 16, 1922. Serial No. 601,286. 1 Claim. (Cl. 308—103.)

In a force-feed grease expelling unit for insertion into a hollow shaft, an externally threaded plug adapted to close one end of the shaft, a screw having one end swiveled in and passing through said plug at the axis of the latter, spaced grease-expelling pistons threaded on said screw by right and left hand threads respectively, said pistons having peripheral edges which are concentric with said screw throughout their circumference, and a rod parallel with the screw and anchored at one end to the aforesaid plug, said pistons having openings through which said rod passes to hold the pistons against turning when the screw is turned to operate said pistons and to force rotation of said pistons with said plug when the latter is turned incident to endwise insertion of the unit into the shaft or removal from such shaft, the peripheries of said pistons being exposed for contact with the interior of said shaft.

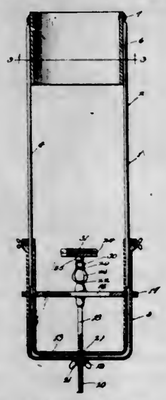


1,573,294. REENFORCED BRACING MEMBER FOR AIRCRAFT. BERTHOUD C. BOULTON, Dayton, Ohio. Filed June 27, 1923. Serial No. 648,053. 1 Claim. (Cl. 244—31.)

A structural rib for airplane wings comprising a sheet of plywood defining the sectional contour of the airplane wing, strips of wood of small cross-sectional area attached to the upper and lower edges at the sides of said sheet and flush with the outline of said sheet to also define the sectional contour of the airplane wing, a plurality of reenforcing strips of wood extending diagonally between said upper and lower edges and attached in

pairs directly to said plywood sheet, on opposite sides thereof, said plywood sheet being cut away between said diagonally extending strips whereby a rigid truss is provided without the use of fitting members.

1,573,295. ART OF LETTERING. EDGAR BOURGEOIS, Marlboro, Mass. Filed Sept. 23, 1925. Serial No. 58,000. 7 Claims. (Cl. 41—33.)



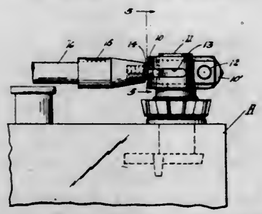
1. The herein described method of lettering, which consists in cutting in a letter ply of material a letter or symbol, thereafter applying a suitable backing to said ply to hold the ply intact, thereafter adhesively securing the first mentioned ply to the surface on which the letter is to be accomplished, then stripping off the backing, and thereafter stripping from said surface such parts of the letter ply as it is desired to remove.

6. As a new article of manufacture, a sheet of metal foil having a letter or symbol cut thereinto and a suitable temporary flexible backing adhesively, detachably secured to said sheet to maintain the sheet intact.

1,573,296. ADJUSTABLE SPLINT. HUGH THOMAS BRASELL, Fort Sumner, N. Mex. Filed June 13, 1922. Serial No. 567,985. 1 Claim. (Cl. 128—85.)

A surgical splint comprising a frame member including side bars and a yoke connecting said bars at one end, a limb-encircling band secured rigidly to said yoke and disposed between said side bars, a second frame member including tubular side bars and a cross bar connecting said side bars at one end, the side bars of the first-mentioned frame member being adjustably secured in the tubular side bars of the second frame member, a crosshead slidably engaged at its ends upon the tubular sidebars, a standard fixed to and extending from one side of said crosshead through the cross bar of the second-mentioned frame member, adjustable means for securing said standard in the cross bar, a second standard fixed

to and extending from the opposite side of the crosshead and terminating in a ball, a rest member provided on

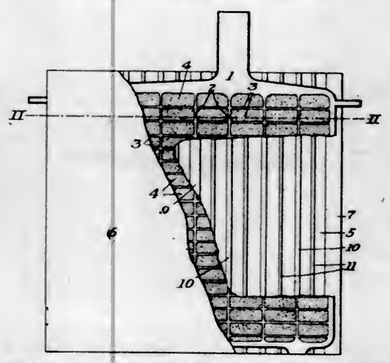


one side with a shank terminating in a split socket adapted to fit around said ball, and means for clamping said socket about the ball.

1,573,297. PROCESS OF DRYING PAPER. EMIL A. BRINER, East Orange, N. J., and HENRY J. GUILD, Bangor, Me.; said Guild assignor to Eastern Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 29, 1919. Serial No. 341,359. 6 Claims. (Cl. 34—24.)

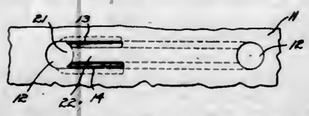
3. The following process for drying paper, to wit: first, subjecting an initially wet newly formed traveling web of paper to progressive drying, while being forcibly held to substantially determinate form and dimensions, until the moisture content is reduced to a first critical value marking the beginning of injury from such mechanical constraint; second, immediately and continuously subjecting the same to further progressive drying without any considerable degree of such constraint, until the moisture content has been further reduced to a second value at which immunity from injury by customary degrees of mechanical restraint is reestablished; and, third, completely drying the web while under such constraint.

1,573,298. STORAGE-BATTERY TERMINAL-POST CLAMP. MAX BROWN, Chicago, Ill., assignor to The Brown-Sebco Terminal Mfg. Co., Inc., Chicago, Ill., a Corporation of Illinois. Filed May 5, 1922. Serial No. 558,712. 8 Claims. (Cl. 173—259.)



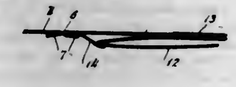
4. A device of the class described comprising a split clamp adapted to embrace a terminal post; said clamp having an elongated slot formed in its side and also having an opening formed therein for the reception of a bolt provided with a head and threaded; and means adjustably passing through the opposite ends of said clamp for drawing the same together and thereby tightly to engage said clamp around said post.

1,573,299. SHOE. HUGH BULLOCK, Andover, Mass., assignor to Converse Rubber Shoe Co., a Corporation of Massachusetts. Filed May 29, 1924. Serial No. 716,822. 3 Claims. (Cl. 36—45.)



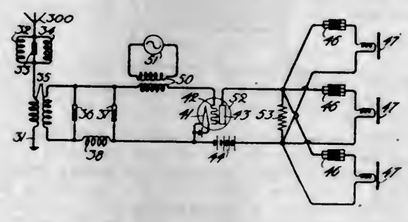
1. An ankle height athletic shoe, having lacing means at the front thereof, and provided at its top, rear part with a substantially U-shaped notch, the edges of which extend partly around the Achilles tendon of the wearer, whereby the pull from the lacing means is distributed and chafing of the tendon prevented.

1,573,300. STORAGE BATTERY. RUFUS N. CHAMBERLAIN, Chicago, Ill., assignor, by mesne assignments, to Gould Storage Battery Company Inc., New York, N. Y., a Corporation of New York. Filed Mar. 24, 1922. Serial No. 546,402. 4 Claims. (Cl. 136—149.)



2. The combination with a battery plate having vertical ribs of a separator having wide ribs on its vertical edges, a wide rib intermediate the edge ribs and narrow ribs between said intermediate ribs and said edge ribs, each of said wide ribs coinciding with the ribs on said plate, substantially as described.

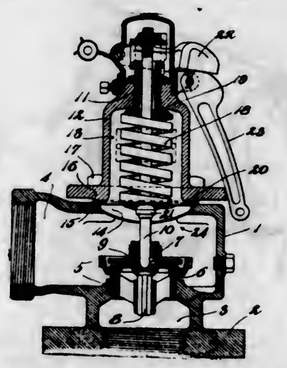
1,573,301. METHOD OF AND APPARATUS FOR CUTTING WIDE SLOTS. CLARENCE J. COBERLY, Los Angeles, Calif., assignor to Kobe, Inc., Los Angeles, Calif., a Corporation of California. Filed Jan. 5, 1925. Serial No. 735. 11 Claims. (Cl. 266—23.)



1. The method of cutting a slot in a sheet of metal, comprising; mechanically forming holes through said metal at points on opposite ends of the proposed slot; and simultaneously burning between said holes a pair of parallel slots.

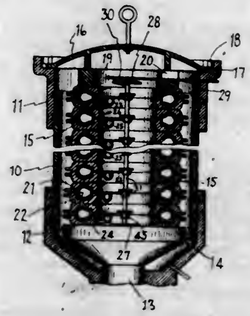
1,573,302. COAT. ISIDORE M. COHEN, Philadelphia, Pa. Filed Feb. 19, 1925. Serial No. 10,200. 1 Claim. (Cl. 2—247.)

A garment including a pocket having a straight upper edge with only the forward portion thereof secured to the interior of the garment, and a flexible connection between the rear end of the unsecured portion of said upper edge, said unsecured portion, together with the rear vertical edge of the pocket, being otherwise free of the garment, and said connection projecting from said upper edge in substantial parallelism thereto and being secured to said garment at a point rearwardly of said vertical edge.



1,573,303. CARRIER-WAVE TRANSMISSION. EDWIN H. COLPITTS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Nov. 2, 1920, Serial No. 421,764, Patent No. 1,465,932, dated Aug. 28, 1923. Divided and this application filed Oct. 21, 1922. Serial No. 595,909. 15 Claims. (Cl. 250—9.)

1. The method of multiplex transmission comprising a modification of each of a plurality of different frequency oscillations in a manner individual thereto, simultaneous transmission of all of said modified oscillations, reception of all of said transmitted oscillations at a common station, conversion of all of said received oscillations into a composite current comprising lower frequency oscillations which differ in frequency by greater proportional amounts than the corresponding transmitted oscillations from which they are derived, selection of each of said lower frequency oscillations from the other lower frequency oscillations of the composite current to thereby distinguish their individual modifications, and utilization of each of said selected oscillations to give a response which is characteristic of the individual modification thereof.

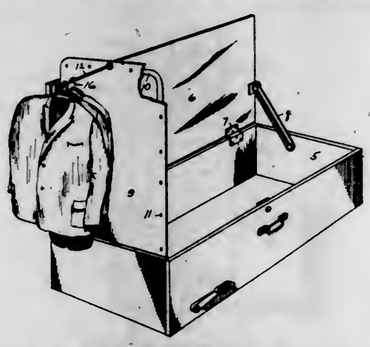


1,573,304. VALVE. PHILIP G. DARLING, Bridgeport, Conn., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed Feb. 16, 1924. Serial No. 693,261. 2 Claims. (Cl. 137—53.)

1. In combination with a safety valve having a casing provided with an outlet chamber, a valve seat, a valve head, said head being subjected to pressure tending to lift it from its seat, a removable spring housing secured in concentric relation to an opening in the wall of the outlet chamber of the casing, a spring in the housing, a spindle for transmitting movement from the spring to the valve head, and a septum of thin sheet material having a central dished portion convex toward the valve head whereby to make it stiff and unyielding and having a flat peripheral flange, said flange being adapted at will to be interposed and clamped between opposed surfaces of the spring housing and the casing, which surfaces, except for the interposition of the septum, would

contact directly with each other, the central convex part of the septum when so positioned forming a fixed partition between the interior of the housing and outlet chamber.

1,573,305. HEATER CONNECTION. CHARLES H. DESAUTELS, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Oct. 17, 1922. Serial No. 595,208. 2 Claims. (Cl. 285—107.)



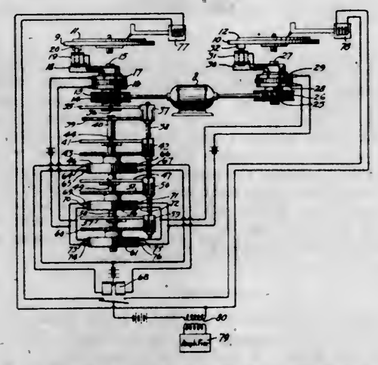
2. A T-coupling comprising opposed nipples adapted to be secured to the main line pipe sections, said nipples having secured thereto interfitting interrupted screw threads whereby they may be coupled together by sliding the thread segments past each other, and locked by rotating one set of threads relative to the other, and a plug fitting between the nipples and presenting surfaces adapted to form fluid tight seats with the nipples when the coupling is locked, the nipples having passages connecting with the pipe sections, and the plug having a passage connecting with the passages in the nipples, and adapted to be connected to a branch pipe.

1,573,306. WARDROBE TRUNK. KURT ARMAND DIEKELMANN, Birmingham, Ala. Filed May 5, 1925. Serial No. 28,210. 4 Claims. (Cl. 190—13.)

1. In a device of the character described, in combination with a body portion and a cover for the same, of a panel extending transversely of the body portion and hingedly connected thereto at a point adjacent to the

bottom of the body portion, a hanger supporting rod extending from the panel at a point adjacent the top and manually operable means operative from the exterior of

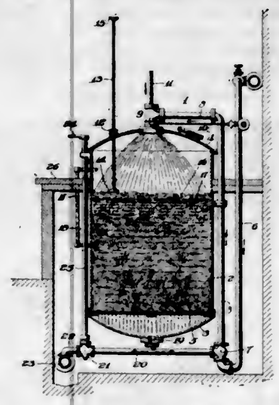
the body portion for swinging said panel from a position where it lies substantially within the body to a position where it lies substantially vertical to the body.



1,573,307. FUEL OIL. FRANK L. DIETZ, Brooklyn, N. Y. Filed Nov. 16, 1921. Serial No. 515,570. 4 Claims. (Cl. 44—9.)

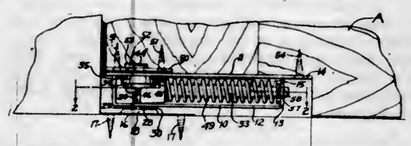
1. A fuel oil for the generation of power by explosion engines, consisting of low temperature tar and of a mixture consisting of an alcohol and a hydrocarbon, both boiling at approximately 79 centigrade miscible therewith, as an agent capable of preventing the solidification of said low temperature tar.

1,573,308. MOTOR FUEL OIL. FRANK L. DIETZ, Brooklyn, N. Y. Filed Feb. 2, 1922, Serial No. 533,568. Renewed July 18, 1925. 3 Claims. (Cl. 44—9.)



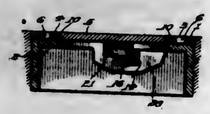
1. A fuel oil for the generation of power in explosion engines, consisting of the crude tar obtained by the distillation of coal at temperatures up to 600 centigrades and alcohol.

1,573,309. RECORDING AND REPRODUCING MACHINE. THOMAS L. DOWEY, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 12, 1923. Serial No. 680,168. 4 Claims. (Cl. 179—100.1.)



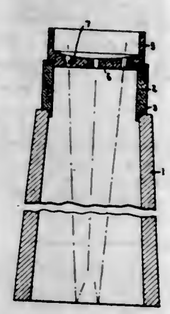
1. In a phonographic apparatus including record supporting and driving means and a plurality of electrical recorder-reproducers adapted to be brought into operation in succession, a common translating device, a switching arrangement for connecting said recorder-reproducers one at a time to said translating device comprising switching means, controlling means rotating at a lesser rate than said record supporting means for conditioning said switching means for operation only upon completion of a predetermined number of revolutions of said record supporting means, and means having an instantaneous speed of the same order as the peripheral speed of the record for actuating said switching means.

1,573,310. INDICATOR FOR INJECTOR PRESSURE KIERS. WILLIAM C. FOULDS, Tuckerton, N. J. Filed Nov. 12, 1921. Serial No. 514,839. 2 Claims. (Cl. 33—125.)



1. The combination with a pressure kier having a gauge for indicating the level of liquid therein, of a vertically disposed slidable indicating rod passing through the top of the kier to indicate above the top of the latter the height of the material contained in the kier, the foot of said rod resting on said material, whereby the height of the material may be compared with the height of the liquid.

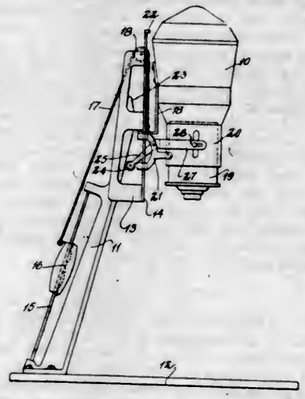
1,573,311. HINGE. DAVID S. FRENCH and HAROLD S. FORSBERG, Bridgeport, Conn., assignors to The Forsberg Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 28, 1923. Serial No. 665,480. 2 Claims. (Cl. 16—185.)



1. A hinge comprising a floor plate, a stationary post secured therein, said post including a cylindrical portion and having oppositely disposed pivotal shoulders, an annular plate member fixed upon said pivotal shoulders and surrounding the post, a frame comprising an upper plate with cap pivotally associated with said annular plate member and a lower plate pivoted upon said cylindrical portion, the flange of said cap engaging the circumferential margin of said annular plate member and there being a pocket between said annular plate member and cap, said post extending into said pocket, a ball retaining member in said pocket and rotatable upon said post, said ball retaining member having individual sockets spaced from said post, balls in said sockets and engaging the adjacent faces of said annular plate member and cap, a stop plate with stops, a pin on said lower plate and adapted to engage said stops, and a spring actuated plunger associated with said frame and including arms with grooves adapted to engage said pivotal shoulders.

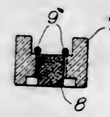
1,573,312. STOP BOX. JOSEPH L. FRITZ, Philadelphia, Pa. Filed Oct. 29, 1923. Serial No. 671,622. 5 Claims. (Cl. 137—13.)

1. In a stop box, the combination of a box having a flange adjacent its upper end and extending inwardly, which flange is provided with notches extending therethrough and the said box also having lugs or projections located below the said flange, which lugs or projections are provided with notches in their upper edges which form vertical shoulders, and a cover for the said box, which cover is provided with depending projections the lower edges of which terminate in outwardly projecting extensions which are adapted to engage said shoulders whereby the said cover is prevented from turning in one direction until it is lifted vertically a distance sufficient to disengage the said projecting extensions from said shoulders.



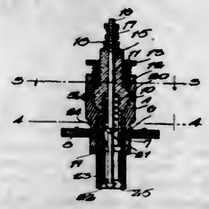
1,573,313. HOT TOP FOR INGOT MOLDS. VICTOR A. GIESEY, Cleveland Heights, Ohio. Filed Aug. 2, 1924. Serial No. 729,717. 1 Claim. (Cl. 22—147.)

In a pouring top for ingot molds, the combination of a tubular member removably mounted upon an ingot mold and in alignment therewith, and a transverse partition in said member provided with a plurality of convergent openings therethrough, the axes of such openings when projected falling against the bottom of said mold adjacent the center thereof.



1,573,314. ENLARGING CAMERA. EMANUEL GOLDBERG and MARTIN NOWICKI, Dresden, Germany. Filed Jan. 3, 1925. Serial No. 444. 4 Claims. (Cl. 88—24.)

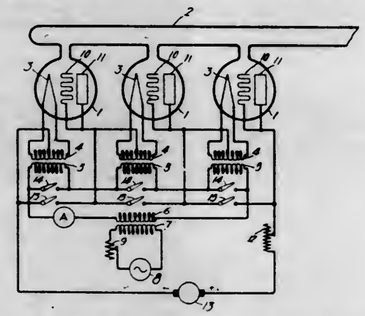
3. Enlarging camera comprising a frame, a support for said frame, a means for suspending said camera from said frame allowing a vertical displacement of the same, a rod spaced and parallel to said frame and secured thereon, a counterweight sliding on said rod to form a handle, to which one end of said suspension means is secured, and means including a telescopic metal tube objective holder for accurately focusing by locating the point of application of the leverage of said focusing



means within an area limited by the outer circumference of the telescopic metal tube for ensuring at all times the taking of an accurate picture.

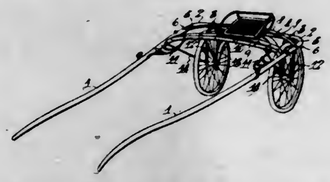
1,573,315. METHOD OF CEMENTING TWO PARTS TOGETHER. JAMES THOMAS GRIFFIN, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 12, 1922. Serial No. 587,674. 8 Claims. (Cl. 18—59.)

1. The method of securing two parts together, consisting in placing a tablet of cementing material adjacent the point where the joint is to be made, said tablet being composed of cementing material with a volatilizing binder, and then subjecting the parts to a temperature sufficiently high to cause the cement tablet to soften and adhere to both of the said parts to cause a union between them and a volatilization of the binder.



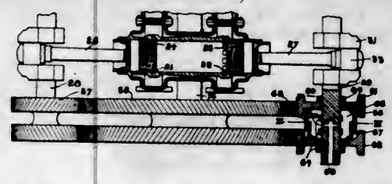
1,573,316. MAGNETO PLUG. ERNEST L. HADDOCK, Vancouver, British Columbia, Canada. Filed Sept. 13, 1923. Serial No. 662,517. 1 Claim. (Cl. 173—324.)

A terminal plug for magnetos comprising a metal jacket having an annular enlargement therein defining an upper and a lower stop shoulder, a porcelain body fitted in the jacket resting on the shoulder, the lower end of the porcelain body being reduced and extended below the annular enlargement in spaced relation to the inner face of the jacket defining an annular chamber



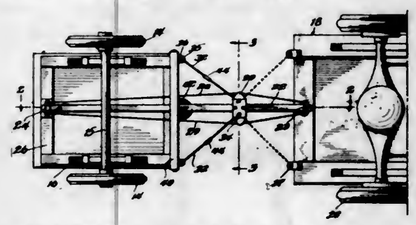
therewith, a nut for holding the porcelain body in position in the jacket on said shoulder, an axially disposed contact rod extending through the porcelain body and terminating below the lower end thereof, a binding post on the upper end of the rod, a contact point on the lower end of the rod, means carried by the upper end of the rod for holding the same in position on the porcelain body and for limiting the sliding movement thereof, a stop collar on said rod, an expansion spring coiled about the rod engaging the collar at its lower end and the porcelain body at its upper end, a porcelain sleeve having a reduced extension slidably disposed in the chamber defined by the jacket and the reduced portion of the porcelain body the reduced portion of the sleeve defining a stop shoulder, the sleeve receiving the lower end of the contact rod and an expansion spring disposed in the chamber having its opposite ends engaging the upper edge of the sleeve and the stop shoulder defined by the annular enlargement of the jacket.

1,573,317. MANUFACTURE OF VACUUM TUBES. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 2, 1922. Serial No. 565,301. 3 Claims. (Cl. 250—27.)



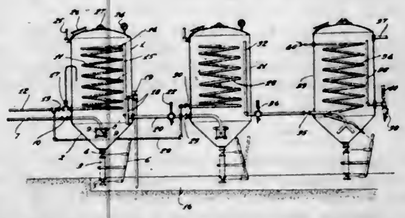
1. The process of simultaneously exhausting a plurality of vacuum tubes which comprises establishing a space current flow through said tubes in series, supplying equal heating currents to the cathodes of said tubes and removing from said tubes the gas released from the electrodes thereof.

1,573,318. RACING SULKY. JOSEPH HUBER, Bozeman, Mont. Filed June 22, 1925. Serial No. 38,833. 3 Claims. (Cl. 280—63.)



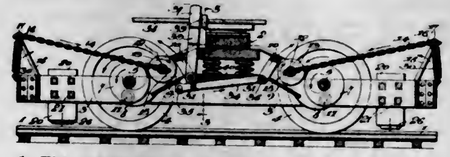
1. A sulky of the class described comprising curve-shaped shafts having well curved inturned rear end portions, a rigid rear cross bar upon each end of which one shaft rear end is secured, a truss circle secured between the shafts in advance of the rear cross bar, a bowed brace secured at its ends to the shafts and to the rear cross bar and having its rear bowed portion extending beyond and over the said cross bar, means positoned inwardly of each end of the cross bar for mounting a wheel, and a seat secured at its front end upon the truss circle and at its rear end upon the extended bowed portion of the bowed brace.

1,573,319. REVERSING MECHANISM FOR OPPOSED-PISTON ENGINES. ALEXANDER T. KASLEY, Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed July 2, 1921. Serial No. 482,281. 8 Claims. (Cl. 123—51.)



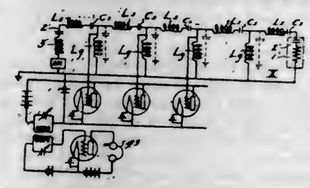
7. In an engine installation, the combination of two substantially parallel and spaced apart crank shafts, a plurality of open-ended cylinders having their center lines in the plane of the center lines of the crank shafts, opposed pistons in each cylinder, inlet and exhaust ports controlled by said pistons, a driven element, transmission mechanism between the crank shafts and the driven element, and automatically operative means for adjusting the relative angular disposition of the cranks to each other so that the pistons controlling the exhaust ports may lead the other pistons in both forward and reverse operations of the engine.

1,573,320. DRAFT MECHANISM. VIRGIL C. KLINE, Far Rockaway, N. Y. Filed Apr. 14, 1925. Serial No. 22,946. 17 Claims. (Cl. 280—33.4.)



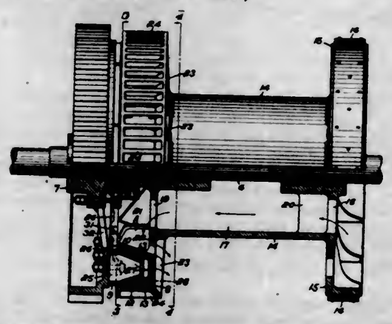
1. In a vehicle trailer including a single pair of supporting wheels, a drawbar pivoted to said trailer for transverse pivotal movement about a fixed point substantially rearwardly of the vertical plane of the axis of rotation of said wheels.

1,573,321. CONTINUOUS PROCESS OF DEMULSIFYING MINERAL OILS. WADSWORTH D. LEEPER, New York, N. Y., assignor to American Demulsifying Company, Muskogee, Okla., a Corporation of Oklahoma. Filed Dec. 7, 1921. Serial No. 520,579. 11 Claims. (Cl. 196—5.)



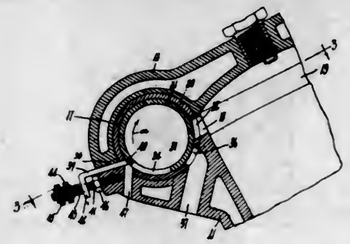
10. The herein described process of demulsifying mineral oils which consists in first washing the oil by passing it through hot water while the oil is in a finely divided state and then passing live steam through the oil thus washed.

1,573,322. BRAKE DEVICE. EBENEZER MORRIS, Augusta, Ga. Filed May 31, 1924. Serial No. 717,058. 6 Claims. (Cl. 188—41.)



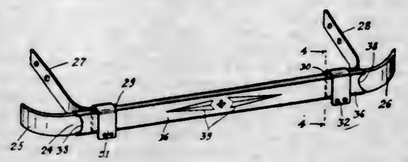
1. The combination with a car truck and a longitudinally movable brake operating rod, of shoes movable into and out of engagement with the rails over which the truck travels, box housings for housing the shoes in a vertically movable manner, crank levers for moving the shoes, a friction roller fixed upon the axle of the adjacent wheels of the truck, a pivoted frame, a cross shaft carried by the frame, a friction roller on the cross shaft, connecting means connecting the cross shaft and the shoe moving levers, a friction roller on the cross shaft, and means moved by the brake rod for causing the frame to move and the rollers to engage.

1,573,323. HIGHLY-SELECTIVE CIRCUIT. HAROLD W. NICHOLS, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1921. Serial No. 526,206. 14 Claims. (Cl. 178—44.)



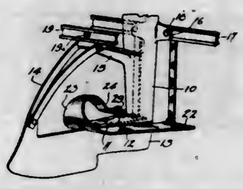
1. In a selective system, a source of electric waves, a plurality of repeaters controlled by said source, a network having a plurality of sections connected between said repeaters and said source, said repeaters having individual input circuits connected to separate points in said network in such manner that, for desired frequencies, the energy supplied to respective repeaters is in phase, and for undesired frequencies the energy supplied to respective repeaters is out of phase, whereby energy of said undesired frequencies is substantially excluded from an output circuit connected to said repeaters.

1,573,324. FRICTION CLUTCH. ALMON E. NORRIS, Brookline, Mass. Filed June 30, 1924. Serial No. 723,078. 8 Claims. (192—113.)



1. In a double cone friction clutch, the combination of two clutch members, each having walls presenting two oppositely inclined frusto-conical surfaces frictionally engageable with corresponding surfaces of the other member, and means for cooling said walls by utilizing the rotation of said members to cause air currents to flow along said walls in the general direction of the axis of said members.

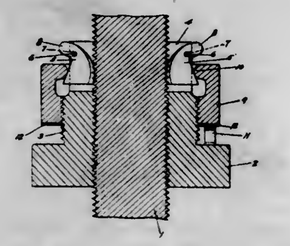
1,573,325. ROTARY VALVE AND CARBON REMOVER THEREFOR. JOHN F. NORTON, Boston, Mass. Filed Feb. 20, 1923. Serial No. 620,272. 4 Claims. (Cl. 123—80.)



1. An internal combustion engine embodying therein a rotary valve, a scraper mounted upon said engine and yieldingly engaging the periphery of said valve and means to vary the pressure of said scraper upon said valve.

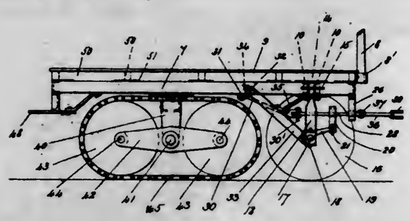
1,573,326. BUMPER. WALTER F. OHME, Minneapolis, and LEWIS H. FELKER, St. Paul, Minn. Filed Nov. 19, 1923. Serial No. 675,497. 6 Claims. (Cl. 293—55.)

1. A bumper comprising a bar having a flattened surface and formed with rounded edges, a spring facing having a portion adapted to lie adjacent said flattened surface, said facing being formed of spring metal and curved spring ends formed on said facing adapted to snap over said rounded edges of said bar to hold said facing in place thereon under spring tension.



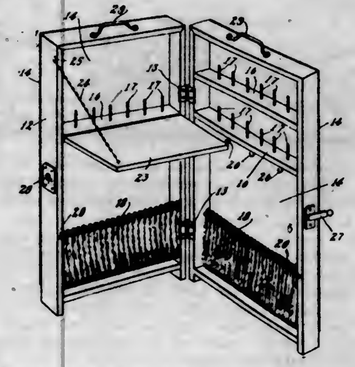
1,573,327. PLANTER DEPTH GAUGE. ALBA A. RESSEGUIE, Terril, Iowa. Filed Aug. 17, 1925. Serial No. 50,583. 6 Claims. (Cl. 97—327.)

1. A planter depth gauge to be attached to a planter having a planter leg secured by means of laterally spaced bolts to a transverse planter frame member, and having a planter foot extending forwardly from the lower end of the planter leg and having a planter shoe adapted to be secured to the leg by means of a bolt extending through said foot; said planter gauge comprising a pair of runners spaced at their rear ends



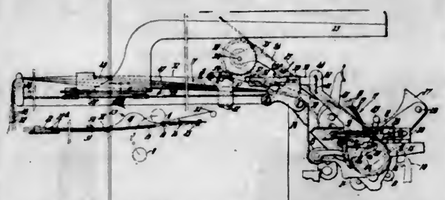
to embrace the planter shoe and integrally united at their forward ends in an upwardly curved breast portion, said breast portion having a rearwardly extending neck adapted to be secured to said second mentioned bolt, arms secured to said first mentioned bolts, and depending therefrom, the lower ends of said arms being secured to the runners.

1,573,328. LOCK NUT. BURT SALE, Portland, Oreg. Filed July 29, 1925. Serial No. 46,763. 4 Claims. (Cl. 151—12.)



1. In a device of the character described, the combination of a nut having an inside thread, a neck coaxially with the nut and forming an integral part thereof, said neck having a male thread, a head coaxially with the neck and forming an integral part thereof, said head having an inside thread and being divided by a plurality of radially extending slots, a groove in the head across each slot, a knife movable in each slot, said knife being pivotally mounted in the groove, a handle projecting at right angles from the back of the knife and capable of receding into the slot, a sleeve nut screwably mounted on the neck, said sleeve nut having at the upper surface an inwardly directed shoulder, the clockwise rotation of the sleeve nut forcing the shoulder along the back of the knife and pressing the knife edge past the inside thread of the head, the counter clockwise rotation of the sleeve nut pressing the handle into the slot and withdrawing the knife edge from the inside of the head, and a crimped spring between the upper surface of the nut and the lower surface of the sleeve nut to normally retain the shoulder at a definite place on the back of the knife.

1,573,329. TRUCK. HENRY O. SCRANTON, Jeanerette, La. Filed Aug. 22, 1924. Serial No. 733,584. 10 Claims. (Cl. 280—33.55.)

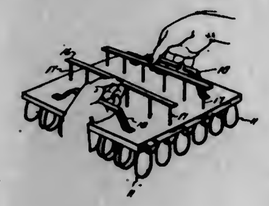


1. In a truck, a frame, a front axle pivoted by a horizontal pivote to the frame and provided with a slot, stub axles pivoted to the front axle and provided with steering arms, front wheels mounted on the stub axles, a coupling bar secured between the steering arms, and a draw bar having its rear end pivotally connected with the said frame by a vertical pivot and projecting through the slot in the front axle and operatively connected with the coupling bar so as to steer the front wheels.

1,573,330. SCREEN. CLARA DELL SMITH, Reading, Mass. Filed June 24, 1925. Serial No. 39,164. 1 Claim. (Cl. 223—53.)

An article of the character stated, comprising a screen including two similar recessed members hinged together and each having a back and a marginal frame, a shelf within each member extending throughout the width and depth of the recess in the member, the forward edges of said shelves being in contact when the recessed members are closed together, a hook within one member above the said shelf therein, a swinging shelf supported by hinges secured to the lower face of the last said shelf, whereby it may hang vertically from said fixed shelf or, when the members are in open relation, extend horizontally therefrom with its upper surface flush with the upper surface of the fixed shelf, said swinging shelf extending throughout the length of the front edge of the fixed shelf, and a chain connected to the swinging shelf and adapted to be engaged with said hook to maintain the swinging shelf in horizontal position, in which it is in alignment with both the fixed shelves.

1,573,331. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 26, 1924. Serial No. 701,913. 18 Claims. (Cl. 197—126.)

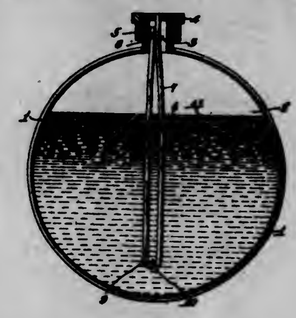


1. In a typewriting machine, the combination of a platen around which a bill-sheet and a record-sheet may be fed, a swing-frame to lift said platen, line-spacing means for said platen to feed said bill-sheet, line-spacing mechanism comprising a line-space wheel on said swing-frame for the record-sheet, and a connection from the platen line-spacing means to the line-space wheel for the record-sheet, said connection being so arranged as to permit the line-space wheel to be swung with the swing-frame.

1,573,332. EGG-HANDLING MACHINE. FRANCIS SMYTHE and ROSS SMYTHE, Akron, Iowa. Filed July 6, 1925. Serial No. 41,718. 3 Claims. (Cl. 294—87.)

1. In an egg-handling device, a base, a plurality of pairs of egg-receiving loops secured to and depending

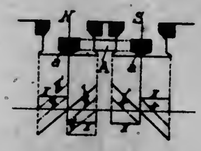
from, said base, said pairs of loops being aligned in rows, a plurality of stripping bars positioned between the loops of the respective rows, a pair of finger bars disposed above the base in positions extending transversely of the stripping bars, and spaced from each other and from the edges of the base, rods connecting each of the



finger bars with each of the stripping bars, said rods being slidably extended through the base, and handles secured to the base, parallel to, and spaced from, the remote sides of the finger bars, whereby an operator may reach his fingers under, and his thumbs above, said handle to engage between said thumbs and fingers, the finger bars.

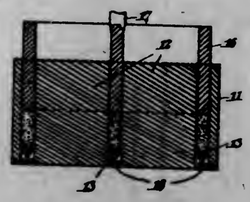
1,573,333. DYNAMO-ELECTRIC MACHINE. HUGH M. STOLLER, Mountain Lakes, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 15, 1924. Serial No. 699,429. 2 Claims. (Cl. 172—293.)

1. In combination a plurality of series wound motors, alternating current supply means common to said motors, means for establishing a plurality of direct connections between respective points in each armature circuit and corresponding points in another of the armature circuits of said machines for starting, to cause said machines to accelerate in step with each other, and means for thereafter opening said direct connections and for closing independent short circuits across fixed points in each armature circuit substantially 180 electrical degrees apart to cause said machines to run in synchronism with each other.



1,573,334. ATOMIZER. ANTONY THOMAS, Philadelphia, Pa., assignor of one-half to Spyridon Gorgolis, Philadelphia, Pa. Filed Sept. 30, 1924. Serial No. 740,748. 2 Claims. (Cl. 299—90.)

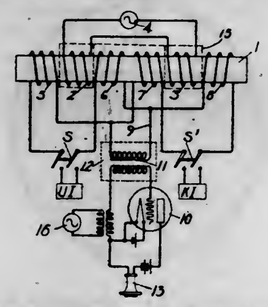
1. An atomizer including a casing characterized by having a top cap closure threaded thereon; a bent tube within the casing having one leg thereof fixed in the cap closure and extending through the same and having the other leg thereof terminating short of the cap closure and opening into the space above the tolerance line of liquid; said tube being of a length to have its



bent portion situated near the bottom of the casing and having an opening adjacent its curved portion, substantially as described.

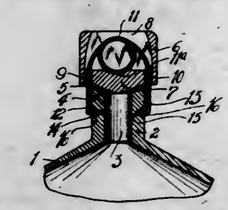
1,573,335. ARRANGEMENT FOR THE COMPENSATING WINDINGS OF COMMUTATOR MOTORS WITH SALIENT POLES. LAJOS TORDA, Budapest, Hungary. Filed Mar. 22, 1924. Serial No. 701,164. 5 Claims. (Cl. 171—228.)

2. An electric commutator motor having in combination, an armature provided with armature windings, a field comprising a frame carrying salient pole pieces divided on longitudinal planes, field windings about said pole pieces, neighboring pole pieces being bridged by formed compensating windings carried in slots in said pole pieces, which slots are beneath the pole faces and are intersected by said longitudinal planes.



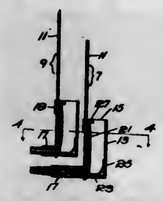
1,573,336. BLOCK-MOLDING DEVICE. FRANK VAN ANDEN, Miami, Fla. Filed Sept. 18, 1925. Serial No. 57,120. 5 Claims. (Cl. 25—121.)

1. In a device of the class described, a mold box, a pallet removably arranged in said box, cores protruding through said pallet, the edges of said pallet engaging said box and cores presenting acute angles, and a knife edge supporting said pallet.



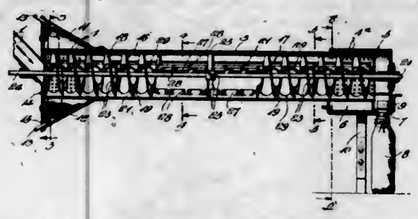
4. In a device of the class described, a mold box, cores in said box, a sectional tamper, the assembled section of said tamper corresponding with the shape and size of the channels between said cores and box, and the said sections adapted to be operated alternately.

1,573,337. ELECTRICAL BRIDGE. HARALD J. VENNES, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 20, 1920. Serial No. 397,769. 6 Claims. (Cl. 175—183.)



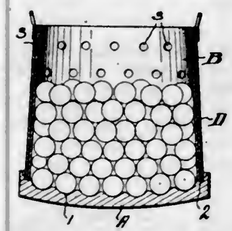
1. A measuring bridge comprising a transformer having a plurality of windings, a source of waves connected to certain windings of said transformer, other windings of said transformer being included in a circuit with a known and an unknown impedance, a path connecting separate points of said circuit and including a translating element, and means for shielding said element.

1,573,338. COLLAPSIBLE-TUBE CLOSURE. CHRISTIAN C. WARTH, Spokane, Wash. Filed Apr. 2, 1925. Serial No. 20,166. 4 Claims. (Cl. 221—60.)



1. The combination with a dispensing head having a valve seat and opposed sockets, of a closure cap having a head to fit said seat, a yoke having a spring coil enclosed within a recess in said cap and its arms passed through holes in said cap, and angular pivot pins on the ends of said arms seated in said sockets.

1,573,339. PEN FOR RECORDING GAUGES. EDWARD J. WATTS, Foxboro, Mass., assignor to The Foxboro Company, Foxboro, Mass., a Corporation of Massachusetts. Filed June 28, 1920. Serial No. 392,220. 11 Claims. (Cl. 120—43.)

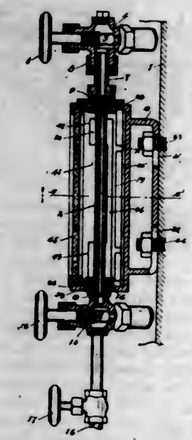


1. A pen for recording gauges and the like and adapted particularly for multiple pen instruments comprising a reservoir having an open end and opposed flat sides and a stylus projecting from one of said sides remote from said open end, the whole providing a pen of relatively great ink capacity yet restricted depth whereby it may swing freely between a chart and instrument cover or in cooperation with other pens.

1,573,340. GRAIN-TREATING MACHINE. SAMUEL A. WEITMAN, Kahlotus, Wash. Filed Apr. 23, 1923. Serial No. 634,119. 8 Claims. (Cl. 83—28.)

1. A grain treating machine comprising a rotatable cylinder having a grain inlet and having its walls perforated throughout a portion of its length, a drum surrounding the perforated portion of said cylinder to contain a grain treating medium, and a dipper in said drum for elevating a predetermined quantity of its contents and dropping such quantities onto the perforated portion of the cylinder, said dipper being passed into the drum through a slot in the end thereof and movable into and out of the drum through the slot.

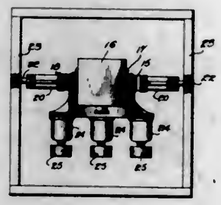
1,573,341. DEVICE FOR PACKING FRUIT AND THE LIKE. ENOS B. HIATT, Palisade, Colo. Filed Sept. 27, 1924. Serial No. 740,280. 5 Claims. (Cl. 226—17.)



1. An apparatus for packing fruit, including a facing base, a relatively weak walled basket liner and a reinforcing shell therefor adapted to be placed on the facing base, said shell being outermost and designed for removal preparatory to telescoping the basket to be filled over the filled liner, said liner being of such size to receive the full content of the basket to be filled.

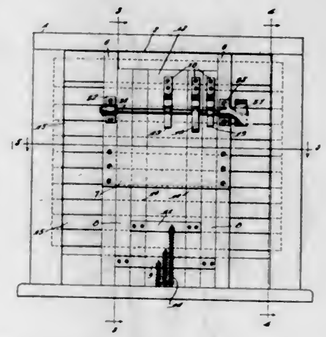
1,573,342. COMBINED WATER-GAUGE ILLUMINATOR AND PROTECTOR. WILLARD J. HILL, SAMUEL J. LUPTON, and FRANCIS E. COLLINSON, Winnipeg, Manitoba, Canada, assignors to said Hill. Filed Mar. 13, 1924. Serial No. 699,129. 9 Claims. (Cl. 73—54.)

1. The combination with a water gauge glass, of a combined water gauge illuminator and protector comprising a permanently mounted bracket and an integrally formed lamp containing casing and water gauge glass protector detachably carried by the bracket.



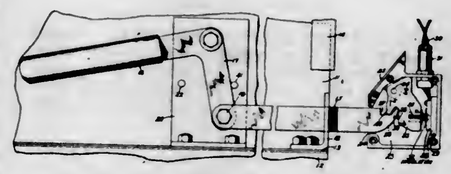
9. A combined water gauge illuminator and protector for a boiler, comprising an integrally formed lamp casing and water gauge glass protector, the protector being substantially square in horizontal section and having one of the rear sides opening to the lamp casing and provided with a web protecting the lamp and forming upper and lower steam escape openings and a light slot therebetween, the other of the rear sides open to permit of the passing of the water gauge glass within the protector, the front sides thereof transparent and the upper and lower ends thereof provided with semi-circular bearings engaging the gauge glass mountings, a discharge pipe leading from the bottom of the lamp casing, a closure plate on which the protector is detachably mounted,

said closure plate closing the open side of the protector and having a bottom horizontal extension through which the lower gauge glass mounting extends and an upper horizontal saddle like extension cooperating with the top of the protector to enclose the upper gauge glass



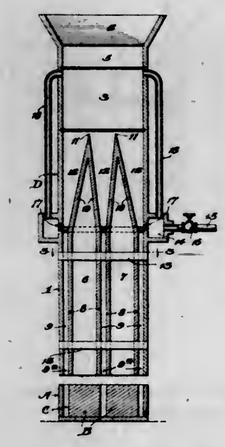
mounting, a supporting bracket permanently attached to the rear of the closure plate and a mirror on the front face of the closure plate adapted to reflect the light rays emanating through the light slot on to the water column within the gauge glass.

1,573,343. SUPPORT. WILLIAM F. HOLEKA, San Francisco, Calif. Filed Dec. 31, 1923. Serial No. 683,812. 2 Claims. (Cl. 74—78.)



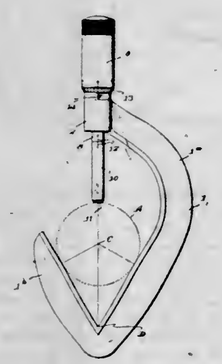
1. In a device of the character described a central support having a depending portion provided at its bottom with an outstanding horizontal flange, a plurality of motor casings secured to said flange, a depending motor shaft carried by each motor casing, a fly-wheel carried by each shaft adjacent its motor casing, means adjacent the upper face of said support for securing an instrument thereto, an inner member surrounding said support and pivotally connected at opposite sides thereto, and an outer member surrounding said inner member and pivotally connected thereto at opposite sides and at right angles to said first named pivotal connection, the upper faces of said support and said inner and outer members being substantially flush.

1,573,344. PICTURE DEVICE. LOUIS G. JORDAN, Aberdeen, Wash. Filed Mar. 30, 1923. Serial No. 628,898. 5 Claims. (Cl. 40—60.)



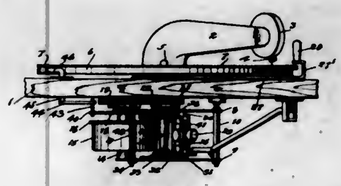
1. In a device of the class described, a frame, panels on the frame, slides mounted to reciprocate on the frame, one slide comprising spaced parts and a connection therebetween, the connection retaining the other slide for reciprocation, tongues carried by the slides, and operating between the panels, the panels and the tongues being provided with cooperating display matter, and means for reciprocating the slides.

1,573,345. ELEVATOR-DOOR LOCK. FREDERICK E. KALTE, Los Angeles, Calif., assignor to Randall Control and Hydrometric Corporation, Los Angeles, Calif., a Corporation of California. Filed Oct. 13, 1923. Serial No. 668,303. 2 Claims. (Cl. 187—31.)



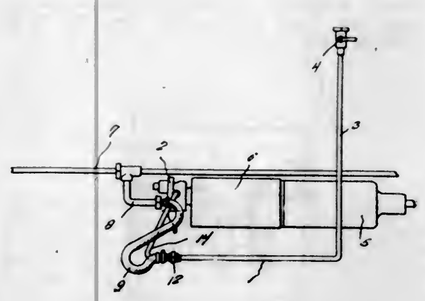
2. In a lock for a horizontal elevator door, a weighted lever supported on the door, a horizontally movable bolt connected to the lever and extending beyond the door, the arrangement being such that the horizontal movement of said bolt may be comparatively large, a lock casing having an aperture and supported at the side of the door, the aperture alining with the bolt only when the door is in closed position, an inclined guide supported by the casing and cooperating with the lower surface of the bolt end to move it against the force exerted by the weighted lever as the door is brought to closing position, and thereby to permit it to enter the aperture in the casing, a weighted tumbler opposite the aperture and pivoted for movement in the casing about a horizontal axis, a contact resiliently supported by the tumbler and a cooperating stationary contact, said tumbler having a notch near the place where the bolt enters the casing, and arranged to accommodate a cooperating finger formed on the end of the bolt, whereby horizontal movement of the bolt in and out of the aperture may serve to operate the contacts positively in either direction.

1,573,346. PROCESS FOR FILLING AND TAMPING MOLDS. ALLEN KISSAM, Orlando, Fla. Filed June 27, 1924. Serial No. 722,842. 3 Claims. (Cl. 25—155.)



1. A process for the filling of molds with semi-wet cementitious materials which consists in forcing by fluid pressure a quantity of said material through a tube into a mold beyond, the tube and mold having the same cross sectional shape.

1,573,347. CALIPER. PAUL CHARLES LABASSE, New Orleans, La. Filed Sept. 15, 1923. Serial No. 662,914. 3 Claims. (Cl. 33—166.)

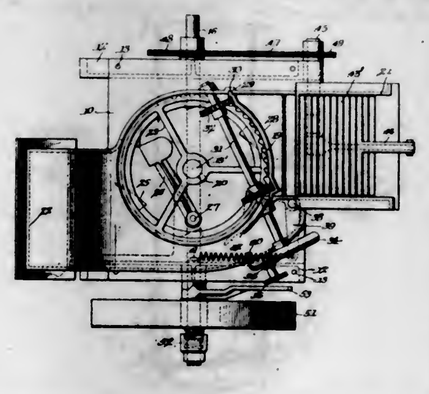


1. A micrometer caliper comprising a barrel, an arm extending from the barrel and terminating in an angular extremity with the apex of the angle in line with the axial center of said barrel, a sleeve movable upon the barrel, there being cooperating graduations upon the sleeve and barrel, an adjusting nut threadedly engaging the bore of the barrel, a spindle secured to the sleeve and extending through and threadedly engaging the nut and a range pin detachably secured to the spindle.

1,573,348. TALKING MACHINE. GEORGE W. LAWRENCE, Winnipeg, Manitoba, Canada. Filed Mar. 8, 1924. Serial No. 697,865. 2 Claims. (Cl. 185—39.)

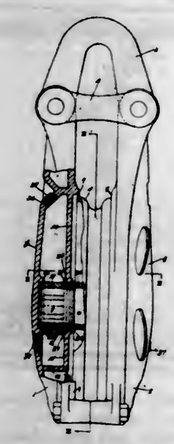
1. In a talking machine, the combination with a spring actuated motor presenting a driving shaft, a turn table shaft and a turn table carried by and rotating with the turn table shaft, of a winding crank revolvable around the turn table shaft and extending outwardly beneath the turn table and provided at its outer end with a hand grip, ratchet controlled intermeshed gears for effecting the rotation of the motor driving shaft to wind the motor spring and in the rotation of the crank in a pre-determined direction, releasable friction means preventing the rotation of the motor shaft subsequent to the spring being wound and a train of gears and pinions connecting the motor with the turn table shaft and adapted to rotate the turn table shaft upon the aforesaid friction means being released.

1,573,349. CLEAN-OUT ATTACHMENT FOR THE RETENTION PIPE AND RETENTION VALVE OF AN AIR-BRAKE SYSTEM. MERCED LEDESMA and ADOLFO ACOSTA, El Paso, Tex. Filed Aug. 4, 1924, Serial No. 729,996. Renewed Nov. 30, 1925. 3 Claims. (Cl. 303—75.)



1. The combination with an air brake system including a train line and the retention pipe and retention valve associated therewith, of a connection between the train line and the retention pipe for forcing the air under pressure in the train line to the retention pipe and the retention valve for cleaning out the same.

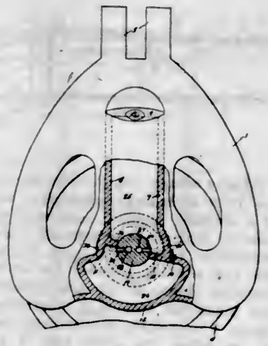
1,573,350. PERCENTAGE FEEDER. ANGUS D. MACLELLAN, Owensboro, Ky., assignor to MacLellan Mixer Company, Owensboro, Ky., a Corporation of Kentucky. Filed Jan. 12, 1925. Serial No. 2,046. 23 Claims. (Cl. 83—44.)



1. In a feeder of the class described, the combination of a casing having inlet and outlet openings, an inclined

drive shaft extending through the bottom of the casing, a wheel keyed to said shaft and having peripheral

pockets mounted in said casing, a scraper contacting with the periphery of said wheel, and means for preventing material from passing around said scraper.

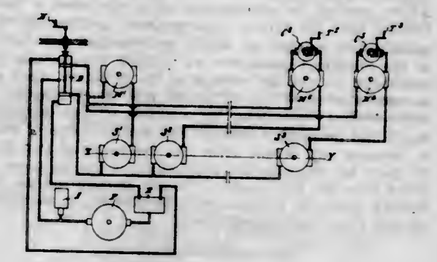


1,573,351. PULLEY BLOCK. FREDERICK B. MALLORY, Portland, Oreg. Filed Apr. 10, 1923. Serial No. 631,196. 12 Claims. (Cl. 308—94.)

1. In a device of the class described, a side-bearing member having an opening for a shaft and including a plurality of independent lubricant reservoirs closed from communication with one another disposed on substantially opposite sides of the shaft opening respectively, and said member having means whereby said reservoirs may communicate with a shaft extending through said opening, respectively, at substantially opposite sides thereof.

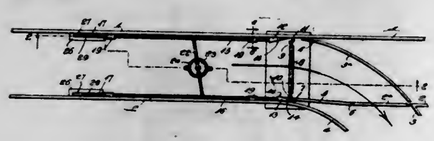
1,573,352. PULLEY BLOCK. FREDERICK B. MALLORY, Portland, Oreg. Filed June 13, 1923. Serial No. 645,110. 18 Claims. (Cl. 308—94.)

1. A pulley block comprising the combination with a pair of block-sides, an axle supported thereby, and a sheave thereon, of wholly independent lubricating chambers in one of the block-sides, and separate means of communicating lubricant supply through the axle to



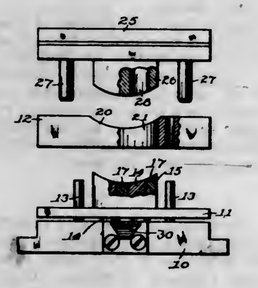
the bearing surfaces of the sheave and axle, from one or the other of said lubricant chambers, depending upon the position occupied by the block in use.

1,573,353. PROCESS OF USING OR APPLYING STICKY, HEAT-SENSITIVE SHOE-BOTTOM FILLER TO SHOE BOTTOMS. GEORGE H. MAXWELL, Phoenix, Ariz. Filed Sept. 14, 1921. Serial No. 500,709. 3 Claims. (Cl. 18—1.)



1. The herein described process of conditioning, for filling operations, a shoe bottom filler of granular, sticky material slowly penetrative by heat and liable to be charred and burned at high heat, consisting in passing a mass of the filler in non-compacted and readily permeable condition in a prescribed confined course, permeating the mass with a moist heating agent during such passage, and withdrawing the thus conditioned and non-compacted material from the mass.

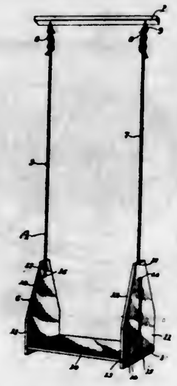
1,573,354. HYDRAULIC DISTANT CONTROL APPARATUS. NICOLAS EMILIEN METHLIN, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed July 8, 1924. Serial No. 724,872. 10 Claims. (Cl. 89—41.)



1. Apparatus for controlling one or more guns from a central station provided with a sighting telescope comprising, in combination, hydraulic means for moving said telescope, hydraulic means operatively connected to each gun to be controlled for moving the latter, means for transmitting equal volumes of liquid to each of said hydraulic means, and compensating means operatively connected to said second named hydraulic means for imparting complementary displacements to the latter.

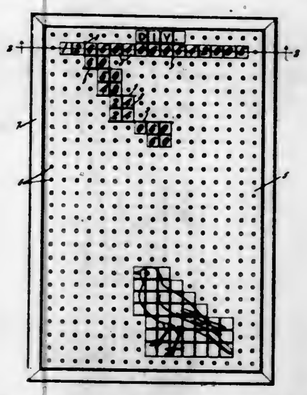
1,573,355. RAILWAY-SWITCH MECHANISM. JOHN J. O'ROURKE, Harrisburg, Pa. Filed Oct. 5, 1925. Serial No. 60,563. 6 Claims. (Cl. 246—317.)

1. In a railway switch, the combination with main and branch line rails including a laterally movable switch tongue, of a shifting member connected with said laterally movable tongue, longitudinally movable switch tongues engageable respectively with the laterally movable tongue and shifting member for shifting the said laterally movable tongue in opposite directions, a pair of sliding rods connected with said longitudinally movable switch tongues, a connection between the rods for retracting either rod when the other rod is projected, and means for positively projecting either rod.



1,573,356. METHOD OF SHAPING SHEET PYROXYLIN AND THE LIKE. EARL R. PERSON, Leominster, Mass., assignor to The Viscoloid Company, a Corporation of Massachusetts. Original application filed Mar. 15, 1922, Serial No. 543,938. Divided and this application filed Nov. 19, 1923. Serial No. 675,475. 1 Claim. (Cl. 18—51.)

The method of molding sheet pyroxylin and the like which consists in cutting out of a flat sheet a blank thinner than the article to be produced, perforating it at exactly the margin at which perforations are desired in the completed product so as to leave the surfaces perpendicular to the flat surface of the blank or sheet and so that the blank at all points will be rectangular in cross section, smoothing the surfaces of the perforated blank and pressing it between two surfaces, one of which is concave and deeper than the thickness of the blank to force all the material originally cut out to form the blank into the die, whereby all the material of the perforated blank is utilized and the product is materially thicker than the original sheet.

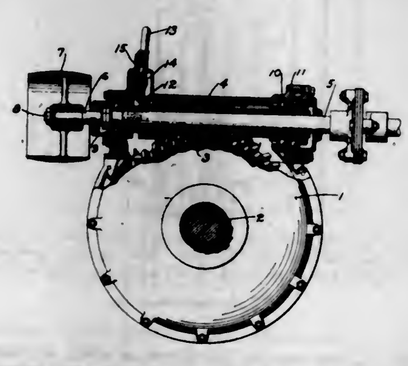


1,573,357. SWING. JOSEPH PHOENIX, Adams, Mass. Filed Aug. 11, 1924. Serial No. 731,482. 2 Claims. (Cl. 155—58.)

1. A pendent swing comprising a suspension rope having suspension hooks provided at each end thereof, a seat portion comprising vertically extending side arms having horizontally aligned apertures provided adjacent their upper and lower ends centrally of the side arms, and having vertically extending grooves provided in their confronting faces extending from the upper apertures of the arms to the upper marginal edges thereof, said grooves to receive longitudinal portions of the suspension rope for retaining the seat portion in an equal line

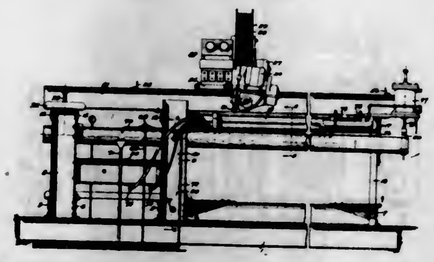
of action with the suspension rope, and a seat secured between the side arms at a point directly above the lower apertures in said arms.

1,573,358. EDUCATIONAL DEVICE. JOSEPH P. ROSS, Winona, Minn. Filed Aug. 1, 1924. Serial No. 729,591. 1 Claim. (Cl. 35—2.)



In a device of the character described, a base having a plurality of spaced openings formed therein, indicating members having pegs, said pegs adapted to be positioned in the openings to secure the indicating members in position on the base, said indicating members being of sizes to provide spaces between adjacent indicating members, dividing strips adapted to be positioned within spaces formed between indicating members, said dividing strips adapted to be held by frictional contact with the indicating members.

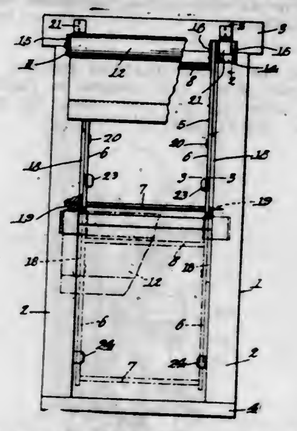
1,573,359. POWER-TRANSMISSION DEVICE. GLOVER E. RUCKSTELL, Berkeley, Calif. Filed Sept. 9, 1924. Serial No. 736,752. 2 Claims. (Cl. 74—7.)



2. A power transmitting device comprising the combination of a worm gear operatively connected to the rear axle shafts of a motor operated vehicle, a housing therefor, a driving shaft driven from the motor vehicle and extending rearwardly of the vehicle and through and rearwardly of the housing, bearings at each side of the

housing rotatably supporting the shaft, a worm loose on the shaft in the housing and in mesh with the worm gear, an axially shiftable clutch splined to the shaft at one end of the worm within the housing, the worm and clutch be-

ing between the shaft supporting bearings and the adjacent ends of the worm and clutch being toothed, and means extending outwardly of the housing for shifting the clutch.



1,573,360. WELDING APPARATUS. PHILIP D. SHOENBERGER, San Mateo, Calif., assignor to Western Pipe & Steel Company, San Francisco, Calif., a Corporation of California. Filed July 23, 1925. Serial No. 45,497. 13 Claims. (Cl. 113—59.)

1. Welding apparatus comprising an automatic welding head, a supporting structure having fixed spaced elements between which said head operates, a pivoted mandrel for supporting a tube to be welded and means for actuating said mandrel so as to clamp the tube supported thereon between it and said horizontal elements.

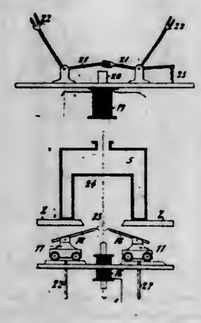
1,573,361. WINDOW-SHADE SUPPORT. OSCAR C. SIMMONS, Dallas, Tex. Filed Apr. 2, 1925. Serial No. 20,219. 1 Claim. (Cl. 156—27.)

In a device of the class described, a carrier frame having its upper and lower edges free, the frame being provided with mechanism for supporting a window hanging, radius arms pivoted to the frame intermediate the ends of the frame, and means for pivotally mounting the radius arms on a window casing at a point about midway between the upper and lower ends of the casing, the radius arms extending upwardly from said means when the frame is elevated enough to dispose said mechanism at the top of a window casing, the radius arms being of

such length, and said means being so located, that when the frame is swung downwardly, practically all of the upper half of the casing will be uncovered.

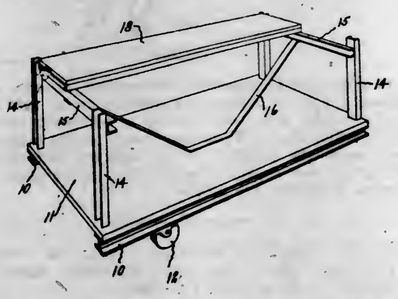
1,573,362. CHILD'S TOY AND EXERCISER. COLUMBUS D. STOVALL, Lexington, Ky. Filed June 18, 1925. Serial No. 38,077. 3 Claims. (Cl. 272—57.)

1. A toy and exerciser of the character described comprising a pair of bodies each adapted to be held in a child's hands, each body having a somewhat globular handle fitting the child's hands, a more or less contracted neck below the handle, and an enlarged foot or base having a lower surface disposed in a single plane and adapted to engage the ground.



1,573,363. TRAFFIC SIGNAL. OSVAL R. STRAWN, Columbus, Ohio. Filed June 20, 1923. Serial No. 646,499. 1 Claim. (Cl. 177—329.)

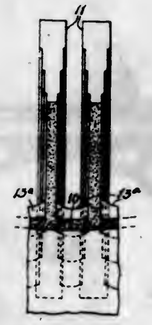
A traffic signal comprising a sleeve, means for attaching the sleeve to a vehicle, said sleeve having its outer end provided with a flange, a semaphore comprising a pair of plates having their rear ends formed with channels for engagement with said flange, a collar located in the sleeve and having an annular rim for engaging the channels of said frames, a clamping ring engaged with the joint formed by the channel and rim, translucent



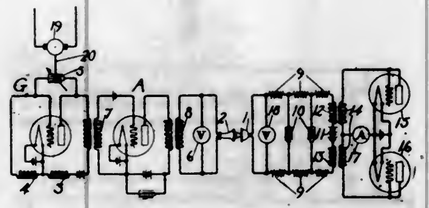
plates clamped between the said frames and disposed in spaced relation, a lens carried by the collar, a lighting element in the sleeve, the rays from which pass through the lens to the space between the plates, and for the purpose set forth.

1,573,364. BUILDING HEATING DEVICE. UMBERTO VALENTINI, Rome, Italy, assignor to Lamberto Lombardi. Filed Apr. 21, 1923. Serial No. 633,815. 4 Claims. (Cl. 219—38.)

1. In a heating apparatus, a boiler including a bottom provided with a heating chamber, an electric arc producing device arranged in said chamber to heat said boiler, and electromagnetic means so arranged with respect to the electric arc producing device as to deflect the arc in the direction of the boiler.



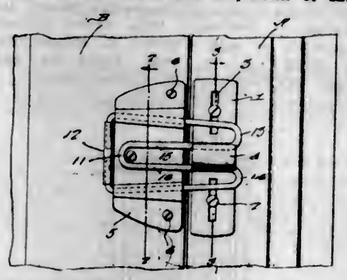
1,573,365. TRUCK. HARLEY C. WOOD, Chicopee Falls, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed May 15, 1925. Serial No. 30,431. 3 Claims. (Cl. 214—1.)



1. A truck having a main platform, presenting a surface for piling material, a super-structure including a transverse track, and a platform substantially half the width of the main platform and mounted for lateral movement on said track from one side to the other of the truck, said movable platform also presenting a piling surface.

1,573,366. DAM CONSTRUCTION. PIERRE ZUCCO, San Francisco, Calif. Filed Aug. 1, 1922, Serial No. 578,871. Renewed Dec. 15, 1925. 3 Claims. (Cl. 61—32.)

1. A concrete dam comprising an angularly disposed pressure wall decreasing in thickness from the bottom to the top, a plurality of buttresses on the rear side of the wall vertically disposed, interspaced and integral with the pressure wall, and a plurality of superposed, interspaced horizontally extending ribs disposed between the buttresses and integral with the rear face of the pressure wall and the buttresses, said ribs forming horizontal arches between the buttresses which decrease in span, said spans being longest at the top and decreasing in span towards the bottom of the dam.

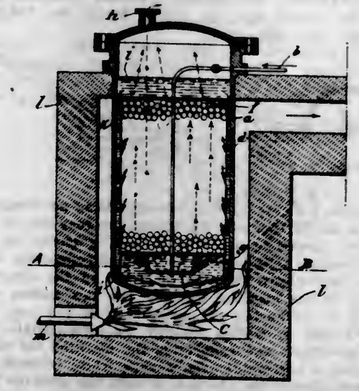


1,573,367. METHOD OF GENERATING AN ALTERNATING CURRENT OF VARIABLE FREQUENCY. HAROLD DE FOREST ARNOLD, Maplewood, N. J., and JOHN P. MINTON, White Plains, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Nov. 12, 1917, Serial No. 201,565, now Patent No. 1,426,807, dated Aug. 22, 1922. Divided and this application filed Sept. 8, 1920. Serial No. 408,843. 6 Claims. (Cl. 250—36.)

1. The method of operating an oscillator which is adapted to generate a continuous wave of a single frequency and which includes a frequency determining oscillation circuit, which comprises cyclically and continuously varying the tuning of said oscillation circuit.

1,573,368. COMBINED DOOR CHECK AND FASTENER. JULIUS E. BARNES, Woodruff, Kans., assignor of one-half to Lawrence O. Flynn, Imperial, Nebr. Filed Sept. 26, 1924. Serial No. 740,037. 1 Claim. (Cl. 292—76.)

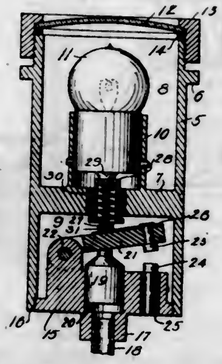
A combined door check and fastener comprising a plate adapted to be adjustably secured to a door frame adjacent the door contacting edge thereof, the intermediate portion of said plate being bent upon itself to provide a cylindrical head and an adjoining web forming a keeper, an additional plate adapted to be secured to a door for cooperation with the first mentioned plate, said additional plate having transverse channels formed therein and a retaining flange formed on one edge, and a wire fastener comprising a single strand of wire bent intermediate its ends to provide a U-shaped portion for coaction with said keeper and a portion of said door



plate, the free end portions of the wire forming arms extending through said channels and having their extremities bent at angles for coacting with said flange.

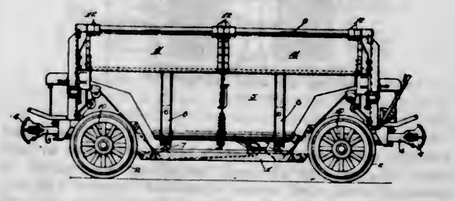
1,573,369. STORAGE-BATTERY SEPARATOR. RAYMOND C. BENNER, Bayside, N. Y., assignor to The Prest-O-Lite Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 21, 1922. Serial No. 530,943. 3 Claims. (Cl. 136—150.)

3. A storage battery separator comprising a fabricated sheet of sulfite wood fibre impregnated with gelatinous silicic acid.



1,573,370. METHOD AND APPARATUS FOR CONTINUOUS DISTILLATION OF TARS AND OILS. ERWIN BLUMNER, Berlin-Charlottenburg, Germany. Filed Apr. 11, 1921. Serial No. 460,573. 7 Claims. (Cl. 196—92.)

1. The method of distilling tars and oils, which include the steps of delivering the tars and oils to the lower portion of a column of hot liquid metal and retarding the upward flow through the metal while maintaining the tars and oils in finely subdivided condition, said upward flow of the tars and oils effecting an upward circulation of the contiguous liquid metal, and permitting a return or down flow of the metal out of the path of the rising tars and oils.

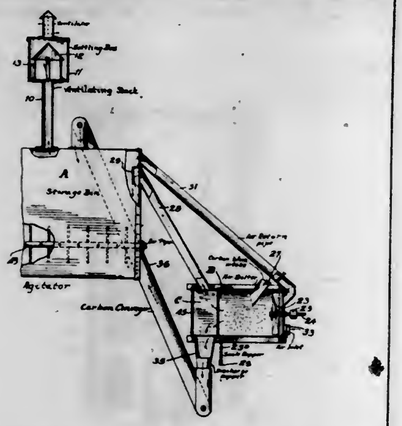


1,573,371. OIL-CIRCULATION SIGNAL. ARTHUR BLOCH, Philadelphia, Pa. Filed Apr. 19, 1921. Serial No. 462,736. 4 Claims. (Cl. 177—311.)

1. In an apparatus of the character disclosed, a casing, a support detachably mounted on said casing, a lever pivoted on said support, a contact carried by said lever, a relatively stationary contact on the support for engagement by the lever carried contact, a pressure actuated element on the support beneath the lever for operating the lever in one direction, a spring bearing on said lever and adapted to move the same in the opposite direction,

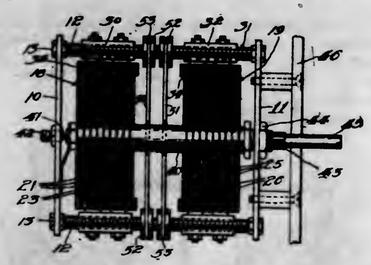
a signal element, means mounting said element in said casing, and means forming an electrical connection between said lever-carried-contact and said signal element including a spring bearing on said lever and adapted to move it in the opposite direction.

1,573,372. COVERED DUMP BODY. ROBERT N. BURTON, Oak Park, Ill., assignor to Highway Trailer Company, Edgerton, Wis., a Corporation of Wisconsin. Filed May 15, 1925. Serial No. 30,520. 9 Claims. (Cl. 298—23.)



1. In combination with a vehicle frame, an upwardly open hopper body mounted thereon for rolling to dumping position, a cover for the body supported independently of the body on the vehicle frame and means for raising and lowering the cover at will independently of the position of the body.

1,573,373. PROCESS AND APPARATUS FOR BOLTING CARBON BLACK. WALTER C. CASSELL and CARL K. SPRINGFIELD, Breckenridge, Tex., assignors of one-half to The Texas Carbon Industries, Inc., Breckenridge, Tex., a Corporation of Delaware. Filed June 27, 1925. Serial No. 40,045. 14 Claims. (Cl. 209—25.)

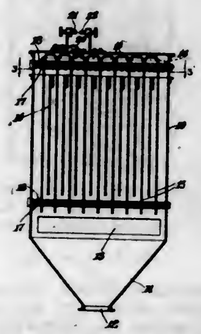


8. An apparatus for bolting carbon black including a bolting chamber having a finely divided screen intersecting the chamber, a fan having a diameter approximately

that of the chamber and causing an air blast longitudinally through the entire cross sectional area of the chamber and through the entire area of said screen,

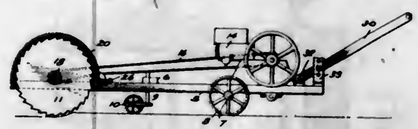
means for discharging carbon black into said chamber in front of the fan and means for collecting the carbon black which has passed through said screen.

1,573,374. RADIOCONDENSER. PAUL A. CHAMBERLAIN, Chicago, Ill., assignor, by direct and mesne assignments, to Electrical Dealers Supply House, Inc., Chicago, Ill., a Corporation of Illinois. Filed July 2, 1924. Serial No. 723,617. 12 Claims. (Cl. 250—41.)



1. In an apparatus of the class described, a condenser provided with capacity elements movable relative to each other, one of said elements comprising a plurality of insulated units, and means interposed between adjacent units and conductively connected to the other of said elements, and adjustable in position relative to said insulated units to vary their respective capacity ratios.

1,573,375. PROCESS FOR MANUFACTURING COLLOIDAL COMPOUNDS OF ARSENIC. AUGUST CHWALA, Vienna, Austria, assignor to Oderberger Chemische Werke Aktiengesellschaft, Oderberg, Czechoslovakia, a Joint Stock Company of Czechoslovakia. Filed Aug. 20, 1924. Serial No. 733,222. 16 Claims. (Cl. 252—6.)

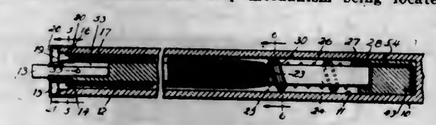


1. In the art of producing colloidal compounds of arsenic the step which consists in mechanically dispersing the arsenic compound in presence of protective colloids and of salts of metallic acids derived from higher oxides of a metal combining with oxygen in several proportions, the said oxides having the property of forming acids.

1,573,376. POWDER COLLECTOR. WALTER H. DICKERSON, East Orange, N. J., and WHARTON B. MCLAUGHLIN, New York, N. Y.; said Dickerson assignor to Industrial Waste Products Corporation, Dover, Del., a Corporation of Delaware; Celia Brown McLaughlin administratrix of said Wharton B. McLaughlin, deceased. Filed Apr. 11, 1923. Serial No. 631,480. 7 Claims. (Cl. 183—7.)

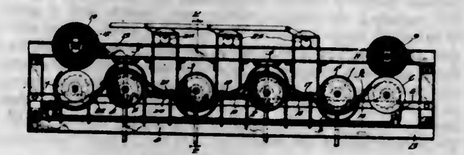
1. A collector for finely divided charged particles suspended in a gaseous medium, comprising a casing provided with an inlet and outlet for the gaseous medium, and an uncharged electric condenser within said casing to collect the particles suspended in the gaseous medium passing thru the collector and to remove from said particles charges of electricity.

1,573,377. ICE-CUTTING, TIMBER-FRAMING, AND WOOD-SAWING MACHINE. STANLEY DIEHL, Bedford, Pa. Filed Apr. 22, 1924. Serial No. 708,202. 1 Claim. (Cl. 262—20.)



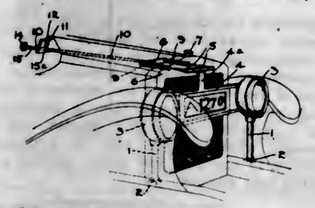
A portable ice cutting machine comprising an elongated frame, an ice cutting saw carried by the rear end of the frame and spaced to one side thereof, a motor on the forward portion of the frame and having connection with said ice cutting saw to turn the same in the direction of travel of the machine whereby the saw assists substantially in advancing the machine from the rear end thereof, a pair of wheels beneath the intermediate portion of the frame and supporting the machine for movement about a horizontal axis, a gage wheel between the first-named wheels and the saw to hold the machine in a predetermined position and cooperating with the first-named wheels in rendering the machine mobile over land and ice, and an operator's handle at the forward end of the machine for guiding the machine and tilting the same from a position on the uncut ice.

1,573,378. AUTOMATIC STOP ROLLER FOR SHADES. OTTO E. EDSTROM, Chicago, Ill., assignor to Illinois Patents Corporation, Cary, Ill., a Corporation of Illinois. Filed Jan. 15, 1923. Serial No. 612,579. 2 Claims. (Cl. 156—36.)



1. In a device of the character described, a shade roller having an axial recess in one end, a spindle disposed in said recess, pawl and ratchet mechanism between said roller and spindle, a rewind spring on said spindle connected thereto and to said roller, yielding stop

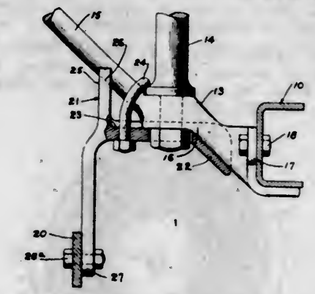
mechanism including a helical member on said spindle connected to rotate with said roller, and a traveling member driven by said roller and moving in a longitudinal slot in said spindle, said stop mechanism being located



at the inner end of said spindle, the means for connecting said spring and roller being so disposed with relation to the stop mechanism that when the latter reaches its extreme of movement with the shade unwound said pawl and ratchet mechanism will be out of register.

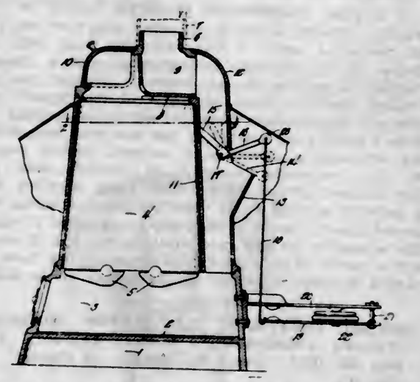
1,573,379. METHOD OF AND APPARATUS FOR DRYING WOOD VENEER. ARMIN ELMENDORF, Chicago, Ill. Filed Dec. 20, 1922. Serial No. 607,927. 6 Claims. (Cl. 34—48.)

2. The method of drying veneer which consists in laying on the first roll of a series of feed rolls driven at the same speed a roll of veneer wound in such direction that the veneer will be unwound by the frictional action of the said first feed roll and be advanced toward the second feed roll, causing the veneer to take a curved form between adjacent feed rolls, and applying heat during the passage of the veneer.



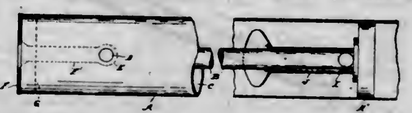
1,573,380. MOUNTING AND MEANS FOR TILTING VEHICLE HEADLIGHTS. FRANK GEORGE EVANS, New Plymouth, New Zealand. Filed Sept. 17, 1924. Serial No. 738,298. 2 Claims. (Cl. 240—61.)

1. Means for the purpose described, comprising, at least two lamps pivoted for oscillation in vertical planes, tie means interconnecting the lamps, an upstanding bracket connected to the center of the tie means, a round operating rod, a fork carried at one end of the operating rod and pivoted to the bracket, and an operating handle at the other end of the rod, a support slidably receiving the fork, springs sleeved on the tines of the fork and biasing the rod in one direction, a key hole slotted member slidably receiving the rod, and a plurality of flattened portions on the rod for cooperating with the key hole slot to hold the rod in fixed position.



1,573,381. BUMPER BRACKET. ROLLIN B. FAGEOL, Los Angeles, Calif., assignor to American Chain Company, Inc., Bridgeport, Conn., a Corporation of New York. Filed June 10, 1925. Serial No. 36,098. 4 Claims. (Cl. 293—55.)

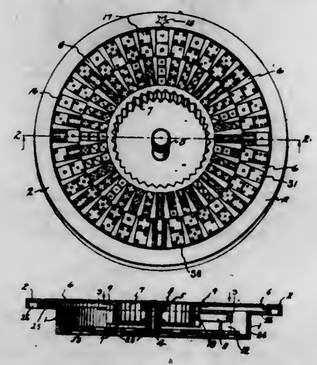
1. A bumper mounting adapted to be anchored to an inclined fender supporting arm carried by a vehicle frame comprising a fitting formed with recessed seats spaced a distance from each other and within which seats said fender arm is positioned, fastening means engaging the arm on the opposite side from the seats and at a



point intermediate the same, whereby the fitting will be rigidly secured to the arm, means carried by said fitting for holding a bumper bracket, and a bumper bracket fastened thereto.

1,573,382. BROODER STOVE. JACOB T. LANDGRAF, Macomb, Ill., assignor to American Steel Products Co., Macomb, Ill., a Corporation of Illinois. Filed June 13, 1925. Serial No. 36,799. 9 Claims. (Cl. 126—58.)

1. In a stove, a heater chamber disposed above an ashpit and below a flue, a duct connecting the ashpit with the flue independent of the heater chamber and having an intermediate air inlet, two dampers respectively controlling the parts of the duct leading from the air inlet to the flue and to the ashpit, and connections for moving the dampers in unison so as to move one damper to its open position while moving the other damper to its closure position.

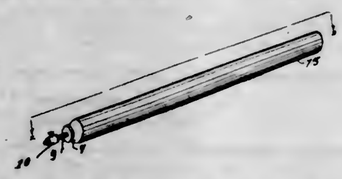


1,573,383. AIR GUN. CHARLES F. LEFEVER, Plymouth, Mich., assignor to Daisy Manufacturing Company, Plymouth, Mich., a Corporation of Michigan. Filed Sept. 22, 1924. Serial No. 739,170. 6 Claims. (Cl. 124—8.)

6. In a device of the character described, a gun barrel, a shot tube extending through said barrel, and having an opening for the admission of shot to said tube, a shot guide mounted upon said tube at one side of said opening, a support for the tube fixed within the barrel

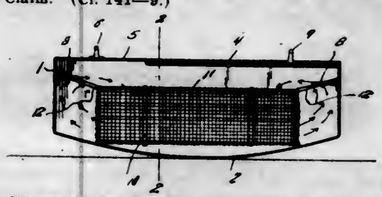
at the other side of said opening, and a collar rigidly carried by the tube for engagement with said support, said shot guide having an integral portion engaged within said collar.

1,573,384. GAME. FRANK J. LIESKE, Detroit, Mich., assignor of one-half to Harry W. Gilberg, Detroit, Mich. Filed Dec. 10, 1923. Serial No. 679,591. 5 Claims. (Cl. 273—142.)



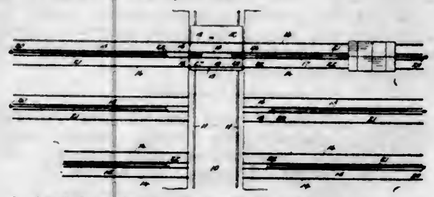
1. A game comprising a receptacle having an outwardly extending flange at its upper edge provided with an indicating mark, a disk extending flush with the flange of the receptacle and provided with a recessed cup-shaped portion at the center, a knurled post extending upwardly from the center of the recessed portion and providing a means for manually rotating the disk, a bearing pin carried by the said post and extending downwardly therefrom, a recessed bearing secured in the receptacle, adapted to receive said pin, the recessed portion of the disk being provided with a series of notches in its outer periphery, a spring supported roller mounted in the receptacle adapted to engage the notches of the disk successively as the disk is rotated and a series of different combinations of disk faces arranged in radial alignment on the surface of the disk.

1,573,385. TREATMENT OF EARTHY MINERALS. WILLIAM FELDENHEIMER, London, England. Filed May 26, 1925. Serial No. 33,051. 16 Claims. (Cl. 252—8.)



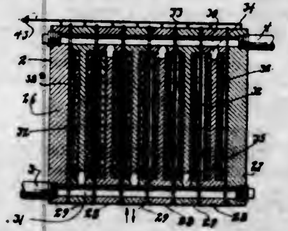
1. The process for improving the colour of earthy minerals which comprises bringing into contact with an aqueous suspension of the sub-divided mineral an acid salt of sulphurous acid in the presence of a metal which reduces sulphurous acid and does not form coloured oxidized salts.

1,573,386. MANDREL. MALETIS FLOYD FIELD, Akron, Ohio, assignor to himself and Alphonso H. Marietta, Akron, Ohio. Filed July 21, 1921. Serial No. 486,415. 3 Claims. (Cl. 18—45.)



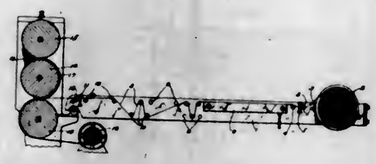
1. In a mandrel for manufacturing inner tubes, a hollow cylinder form; an opening in the wall thereof and a covering arranged thereon and forming a part thereof, said covering comprising a flexible member wound spirally around the tube.

1,573,387. DISHWASHER. SHERMAN Q. FRENCH, Harwarden, Iowa. Filed Aug. 1, 1924. Serial No. 729,526. 1 Claim. (Cl. 141—9.)



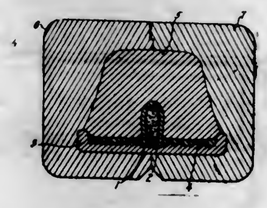
A dish washing apparatus comprising a substantially rectangular elongated tank having a longitudinally curved flat bottom forming a rocking surface, said tank being provided in its top wall and adjacent one end with a comparatively large opening, a slide cover for said opening, a substantially oblong wire dish containing basket insertable and removable through said opening in the tank, said basket being open at its top, a pair of U-shaped handles fastened rigidly to the ends of the basket, means for confining the dishes within said basket, and a pair of pivotally mounted upwardly swinging baffle plates carried by the opposite end walls of said tank, said plates being normally disposed in a horizontal plane above the top of said basket, and the aforesaid handles resting upon said baffle plates, with their bight portions engaging the end walls of the tanks to prevent endwise movement of the basket within the latter.

1,573,388. TRUCK MOVING APPARATUS. GEORGE C. FRIESEN, Dallas, Oreg. Filed June 4, 1925. Serial No. 34,884. 5 Claims. (Cl. 104—50.)



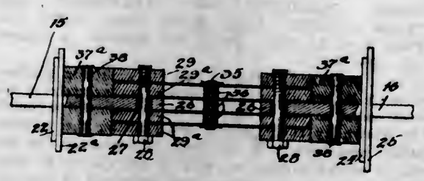
1. Apparatus for shifting trucks from one to another of different tracks and for moving trucks along said tracks comprising a member movable under a truck, means carried by said member automatically engageable with part of said truck when the member is moved under the same whereby the truck then is movable with the member, a car onto which said member and said truck are movable whereby they may be transported from one location to another, and means carried by said car for moving said member.

1,573,389. METHOD OF AND APPARATUS FOR BREAKING EMULSIONS. LEROY G. GATES, Bakersfield, Calif., assignor to Standard Oil Company, San Francisco, Calif., a Corporation of California. Filed May 14, 1925. Serial No. 30,193. 15 Claims. (Cl. 204—24.)



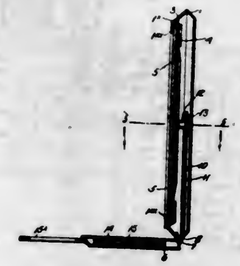
1. A process of breaking emulsions, which includes bringing the particles of the emulsion into intimate contact with and separating them from a medium which is both a conductor of static electricity and is adapted to bring both phases of the emulsion to the same electrical charge, and positively removing the charge imparted to said medium.

1,573,390. MANUFACTURE OF RUBBER-COATED WEFTLESS-CORD FABRIC. ALBERT GESSNER, Jr., Morgantown, W. Va. Filed Aug. 18, 1922. Serial No. 582,771. 4 Claims. (Cl. 154—1.)



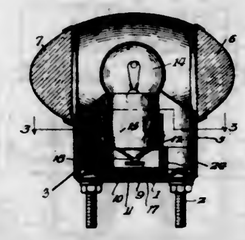
1. An apparatus for making weftless cord fabric comprising a warp beam constituting a supply for a plurality of cords, means for laying the cords in sheet form in parallel relationship, calender rolls for applying unvulcanized rubber thereto and non-rotatable bars, between the source of supplying and the calender rolls, with which the cords are in frictional contact as they are pulled through the apparatus for holding all the cords under equal tension, all the cords being in the same plane.

1,573,391. METHOD OF MANUFACTURING CUSHION TIRES. JOHN M. HIBNER, Detroit, Mich., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed July 17, 1923. Serial No. 652,005. 8 Claims. (Cl. 18—55.)



1. That method of manufacturing solid tires of the cushion type which consists in, vulcanizing rubber composition to a one-piece metallic rim with enclosed comminuted material defining an internal cavity formation, and finally removing the material in comminuted form from the vulcanized tire on the rim.

1,573,392. RENEWABLE FUSE ELEMENT. JOHN B. GLOWACKI, Chicago, Ill. Filed Aug. 8, 1923. Serial No. 656,316. 3 Claims. (Cl. 200—135.)

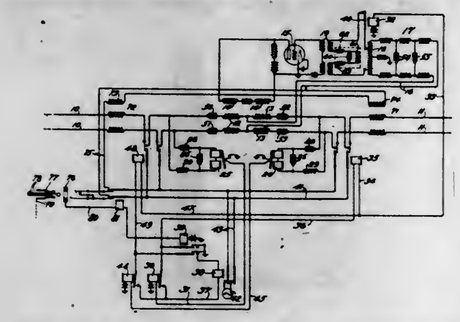


1. A fuse element comprising a plurality of strips of fusible material, and means for permanently securing said strips together in a spaced relationship, with the ends of the strips extending free for individual attachment within a fuse cartridge.

1,573,393. COMBINED MIRROR AND COMPACT HOLDER. CHARLES GOLD and ABRAHAM GOLD, New York, N. Y., assignors to Charles Gold & Brothers, a Copartnership consisting of Charles Gold, Abraham Gold, and Isadore Fogel, New York, N. Y. Filed June 2, 1925. Serial No. 34,311. 2 Claims. (Cl. 132—83.)

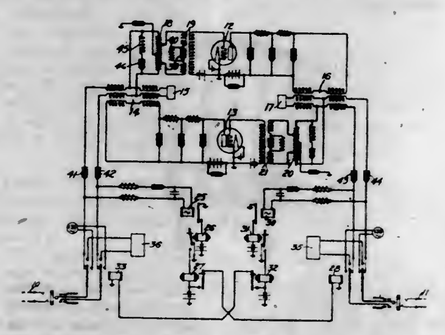
1. A vanity case comprising a casing, a bar adapted to slide bodily from one point to another within the casing, a holder pivotally connected to the bar, means for guiding the bar and holder in their movements within the casing, the device being such that when the holder is moved to outer position it may be swung to angular position relatively to the casing.

1,573,394. PARKING LAMP. JAMES J. GOUGH, Chicago, Ill., assignor to Chicago Electric Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed July 22, 1925. Serial No. 45,208. 6 Claims. (Cl. 240—8.22.)



1. In a lighting device of the class described, a metallic casing including a base, a substantially U-shaped bulb holder having its bight secured to the base, a lamp bulb having its base gripped between the arms of the holder, means insulating the holder from the casing, a resilient contact member disposed for engaging the axial terminal of the lamp bulb, and a switching member movably mounted on the casing for movement circumferentially of the latter, the switching member being disposed for engaging the tip of one arm of the holder.

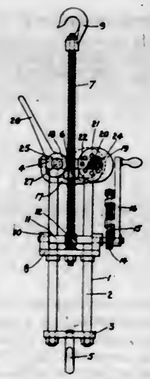
1,573,395. SIGNALING CIRCUITS. EDGAR D. JOHNSON, East Orange, and CHARLES W. GREEN, Wyoming, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 23, 1921. Serial No. 454,830. Renewed Aug. 14, 1925. 15 Claims. (Cl. 179—4.)



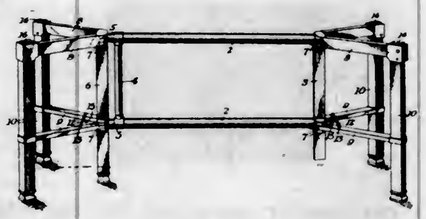
1. In an electric system, two real line sections directly connected without the intermediary of balancing artificial lines, and a repeater station comprising a repeater element, a three-winding transformer having one winding in circuit with one line section, a second winding in circuit with the second line section, and a third winding connected to the output of said repeater element, a

connection from a point intermediate said first two windings to the input of said repeater element, a source of signaling currents other than speech currents at said station, means responsive to signaling currents from one line section for impressing currents from said source

upon said second line section, and an anti-resonant circuit in shunt to said connection to the input of said repeater and tuned to a frequency corresponding to the frequency of said signaling currents whereby currents of said signaling frequency are prevented from being impressed on said repeater.



1,573,396. SIGNALING SYSTEM. CHARLES WILLIAM GREEN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 17, 1921. Serial No. 523,006. 5 Claims. (Cl. 179—15.)

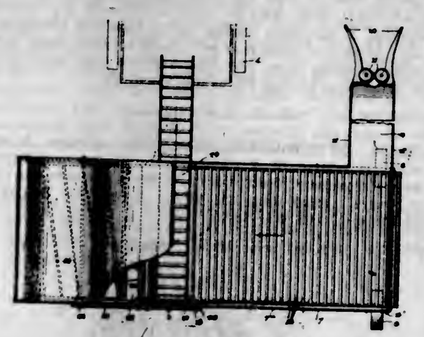


1. In combination, two line sections, a repeater circuit therebetween, a repeater element therein, a transformer in said circuit, means associated with said transformer for causing said element to have a substantially constant amplification over a wide range of frequencies which it is desired to transmit through said repeater, and means for preventing the passage of an undesired frequency through said repeater circuit without appreciably effecting the amplification characteristic of said element for said range of frequencies comprising an inductance and a capacity resonating at the undesired frequency.

1,573,397. ROPE PULLER. JOSEPH OSCAR GRENIER, Vancouver, British Columbia, Canada. Filed Mar. 9, 1925. Serial No. 14,307. 6 Claims. (Cl. 254—67.)

6. A rope puller comprising a frame presenting parallel guide bars connected by suitable end member, a cross head movable on and longitudinally of said guide bars, a pulling screw connected to the cross head and movable longitudinally of the frame through threaded engagement with one of the end members, means for attaching the frame to an anchorage, means for connecting the screw to a rope, a worm gear fixed to the pulling screw within the cross head, a shaft carried by the cross head equipped with a worm opening meshing with the worm gear and, handle means for rotating said shaft.

1,573,398. BIER. BENJAMIN M. GRIFFITH, Pittsburgh, Pa., assignor to National Casket Company, Pittsburgh, Pa., a Corporation of New York. Filed Dec. 29, 1924. Serial No. 758,541. 6 Claims. (Cl. 27—27.)

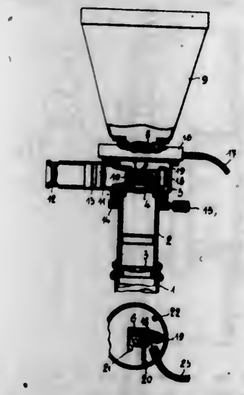


1. A bier, comprising an intermediate portion, uprights at the ends of said intermediate portion adapted to rest on a supporting surface for the bier, brackets on each of said uprights in vertically spaced relation, and oppositely folding legs pivotally mounted in said brackets, substantially as described.

1,573,399. COMBINED CORN HARVESTER AND STALK CUTTER. ABIAH HAYES GUARD, Colfax, Ind. Filed Sept. 1, 1920. Serial No. 407,325. 3 Claims. (Cl. 130—5.)

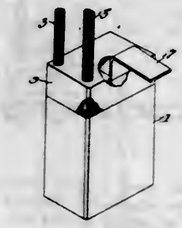
3. In a combined harvester and stalk cutting machine having its longer dimension disposed transversely to the line of travel, means to connect the machine to a vehicle to be drawn by the latter, a conveyor on the machine operable transversely to the path of travel of the machine to extend beyond one side of the vehicle to there receive stalks, means adjacent the other end of the conveyor to remove ears from the husks, means operable to deliver the ears forwardly, means operable to cut stalks and husks into fertilizer size after removal of the ears, means extending beyond the other side of the machine to guide the cut stalks and husks onto the ground as

fertilizer, a wheel-supported frame for the machine having upright members at the rear, driving means for the different elements of the machine having shafts jour-



naled in said upright members, a table adjacent said conveyor supported by said upright members, and a stalk-guiding wall at the rear of said table and above said upright members extending above the conveyor.

1,573,400. METHOD OF MAKING ABRASIVE ARTICLES. MINER L. HARTMANN, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed July 13, 1923. Serial No. 651,430. 5 Claims. (Cl. 51—280.)



1. In the process of making bonded abrasive articles, the steps consisting in adding to a raw mixture of abrasive grains and bond, comminuted non-volatile organic particles which do not have a tendency to swell up during burning, pressing the mixture to the desired shape, and subsequently effecting removal of the organic particles by burning the shaped article.

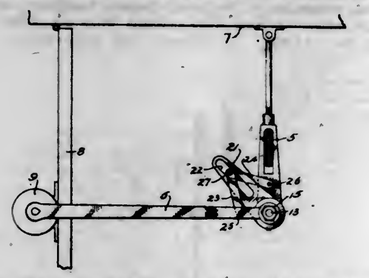
1,573,401. PHOTOGRAPHIC CAMERA. HERMANN HEINS, Wetzlar, Germany, assignor to the Firm Ernst Leitz, Optische Werke, Wetzlar, Germany. Filed May 20, 1924. Serial No. 714,731. 6 Claims. (Cl. 95—42.)

1. Photographic camera having a photo lens adapted to be placed behind an optical instrument provided with an eyepiece, and reflecting means disposed in front of said photo lens and adapted for observing the object to be photographed.

1,573,402. CONDUCTIVE BRUSH AND METHOD OF SECURING ATTACHMENTS THERETO. ALBERT F. HERMAN, Cleveland, and HORACE S. ELLSON, Lakewood, Ohio, assignors to National Carbon Company, Inc., a Corporation of New York. Filed May 19, 1924. Serial No. 714,496. 11 Claims. (Cl. 171—326.)

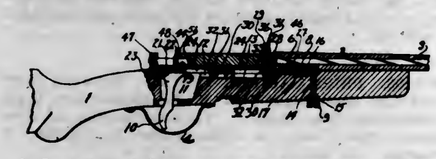
4. In combination with a conductive brush having an electroplated coating on a portion of its surface, a metallic cap having its inner surface coalesced with the coating, and a flexible conductor having an end embedded in said cap.

1,573,403. PRICE CARD OR TICKET. HERMANN HOPP and LEO HOPP, New York, N. Y., assignors to Hopp Press, Inc., New York, N. Y., a Corporation of New York. Filed June 13, 1925. Serial No. 36,788. 3 Claims. (Cl. 40—5.)



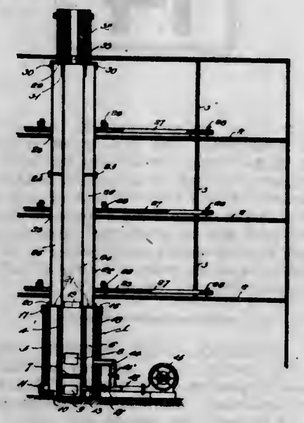
1. A price display system comprising two cards adapted for use in combination with each other, printed matter upon each of said cards which when the cards are used together forms a portion of a complete readable legend, and a plurality of tabs formed in one of said cards, one edge of one of said cards being adapted to underlie one or both of said tabs to retain the cards together, and both of said tabs carrying printed matter to be employed in combination with the printed matter of said cards to form a complete readable legend.

1,573,404. FRICTION DOOR HOLDER. NORMAN B. HUBD, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed July 15, 1925. Serial No. 43,722. 3 Claims. (Cl. 16—65.)



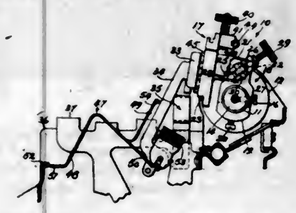
1. In a friction door holder, a pair of arms having friction faces thereon, a friction block adapted to frictionally engage said faces, a bolt connecting said arms and in screw threaded engagement with said friction block whereby when the bolt and friction block are rela-

tively rotated in one direction, the block will contact with the friction face on one arm and, when rotated in the opposite direction, the block will contact with the



friction face on the other of said arms, and means for causing said block to rotate at a different speed than said arms as the latter are swung to and fro.

1,573,405. GUN. GEORGE S. LEWIS, Springfield, and EARL B. SMITH, Chicopee Falls, Mass. Filed Apr. 1, 1925. Serial No. 19,837. 19 Claims. (Cl. 42—16.)

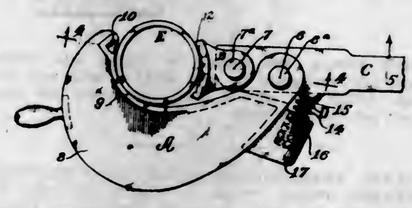


1. In a gun, a frame equipped with a sear, a breech-block slidingly mounted on said frame, and a spring-pressed firing-pin bolt in said breech-block, said bolt having therein arresting and cocking notches, and said breech-block being provided with a member which closes the entrance to said cocking notch except when said bolt is drawn back into firing position.

1,573,406. COMBINED CHIMNEY, FURNACE, AND VENTILATOR. EDWARD DUDLEY LEWIS, Elmira, N. Y. Filed Feb. 12, 1925. Serial No. 8,763. 4 Claims. (Cl. 126—99.)

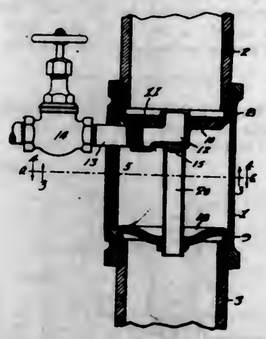
1. A heating system comprising a furnace having spaced inner and outer walls and an air inlet into the space between said walls, means within the inner wall permitting heating thereof to in turn heat the air between the two walls, an outer pipe rising from the outer wall and adapted for passage through an opening or openings in the floor or floors of the building in which the system is used, an inner pipe within said outer pipe in spaced relation with the latter and rising rigidly from the aforesaid inner wall to form an exhaust gas escape therefrom, a cap plate resting on at least the outermost of said pipes and connected with both of said pipes, and a chimney rising from and supported by said cap plate, said outer pipe having air escape openings.

1,573,407. TYPEWRITING MACHINE. JOSEPH LINDBURG, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 31, 1924. Serial No. 689,633. 16 Claims. (Cl. 33—183.)



1. A device for positioning type-blocks on pivoted type-bars of a revoluble-platen typewriting machine, comprising a main bracket, supporting means on which said bracket is adjustable in a plane at right angles to the platen axis, an anvil-guide-support adjustable angularly, forwardly, or rearwardly on said main bracket in a plane at right angles to the platen axis, an anvil mounted for up-and-down adjustment thereon, and means on the anvil-guide-support to guard against accidental removal from said main bracket and to facilitate assembling and dismounting thereof, said device being positionable at the printing point and adjustable to cause the face of a type-block to lie flat on the anvil and in correct printing alignment upon operation of a type-bar to carry the type-block against the anvil.

1,573,408. SUCKER-ROD FISHING TOOL. HERMAN R. LLOYD and JACK E. REYNOLDS, Taft, Calif. Filed May 13, 1925. Serial No. 30,004. 1 Claim. (Cl. 294—90.)

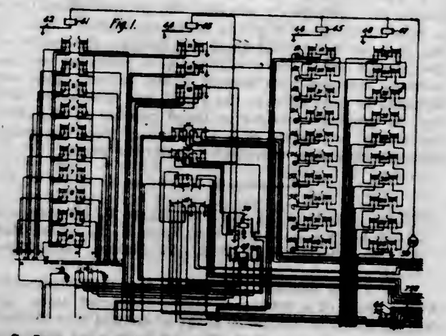


A sucker rod fishing tool of the class described including a casing, a fixed slip, and a movable slip, said casing including an upper portion arcuate in cross section, and a lower portion circular in cross section, said upper portion having a longitudinally extending slot disposed on the median dimension thereof, said fixed slip being fixed in the cylindrical portion opposite to the slot, said fixed slip being arcuate in cross section and having its upper portion of the longitudinal edge cut away to form dove tailed shoulders, said movable slip being arcuate in cross section and provided with an elongated body having an enlarged head formed on its lower end thicker than the body to provide an interior shoulder, the lower edge of the head being dove tailed to form shoulders for co-operating with the shoulders on the fixed slip, an element projecting from the body of the movable slip into the slot for movably mounting the movable slip in the casing.

1,573,409. TUBING TONGS AND WRENCH. THEODORE L. LYNCH and LUTHER P. NICHOLSON, Oxnard, Calif. Filed Oct. 24, 1921. Serial No. 509,964. 4 Claims. (Cl. 81—91.)

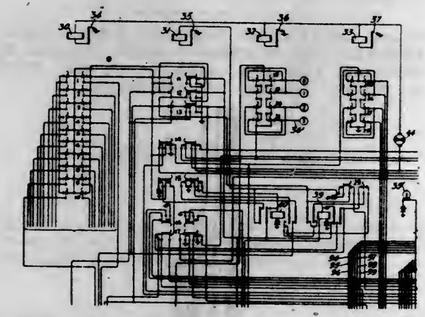
1. A device of the character disclosed, comprising a handle member, a jaw pivotally connected with the handle member at the inner end thereof, a second jaw pivotally connected with the handle member at a point on the handle member outward of the point of pivotal connection of said first named jaw, the second named jaw having an impingement zone at which it engages the work, such impingement zone lying in part approximately in a line common to the points of pivotal mounting of both of said jaws; there being a work-engaging projection at said part of said impinging zone and yielding means for moving one of said jaws into engagement with the work.

1,573,410. TEST FITTING. FRANK E. MCCABE, Chagrin Falls, and MICHAEL L. ROSHETKO, Cleveland, Ohio, assignors to The Grabler Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 7, 1923. Serial No. 617,465. 3 Claims. (Cl. 137—77.)



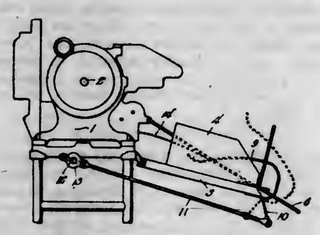
1. A test fitting of the character set forth comprising a shell designed for connection at opposite ends with conduit sections and having an opening in its side, an annular seat extending about the interior of the shell between said opening and one end of the shell, an abutment portion opposed to the seat and situated between the aforesaid opening and the opposite end of the shell, a disk insertable through said opening for engagement with the seat, said disk having a central boss, a base insertable through the opening for engagement with the said abutment portion, a tubular post having screw connection with the base centrally thereof and arranged to receive the boss of the disk, and means for introducing a testing fluid into the conduit beyond the side of the disk adjacent said seat.

1,573,411. MEANS FOR DRAINING WELL TUBING PREPARATORY TO PULLING SAME. WILLIAM H. MCKISSICK, Tulsa, Okla. Filed Mar. 29, 1924. Serial No. 702,777. 7 Claims. (Cl. 103—221.)



1. A drain device for well tubing comprising a body portion having a through passageway and to which sections of a well tubing are adapted to be applied, the body portion having a branch port leading from the through passageway, a ball valve controlling the port, an actuator ball adapted to project through said port into the passageway, and a member adapted to be positioned within the passageway for engaging the actuator ball and through the intervention thereof remove the ball valve from its seat.

1,573,412. AUTOMATIC TESTING SYSTEM TO TEST AUTOMATIC SWITCHES. HARRY W. MACDOUGALL, East Orange, and ARNOLD S. BERTELS, Tenafly, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 3, 1923. Serial No. 666,216. 55 Claims. (Cl. 179—175.)

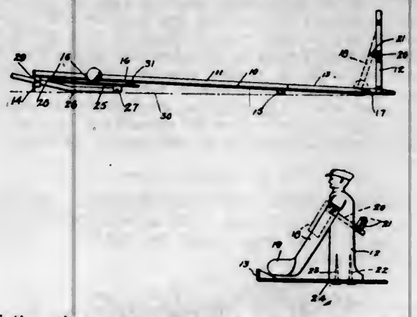


8. In a system for testing groups of automatic switches, means to automatically and progressively select particular combinations of said groups, and means to successively test the automatic switches included in the selected combinations.

1,573,413. AUTOMATIC TESTING SYSTEM TO TEST AUTOMATIC SWITCHES. HARRY W. MACDOUGALL, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 19, 1923. Serial No. 675,525. 58 Claims. (Cl. 179—175.)

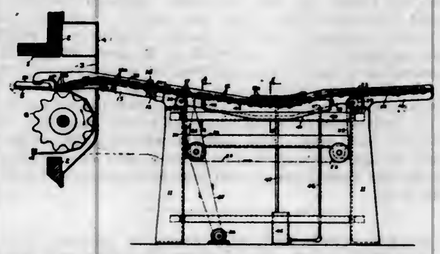
27. In a system for testing groups of apparatus, a selector, means for controlling said selector to select one of said groups, automatic means to successively test each apparatus in the selected group, and means to successively apply a plurality of different conditions of test to each apparatus.

1,573,414. STATIC ELIMINATOR. GEORGE H. MAHONEY, Chicago, Ill., assignor to Chicago Engineering Works, Inc., Chicago, Ill., a Corporation of Illinois. Filed Nov. 20, 1924. Serial No. 751,005. 6 Claims. (Cl. 171—86.)



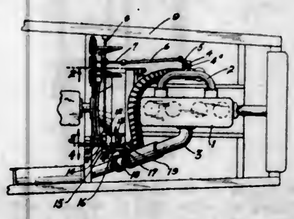
1. The combination with a printing device having means for successively ejecting the printed sheets over a delivery table, of a guard above the delivery table in the path of the ejected sheet for limiting the height of the ejected sheet above said table, a grounded member movably mounted with respect to the delivery table and disposed in proximity to the guard, and means for moving the grounded member in timed relation to the ejecting means to depress each sheet away from the guard after the sheet has been ejected under the guard.

1,573,415. TOY GOLF GAME. BRAM P. MENDES and JACOB LUDWIG LANNERS, New York, N. Y. Filed Mar. 9, 1925. Serial No. 14,018. 13 Claims. (Cl. 273—121.)



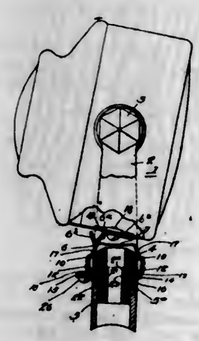
2. In a toy adapted for indoor use, the combination with a field, of a miniature player supported along said field so as to be rotatable about a vertical axis thereof, said player being provided with a club mounted thereupon for swinging movement so as to strike and project a ball along said field, said club being mounted upon a pin rotatably mounted upon said player, and slidable longitudinally thereof within its bearing.

3. In a toy, the combination with a ball and a field therefor, said field having a plurality of holes to receive said ball against movement along the field, of release means mounted beneath said field and in spaced parallel



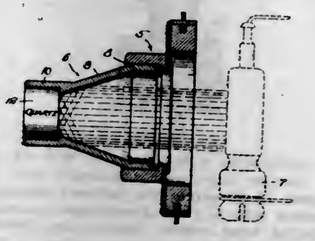
relation thereto, and means for raising said release means into contiguity to said field to raise said ball caught within one of said holes and permit the same to roll out upon the field.

1,573,416. FEEDING MECHANISM FOR CONTINUOUS BAKING OVENS. FRANK P. NISTLE, Intervilla, Pa. Filed July 17, 1924. Serial No. 726,421. 5 Claims. (Cl. 107—57.)



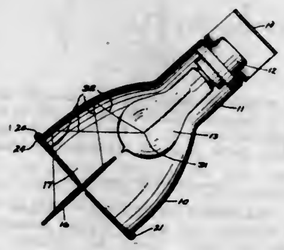
1. Apparatus for continuously delivering pretzels or like dough shapes to an endless belt oven hearth; comprising a receptacle for treating liquid, and a feed platform made up of feed rolls which have their feeding surfaces positively rotated in the same direction and at the same speed; a series of said rolls forming a lowered feed section arranged to dip into said receptacle.

1,573,417. ENGINE-COMPRESSION-BRAKE APPARATUS. HARRY H. NOLEN, San Diego, Calif. Filed Aug. 26, 1924. Serial No. 734,215. 5 Claims. (Cl. 188—99.)



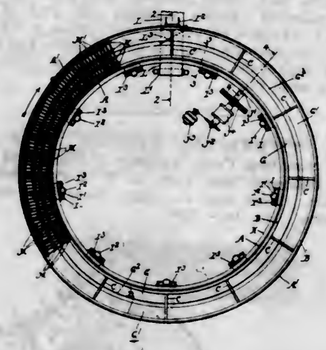
1. In an engine-compression brake apparatus for vehicles, an air intake valve in connection with the intake means of the engine of said vehicle for admitting air to said intake means, said air intake valve being disconnected and operable independently from the conventional throttle valve of the engine, an exhaust shut-off valve positioned in the exhaust line of said engine, and means in connection with said valve for slightly opening said air intake valve prior to the closing action of said shut-off valve.

1,573,418. RANGE-LIMITING DEVICE FOR SEARCHLIGHTS. JOHN K. OLSEN, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Jan. 24, 1923. Serial No. 614,558. 8 Claims. (Cl. 240—61.)



1. The combination with a swiveled support, a base therefor, and a lamp body pivotally mounted in the support, of a stop on the lamp body, a co-acting stop member resiliently mounted on the support, and means whereby the last mentioned stop member will be either yielding or unyielding to motion of the lamp-body stop, according to the angular position of the lamp body support upon said base, said means including an extension of said stop member, and a member having fixed relation to said base for contacting said extension in a manner to prevent yielding motion of said stop.

1,573,419. APPLICATOR FOR THERAPEUTIC LAMPS. LEOPOLD BRUNELLE PAMBRUN, San Francisco, Calif. Filed June 12, 1922. Serial No. 567,574. 2 Claims. (Cl. 174—177.)

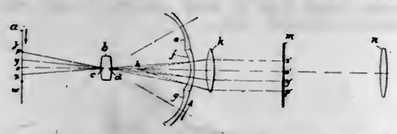


2. A device of the class described comprising a source of light, a frame associated therewith, a holder embodying two cylindrical portions of different diameters and a tapered portion between the cylindrical portions, the entire inner portions of the holder being polished to reflect light entering through the larger cylinder, and a quartz body of uniform diameter within the smaller cylinder and terminating at the tapered portion thereof, whereby to receive in its end all the rays, both direct and reflected, projected into said holder.

1,573,420. ELECTRIC FIXTURE. PAUL D. PHILLIPS, Elmhurst, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 5, 1922. Serial No. 565,942. 2 Claims. (Cl. 240—103.)

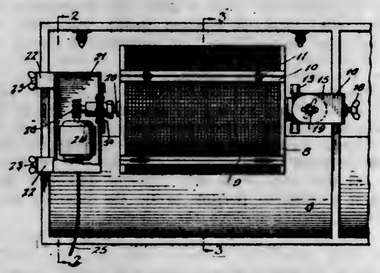
1. The combination with a lamp and a reflector surrounding said lamp, of a glare shield, said lamp and reflector being so positioned and constructed that a substantial portion of the reflected light is reflected back toward the axis of the reflector, said shield being substantially flat and lying substantially in an axial plane of the reflector and having an extent substantially just sufficient to intercept all of the rays which are reflected back toward the axis of the reflector, whereby no reflection of the lamp in the reflector will be visible, said lamp being set well back from said reflector and said shield having a substantial portion inside the reflector and a substantial portion outside the reflector.

1,573,421. CASTING-HANDLING MACHINE. AXEL G. J. RAPP, Chicago, Ill., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 11, 1923. Serial No. 611,988. 8 Claims. (Cl. 209—350.)



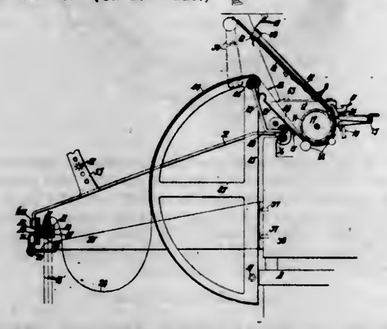
1. In combination in a casting handling machine an annular table adapted to support castings and provided with passages therethrough to permit material from the castings to pass downward mounted for rotary movement, an annular hopper beneath said table fastened thereto, there being an extended open space inside of said table substantially free from obstructions.

1,573,422. MOTION-PICTURE MACHINE. WILLIAM SALORTO, Lancaster, Pa. Filed Mar. 17, 1924. Serial No. 699,619. 4 Claims. (Cl. 88—16.8.)



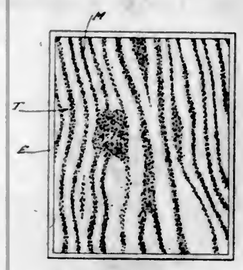
1. In a motion picture machine, the combination of a continuously movable film, a fixed objective lens on front of the film having front and rear nodal points, a con-

tinuously rotatable series of spherical lenses which travel in front of the fixed objective lens, and a fixed focusing lens in front of said path of travel of the rotatable



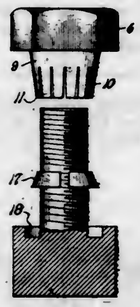
lenses; the rotatable lenses being aplanatic and all of which have a common aplantic point which is coincident with the axis of rotation of the rotatable lenses and with the front nodal point of the objective lens.

1,573,423. WASHING MACHINE. KLARA PAULINE AUGUSTE SCHULTZ and LOUIS WUEST, Brooklyn, N. Y. Filed July 22, 1925. Serial No. 45,196. 1 Claim. (Cl. 68—18.)



A washing machine having a rotatable drum provided with trunnions, a watertight casing having a bearing supporting one of said trunnions, a gear fixedly secured to the end of said trunnion within said casing, an electric motor within said casing provided with a shaft having a worm mounted thereon engaging the gear of said trunnion, a standard supporting said casing, a standard supporting the opposite trunnion of said drum, and means connected with said standards adapted to clamp the walls of a wash tub.

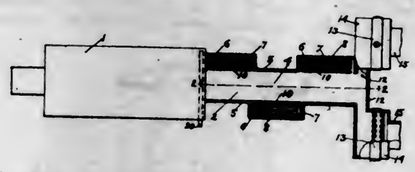
1,573,424. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 21, 1923. Serial No. 640,315. 17 Claims. (Cl. 197—126.)



1. A typewriting machine of the character set forth, including a revoluble line-spacing platen mounted permanently in typing position, means for holding in fixed position, relatively to the platen, the rear ends of carbon-sheets interleaved between the slack plies of work-web, and a slack-take up forming a work-supporting table and movable relatively to the carbon-holding means and the platen, for taking up the slack in the composite web.

1,573,425. PROCESS OF MAKING ARTIFICIAL STONE. CHARLES STEED, Los Angeles, Calif., assignor of one-half to Fred Smith, Los Angeles, Calif. Filed Feb. 19, 1925. Serial No. 10,187. 4 Claims. (Cl. 41—19.)

1. The herein described method of forming artificial stone, that includes coating particles of a soluble substance with an insoluble coating, imbedding such particles in a plastic body, and then after the plastic body has sufficiently set, breaking the said coatings and dissolving away the soluble particles.



1,573,426. INTERLOCKING NUT AND BOLT. AUGUSTA M. STOCK and ROBERT STOCK, Cleveland, Ohio. Filed Apr. 9, 1925. Serial No. 21,987. 2 Claims. (Cl. 151—2.)

1. In combination, a bolt provided with an undercut head, a movable taper washer mounted upon the bolt and adapted to fit within the undercut portion and a nut provided with a yielding extension adapted to be forced by the taper member against the undercut portion of the head.

1,573,427. UTILIZATION OF WASTE HEAT OF FURNACE GASES. HARRY HOWARD STOUT, Douglas, Ariz. Filed Sept. 17, 1920. Serial No. 410,998. 3 Claims. (Cl. 122—7.)

1. In combination with a furnace, a flue adapted to receive hot gasses therefrom, and having a heat-absorbing and heat-radiating side wall, and having a lateral recess opposite said wall and in open communication with the flue passage, steam boiler means in said recess, out of the direct path of such gases through the flue, and adapted to receive heat by radiation from said side wall, and partition means movably mounted adjacent to

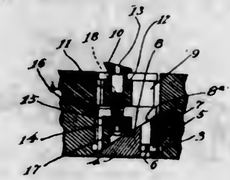
the flue and adapted to be moved into position between said recess and said flue, to temporarily shut off said boiler means from the flue.

1,573,428. MEANS OF ARRESTING A SAWMILL CARRIAGE. DANIEL R. TANNER, La Grande, Oreg. Filed Mar. 19, 1921. Serial No. 453,658. 9 Claims. (Cl. 121—45.)

3. In a combined normal and emergency lever mechanism, a normal lever mounted to swing about a fixed axis and having a pivotally mounted handle, an emergency lever mounted on and slidable longitudinally along said normal lever and connected with said pivoted handle and having an emergency acting portion, and a spring connected with said levers to hold the same in normal relative positions under normal stress applied to said handle and yielding under abnormal stress on said handle for movement of said emergency lever into an emergency position.

1,573,429. PRINTING-PLATE HOLDER. EMIL E. THIEL, Cincinnati, Ohio, assignor to The Printing Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 22, 1924. Serial No. 733,644. 5 Claims. (Cl. 101—385.)

1. A holding device for printing plates comprising a jaw and a carrier, means for movably mounting the jaw in the carrier, said carrier having spring tongues mounted to extend down along the sides thereof, said tongues turned outwardly at the free ends thereof to act as hold-down devices.



1,573,430. PRINTING-PLATE HOLDER. EMIL E. THIEL, Cincinnati, Ohio, assignor to The Printing Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 22, 1924. Serial No. 733,645. 3 Claims. (Cl. 101—385.)

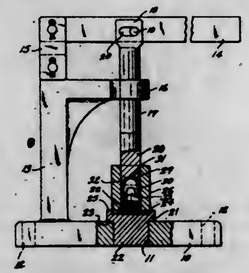
2. In a device of the character described, the combination with a carrier having a base, and interspaced sides, a bearing block, and a jaw, each being pivotally mounted in the carrier, a right and left hand screw

available for turning through the jaw, and right and left hand sockets in the jaw and the bearing block for said screw, for the purpose described.

1,573,431. PRINTING-PLATE HOLDER. EMIL E. THIEL, Cincinnati, Ohio, assignor to The Printing Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 22, 1924. Serial No. 733,646. 7 Claims. (Cl. 101—385.)

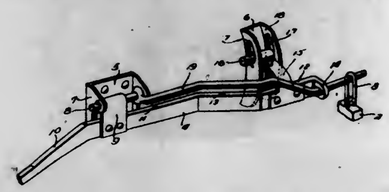
1. In a device of the character described, the combination with a carrier, having a body to fit in an aperture in a press bed, a jaw held movably in the carrier, the carrier having an inclined base and the jaw provided with a wedge for engagement with the inclined base of the carrier, and means for adjusting said wedge and incline engagement to alter the position of the jaw and carrier.

1,573,432. RENEWABLE FUSE. GEORGE R. TRUMBULL, Bantam, Conn. Filed Aug. 29, 1921. Serial No. 496,322. 17 Claims. (Cl. 200—119.)



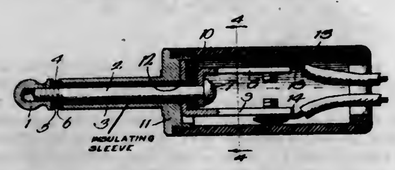
1. In a fuse, a fuse body having end caps thereon with passages for a fuse link, a metallic guard washer within said body and removed a substantial distance from the ends thereof and having a passage for a link, said guard washer having angularly bent spring arms for holding the same within the body, a fuse link extending through the passages and means for making contact with the fuse link at the ends of the body.

1,573,433. WAX-FORM COMPRESSOR FOR INDIRECT INLAY SYSTEMS. ROY E. TUTHILL, Bridgeport, Conn. Filed May 28, 1925. Serial No. 33,451. 7 Claims. (Cl. 18—16.)



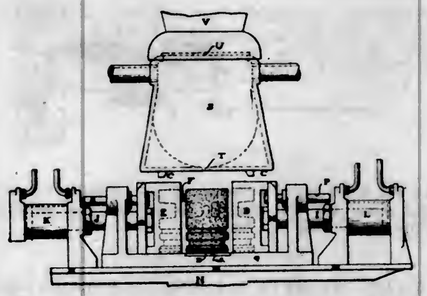
1. In a device for making wax forms for inlays, a holder for inlay wax, a block, a separate die having a cavity

therein carried by the block, said holder being arranged to confine the wax and guide the block for recip-



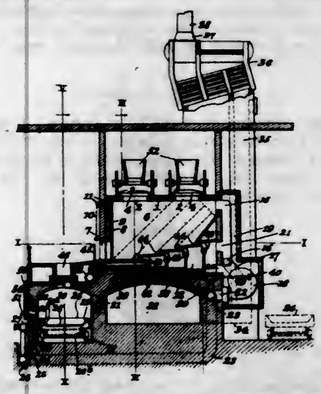
rocatory movement, and means for forcing the die into the wax to cause the wax to fill all parts of the cavity.

1,573,434. COUPLER-LOCK-RELEASING DEVICE. FREDERIC M. WHYTE, Tarrytown, N. Y. Filed Sept. 24, 1924. Serial No. 739,620. 10 Claims. (Cl. 213—159.)



2. A releasing device for car coupler locks comprising a bar adapted to be arranged at one end of the car and to extend transversely thereof, a pair of spaced outer and inner bar-supporting members adapted to be fixed to the car, a pair of spaced outer and inner bar-suspending members carried by the bar, a combined fulcrum and pivotal connection between said outer suspending and outer supporting members, a vertically shiftable pivotal connection between the said inner suspending and inner supporting members, whereby the bar may be swung upwardly about said pivotal connections and may be tilted vertically about said fulcrum connection, and means adapted to flexibly connect the inner end of the bar to the coupler lock.

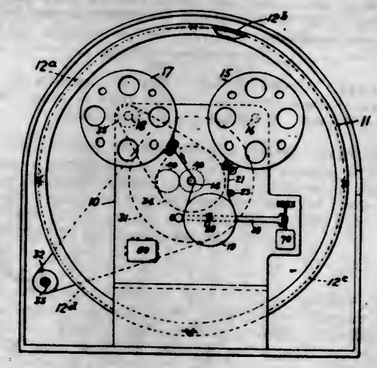
1,573,435. CONNECTING PLUG. ERNEST E. YAYLEY, Chicago, Ill. Filed May 26, 1924. Serial No. 716,007. 1 Claim. (Cl. 173—361.)



A connecting plug including a tip contact; a sleeve contact aligned with the tip contact, said contacts being spaced apart longitudinally of the sleeve and having opposing cup shaped recesses formed in their adjacent ends; and a spacer of insulation in the form of a ring disposed in said recesses and surrounded by and engaging the rims about the same, said tip contact having a shank passing through the sleeve contact and the spacer and serving to bind said contacts and the spacer in assembly.

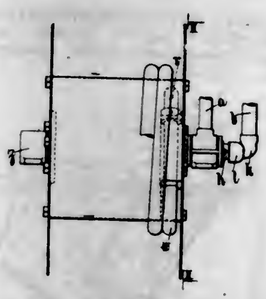
1,573,436. METHOD OF MAKING CORES. ALEXANDER ANDERSON, Detroit, Mich., assignor to Earl Holley, Detroit, Mich. Filed Feb. 25, 1924. Serial No. 694,918. 1 Claim. (Cl. 22—194.)

The method of making sand cores, which consists in first mounting the two halves of a two-piece core box, which is open at the bottom, on horizontal guides, connecting pneumatic pistons to said core box halves, whereby the core box is opened and closed automatically, sliding a plate below the core box so as to close the open end thereof, closing the two halves of the core box, blowing sand therein, opening the core box so as to leave the core on said plate, drying the core on the said plate, and finally removing the core from the plate.



1,573,437. METHOD OF AND APPARATUS FOR THE MOVING OF PILED MATERIALS. ROBERT BALMER, Toronto, Ontario, Canada. Original application filed Sept. 22, 1919, Serial No. 325,431, now Patent No. 1,442,116, dated Jan. 16, 1923. Divided and this application filed Aug. 12, 1922. Serial No. 581,320. 12 Claims. (Cl. 214—17.)

1. In the handling of piled materials, the method of moving such materials consisting in pneumatically expelling a portion of the material at the edge of the base of the slope-face of the pile outwardly and away from said base and creating an avalanche of material down the slope-face of the pile.



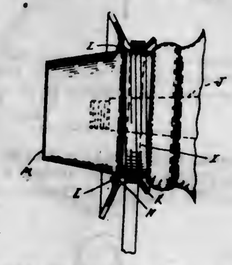
4. In a storage bin for storing and moving refuse piled therein, a discharge opening at the front of the bin, a floor comprising a horizontal part adjacent the discharge opening and a stepped part extending therefrom toward the back of the bin, the treads of the stepped part successively overhanging at the side toward the discharge opening, the plane of the treads being inclined slightly downward toward the horizontal part of the floor.

1,573,438. METHOD OF PROJECTING MOVING PICTURES AND MOVING-PICTURE-PROJECTING MACHINES. SAMUEL BARDY, Philadelphia, Pa., assignor, by mesne assignments, to Bardy Projector Co., Philadelphia, Pa., a Corporation of Delaware. Filed Mar. 8, 1921. Serial No. 450,575. 7 Claims. (Cl. 58—16.8.)

1. The method of projecting pictures comprising passing a film having successive pictures in a continuous manner between a source of light and a relatively fixed lens system, moving a compensating lens system in timed relation to the pictures on the film to compensate for the moving film, and adjusting the lens systems with relation to each other and the film during the movement of the film to compensate for variations in the size of said pictures.

1,573,439. REEL FOR DOUBLE-HOSE LINES. HOWARD EDWIN BEDFORD, London, England, assignor, by mesne assignments, to Pyrene Manufacturing Company, Newark, N. J., a Corporation of Delaware. Filed June 17, 1925. Serial No. 37,814. 7 Claims. (Cl. 299—78.)

1. A hose reel comprising a drum, side plates to said drum, journals extending beyond the drum at each end thereof, one of said journals having two separate and independent passages formed therein for the reception and delivery of two separate liquids.



1,573,440. OUTLET FITTING. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 21, 1917. Serial No. 203,078. 4 Claims. (Cl. 173—330.)

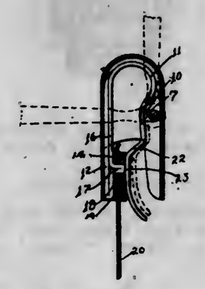
1. An electrical connector device comprising an insulating arch-shaped support, wing portions extending laterally from the central portion of said arch, two wiring terminals, one supported by each wing portion, and two

contact members, one connected with each wiring terminal and each having a contact portion embraced by the arch.

1,573,441. ANCHORAGE DEVICE FOR VEHICLES. WILLIAM W. BLAKELY, Detroit, Mich. Filed May 12, 1924. Serial No. 712,725. 7 Claims. (Cl. 188—32.)

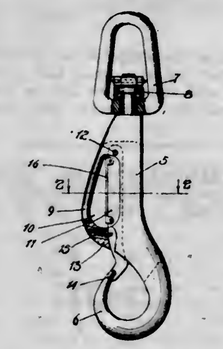
1. In a vehicle anchorage device, a replacement member for the dust cap of a wheel hub, a tie member engageable with said replacement member and a temporary dust cap detachably engageable with said replacement member.

1,573,442. DRAWCUT SCISSORS. HENRY L. FEDDERSEN, San Francisco, Calif. Filed Sept. 30, 1924. Serial No. 740,853. 2 Claims. (Cl. 30—13.)



1. A pair of scissors or shears comprising two blades pivotally and slidably secured together, the pivotal connection comprising a shouldered pin secured fixedly to one of the blades with the shoulder projecting into a slot in the other blade, a projection from the shouldered portion of the pin engaging a notch in the edge of the slot, a threaded reduced portion of the pin extending through the slotted blade and having a nut thereon for securing the joint, and a plate through which said pin passes, said plate being free to rotate on the pin and to slide in the slot.

1,573,443. LICENSE-PLATE HOLDER. FORREST HALLAR, Blairstown, Mo., and BERYL C. LONG, Topeka, Kans. Filed July 18, 1924. Serial No. 726,750. 3 Claims. (Cl. 40—125.)



1. In a holder for license plates, a casing having a side with an extension, the side of the extension being inturned to form a flange, a spring doubled on itself, the doubled portion of the said spring being seated in the extension under the said flange, a projection formed

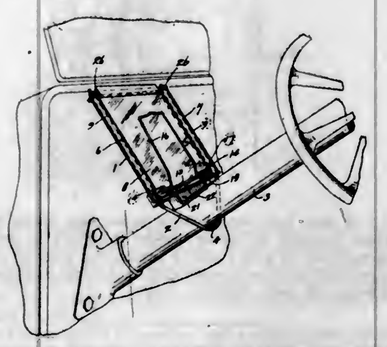
as a part of the spring adapted to enter a slot of a bracket and a slot of a license plate, the said spring having a free end extending across the end of the projection and coacting therewith to retain the device in

operative relation to its support and the license plate, and a cam journaled in the casing in position to bear against the extension for holding it in operative position.

1,573,444. HOOK FOR WELL-DRILLING MACHINES. LUTHER M. JORDAN, Owasso, Okla. Filed Aug. 19, 1924. Serial No. 732,964. 3 Claims. (Cl. 24—241.)

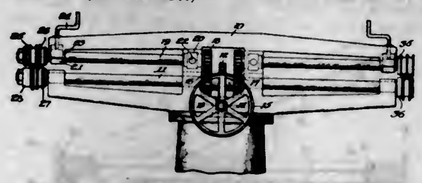
1. In a hook for well drilling machines, a shank having a swivel and a bill, a guard extending from one edge of the shank in spaced relation thereto, a latch pivoted to the shank and extending through the space between the guard and the shank to engage the bill of the hook, and a spring for holding the latch and bill in operative relation to each other.

1,573,445. DISPLAY CONTAINER. HARRY D. PHILLIPS, Bluefield, W. Va. Filed Feb. 24, 1925. Serial No. 11,352. 3 Claims. (Cl. 220—82.)



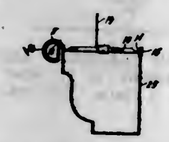
1. A container having a curved side with an opening therein, a frame having flanges at its inner edge shaped to embrace the edge of the container at the opening, the said flanges projecting outwardly and laterally of the wall of the container, an intermediate portion of said frame being in engagement with the inner surface of the container at the said opening and the said frame having an inner edge portion extending across the intermediate portion and spaced therefrom to form a seat, a transparent pane fitted in the said seat, a shield having flanges on its edges adapted to embrace the side flanges of the frame externally of the container for guarding the transparent pane, and an outwardly extending flange on the side of the shield, as and for the purpose described.

1,573,446. RESTRAINING DEVICE. ARTHUR C. POPHAM, Kansas City, Mo. Filed June 3, 1924. Serial No. 717,483. 2 Claims. (Cl. 128—134.)



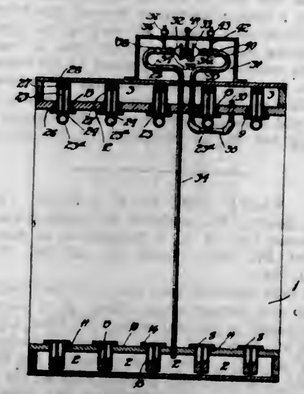
1. A device of the class described comprising a jacket having arm holes and fastening tapes for closing the open front end of the jacket, a tape secured longitudinally to the skirt of the jacket having an end for engagement with the foot rail of the bed and a tape extending from the neck of the jacket having an end for engagement with one of the head rails of the bed.

1,573,447. ROAD-MAP AND REGISTRATION-CERTIFICATE HOLDER. JOHN C. PREWITT, Santa Margarita, Calif. Filed June 2, 1925. Serial No. 34,419. 3 Claims. (Cl. 40—16.)



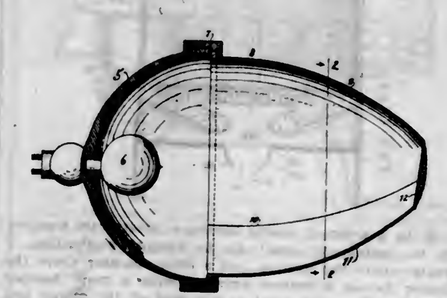
3. A backing for a road-map or the like having guides at the ends thereof, allowing a road-map to be slidably received between the guides and the backing, the guides being made for telescoping engagement with parallel supporting elements.

1,573,448. METHOD OF MAKING PIPE ELBOWS. LEMUEL H. PURNELL, Oak Park, Ill., assignor of one-half to Henry G. Goelitz and one-half to Enoch Purnell. Filed Dec. 5, 1924. Serial No. 754,172. 4 Claims. (Cl. 113—87.)



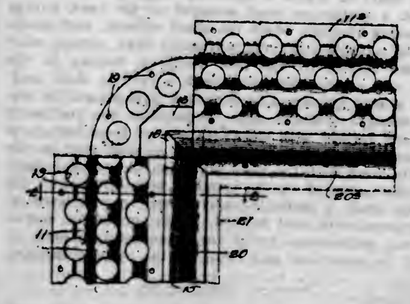
1. The method of making pipe elbows consisting of cutting a straight piece of pipe along a series of alternately inclined planes, simultaneously forming complementary flanges on the cut edges so that one flange will fit within the other, and rotating each section 180° with respect to the contiguous section.

1,573,449. GUTTER HANGER. MAX RACHLIN, New York, N. Y., assignor to Apex Gutter Hanger Corporation, New York, N. Y., a Domestic Corporation. Filed Apr. 13, 1925. Serial No. 22,623. 2 Claims. (Cl. 108—29.)



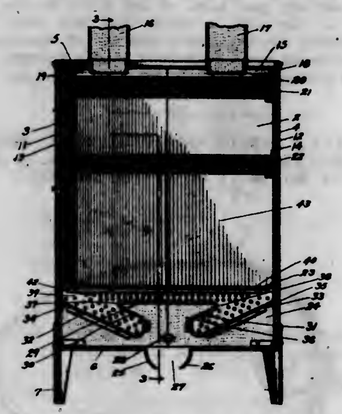
2. In a gutter hanger, a bracing strip having its ends adapted to be snugly engaged with the upper terminal portion of an ogee gutter, said end portions of said bracing strip being provided with slots and terminating in pointed tabs, which are adapted to be punched through the material of the gutter and inserted within said slots.

1,573,450. CHILLING APPARATUS. CHARLES HAROLD MCLEAY RAYSON, St. Kilda, near Melbourne, Victoria, Australia. Filed Aug. 10, 1925. Serial No. 49,429. 7 Claims. (Cl. 62—102.)



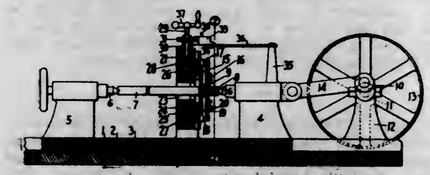
1. A chilling apparatus, comprising, a closed chamber, means for supporting products in the chamber, air ducts inside the chamber at the top and the bottom thereof, a propeller, air pipes connecting the suction side of the propeller to the top air ducts and the compression side of the propeller to the bottom air ducts, a test box, test pipes leading from the top and the bottom air ducts and having spaced adjacent ends positioned in the box, a thermometer projecting from the box and extending between the test pipe ends, an air meter in the box between the pipe ends, a branch pipe from each test pipe connecting the end of each test pipe to atmosphere, and valve means controllable from outside the test box to control passage through the branch pipes and the test pipes.

1,573,451. ANTIGLARE HEADLIGHT FRONT. CHARLES L. REIN, Baltimore, Md. Filed Sept. 10, 1923. Serial No. 661,780. 1 Claim. (Cl. 240—48.4.)



In a headlight, the combination with a dome shaped front composed of an upper transincent and a lower transparent portion, the juncture of said portions at the forward end of said front forming an opening disposed on the longitudinal axis of said headlight, of a lens, positioned in said opening, vertically inclined to said axis and having a curvature for directing rays of light passing therethrough to a greater distance than those passing through said transparent portion.

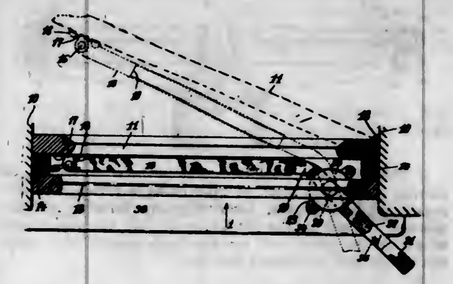
1,573,452. WINDOW CASING. CHARLES H. RICHARDS, Aurora, Ill., assignor of one-half to Richsto Manufacturing Company, a Corporation of Illinois. Filed June 4, 1925. Serial No. 34,837. 2 Claims. (Cl. 72—98.)



1. A corner bracket for casings of the class described comprising a substantially segmental body provided with an attaching portion, and ears extending from the internal angle of the body adapted to engage and substantially completely and transversely fill receiving spaces of angularly disposed plates.

1,573,453. DRIER. RUSH J. RITCHIE, Kansas City, Mo., assignor of one-half to Frank Spiekerman, Greenwich, Conn. Filed May 18, 1923. Serial No. 639,814. 6 Claims. (Cl. 34—19.)

1. In a drier, a casing having a constructed opening in its bottom to admit air to support combustion, a heater above the opening, and a drier chamber above the heater having a bottom provided with a trap chamber extending from the front to the back of the casing and having a constricted inlet in line with the burner.



1,573,454. MULTIPLE-SPLINING MACHINE. JOHN A. SHUTZ, Richmond, Ind. Filed Apr. 16, 1924. Serial No. 706,960. 3 Claims. (Cl. 90—33.)

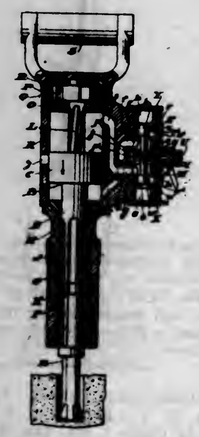
3. In a multiple splining machine, the combination with a base, of a device reciprocable thereon for carrying a shaft in which a plurality of splines are to be formed, a stationary head mounted on the base, having an opening through which the shaft extends, feed blocks radially movable along the stationary head, cutting tools hingedly carried by the feed blocks, a bearing in the upper part of the stationary head, a vertical shaft journaled in said bearing, a bevel pinion mounted on the vertical shaft, a rotatable plate mounted on the stationary head and formed with spiral threads on their rear faces to engage the threads on the plate, a bevel gear on the plate in mesh with the bevel pinion on the vertical shaft, a ratchet mounted on the latter, a lever pivoted on the vertical shaft, a spring-influenced pawl on said lever for engagement with said ratchet, power means for operating the reciprocable device, and connecting means between the latter and said lever for the purpose specified.

1,573,455. FRICTION ADJUSTER FOR SCREENED WINDOWS. EDWIN JOHN SIBLEY, Woodhaven, N. Y. Filed Sept. 1, 1923. Serial No. 660,485. 4 Claims. (Cl. 268—15.)

1. The combination with a relatively fixed member and a relatively movable member, of a friction adjuster for operating the movable member through an opening in the fixed member without disturbing the latter, said adjuster comprising a pivotal support, an arm mounted to swing thereon, adjustable friction means between said pivotal support and said arm, a telescopic member carried on said arm, means for pivoting said telescopic member to the said movable member, a portion of said arm

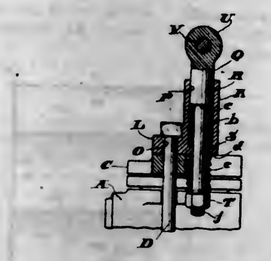
extending away from the said two members to form an operating handle and means on the latter and on the said pivotal support for automatically locking the said arm against accidental operation when said arm and movable member have been moved into a certain predetermined position.

1,573,456. FRICTION CASEMENT ADJUSTER. EDWIN J. SIBLEY, Westbury, N. Y. Filed Apr. 6, 1925. Serial No. 20,947. 1 Claim. (Cl. 292—275.)



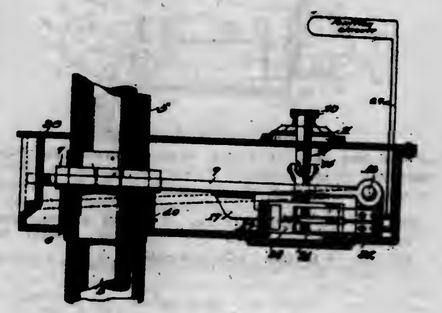
The combination with a window frame and window sash, of a friction adjuster therefor comprising a channel formed member having a slot secured in a recess in the bottom edge of the window sash, a friction box slidably carried with said channel member, a friction shoe within said friction box and in sliding contact with said channel member, a spring interposed between the friction box and the friction shoe, means for varying the pressure of the said spring against the friction shoe, a bracket secured to the window, an arm pivoted to the bracket and the friction shoe for slidably operating the latter within the said channel, said arm being operable below the window sash and adjustable means in said channel member for limiting the sliding movement of the friction box therein.

1,573,457. VALVE FOR ROCK DRILLS. FRED M. SLATER, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 24, 1923. Serial No. 670,396. 8 Claims. (Cl. 121—24.)



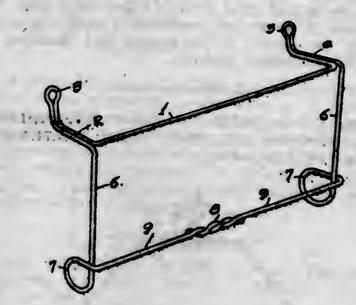
1. In a fluid actuated rock drill, the combination with a cylinder and reciprocating piston of a valve chest, a fluid actuated valve controlling the inlet supply and having a single central flange of larger diameter than the end of the valve, which flange controls the passage of motive fluid from the inlet to both ends of the cylinder, crossed supply passages connecting the forward and rearward spaces in the valve chest between the central flange and the ends of the valve with the rearward and forward ends respectively of the cylinder, small ports connecting the inlet directly with the spaces at the ends of the valve and a free exhaust port controlled by the

piston, and atmospheric leak, ports leading from the spaces at the ends of the valve and controlled by the ends of the valve, whereby the valve is thrown in a direction opposite to the direction of travel of the piston by the live motive fluid passing to the ends of the valve through said small ports and building up pressure at one of said ends of the valve until the free exhaust port



is opened by the piston and the valve being held by the pressure of live motive fluid on one face of the central flange of larger diameter until the valve is ready to be thrown.

1,573,458. CUSHION HANDLE. WILLIAM A. SMITH, Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 13, 1925. Serial No. 15,302. 4 Claims. (Cl. 121—36.)

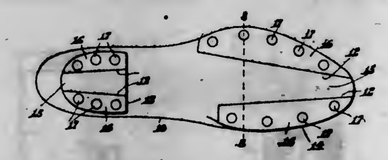


1. In a cushioning device for rock drills, the combination of a back head, cylinders formed separately and mounted on said back head, plungers to reciprocate within said cylinders, spring pressed side bolts for securing the cylinders to the back head, a pair of springs of equal diameter associated with each plunger to cushion longitudinal movement of the plungers in both directions, and a handle supported by the plungers for guiding the rock drill and holding the cylinders against rotation with respect to said back head.

1,573,459. AUTOMOBILE LOCK. ROBINSON RYLAND STABLER, Baltimore, Md. Filed Dec. 23, 1919, Serial No. 346,873. Renewed June 15, 1925. 10 Claims. (Cl. 70—127.)

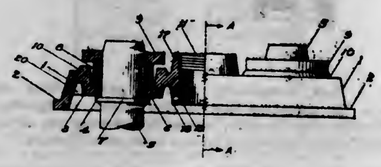
2. A lock comprising steering part locking means, means for actuating said locking means, an ignition circuit controlled thereby, means for locking the actuating means and a generator circuit controlled thereby.

1,573,460. SHOE RACK. WILLIAM F. STARCK, San Francisco, Calif. Filed Apr. 25, 1925. Serial No. 25,844. 3 Claims. (Cl. 211—17.)



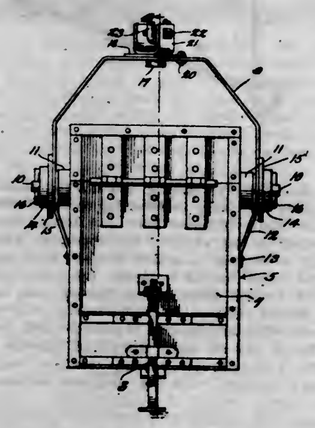
1. A shoe rack for storing and holding shoes comprising a single wire bent to form upper and lower parallel and horizontally disposed bars and having legs formed with eyelets therein adjacent the upper bar whereby said rack may be secured in spaced relation to a vertical surface, and loops formed adjacent the lower bar to engage said vertical surface and thereby hold said lower bar in spaced relation to said surface, said upper and lower bars being arranged to engage the heel and sole respectively of one or more shoes and suspend the same vertically adjacent said vertical surface whereby said shoes may be stored within a minimum horizontal space.

1,573,461. LAST. ELMER D. STONE, Framingham, Mass. Filed July 21, 1925. Serial No. 45,096. 5 Claims. (Cl. 18—46.)



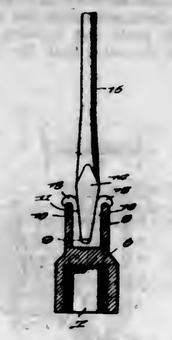
1. A rubber shoe last having separated metal plates inserted into the opposite sides of the bottom thereof

with their outer edges registering with the outer edges of said last, said plates being secured to the bottom face



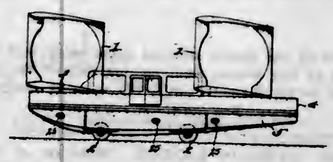
of the last only at points closely adjacent the edges thereof.

1,573,462. BATTERY COVER. CHARLES A. THATCHER, Portland, Oreg. Filed Nov. 6, 1920. Serial No. 422,156. 4 Claims. (Cl. 136—168.)



1. A method for producing a liquid tight seal between the terminal lug and the cover of a storage battery cell which compriaes providing an annular groove between said terminal and said cover, placing a resilient ring of compressible material into said annular groove, said ring in its normal state having a greater volume than the volume of the groove, compressing said ring to substantially the volume of the groove, and retaining the ring in its compressed condition.

1,573,463. PIT BUCKET. CHARLES C. TIPPETT, Luckey, Ohio. Filed Nov. 25, 1925. Serial No. 71,498. 3 Claims. (Cl. 294—68.)

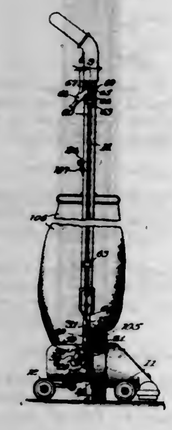


1. In a pit bucket, a body portion, a bail forming a part of the bucket, a U-shaped connecting member mounted on the bail, and means for adjusting the U-shaped connecting member in a horizontal plane.

1,573,464. SCREW-DRIVER ATTACHMENT. HENRY TOPPING, Ashley, Ill. Filed Mar. 3, 1925. Serial No. 12,956. 2 Claims. (Cl. 81—185.)

1. A wrench attachment for screw drivers, comprising a substantially V-shaped jaw member forming a socket that opens through one end and having flat inner faces to embrace the bit of a screw driver and engage the flat sides thereof, said member having its other end angular in cross section to be non-rotatably engaged in the socket of a wrench head.

1,573,465. AEROPLANE HULL. JULIUS VON WALDY, New York, N. Y. Filed Mar. 8, 1924. Serial No. 697,915. 11 Claims. (Cl. 244—2.)



1. A hull for aeroplanes and the like comprising, in combination, a rigid gunwale portion, a flexible bottom portion and means for clamping said portions together in water-tight engagement.

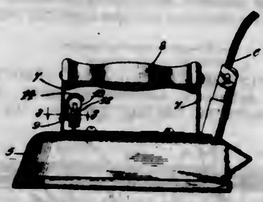
1,573,466. STORAGE CASE. MAY E. P. WARD, Tulsa, Okla. Filed Oct. 17, 1923. Serial No. 669,139. 3 Claims. (Cl. 45—71.)

1. In a storage-case having oppositely-disposed substantially vertical walls and oppositely-disposed protuberances on said walls, a foldable shelf comprising swingably-connected members foldable one against another and adapted to rest on said protuberances, and one of said members having marginal slots into which two opposite protuberances extend and on which the latter member is slidable and on which said shelf hangs when folded.

1,573,467. HANDLE FOR VACUUM CLEANERS AND THE LIKE. EDWARD W. WIEHLE, Chicago, Ill., assignor to Birtman Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 19, 1923. Serial No. 663,583. 2 Claims. (Cl. 306—13.)

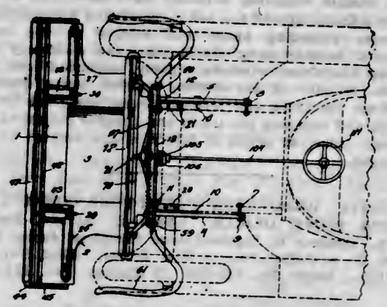
1. In combination with a vacuum cleaner having an operating handle and an element pivoting the handle to the suction housing, a relatively stationary locking segment through which said element passes, the upper portion of said segment being outwardly offset from the handle, tongues extending from said segment and fastened to said housing, a locking detent bifurcated at its lower end straddling and coacting with said segment, a casing offset on said handle in which said detent slides, and means on the upper end of the handle to actuate said detent.

1,573,468. COMPOSITION FOR TREATING BRAKE LININGS. FRANK EDWIN WIESER, San Luis Obispo, Calif., assignor of one-half to Roy R. Palmer, San Luis Obispo, Calif. Filed July 16, 1924, Serial No. 726,388. Renewed July 9, 1925. 1 Claim. (Cl. 87—9.)



A composition for treating brake linings comprising 96 parts of turpentine, 16 parts of castor oil, 8 parts of graphite, and 1 part of oil of citronella.

1,573,469. METHOD OF REGULATING THE OPERATION OF PAPER-MAKING MACHINES. EZEKIEL J. WILSON, East Greenbush, and EDWIN A. REES, Albany, N. Y., assignors to F. C. Huyck & Sons, Rensselaer, N. Y., a Corporation of New York. Filed Apr. 28, 1925. Serial No. 26,891. 4 Claims. (Cl. 92—49.)



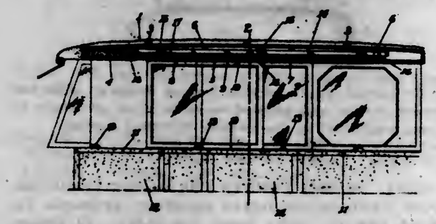
1. A method of regulating the operation of paper making machines provided with endless felts which drive one or more devices thereof, which consist in determining the stresses or strains in the travelling felt by measuring the length of a predetermined portion of the felt passing a selected point or points, and adjusting the machine to eliminate abnormal stresses or strains indicated.

1,573,470. SADIRON. PETER D. YANKOUS, Fort Smith, Ark. Filed Nov. 25, 1922. Serial No. 603,216. 1 Claim. (Cl. 240—2.)

In combination with the inclined edges of the supporting arms of a cast iron handle, a supporting member including a circular lamp receiving portion, hook members extending laterally from the circular lamp receiving portion, and adapted to grip the side edges of an arm of the handle support, and an upwardly and downwardly curved guard section formed integral with the circular portion and adapted to lie in close proximity to a lamp positioned in the circular receiving section.

1,573,471. SAFETY FENDER FOR MOTOR VEHICLES. JOHN YANOVICH and JOSEPH HRUSECKY, Zelienople, Pa. Filed Aug. 11, 1925. Serial No. 49,542. 19 Claims. (Cl. 293—15.)

3. A safey fender for vehicles comprising a platform adapted to be supported on the front of a vehicle, an impact receiving member arranged on the forward end of the platform, and a foot engaging member adapted to be automatically actuated when a person is struck by the impact member for throwing the person onto the platform, and a pair of coacting body encircling members arranged on the platform.



1,573,472. BURNER. ALBERT ZANDER, Chicago, Ill. Filed Dec. 13, 1923. Serial No. 680,458. 4 Claims. (Cl. 158—99.)

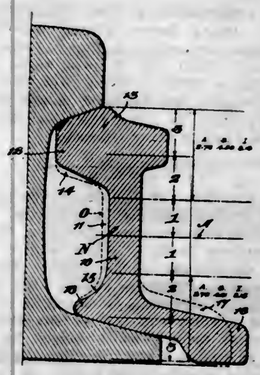
1. A gas burner for drying molds or the like, comprising a hollow body affording a combustion chamber into which the fuel is introduced, means for supplying a combustion-supporting material for supporting initial com-

bustion of said fuel, a discharge outlet for the products of combustion, and controlled means for supplying a final combustion-supporting and temperature-reducing medium under pressure at varying points between the point of initial combustion and the discharge outlet.

1,573,473. WINDOW CONTROL FOR VEHICLE TOPS. SIDNEY S. ALBRIGHT, Sacramento, Calif. Filed Feb. 12, 1924. Serial No. 692,250. 1 Claim. (Cl. 296—47.)

A window mounting structure for vehicle tops having longitudinally spaced top bows, comprising a longitudinal stringer extending under and secured to the bows, a track member under the stringer and resiliently supported therefrom, windows slidably suspended from the track, a pair of transversely spaced strips disposed between the track and stringer, cams supported by the strips and engaging the track, and hangers projecting upwardly from the strips at intervals and secured to the stringer.

1,573,474. REMOVABLE WATER-TUBE CONNECTION FOR STOPE DRILLS. LEWIS C. BAYLES, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 29, 1921. Serial No. 518,550. 2 Claims. (Cl. 121—8.)



1. In a fluid actuated stope drill of the hammer type the combination of a percussive element, a head block for the cylinder, a laterally off-set fluid pressure feeding cylinder secured to the head block, a piston in said feeding cylinder, a rod for said piston held against rotation in the feed cylinder and having an off-set rock engaging pointer at one end for supporting the stope drill in the line of the longitudinal axis of the percussive cylinder, a centrally arranged water tube through the percussive cylinder, and a plug for securing one end of the tube and adapted to receive a water connection for supplying water to said tube.

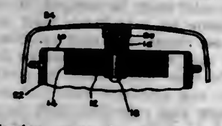
1,573,475. AUDITORIUM WALL, AND THE LIKE. EMILE BERLINER, Washington, D. C. Filed Aug. 18, 1925. Serial No. 50,125. 6 Claims. (Cl. 72—18.)

1. A fireproof vibratory tile comprising a diaphragm of initially plastic composition and spacing means permitting the diaphragm to freely vibrate when affixed to a wall.

1,573,476. STRESS-BALANCING SPLICE BAR. BANCROFT G. BRAINE, New York, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Nov. 28, 1925. Serial No. 71,895. 5 Claims. (Cl. 238—243.)

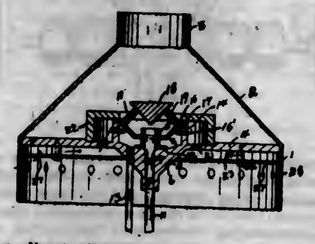
1. A splice bar having unsymmetrical upper and lower members contining zones of metal of substantially the same area at equal distances respectively above and below a neutral axis, the splice bar section having a proportional distribution of metal to dispose the center line of stress of the head at substantially the same distance above the axis at the distance of the center line of stress of the foot below said axis.

1,573,477. CUFF BUTTON. JOHN F. BYRON, Providence, R. I., assignor to Freeman-Daughaday Co., Chartley, Mass., a Corporation of Massachusetts, doing business as Providence Collar Button Company, Providence, R. I. Filed Apr. 20, 1925. Serial No. 24,568. 8 Claims. (Cl. 24—102.)



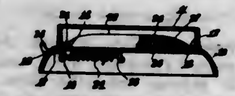
1. A cuff button having a pair of spaced head flanges integral with and connected by a tubular elongated shank portion formed of sheet stock and of substantially uniform diameter throughout its length.

1,573,478. PHOTOGRAPHIC PRINT AND METHOD OF MAKING THE SAME. CHARLES W. CARMAN, Chicago, Ill. Filed Oct. 26, 1925. Serial No. 65,045. 6 Claims. (Cl. 41—19.)



1. The method of making photographic prints on metal consisting of forming in the face of the metal a series of parallel scratches, and applying thereon a continuous tone photographic print.

1,573,479. MOISTENING COVER FOR CONTAINERS. JAMES W. CHRISTIE, Minneapolis, Minn. Filed Nov. 1, 1924. Serial No. 747,227. 2 Claims. (Cl. 131—30.)



2. A moistening cover for jars comprising an upper disk-like member of sheet material adapted to rest upon the top of the jar and seal the latter, felt disk resting upon the lower surface of said upper disk and of smaller diameter than the top of the jar to expose the edges of said felt disks, a lower disk-like member underneath said felt disks, said lower disk-like member having a central depression to form a well, a funnel member resting upon said upper disk, and a tube secured to said funnel member and to said lower disk, said tube having perforations opening into said well.

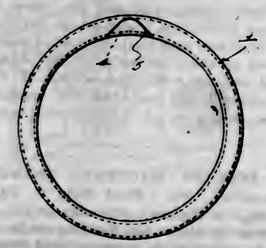
1,573,480. OIL BURNER FOR BROODER STOVES. FRANK S. CONNER, Petaluma, Calif. Filed July 6, 1925. Serial No. 41,686. 9 Claims. (Cl. 158—91.)

1. In a direct oil burner of the character described, a pan, an open-top vessel rising centrally therefrom, means for admitting oil into the vessel through the pan, a marginal flange rising from the pan, a conical ring resting on the flange and descending toward an intermediate portion of the vessel so as to leave an annular space around the same, the flange being perforated to allow air to be drawn therethrough and through the annular space toward the top of the vessel.

1,573,481. INK PAD. ANTHONY L. COSTA, East Boston, Mass., assignor to R. Woodman Mfg. & Supply Co. Inc., Boston, Mass., a Corporation of Massachusetts. Filed Dec. 16, 1924. Serial No. 756,242. 5 Claims. (Cl. 91—54.5.)

1. In an ink pad, a support; a cover therefor; a pad; fixed stops formed on said support projecting over but disconnected from one edge of said pad; and an elongated strip movable toward and from said fixed stops and adapted to engage the opposite edge of said pad.

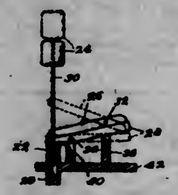
1,573,482. FIRE BRICK OR BLOCK. RICHARD A. DALTAN, Philo, Ohio. Filed May 16, 1925. Serial No. 30,878. 4 Claims. (Cl. 18—60.)



1. A fire brick or block including a body portion, said body portion comprising slag from a high temperature forced draft furnace which is free from ashes, a fire cement which sets hard at a high temperature, Portland cement which sets hard at atmospheric temperatures, and a facing composition comprising divided carborundum, a fire cement which sets hard at a high temperature, and Portland cement which sets hard at atmospheric temperature.

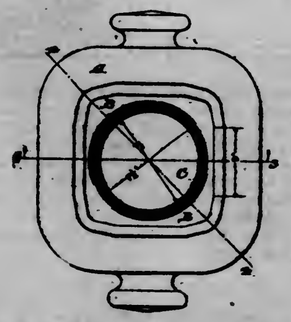
1,573,483. SPLITTING SHEAR. ERNST ENDERS, Albert Lea, Minn. Filed May 29, 1924. Serial No. 716,647. 7 Claims. (Cl. 164—44.)

1. A shear, comprising a track formed of a channel beam, a frame, rollers on said frame extended between and adapted for travel on the flanges of said beam, said frame being formed with a recess, a stationary blade at one margin of said recess, an arm mounted for oscillation across said recess, a cutting blade carried by said arm and adapted to cooperate with the stationary blade, means for oscillating said arm, and means connected with the arm-oscillating means for causing step-by-step travel of said frame.



1,573,484. GASKET HOLDER. CLAUD A. FRANKLIN, Kansas City, Kans. Filed Feb. 7, 1925. Serial No. 7,643. 1 Claim. (Cl. 206—1.)

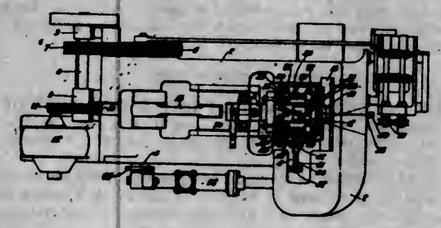
A gasket holder for the gasket used on cream separators, comprising a ring, the respective edges thereof being disposed inwardly to provide a channel which is substantially U-shaped in cross section and is adapted



to receive the gasket, the inner diameter of the ring being less than the inner diameter of the gasket, one of the inwardly disposed edges of the ring being provided with a notch to facilitate the easy removal of the gasket from the ring.

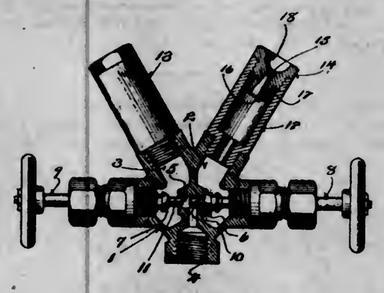
1,573,485. MOISTURE AND VAPOR SEPARATOR. FRANCIS M. FRITTS, Coffeyville, Kans., assignor of one-half to L. H. Stevens, Coffeyville, Kans. Filed Oct. 27, 1922. Serial No. 597,412. 1 Claim. (Cl. 137—68.)

In a moisture and vapor separator, a casing, a plate removably secured to the lower portion of said casing and having an outlet therein, a valve arranged in said casing to normally close said outlet, a straight lever connected to said valve, a second straight lever bearing its entire length against the first one, supporting means for said levers and projecting into the casing from said plate, and a float adapted to be controlled by fluid in the casing and adapted to open the valve through the intermediacy of said levers, substantially as shown and described.



1,573,486. INGOT MOLD. EMIL GATHMANN, Baltimore, Md. Filed Oct. 3, 1925. Serial No. 60,260. 7 Claims. (Cl. 22—139.)

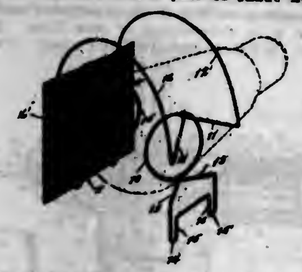
1. A metallic ingot mold having an opening through its top and through its lower end and having a vertically extending ingot-forming chamber, the lower side walls of which above the bottom opening have concaved necked-in portions that join side walls of convex contour which are interposed between the walls of the bottom opening and the said concave walls, the corners of the mold in its lower portion being necked-in and concaved with a larger radius than that of the concaved side walls.



1,573,487. FORGING MACHINE. THOMAS A. GORMAN, Johnstown, Pa. Filed Nov. 7, 1924. Serial No. 748,363. 5 Claims. (Cl. 29—34.)

1. A forging machine for forming balls from bars, comprising a main frame, a cross head movable longitudinally of said frame, a side ram movable transversely of said main frame and said cross head, a breast plate mounted adjacent the forward end of said main frame, a stationary die member carried by said breast plate, a second die member carried by said cross head and adapted to co-operate with said first mentioned die member to forge balls from pieces of rod stock, means for feeding stock into said machine in a direction parallel to the longitudinal axis thereof and at a point to the one side of said stationary die, a shear blade mounted to move transversely of said main frame, to shear off measured pieces of stock and move said pieces into line with said dies, said shear blade being moved during its shearing stroke by said side ram, a filler block adapted to be moved into position between said ram and said shear blade prior to said shearing stroke and to remain

in such position during said stroke, means for moving said filler block into position between said blade and said ram, a receiving block movable transversely of said frame and adapted to co-operate with said shear blade to position and hold the cut stock in line with said dies until after said stock is engaged by said movable die, means operable by said cross head for positively moving said shear blade and said receiving block out of the path of said movable die, means for positively withdrawing said filler block from its position between said shear blade and said side ram, and means for returning said blade and receiving block to normal position.

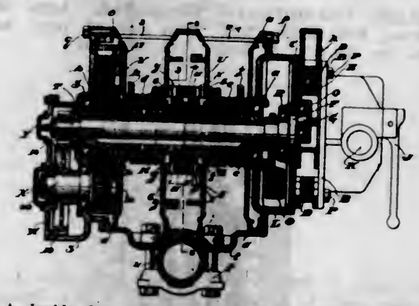


1,573,488. SAFETY APPLIANCE FOR STEAM BOILERS. WILLIAM C. HACKMAN, Milwaukee, Wis., assignor to B. Hoffman Manufacturing Co., Milwaukee, Wis. Filed July 13, 1925. Serial No. 43,258. 3 Claims. (Cl. 122—504.1.)

1. A fusible plug appliance for steam boilers comprising a casing having an inlet, and a pair of elongated compartments having distinct and separate walls, each of said compartments having an outwardly opening aperture communicating therewith, a fusible plug mounted in each of said apertures, and means for alternately connecting said compartments with said inlet.

1,573,489. SHADE HOLDER. FRANCIS CADWALADER HALL, New York, N. Y. Filed Sept. 20, 1924. Serial No. 738,935. 3 Claims. (Cl. 240—138.)

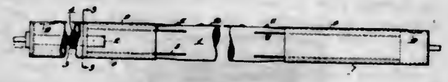
1. A shade holder comprising a pair of spaced circular rings engageable with the opposite sides of a lamp bulb, a pair of arcuate spring members whose ends are attached to the rings, and a pair of shade holding ex-



tensions attached to the opposite sides of the rings, said extensions being bent back on themselves to provide shade holding clips.

1,573,490. INSECTICIDAL COMPOSITION OF MATTER. CARL NELSON HAND, Nitro, W. Va., assignor to The Rubber Service Laboratories Co., Akron, Ohio, a Corporation of Ohio. Filed Mar. 25, 1925. Serial No. 18,313. 11 Claims. (Cl. 167—6.)

1. A dusting composition for use in destroying insect life, which comprises a thiourea.

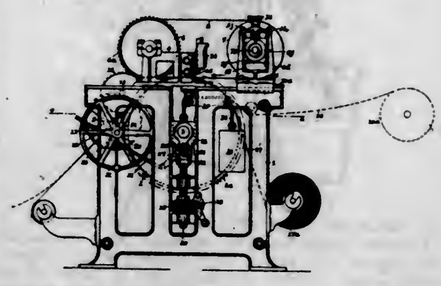


1,573,491. DOUBLE-DRUM HOIST. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 16, 1925. Serial No. 56,654. 1 Claim. (Cl. 254—185.)

A double drum hoist, comprising a motor casing and reversible motor, a motor shaft extending from the motor, a gear box at the opposite end of the motor shaft, a central protective housing connecting said motor casing and gear box and having openings for the drum cables, a rotatable center bearing around said motor shaft forming a drum shaft, drums rotatable relatively to said drum shaft, a spiral gear on said drum shaft between the drums, an internally spiralled sleeve on said gear forming a main driver having oppositely facing teeth at its sides, toothed drum drivers on the drums adapted to cooperate alternately with the main driver according to the direction of rotation of the motor, a brake for said drum driver, and gearing operatively connecting said drum shaft to the motor shaft.

1,573,492. SHADE ROLLER. STEWART HARTSHORN, Short Hills, N. J., assignor to Stewart Hartshorn Company, East Newark, N. J., a Corporation of New Jersey. Original application filed Nov. 18, 1920, Serial No. 423,936. Divided and this application filed Dec. 12, 1923. Serial No. 680,067. 6 Claims. (Cl. 156—29.)

1. A device of the character described, comprising a tubular member, a cylindrical element adapted to form a continuation of the member, the normal diameter of said element from end to end being greater than the bore of the member, there being a longitudinal kerf in

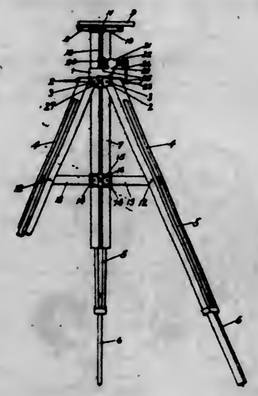


the element, said kerf extending through the end of the element whereby its diameter may be reduced to permit of the element being inserted in the bore of the member.

1,573,493. DRILL FOR FERTILIZERS AND SEEDS. ESLER B. HEYD, Garrettsville, Ohio. Filed July 2, 1925. Serial No. 41,027. 4 Claims. (Cl. 221—120.)

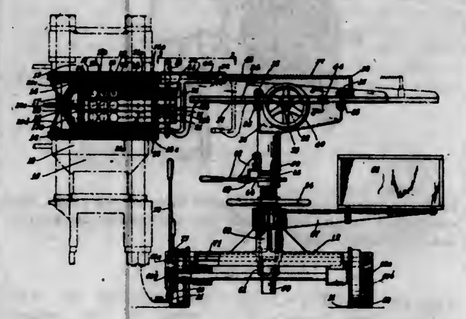
1. In a drill for grain or fertilizer, a box to contain the material to be drilled and having discharge openings in its bottom, a rotatable shaft in the box, a plurality of oblong feeding devices secured to the shaft and inclined to the shaft, the said feeding devices being arranged between consecutive discharge openings, and other feeding devices carried by the shaft between successive members of the first feeding devices and sweeping across and close to the said openings, the first feeding devices being arranged to sweep the said material into the path of adjacent second feeding devices on either side thereof.

1,573,494. FLOCK-PRINTING MACHINE. FLORENT HINNEKENS, Paterson, N. J. Filed Feb. 19, 1925. Serial No. 10,216. 9 Claims. (Cl. 101—122.)



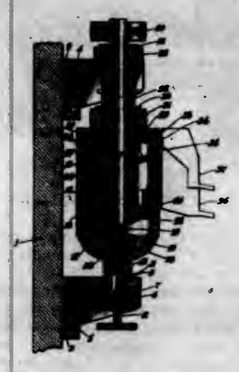
1. A printing machine including, in combination, an endless stencil, spaced rotary rollers around which the stencil is peripherally extended, and means to support said rollers, one roller being adjustable relatively to the other to positions of varying angularity with reference to a plane bisecting the bend formed in the stencil around the first roller.

1,573,495. TIRE-VALVE-CASING CAP. FRANK C. HUGHES, Chicago, Ill. Filed Jan. 12, 1925. Serial No. 1,844. 2 Claims. (Cl. 152—12.)



2. A valve casing cap comprising: a cap proper having internal threads adapted to engage the external threads of a valve casing; packing material within said cap adapted to engage the upper end of a valve casing when the cap is screwed into place, said packing material having an external diameter great enough to cause it to yieldingly engage the internal threads of said cap; spring means above said packing material adapted to yieldingly press said packing material downwardly into engagement with the upper end of a valve casing when the cap is screwed into place; and a separate closing member within said cap adapted to close the end of the valve casing and prevent said packing material from being forced thereinto as the cap is screwed into place.

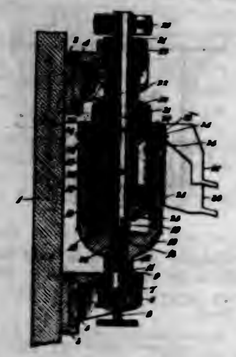
1,573,496. TRIPOD. THEODORE A. JANSSON, Johnson City, and CARL A. BORNMANN, Binghamton, N. Y., assignors to Ansco Photoproducts, Inc., Binghamton, N. Y. Filed Apr. 11, 1925. Serial No. 22,421. 10 Claims. (Cl. 248—43.)



1. A tripod comprising legs and an adjustable supporting element, a rack on said element, a pinion engaging at all times with said rack for adjusting the position thereof, said pinion being slidable laterally with respect to said rack, and locking means engaging said pinion in one position of said pinion whereby said element is secured against movement.

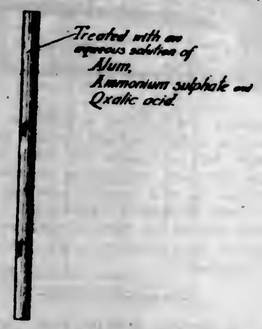
1,573,497. METHOD AND APPARATUS FOR MAKING HOLLOW ARTICLES. EDWIN J. KRODGER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Mar. 25, 1922. Serial No. 546,670. 30 Claims. (Cl. 18—19.)

3. Apparatus for molding a multiple-celled container, said apparatus comprising a set of mandrels adapted to be assembled alternately with sheets of partition-forming stock and to abut each other outside of the container while accommodating the partitions thereof between their work-receiving ends, means for applying external molding pressure to a container with said mandrels and pressing said mandrels together, and means for internally heating the work-engaging ends of said mandrels.



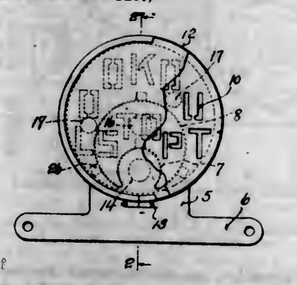
1,573,498. CENTRIFUGAL SEPARATOR. JOHN M. NICOL, Mill Valley, Calif. Filed Aug. 28, 1923. Serial No. 659,727. 5 Claims. (Cl. 209—199.)

1. In a centrifugal machine, the combination of a bowl mounted for rapid rotation and having inner vertical sides provided with a concavity to hold a column of mercury, riffles in said sides below said concavity to also receive said mercury and heavy metal particles, said bowl being mounted for rapid rotation; and stationary means contacting with the inner portion of the material undergoing treatment for effecting a differential movement within a mass subjected to centrifugal force in said bowl.



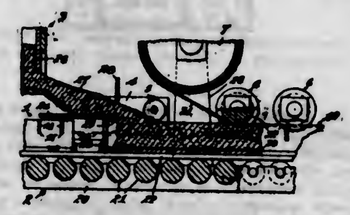
1,573,499. CENTRIFUGAL SEPARATION. JOHN M. NICOL, Mill Valley, Calif. Filed Sept. 26, 1923. Serial No. 665,007. 12 Claims. (Cl. 209—199.)

1. The process of substantially completely separating mineral particles having different densities, comprising adding thereto a material having an intermediate density and centrifugalising the mix to obtain concentric layers with the added material positioned between the minerals



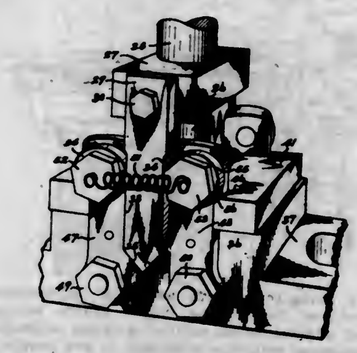
to be separated, and effecting a cutout of a mineral layer at some point within said intermediate layer between the planes of the outer layers.

1,573,500. LAMP WICK. ZACHARIAS OLSSON, New York, N. Y., assignor, by mesne assignments, to Burgoyne Light & Signal Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 10, 1922. Serial No. 593,641. 2 Claims. (Cl. 67—69.)



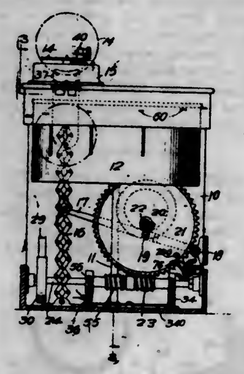
1. A lamp wick rendered incombustible by being impregnated with a compound consisting of alum, ammonium sulphate, oxalic acid and a solvent.

1,573,501. AUTOMOBILE SIGNAL. JAMES M. OSOIAN, Racine, Wis. Filed Apr. 13, 1925. Serial No. 22,680. 1 Claim. (Cl. 177—329.)



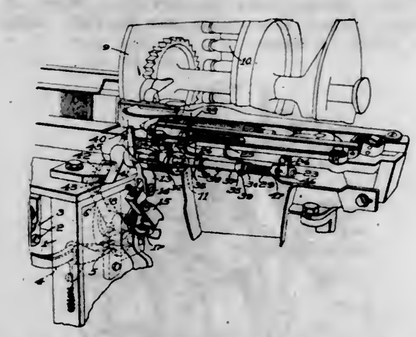
An automobile signal comprising a cylindrical casing having a cutaway lower portion, a transparent member covering such lower portion, a tail light located above such cutaway portion, a small cylindrical partition having an open lower portion and positioned around said tail light and within said casing, an intermediate partition positioned within said casing and surrounding said small partition and having an open lower portion, a lamp located within the portions of said casing external to and enclosed by said intermediate partition, and a legend bearing cover plate for said main casing, said small partition and said intermediate partition having their lower ends joined and together forming a crescent-shaped member whose arms surround the sides and upper part of the tail light.

1,573,502. METHOD AND APPARATUS FOR MOLDING REENFORCED-COMPOSITION STUDDING. CHARLES ALBERT PETERS, Downey, Calif., assignor to Peters Holding Company, a Corporation of California. Filed Apr. 5, 1924. Serial No. 704,382. 15 Claims. (Cl. 25—42.)



1. The method of forming reenforced plastic studding which consists in placing a permanent facing sheet in the bottom of a mold, placing reenforcements in said mold, conveying the mold past a point of delivery, delivering plastic material at said point into the mold and rolling said plastic material down into the mold and around and below said reenforcements, and placing a permanent facing sheet on the molded plastic material.

1,573,503. METAL-WORKING DEVICE. FRANK D. RIPNER, Dayton, Ohio. Filed May 25, 1925. Serial No. 32,600. 5 Claims. (Cl. 113—38.)



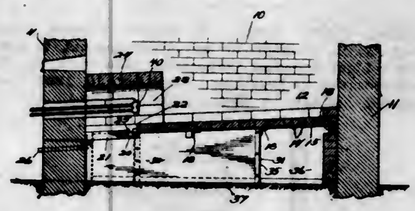
1. A device for drawing sheet metal comprising, in combination, a die including male and female members; a pressure plate adapted to be moved into engagement with the metal on the female die member; and a pressure-plate locking means provided on each one of two opposite sides of the die, each of said locking means including a pair of locking levers adjustably secured to the female die member, and wedges rigidly mounted on the male die member and adapted to be inserted between their respective pair of locking levers whereby said levers will concurrently be moved in opposite directions and into locking engagement with the pressure plate.

1,573,504. AUTOMATIC PHONOGRAPH. OBERLIN SMITH, Bridgeton, N. J. Filed Dec. 29, 1921. Serial No. 525,669. 24 Claims. (Cl. 274—10.)

8. The combination of a player mechanism, a traveling magazine for a collection of player devices, consisting of a rotatable turret having radial compartments for said devices, movable to present the respective devices at a point for removal, and automatic means to selectively stop said magazine at such point, to present a desired player device thereat comprising a circuit for each player device in the magazine and a switch for each circuit adjacent the path of travel of the magazine, and a switch operating member on the magazine for each switch.

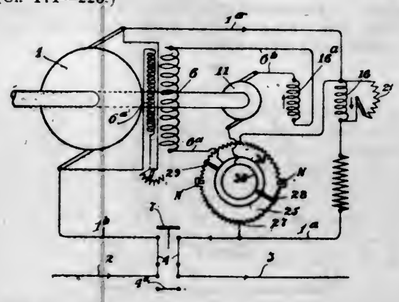
1,573,505. SHUTTLE FEELER MECHANISM FOR LOOMS. MELVIN L. STONE, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 8, 1925. Serial No. 21,683. 14 Claims. (Cl. 139—231.)

1. In a filling replenishing loom, the combination of the transferrer, the transfer dog, a shuttle having a feeler slot, detector means on the lay at the replenishing side cooperating with the feeler slot of the shuttle for determining the position of the shuttle, and connections between said detector means and dog for rendering the dog inoperative unless said detector means enters the feeler slot on call for replenishment of filling.



1,573,506. LOCK. MATT ANUNDI, Clatskanie, Oreg. Filed Aug. 9, 1924. Serial No. 731,075. 3 Claims. (Cl. 70—27.)

1. In a lock of the character described, a spring controlled slidable bolt adapted to engage a keeper, a tumbler pivotally attached to said bolt, resilient means for holding said tumbler in one position, a resilient latch adapted to engage and hold said tumbler when rotated in one direction, means for releasing said latch, and a guide

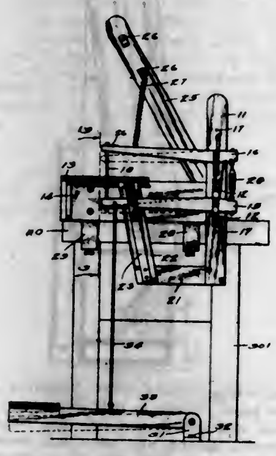


for the key adapted for opening said lock, said guide and said latch being mounted upon a common yielding device, whereby pressure applied to said key serves to release said latch.

1,573,507. FURNACE CONSTRUCTION. HARRY A. ATWATER, Kansas City, Mo. Filed Jan. 16, 1922. Serial No. 529,696. 7 Claims. (Cl. 158—1.)

1. A furnace construction comprising a combustion chamber having a floor and an air feed passage beneath said chamber for conducting air from the exterior of the furnace into said combustion chamber, and a partition structure in said passage arranged to direct the air in a course traversing increasingly hotter portions of the under face of the floor of said combustion chamber throughout said passage to its place of discharge into said chamber.

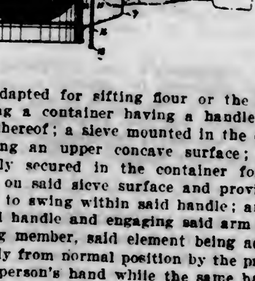
1,573,508. ELECTRIC MOTOR FOR USE ON A CONSTANT-CURRENT VARIABLE-VOLTAGE SYSTEM. GILBERT AUSTIN, JAMES COLQUHOUN MACFARLANE, and WILLIAM ALLAN MACFARLANE, Glasgow, Scotland. Filed Oct. 10, 1924. Serial No. 742,877. 7 Claims. (Cl. 171—225.)



1. In combination, an electric motor having armature and field windings and having fixed brushes for use on a constant current variable voltage system; conductors for connecting a main line circuit to said motor; a resistance in said conductors; means for connecting the motor field windings across said resistance; a dynamo electric machine having its armature windings connected in series with the field winding of the motor and so arranged that the current produced thereby will oppose the current in the motor field winding circuit, and having its field winding in series with the motor armature; and means for mechanically driving the armature of said dynamo electric machine from the motor.

1,573,509. PROCESS OF PRODUCING HIGHLY-ADSORBENT CHARCOAL. ERNEST BATEMAN, Madison, Wis., assignor to the United States of America. Filed Aug. 5, 1919. Serial No. 315,498. 3 Claims. (Cl. 252—3.)

1. In a process of activating carbon, treating carbon in comminuated form and while in a free condition with carbon dioxide at temperatures of 650–1000° C.

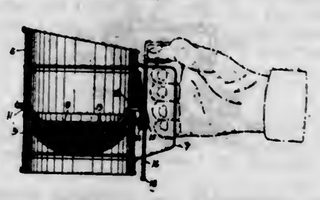


1,573,510. JIG SAW. MOSE EDWARD BAKER, Des Moines, Iowa. Filed June 18, 1923. Serial No. 646,075. 2 Claims. (Cl. 143—73.)

1. A portable jig saw comprising an upright arm, a horizontal arm projecting therefrom, a table on said horizontal arm having a hole therethrough, a pair of saw supporting arms pivoted to said upright arm, a saw mounted between the ends of said saw supporting arms, adjustable means for connecting the opposite ends of the saw supporting arms, an inclined arm extending upwardly from said horizontal arm, a coil spring connected with the upper saw supporting arm and with said inclined arm, a bracket, a foot pedal pivoted to said bracket and a flexible member connecting the foot pedal and the lower saw supporting arm, a second horizontal arm spaced from the first, a guide for the lower saw arm supported on said horizontal arms.

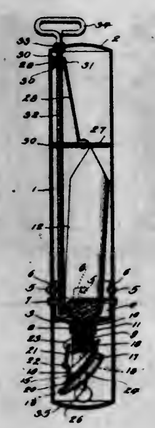
1,573,511. ADJUSTABLE FLANGE FOR PIPE LINES. CLAUDE BELCHER, Des Moines, Iowa, assignor of forty-nine per cent to Frank J. Douglas, Des Moines, Iowa. Filed Jan. 31, 1923, Serial No. 616,000. Renewed Jan. 11, 1926. 2 Claims. (Cl. 285—162.)

1. In a device of the class described, a flange having a central opening and a tubular extension provided with an interior packing rest, a pipe projected into said extension, a packing connection between the pipe and the extension, a collar having a screw-threaded connection with the pipe and diametrically opposite projecting arms, rods fixed to said flange and projecting slidably through said arms, springs received on said



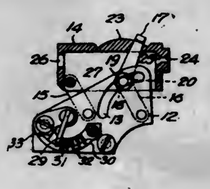
rods between said arms and said flanges and between said arms and retaining flanges secured to the ends of said rods.

1,573,512. DOOR HOLDER. ALDEN J. BUSH, Columbus, Ohio. Filed Oct. 6, 1924. Serial No. 741,795. 4 Claims. (Cl. 292—275.)



1. In a device of the character described, the combination of a closure, connections to said closure, an automatic holding device for said connections normally in inoperative position but adapted to move into holding position at a predetermined point in the travel of said closure, means for maintaining the holding device in operative position during the further travel of said closure and until it reaches substantially the end of movement of said closure, and means for automatically releasing said holding device at or near the end of the movement of the closure.

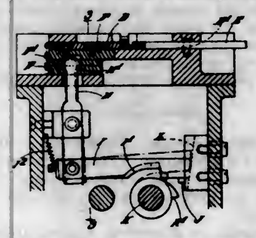
1,573,513. FLOUR SIFTER. STANLEY B. GAMBLE, Oakland, Calif. Filed Sept. 30, 1925. Serial No. 59,451. 3 Claims. (Cl. 209—282.)



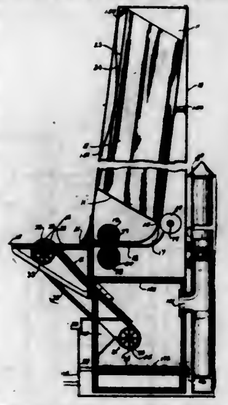
1. A sifter adapted for sifting flour or the like, said sifter comprising a container having a handle mounted on the outside thereof; a sieve mounted in the container, said sieve having an upper concave surface; a sifting member pivotally secured in the container for moving back and forth on said sieve surface and provided with an arm adapted to swing within said handle; an element mounted in said handle and engaging said arm for actuating the sifting member, said element being adapted to move downwardly from normal position by the pressure of one finger of a person's hand while the same hand holds the handle; and a coil spring having its upper end attached to the upper part of the handle and its lower end attached to said element for returning the element from depressed to normal position.

1,573,514. APPLICATOR. EARL R. HAMILTON, Pekin, Ind. Filed Apr. 2, 1925. Serial No. 20,218. 8 Claims. (Cl. 91—67.4.)

1. An applicator comprising a tubular casing adapted to contain a compressible tube, a closure for one end of said casing having an annular side wall having the inner portion of its width removably received in said one end of the casing and having a knurled external rib abutting the same, said closure having a discharge neck, an applicator carried solely by the outer end of said neck, the inner end of said neck being internally threaded for engagement with the usual threaded neck of the collapsible tube, and a protecting cap for covering the applicator and neck, said cap fitting removably over the outer portion of the aforesaid side wall and abutting the aforesaid rib.



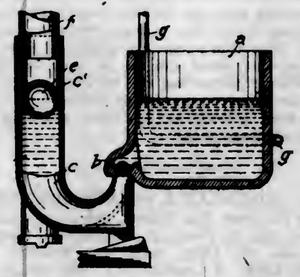
1,573,515. REAR SIGHT FOR HIGH-VELOCITY WEAPONS. JOHN W. HARKOM, Melbourne, Quebec, Canada. Filed Oct. 18, 1922. Serial No. 595,370. 13 Claims. (Cl. 33—58.)



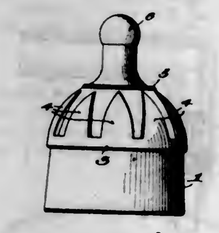
8. In a rear sight, a base, a sighting member, links swingingly supporting the sighting member on the base, an adjustable stop engageable by the links and adapted when so engaged and upon adjustment to raise the sighting member, and means for adjusting the stop and gauging the adjustment thereof.

1,573,516. WIRE BINDING OR TYING APPARATUS. ERNEST ALBERT INGOLD, London, England, assignor to (Messrs.) W. & C. Pantin, London, England. Filed May 5, 1924. Serial No. 711,269. 4 Claims. (Cl. 140—93.)

1. In an apparatus for twisting together the overlapping ends of a loop of wire encircling a package, a gripping device for securing one end of the wire during the twisting operation comprising a pivotally movable clip, a transversely movable clip cooperating therewith to hold the wire, a stop normally preventing transverse movement of the latter clip, and means operating to withdraw the stop at a predetermined phase of the twisting operation.

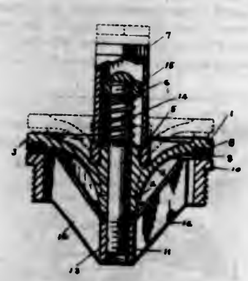


1,573,517. VENDING MACHINE. GEORGINA A. JOHNSTON, Los Angeles, Calif. Filed Dec. 6, 1923. Serial No. 678,868. 18 Claims. (Cl. 4—247.)



1. In combination with a toilet including a seat, a receptacle for paper, means to feed said paper from said receptacle over said seat in one direction, means to stop said sheet feeding means, and additional means for removing said sheet from said seat in a direction opposite to the first mentioned direction and in the same plane.

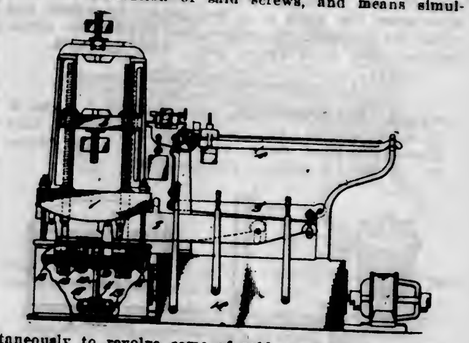
1,573,518. CASTING MACHINE. ALBERT KAUFMANN, Berlin, Germany. Filed Sept. 22, 1925. Serial No. 57,924. 8 Claims. (Cl. 22—69.)



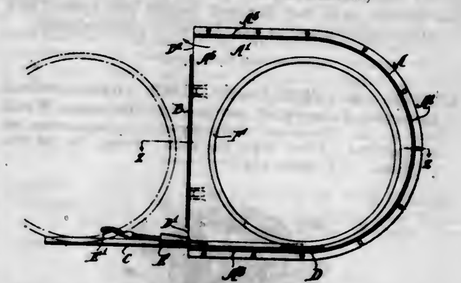
1. Casting machine comprising a casting reservoir, means for supplying fluid under pressure to said reservoir, and a float in said reservoir which is adapted to rest on, and partly to be immersed in, the molten metal in said reservoir.

1,573,519. NURSING NIPPLE. JESSE LITTLE, Lakewood, R. I., assignor to Davol Rubber Company, Providence, R. I. Filed Mar. 23, 1925. Serial No. 17,661. 3 Claims. (Cl. 128—252.)

1. In a breast nipple, a body having a dome; at its base provided with an external integral circular band and external tapering spaced fingers extending upwardly from the band and merging into the top part of the dome, a circular external rib integral with the dome and spaced above the free ends of the fingers, and a nipple proper extending upwardly from the top of the dome and having its base disposed adjacent to the free ends of the fingers, the fingers tapering in thickness from the outer or base ends thereof to the free ends thereof and merging substantially into the top of the dome at their said free ends.



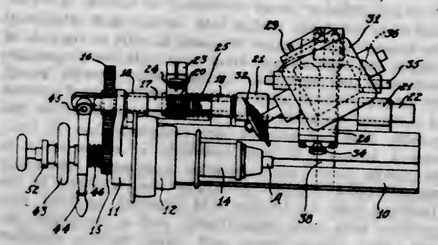
1,573,520. VALVE. JOHN C. MCNAB, Rochester, N. Y. Filed Aug. 25, 1924. Serial No. 733,979. 2 Claims. (Cl. 251—144.)



2. A valve having a seat, a hub located centrally thereof, a valve stem threaded into said hub and extending upwardly therefrom, a cover for said valve having a conoidal web making a sliding engagement with said stem, a nipple surrounding said stem forming a part of said cover and extending upwardly therefrom, a spring surrounding said stem and resting upon the nipple below, a head on top of said stem which confines said spring from above, a bonnet making threaded connection with said nipple and enclosing the spring and stem, said conoidal web extending down from the cover and below the valve seat and with the nipple making a long bearing with the stem.

1,573,521. TESTING MACHINE. WILLIAM C. MORAN, Laurel Springs, N. J., assignor to Riehle Bros. Testing Machine Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 8, 1925. Serial No. 48,998. 3 Claims. (Cl. 265—16.)

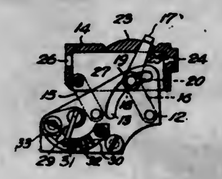
1. A testing machine including stationary and movable specimen supports, more than two load screws operatively engaging said movable support and adapted to move the same relatively to said stationary support with the revolution of said screws, and means simultaneously to revolve some of said screws in a direction opposed to the direction of rotation of the other of said screws.



1,573,522. RING-HEATING FURNACE. RIDGEWAY REGARS, Burlington, N. J., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed Jan. 25, 1924. Serial No. 688,427. 1 Claim. (Cl. 263—5.)

A narrow upright furnace for heating steel rings having side walls, a curved rear wall and an open front of substantially the height of the furnace, in combination with a door formed to partially close the open front of the furnace and leave openings at the top and bottom thereof and a ring support located at the bottom of the furnace shaped as described to hold the band above the furnace bottom.

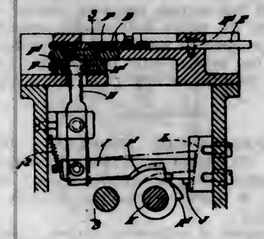
1,573,523. THREAD-GRINDING MACHINE. STEPHEN RICHARD, Jr., Sturbridge, Mass. Filed Dec. 18, 1924. Serial No. 756,817. 5 Claims. (Cl. 51—95.)



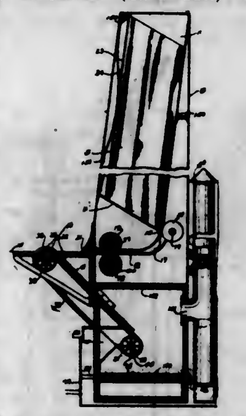
1. In a device of the character described, a base, a rotatable work holder mounted thereon, an abrasive wheel adapted to operate upon the work, a pivoted support mounted on the base and adapted to carry the

1,573,514. APPLICATOR. EARL R. HAMILTON, Pekin, Ind. Filed Apr. 2, 1925. Serial No. 20,218. 8 Claims. (Cl. 91—67.4.)

1. An applicator comprising a tubular casing adapted to contain a compressible tube, a closure for one end of said casing having an annular side wall having the inner portion of its width removably received in said one end of the casing and having a knurled external rib abutting the same, said closure having a discharge neck, an applicator carried solely by the outer end of said neck, the inner end of said neck being internally threaded for engagement with the usual threaded neck of the collapsible tube, and a protecting cap for covering the applicator and neck, said cap fitting removably over the outer portion of the aforesaid side wall and abutting the aforesaid rib.



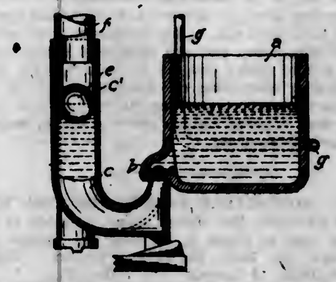
1,573,515. REAR SIGHT FOR HIGH-VELOCITY WEAPONS. JOHN W. HARKOM, Melbourne, Quebec, Canada. Filed Oct. 18, 1922. Serial No. 595,370. 13 Claims. (Cl. 33—58.)



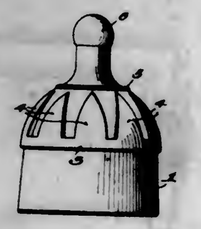
8. In a rear sight, a base, a sighting member, links swingingly supporting the sighting member on the base, an adjustable stop engageable by the links and adapted when so engaged and upon adjustment to raise the sighting member, and means for adjusting the stop and gauging the adjustment thereof.

1,573,516. WIRE BINDING OR TYING APPARATUS. ERNEST ALBERT INGOLD, London, England, assignor to (Messrs.) W. & C. Pantin, London, England. Filed May 5, 1924. Serial No. 711,269. 4 Claims. (Cl. 140—93.)

1. In an apparatus for twisting together the overlapping ends of a loop of wire encircling a package, a gripping device for securing one end of the wire during the twisting operation comprising a pivotally movable clip, a transversely movable clip cooperating therewith to hold the wire, a stop normally preventing transverse movement of the latter clip, and means operating to withdraw the stop at a predetermined phase of the twisting operation.

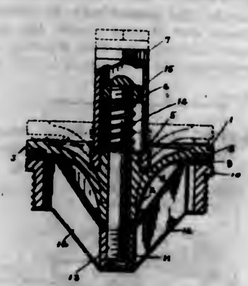


1,573,517. VENDING MACHINE. GEORGINA A. JOHNSTON, Los Angeles, Calif. Filed Dec. 6, 1923. Serial No. 678,868. 18 Claims. (Cl. 4—247.)



1. In combination with a toilet including a seat, a receptacle for paper, means to feed said paper from said receptacle over said seat in one direction, means to stop said sheet feeding means, and additional means for removing said sheet from said seat in a direction opposite to the first mentioned direction and in the same plane.

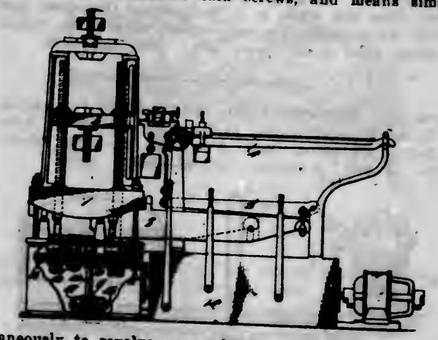
1,573,518. CASTING MACHINE. ALBERT KAUFMANN, Berlin, Germany. Filed Sept. 22, 1925. Serial No. 57,924. 8 Claims. (Cl. 22—69.)



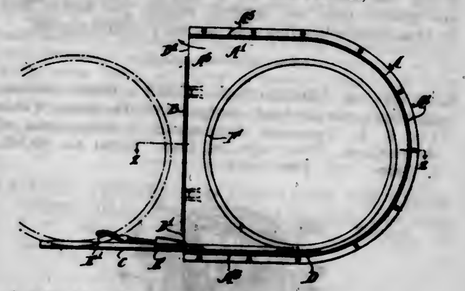
1. Casting machine comprising a casting reservoir, means for supplying fluid under pressure to said reservoir, and a float in said reservoir which is adapted to rest on, and partly to be immersed in, the molten metal in said reservoir.

2,573,519. NURSING NIPPLE. JESSE LITTLE, Lakewood, R. I., assignor to Davol Rubber Company, Providence, R. I. Filed Mar. 23, 1925. Serial No. 17,661. 3 Claims. (Cl. 128—252.)

1. In a breast nipple, a body having a dome; at its base provided with an external integral circular band and external tapering spaced fingers extending upwardly from the band and merging into the top part of the dome, a circular external rib integral with the dome and spaced above the free ends of the fingers, and a nipple proper extending upwardly from the top of the dome and having its base disposed adjacent to the free ends of the fingers, the fingers tapering in thickness from the outer or base ends thereof to the free ends thereof and merging substantially into the top of the dome at their said free ends.



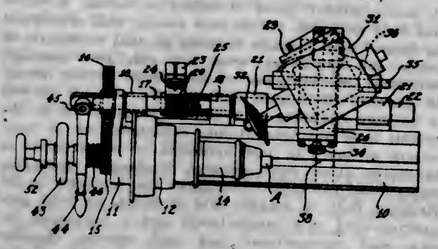
1,573,520. VALVE. JOHN C. MCNAB, Rochester, N. Y. Filed Aug. 25, 1924. Serial No. 733,979. 2 Claims. (Cl. 251—144.)



2. A valve having a seat, a hub located centrally thereof, a valve stem threaded into said hub and extending upwardly therefrom, a cover for said valve having a conoidal web making a sliding engagement with said stem, a nipple surrounding said stem forming a part of said cover and extending upwardly therefrom, a spring surrounding said stem and resting upon the nipple below, a head on top of said stem which confines said spring from above, a bonnet making threaded connection with said nipple and enclosing the spring and stem, said conoidal web extending down from the cover and below the valve seat and with the nipple making a long bearing with the stem.

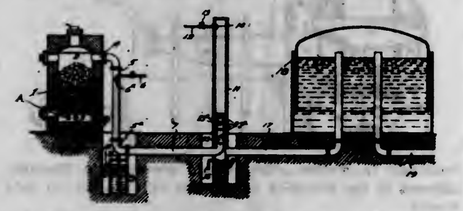
1,573,521. TESTING MACHINE. WILLIAM C. MORAN, Laurel Springs, N. J., assignor to Riehle Bros. Testing Machine Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 8, 1925. Serial No. 48,998. 3 Claims. (Cl. 265—16.)

1. A testing machine including stationary and movable specimen supports, more than two load screws operatively engaging said movable support and adapted to move the same relatively to said stationary support with the revolution of said screws, and means simultaneously to revolve some of said screws in a direction opposed to the direction of rotation of the other of said screws.



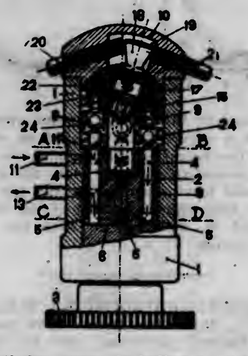
1,573,522. RING-HEATING FURNACE. RIDGEWAY REGARS, Burlington, N. J., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed Jan. 26, 1924. Serial No. 688,427. 1 Claim. (Cl. 263—5.)

A narrow upright furnace for heating steel rings having side walls, a curved rear wall and an open front of substantially the height of the furnace, in combination with a door formed to partially close the open front of the furnace and leave openings at the top and bottom thereof and a ring support located at the bottom of the furnace shaped as described to hold the band above the furnace bottom.



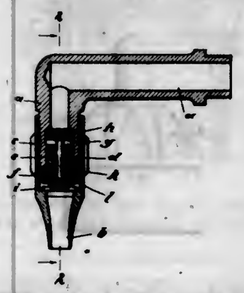
1,573,523. THREAD-GRINDING MACHINE. STEPHEN RICHARD, Jr., Sturbridge, Mass. Filed Dec. 18, 1924. Serial No. 756,817. 5 Claims. (Cl. 51—95.)

1. In a device of the character described, a base, a rotatable work holder mounted thereon, an abrasive wheel adapted to operate upon the work, a pivoted support mounted on the base and adapted to carry the



abrasive wheel, means to swing the pivoted support toward or away from the work, means for moving the support and abrasive wheel longitudinally of the work when the wheel is in engagement therewith, and means for returning the support and wheel to its initial position when it is swung away from the work.

1,573,524. GASEOUS FUEL PRODUCTION. JAMES R. ROSE, Edgeworth, Pa., assignor of one-half to John Harris, Cleveland, Ohio. Filed May 28, 1923. Serial No. 641,883. 5 Claims. (Cl. 48—205.)



1. The process of manufacturing an enriched gas which consists in generating blue water gas, cooling such gas and conducting the same through a mixing tower or chember, and adding to such gas while in transit through said mixing chamber or tower a regulated quantity of liquefied hydrocarbon gas having a vapor tension of not less than twenty-five pounds per square inch and not greater than five hundred pounds per square inch at atmospheric pressure and ordinary temperatures.

1,573,525. MULTICYLINDER PUMP. HENRI SANDOZ, Tavannes, Switzerland, assignor to Tavannes Watch Co., S. A., Tavannes, Switzerland, a Corporation of Switzerland. Filed Sept. 29, 1925. Serial No. 59,262. 1 Claim. (Cl. 103—162.)

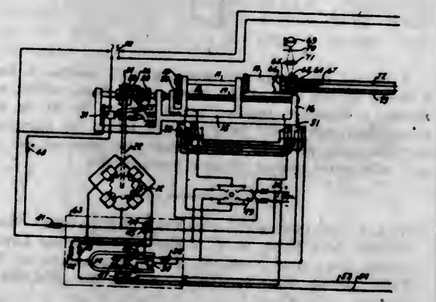
A multi-cylinder pump including a casing, a cylindrical body rotatable within said casing, said cylindrical body formed with passages disposed parallel to its axis of rotation and equi-distant from said axis, such passages constituting the cylinders of said multi-cylinder pump, said casing formed with diametrically opposed suction and delivery chambers with which the cylinders on the rotatable body are brought into communication in turn, plungers arranged in said cylinders, a compartment in said casing above said plungers, a plunger connecting member located in said compartment and rotatable by the cylindrical body to actuate said plungers, an inlet pipe connected with said compartment and a connection between said compartment and said suction chamber whereby the liquid to be drawn in will pass through said compartment and will be subjected to energetic agitation by said plunger connecting member and will lubricate the movable parts of the pump.

1,573,526. FAUCET OR TAP FOR WATER PIPES, ETC. OTTO SCHOTT, Stuttgart, Germany, assignor to Walter Grahler, Panoramastr, 31, Degerloch, Stuttgart, Germany. Filed Aug. 29, 1923. Serial No. 660,001. 4 Claims. (Cl. 277—27.)

4. In a faucet, a discharge pipe, an offset shoulder in the wall thereof to provide an enlarged bore at the lower end of the pipe, said pipe being internally threaded from the lower end thereof to a point in spaced relation to said shoulder, an exteriorly threaded nipple operatively mounted in said threaded end of said pipe, the upper end of said nipple being positioned in spaced relation to said shoulder, a disk loosely positioned between said shoulder and the upper end of said nipple, said disk adapted to seat on the upper end of said nipple and close the bore, therein, said pipe being exteriorly threaded and an internally threaded nozzle member operatively mounted on the lower end of said pipe, an offset shoulder in the wall of the bore of said nipple, a spider supported by said offset shoulder, a pin coaxially fixed to said spider so as to project upwardly therefrom, a packing washer mounted on said pin and arranged to seat against the lower end of said nipple, whereby the nozzle may be rotated to open and close the lower end of said nipple, the upper end of said pin positioned against said disk whereby the same is held away from its seat in said nipple in the operation of said valve.

1,573,527. FLYING TOP. RUDOLPH SIMONEK, New York, N. Y., assignor of one-half to Michael Pilnacek, New York, N. Y. Filed June 26, 1025. Serial No. 39,853. 1 Claim. (Cl. 244—2.)

An aerial top embodying a plurality of radially extending lifting blades supported at their outer ends by an integral ring of hollow circular cross section, said top being provided with two coaxial pegs one of which extends upwardly and is adapted to cooperate with a ceiling and the other one of which extends downwardly and is adapted to cooperate with a floor, in combination with operating means for said top comprising



a handle, a drum rotatably mounted on the handle and provided in its end with a hole into which the lower peg of the top is adapted to seat, a cord having one of its ends secured to the drum and the remaineder of the cord being adapted to be wound on the drum, arms carried by the drum and projecting beyond the end thereof and into engagement with the blades to preclude relative rotation between the top and the drum when the peg of the top is in engagement with the hole of the drum.

1,573,528. FOOTWEAR. MARIUS M. SORENSEN, Vallerod, Denmark, assignor of one-half to Ernst Frederik Henry Enna, Copenhagen, Denmark. Filed July 30, 1923. Serial No. 648,669. 4 Claims. (Cl. 36—14.)

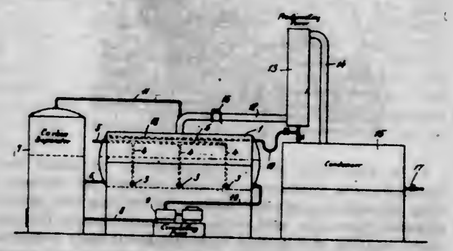
1. In an article of footwear, the combination of two members and an interposed strip of crude rubber in sheet form united to the members by pressure, without vulcanization and constituting the sole connecting means between the members, said members being of material other than crude rubber.

1,573,529. PICTURE-TRANSMISSION SYSTEM. DONALD M. TERRY, New York, N. Y., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Feb. 9, 1925. Serial No. 7,739. 7 Claims. (Cl. 178—5.)

1. In a picture transmission system, a transmitting and a reproducing station, means at the transmitting station for transmitting picture characteristics as an electric wave, means at the reproducing station responsive to the wave for controlling the reproduction of the picture, means associated with said transmitting means for testing the operation thereof, a signaling device, and means at said reproducing station for also causing the operation of said testing means for controlling the operation of said signaling device.

1,573,530. BED BOTTOM FOR HOSPITAL BEDSTEADS. WILLIAM A. WEAVER, Philadelphia, Pa. Filed Oct. 20, 1923. Serial No. 669,642. 4 Claims. (Cl. 5—69.)

1. In a bed of the character stated, a frame, a head section and a body section adjustably mounted upon said frame, a bearing bracket, and a pair of threaded actuating means rotatably mounted in said bracket in vertical

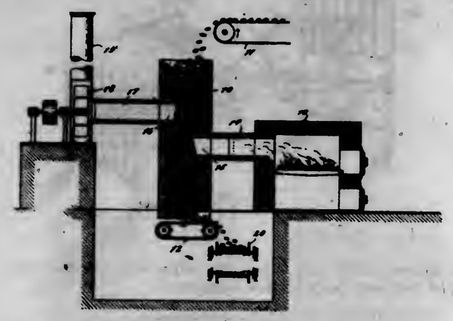


alignment with each other, for adjusting said head section and said body section respectively.

1,573,531. SCREW-THREADED ATTACHING DEVICE. ARVIN C. WEBSTER, Detroit, Mich. Filed Mar. 9, 1925. Serial No. 14,035. 2 Claims. (Cl. 85—32.)

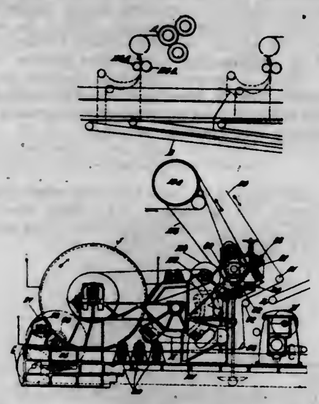
1. In combination, two sheet metal members having aligned apertures therein, a securing fitting consisting of a strip of sheet metal having ends secured to one of said members and having an intermediate thickened portion formed by bending the intermediate portion of the strip upon itself, a screw threaded opening in said thickened portion and a screw extending through all of said openings with its head abutting the other said member, for securing said members together.

1,573,532. PROCESS AND APPARATUS FOR DECOMPOSING OILS. CLIVE MORRIS ALEXANDER, New York, N. Y. Filed Oct. 9, 1919. Serial No. 329,625. 10 Claims. (Cl. 196—70.)



1. A process of decomposing oil, comprising injecting a lighter oil in an atomized liquid form below the surface of a bath of heavy oil, heated to a temperature sufficient to decompose the lighter oil, at such a depth that the lighter oil will be cracked before vaporization collecting the oil formed as the result of the cracking, leading said heavy oil from the still, removing the carbon therefrom and returning it to the still.

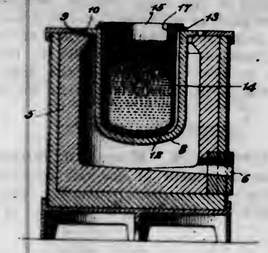
1,573,533. METHOD AND APPARATUS FOR DRYING OR CALCINING. JAMES A. BARR, Mount Pleasant, Tenn., assignor to The International Agricultural Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 9, 1924. Serial No. 705,402. 11 Claims. (Cl. 34—34.)



1. An apparatus for heat-treating material, comprising a shaft having an entrance for material at the top and

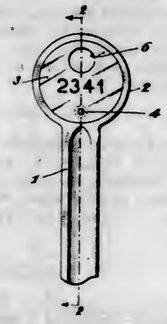
an exit therefor at the bottom, means for withdrawing said material from the shaft, means for admitting furnace or other drying gases intermediate the ends of said shaft

and suction means for withdrawing all of said gases from contact with the material undergoing heating at points intermediate the ends of said shaft.



1,573,534. MANUFACTURE OF INLAID FLOOR-CLOTHS. EDWARD BATTEN and JAMES DENNE BATTEN, Beckenham, England. Filed Oct. 6, 1924. Serial No. 741,932. 23 Claims. (Cl. 154—21.)

1. In apparatus for the manufacture of inlaid floor cloths by the continuous process, means for feeding a strip of pattern material, means for cutting out pattern elements from the said strip, automatic means for partially rotating said pattern elements about their own axes after being cut, means for feeding a backing, and means for automatically assembling said pattern elements on said backing.



1,573,535. POT OR CRUCIBLE. ARTHUR E. BELLIS, Springfield, Mass., and CHARLES S. COLLINS, New York, N. Y., assignors, by mesne assignments, to The Bellis Heat Treating Company, New Haven, Conn., a Corporation of Connecticut. Filed Oct. 18, 1920. Serial No. 417,785. 3 Claims. (Cl. 263—48.)

3. A pot or crucible for use in the heat treatment of high speed tool steels adapted to contain a heat transfer bath consisting of a solution of chemical salts neutral to the metal to be treated and dissociating at high temperatures into a basic oxide and an acid gas, said pot or crucible having a wall structure formed from a ferrous metal alloy and containing, in combination with the other components, not more than two percent each of carbon, silicates, aluminates, or other basic impurities whereby said wall structure is capable of withstanding a temperature of 1800° F. or greater without releasing im-

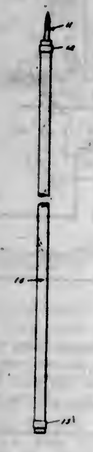
purities from said wall structure into the bath solution and whereby said solution is maintained neutral to the surface of the metal being treated.

1,573,536. KEY. EDGAR M. BENHAM, Norwood, Ohio, assignor to The Mosler Lock Company, Covington, Ky., a Corporation of Ohio. Filed Mar. 10, 1924. Serial No. 698,057. 1 Claim. (Cl. 40—2.)

A key of the character described and having a head, a recess on one side of the head, and a flange about said recess, a separate number plate shaped to fit in said recess flush with said flange, and a screw for removably securing said plate in said recess, the head of the key and said plate having aligned perforations.

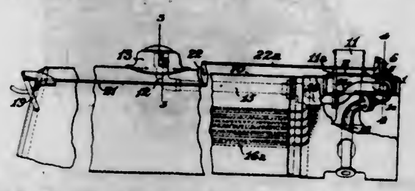
1,573,537. PAINT AND VARNISH REMOVER. GUIDO BLENIO, New York, N. Y., assignor to Proofing Laboratories, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 23, 1920. Serial No. 376,060. 2 Claims. (Cl. 87—5.)

1. A paint and varnish remover comprising paint and varnish solvents, and dissolved rubber, one said solvent being oil of mirbane, the proportion of oil of mirbane being as high as 15 per cent.



1,573,538. METAL CASEMENT WINDOW. CHARLES S. BOCK, Chicago, Ill., assignor to Andrew Hoffman Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 20, 1924. Serial No. 693,961. 9 Claims. (Cl. 189—69.)

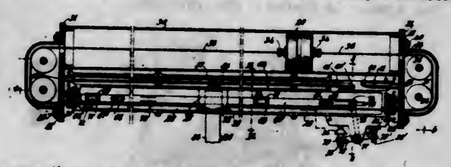
1. A double casement sash of metal construction, wherein the abutting stiles severally comprise a standard metal channel bar which is so positioned in the fabrica-



tion as to present outwardly extending flanges in the front and rear planes of either sash portion for abutment against the outwardly extending flanges of the complementary sash portion, and wherein one of the outwardly extending flanges of each sash portion is provided with a strip which laps against the corresponding flange of the other sash portion.

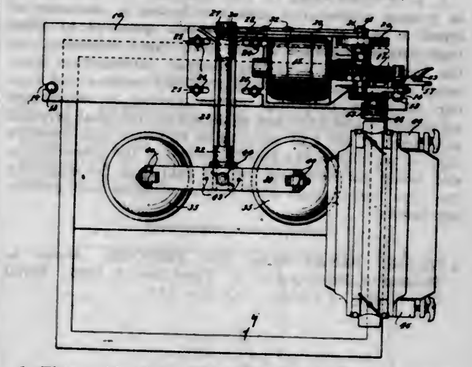
1,573,539. PIKE-POLE GAD. FRED A. BROWN, Los Angeles, Calif. Filed June 7, 1924. Serial No. 718,500. 1 Claim. (Cl. 294—19.)

A pike pole, and a gad fixed on the end of the pole, the gad being polygonal in cross-sectional configuration and having a tapered end portion in the form of a left-handed helix.



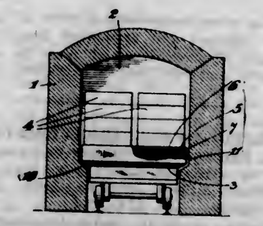
1,573,540. SUPERHEATED-STEAM THROTTLE VALVE. ALFRED W. BRUCE, New York, N. Y. Filed Apr. 25, 1923. Serial No. 634,480. 5 Claims. (Cl. 122—462.)

1. In a boiler of the locomotive type, the combination of a casing, having a flattened top and closing an opening in the top of the smoke box of the boiler; a superheater header in the smoke box; and a throttle valve, located in and supported on the casing, between the stack and the front thereof, and controlling communication between the superheater and the steam supply pipes in the smoke box.



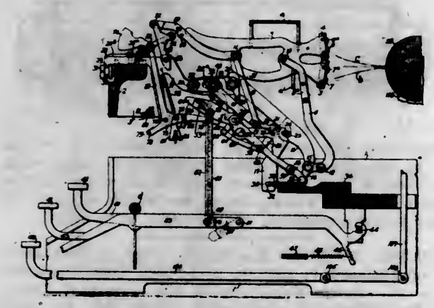
1,573,541. RECIPROCATING MECHANISM FOR WINDSHIELD CLEANERS AND THE LIKE. JOSEPH DEMAND, New York, N. Y., assignor, by mesne assignments, to All Clear Windshields, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Feb. 23, 1921. Serial No. 447,070. 9 Claims. (Cl. 121—164.)

1. A reciprocating mechanism for a windshield cleaner, comprising a cylinder, a piston, and means including valved connections for moving said piston in opposite directions in said cylinder, a guideway extending along said cylinder in adjacent parallel relation therewith, a wiper carrier movable along said guideway, movement transmitting means connecting said carrier with said piston whereby on movement of said piston a movement of translation will be imparted to said carrier, and valve operating mechanism engageable by the movable part of said mechanism at a predetermined point in the movement of said carrier in either direction whereby the motor



connections may be reversed, thereby effecting a reversal of the direction of movement of said piston and carrier, all parts of said mechanism being at all times confined within a space which exceeds the length of said cylinder by but a relatively small fraction of its length.

1,573,542. WASHING MACHINE. JOHN A. DICKERMAN and HERBERT V. LECKIE, Bridgeport, Conn., assignors to The Dawn Manufacturing Co., Stratford, Conn., a Corporation of Connecticut. Filed May 19, 1921. Serial No. 470,898. 10 Claims. (Cl. 68—19.)



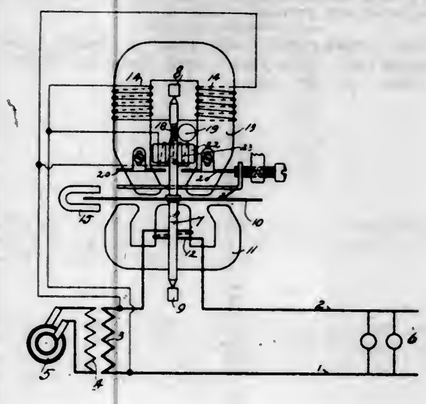
1. The combination with a wash tub, a platform, means for removably attaching the end portions of the platform to the sides of a tub, a motor, a bracket adjustably mounted upon the platform for longitudinal adjustment to center the same with respect to tubs of different widths, a rotatable shaft mounted solely within the bracket, longitudinal adjustable operating connections between the motor and shaft, a cross arm and pounders removably attached to the side of the end portion of the shaft.

1,573,543. TUNNEL KILN. FRANCIS A. J. FITZ GERALD, Niagara Falls, N. Y., assignor to Harper Electric Furnace Corporation, a Corporation of New York. Filed June 1, 1925. Serial No. 33,923. 8 Claims. (Cl. 25—142.)

1. A sagger carrier for use in tunnel kilns consisting of a metal body the top of which is formed as a receptacle, divided refractory heat-insulating material contained in said receptacle, and sagger-supporting members in said material.

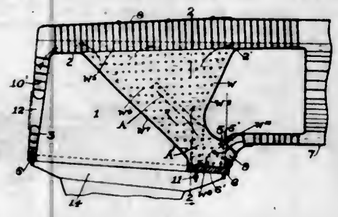
1,573,544. TYPEWRITING MACHINE. GEORGE G. GOING, Middletown, Conn., assignor to Remington-Noiseless Typewriter Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 19, 1925. Serial No. 3,365. 73 Claims. (Cl. 197—25.)

1. In a typewriting or like machine, the combination in a type action of a type bar having a plurality of types, a pair of keys therefor each operative to print from one or another of the said types depending on the key actuated, a driving member, intermediate actuating connections between said driving member and type bar including governing means having a momentum accumulator and arranged to decelerate the final printing movement of the type bar and to translate into pressure against the platen the kinetic energy of the accumulator, and means controlled by both of said keys for actuating the type bar through said driving member and governing means.



1,573,545. INNER RING FOR PISTONS. ARDEN L. HAMILTON, Brooklyn, N. Y. Filed Mar. 9, 1925. Serial No. 13,953. 3 Claims. (Cl. 29—182.)

3. Inner ring stock comprising a strip of spring steel longitudinally crimped and graduated longitudinally to show the length of material which must be cut from a strip to properly cooperate with a particular piston size.

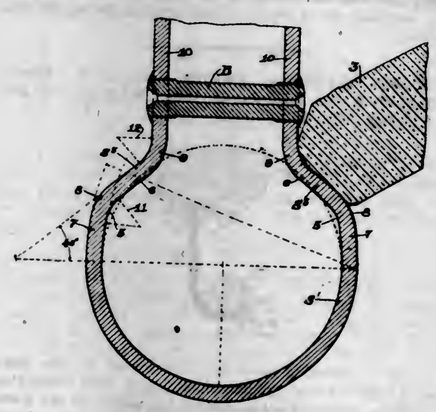


1,573,546. INDUCTION ELECTRICITY METER. JESSE HARRIS, La Fayette, Ind., assignor to Duncan Electric Manufacturing Company, La Fayette, Ind., a Corporation of Illinois. Filed June 15, 1925. Serial No. 37,173. 3 Claims. (Cl. 171—264.)

3. An induction electricity meter including a torque producing magnet system provided with current and pressure windings in inductive relation to the motor armature, and a supplemental magnetic flux producing device having a magnetizable core arranged in a path for flux produced by said magnet system that shunts the meter armature and having an energizing circuit whose resistance increases and decreases more upon increase and decrease in temperature than the resistance of said

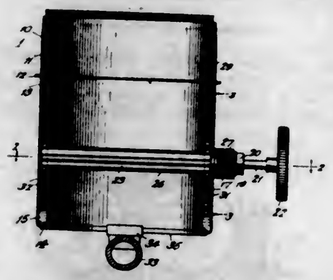
pressure winding increases and decreases, said supplemental flux producing device being arranged to have its flux flow oppositely to the flux of said magnet system flowing in said path that shunts the armature.

1,573,547. LOCOMOTIVE BOILER. CHARLES GILBERT HAWLEY, Chicago, Ill., assignor to Locomotive Firebox Company, Chicago, Ill., a Corporation of Delaware. Filed May 13, 1922. Serial No. 560,654. 2 Claims. (Cl. 122—71.)



1. In combination with a locomotive boiler firebox including a crown sheet, a throat sheet and a mud ring having a tongue extending rearwardly from said throat sheet, a substantially triangular upright flat tubular water wall having an inlet mouth at one end including a part embracing said mud ring tongue and a part opening through the throat sheet and communicating with the bottom water space of the boiler, the other end of the water wall opening through the crown sheet and communicating with the top water space of the boiler.

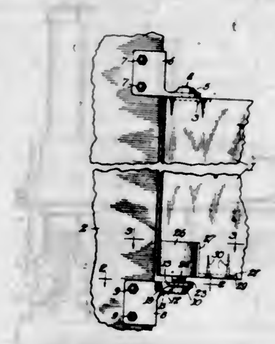
1,573,548. BRICK-SUPPORTING THERMIC SIPHON. CHARLES GILBERT HAWLEY, Chicago, Ill., assignor to Locomotive Firebox Company, Chicago, Ill., a Corporation of Delaware. Filed May 13, 1922. Serial No. 560,670. 2 Claims. (Cl. 122—71.)



1. A thermic siphon including spaced parallel side walls and a bulged tubular bottom portion of a diameter greater than the spacing between said side walls, the lower part of said bottom portion being semi-cylindrical

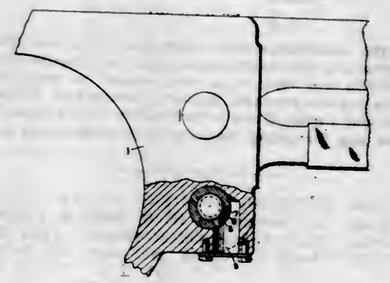
and the upper part thereof including walls substantially parallel with said side walls, there being inclined ledge walls between and connecting said parallel side walls

and said walls forming the upper part of said bulged bottom portion, which ledge walls each provides a full face contact seat for one end of an associated fire brick.



1,573,549. LIQUID-FUEL BURNER. WILLIAM C. HOMAN, Meriden, Conn., assignor to Lewis T. Wilcox, Peekskill, N. Y. Filed May 28, 1925. Serial No. 33,334. 6 Claims. (Cl. 67—60.)

1. In a liquid fuel burner, a casing, a wick holder therein, the said wick holder being provided in diametrically opposite positions with longitudinal slots, and devices extending centrally through the casing and engaging the edges defining the sides of the said slots in the wick holder for simultaneously imparting a uniform movement to the said wick holder.

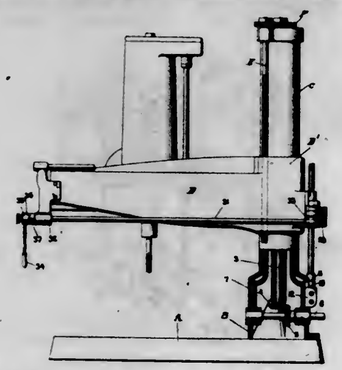


1,573,550. SPRING HINGE. WILLIAM J. KEENE, Chicago, Ill., assignor to Chicago Spring Hinge Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 9, 1923. Serial No. 656,595. 2 Claims. (Cl. 16—182.)

1. A double acting spring hinge comprising a bracket having spaced attaching plates and an arm having an aperture with an annular seat around the aperture and a recess extending radially from the aperture between and communicating with the space formed between the side plates of the bracket, a bushing in the aperture having an annular flange rotatable engaged in the seat flush with the top of the arm and provided with a radially outwardly extending arm disposed in the recess of the bracket, an adjusting member rotatably mounted in the side flanges of the bracket and extending across the recess, said adjusting member having threaded engagement with the radial arm and held against longitudinal

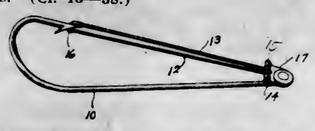
movement to adjust the bushing, a spindle having a squared end fitting a socket in the bushing, and a hinge casing journaled on and oscillatable around the spindle.

1,573,551. PEEPHOLE FOR THREADS. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 8, 1921. Serial No. 483,230. 4 Claims. (Cl. 77—28.)



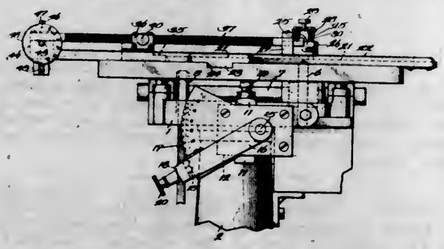
1. In a machine-tool a movable member in combination with a nut and screw arranged to move said member; said nut being formed to render visible a section of its internal thread, whereby the wear on said thread may be made apparent before the thread becomes unduly weakened.

1,573,552. COLUMN-BINDER-CONTROL LINKAGE. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 24, 1921. Serial No. 494,830. 3 Claims. (Cl. 77—28.)



1. A radial-drill comprising an upright post; a sleeve rotatably mounted on said post; a radial arm slidably mounted on said sleeve; a clamp located at the base of said sleeve for binding the sleeve to said post and having a slot therein on the side of the post opposite to the arm; a horizontal shaft located back of said arm; a vertical shaft located on said sleeve on the side opposite to said arm for operating said clamp; mechanism for operatively connecting the horizontal shaft to the vertical shaft while permitting vertical movement of the hori-

zontal shaft and arm with respect to the vertical shaft; an operating handle located on the horizontal shaft at the outer end of the arm for solely operating the shafts



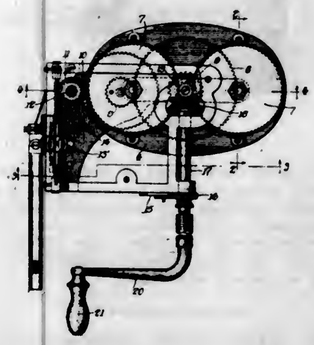
and said clamp; and clutch means for connecting the operating handle to the horizontal shaft and for permitting the adjustment of the handle with respect to the horizontal shaft.

1,573,553. FISHHOOK. JOSEPH KLIPEC, Cleveland, Ohio. Filed Nov. 6, 1924. Serial No. 748,048. 9 Claims. (Cl. 43—38.)

3. The combination with a fish hook, of a weed guard comprising a wire doubled upon itself to comprise a loop adapted to bear against the inner side of the hook point, and having the two ends pivotally mounted on the hook shank and a pair of cam surfaces acting on the two legs of the loop for giving the loop an outward spring pressure.

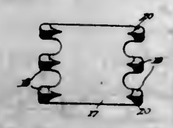
1,573,554. BEVELING MACHINE. WILLIAM J. KNOLL, Chicago, Ill., assignor to H. B. Rouse & Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 13, 1924. Serial No. 737,507. 5 Claims. (Cl. 29—69.)

1. A beveling cutter; a work support for positioning the material, this support and cutter being relatively movable to enable the cutter to cut the work upon the support; a gauge for determining the over all length of the portions cut and beveled; and a supplemental gauge for modifying the adjustment of the first gauge to measure the length between the overhung bevel edges of the portions being cut and beveled.



5. A beveling cutter; a work support for positioning the material, this support and cutter being relatively movable to enable the cuter to cut the work upon the support; a gauge for determining the over all length of the portions cut and beveled inclusive of an adjustable gauge stop and a measuring bar along which the stop is movable; and a supplemental gauge for moving the measuring bar longitudinally in measuring the length between the overhung bevel edges of the portions being cut and beveled.

1,573,555. SNUBBING DEVICE. ROYAL S. LEWIS, Yakima, Wash. Filed Apr. 1, 1924. Serial No. 703,499. 4 Claims. (Cl. 267—8.)

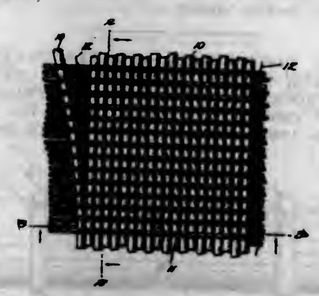


1. In a snubbing unit for attachment to the body and I-beam axle of an automobile, said unit embodying a resilient snubbing strap element connected to the lower part of said axle, anchoring means adapted to be applied to said axle and comprising a hook plate having a hook portion for hooking over one of the bottom flanges of said axle, the said plate in arranged relation extending across under and in engagement with the lower face of said axle, a fulcrum plate having rocking engagement with said hook plate and having a lip for engagement with the upper face of the other bottom flange of said axle, means for drawing and holding the lip of said fulcrum plate toward said hook plate against the intervening flange of said axle, and means for securing said snubbing strap against the face of said hook plate.

1,573,556. SPRING MOTOR. JOHN A. LUNDEN, Chicago, Ill., assignor to Lakeside Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 21 1923. Serial No. 663,992. 5 Claims. (Cl. 185—39.)

1. The combination with a coiled spring; of a winding gear element with which one end of the spring is assembled; a rotatable load operating element with which the other end of the spring is assembled; a second winding gear element in mesh with the aforesaid winding gear element; a winding shaft in driving relation to the second winding gear element; a mounting upon which said spring, the first aforesaid winding gear element, and the load operating element turn together bodily; and a detent associated with the winding shaft permitting rotation of said shaft in a winding direction and preventing reverse rotation of the shaft.

1,573,557. TEMPORARY BALE FASTENING. ALEXANDER S. MACKENZIE, Houston, Tex., assignor to Clayton Gin Compress Company, Houston, Tex., a Corporation of Texas. Filed Mar. 2, 1925. Serial No. 12,643. 10 Claims. (Cl. 24—153.)

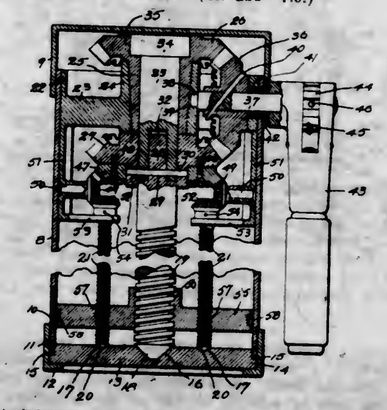


1. A fastener of the class described comprising a body portion; short, overhanging hooks at one end of said body portion; and a relatively long, straight hook at the opposite end of said body portion provided with a barb.

1,573,558. WIRE BASKET OR RECEPTACLE. LYNN W. MACOMBER, Battle Creek, Mich., assignor, by mesne assignments, to United Steel & Wire Company, Battle Creek, Mich., a Corporation of Michigan. Filed Dec. 5, 1923. Serial No. 678,652. 4 Claims. (Cl. 220—19.)

1. A wire receptacle comprising a plurality of wire side hoops, a wire bottom hoop, angled integral side and bottom hoop, angled integral side and bottom slat members formed of folded pieces of wire disposed with their bights at the bottom and welded to said side and bottom hoops, the bottom hoop being disposed adjacent the angles of said slat members, the bight portions of said members being disposed in an annular relation and arranged in overlapping relation so that each overlaps the adjacent members, the overlapping parts of said members being welded together, and tie members connecting the inner ends of opposed slat members.

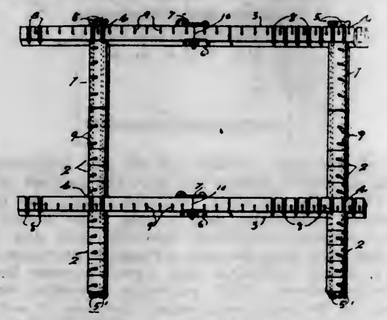
1,573,559. FABRIC. FRED B. MANLEY, Paterson, N. J., assignor to Textiles Development Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 17, 1922. Serial No. 595,142. 7 Claims. (Cl. 139—415.)



1. A hose of belting duck, comprising a warp of straight, parallel cord or yarn strands lying in a single plane without undulations and substantially in contact with each other, a filler of yarn weft strands resting without undulations on opposite sides of the warp, said weft strands being relatively widely spaced, and a single binder strand of relatively small size between adjacent cords for interlocking the filler strands and serving to maintain the cord warp strands and the weft strands in position, adjacent binder strands being similarly disposed relative to the cord warps and filler strands, the weft strands being of sufficient size and proximity to each other to give a greater resistance to bending crosswise of the weft strands than lengthwise of the weft strands.

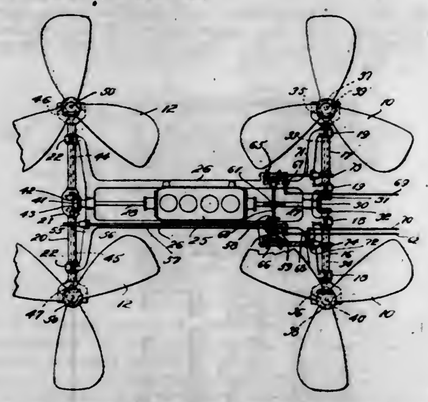
1,573,560. TELEPHONE-DIRECTORY STAND. MILTON HENRY MANN, San Francisco, Calif. Filed Sept. 24, 1924. Serial No. 739,634. 1 Claim. (Cl. 45—31.)

A top for tables, stands and the like comprising a frame adapted to embrace the upper end portions of the legs of a table and to be connected thereto and to be supported horizontally thereby, said frame having its lateral portions constructed relatively thick and deep and depending from the edge portions of the upper face of the frame, certain of said lateral portions having transverse recesses, and guideways extending transversely of the frame and forming extensions of said recesses, certain of said guideways being arranged one above the other in parallel horizontal planes, slidable boards closely fitted in said guideways and extending at one end through the recesses and constructed so that their outer end surfaces extend flush with the outer surfaces of the recessed lateral portions when the boards are wholly disposed in the guideways and recesses whereby the outer faces of said lateral portions may appear continuous, the inner edge of said frame having a rabbet and a horizontally extending transparent plate wholly disposed in the said rabbet and forming a continuation of the upper surface of the frame and constituting a panel.



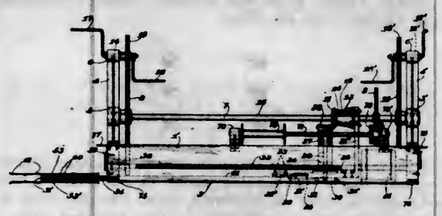
1,573,561. LUBRICATING APPARATUS. SIM MANNING, St. Louis, Mo., assignor of one-third to Richard Willis, St Louis, Mo. Filed July 30, 1923. Serial No. 654,590. 2 Claims. (Cl. 221—7.9.)

2. A lubricator comprising a casing, a cover and a bottom secured thereto, a piston located within said casing, a plurality of gears located within the casing adja-



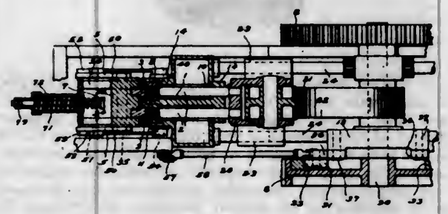
cent the cover, a ratchet mechanism located without said casing for operating said gears, a screw carried by one of said gears and extending centrally through said piston for raising and lowering the same, screws carried by certain of said remaining gears and extending through said piston for preventing the same from turning, said last mentioned screws having a finer lead than the first mentioned screw and adapted to be rotated proportionately faster so that all of said screws will feed equally, and a charging opening located in the side of said casing at a point below the piston when the same is raised.

1,573,562. CURTAIN STRETCHER. THOMAS MIERSMA, Muskegon, Mich. Filed Nov. 17, 1924. Serial No. 750,367. 3 Claims. (Cl. 45—24.)



1. In a curtain stretcher frame, side rails having laterally disposed slots therein, end rails made up of a number of short longitudinally adjustable sections each section having holes therethrough longitudinally, bolts passed through said holes and arranged to pass into the slots in the side rails, and thumb nuts on said bolts, all arranged to clamp one end of the side rails firmly to the end rails and the other side rail firmly between two sections of each of the end rails, and hooks thereon for securing the curtains in place upon the frame.

1,573,563. HELICOPTER. EDWARD Y. MOORE, Cleveland, Ohio. Filed Mar. 28, 1923. Serial No. 628,206. 6 Claims. (Cl. 244—19.)



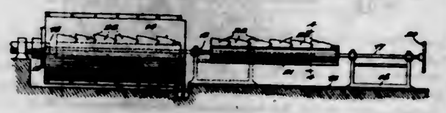
1. In a helicopter, the combination of a frame, of four propellers, a motor geared with all of said propellers for rotating them, mechanism for varying the position of the axis of rotation of two of the propellers as a unit, two mechanisms for respectively varying the axis of rotation of the other propellers, and three controls for said three mechanisms.

1,573,564. MINING MACHINE. HESS P. MORGAN, Lisbon, Ohio. Filed Mar. 31, 1924. Serial No. 703,137. 5 Claims. (Cl. 262—27.)

1. A mining machine comprising a frame, supporting means fixed to the opposite ends of the frame, a driving shaft rotatably mounted in said supporting means, a bodily movable beam slidably carried by said frame, cutters mounted at the free end of the beam, gearing interposed between said shaft and cutters for rotating the same, and means associated with said supporting means for manually applying power to the opposite ends of said driving shaft.

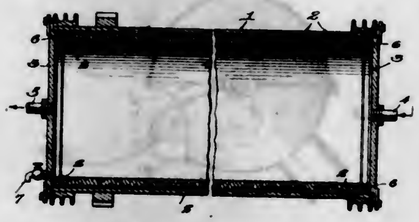
1,573,565. ART OF BRIQUETTING. PAUL C. MULLIGAN, Seattle, Wash., assignor to himself, Herbert G Swalwell, Isaac M. Foster,. and Luther J. Hull, all of Seattle, Wash. Filed July 21, 1924. Serial No. 727,321. 34 Claims. (Cl. 25—85.)

1. In a briquetting press, in combination with a mold sleeve, a head movable to close one end thereof, and a ram reciprocable in its other end, means for controlling the movements of said head and ram to advance a charge before the ram to expel a previously formed briquette, then to close the delivery end of the sleeve with the head after expulsion of the said briquette and before expulsion of the said charge, then to advance the ram to complete the compression of the charge, then to withdraw the ram, and finally to withdraw the head as the ram begins its next advance.



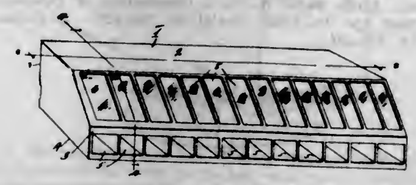
1,573,566. DISTRIBUTING AND PLACEMENT DEVICE FOR PLASTIC MATERIAL IN CENTRIFUGAL PROCESSES AND PROCESS OF USING THE SAME. CLIFFORD R. NICHOLS, Dallas, Tex. Filed Apr. 20, 1925. Serial No. 24,626. 16 Claims. (Cl. 25—30.)

1. In combination with a rotatable form for centrifugally cast products; conveying means mounted within the form to successively relay material longitudinally therethrough; means to effect lateral adjustment of



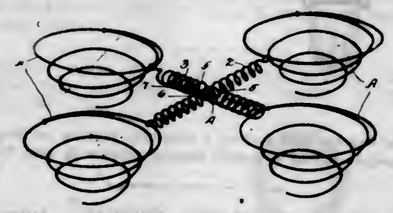
said conveying means within the form during the centrifugal placement of said material therewithin in accordance with the varying inner diameter of the product, and means to permit removing the said conveying means from the form.

1,573,567. CENTRIFUGAL PROCESS OF FORMING AND FINISHING HOLLOW BODIES OF PLASTIC MATERIALS AND APPARATUS THEREFOR. CLIFFORD R. NICHOLS, Detroit, Mich. Filed Oct. 28, 1925. Serial No. 65,483. 17 Claims. (Cl. 25—30.)



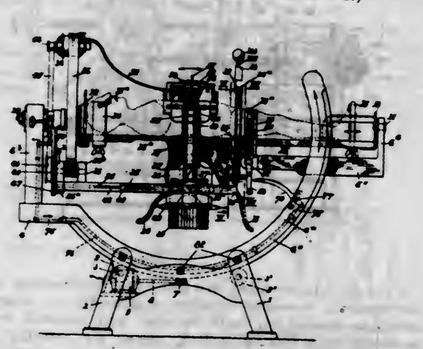
1. In a centrifugal plastic ware machine, the combination of a rotary mold, mold charging means and means carried by the charging means for aiding centrifugal action in simultaneous longitudinal and circumferential placement of the plastic material within the mold.

1,573,568. METHOD OF IMPREGNATING CEMENTITIOUS PRODUCTS. CLIFFORD R. NICHOLS, Detroit, Mich. Filed Nov. 23, 1925. Serial No. 71,009. 6 Claims. (Cl. 25—38.)



1. The hereindescribed method of impregnating cementitious products, which resides in first determining the water content of the plastic material and the physical characteristics thereof, then rotating the plastic material against a confining surface coated with fusible material, and finally subjecting the interior of the molded product to a fluid heated to a predetermined degree of temperature throughout a period of time to effect melting of the fusible material and uniform impregnation of the product by the fusible material.

1,573,569. DISPLAY AND STORAGE COUNTER. ARMAND PETERSEN, Omaha, Nebr. Filed Jan. 18, 1923. Serial No. 613,343. 1 Claim. (Cl. 211—227.)

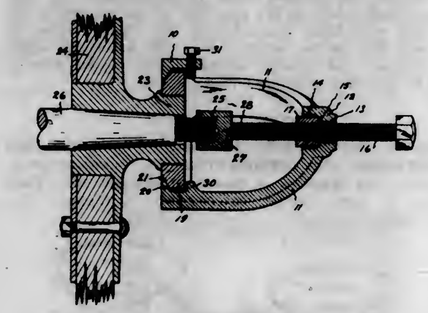


A combined counter and display device, said counter having its upper side horizontally disposed, said upper side terminating in a downwardly and forwardly extending inclined portion, said inclined portion being provided with transparent members, a downwardly and forwardly inclined partition forming a compartment adjacent the upper side of the counter and below the top and inclined portions thereof, a plurality of bins in the front side of the counter and disposed below the compartment, an elongated compartment in the rear side of the counter below the first mentioned compartment, and doors carried by the rear side of the counter below the horizontal upper side thereof and forming means whereby access may be had to the first mentioned compartment.

1,573,570. CONNECTING SPRINGS FOR USE IN BED BOTTOMS AND OTHER PLACES. CORNELIUS B. PLATT and WILLIAM S. BROWN, Carthage, Mo. Filed Nov. 2, 1923. Serial No. 672,303. 6 Claims. (Cl. 5—269.)

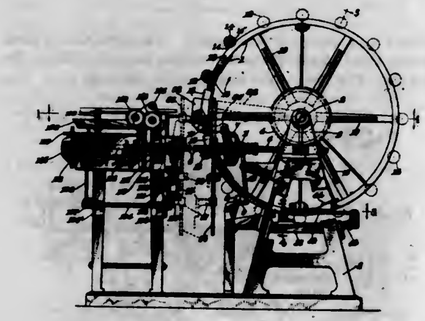
6. A helical spring adapted to be used in association with a spring that crosses it, and as a spring connection, having the coils of a short intermediate section of the spring of reduced size as compared with the coils on either side of said section.

1,573,571. TABLE FOR X-RAY TRANSRADIATION. ERNST POHL, Kiel, Germany. Filed May 20, 1924. Serial No. 714,599. 42 Claims. (Cl. 250—34.)



1. A rotatable bed for X-ray transradiation comprising a couch for the patient, means supporting said couch for rotation about a longitudinal axis, means supporting said couch for tilting about a transverse axis, means for transradiating the patient placed on the couch, and means permitting said transradiating means to rotate around said couch regardless of the position of said couch.

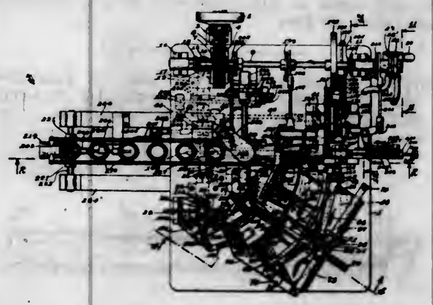
1,573,572. WHEEL PULLER FOR MOTOR VEHICLES. FRANK W. REES, Olympia, Wash., assignor to Superior Tool Company, Inc., Olympia, Wash., a Corporation of Washington. Filed Aug. 14, 1924. Serial No. 731,907. 3 Claims. (Cl. 29—85.)



1. In a device of the class described, a frame, having a spherical bearing surface formed therein, a thrust screw

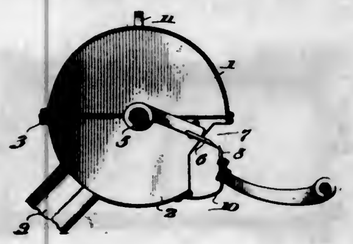
operatively disposed in said frame, and an adapter nut arranged to be secured to an object on which a pull is

to be exerted and having a spherical bearing surface arranged to fit the spherical bearing surface in said frame.



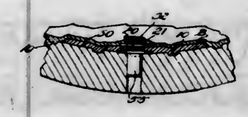
1,573,573. TUBE-FORMING MACHINE. JAMES D. REIFSNYDER, Brooklyn, N. Y., assignor to Tulip Container Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 6, 1924. Serial No. 730,373. 20 Claims. (Cl. 93—81.)

1. In a tube forming machine, the combination of a continuously rotatable member, a plurality of rotatable mandrels carried by said member and adapted to be moved past a feeding station, means for rotating said mandrels to form tubes from paper blanks, a cam connected to each of said mandrels to rotate therewith, a track on which the cams are adapted to move to hold their respective mandrels in proper registration to receive paper blanks, and a second track on which said cams are adapted to move to hold their respective mandrels in proper registration after said paper blanks are wound thereon to form tubes.



1,573,574. TUBE-FORMING MACHINE. JAMES D. REIFSNYDER, Brooklyn, N. Y., assignor to Tulip Container Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 30, 1924. Serial No. 746,719. 12 Claims. (Cl. 93—79.)

7. In a machine for making tubes, the combination of a winding mandrel adapted to be rotated to wind tubes from strip material, means for intermittently rotating said mandrel in one direction to wind a tube, and

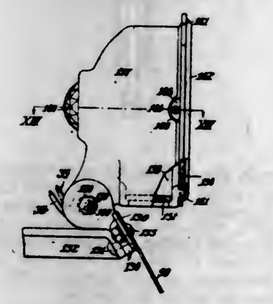


means for rotating said mandrel a fractional revolution in the reverse direction to place said mandrel in proper position to wind the next tube.

1,573,575. SUCTION DEVICE FOR UNHAIRING MACHINES. NOAH REINGOLD and MEYER REINGOLD, New York, N. Y. Filed Mar. 20, 1924. Serial No. 700,543. 5 Claims. (Cl. 149—26.)

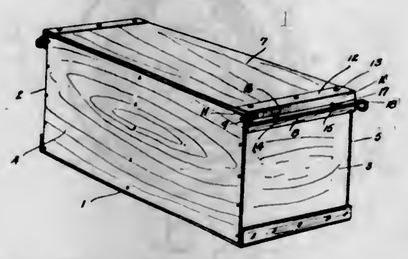
5. A device of the character described including upper and lower sections hinged together, a rotary knife mounted therein, the lower section having a cutout portion in the side and end walls thereof forming an open mouth extending throughout the length of said lower section, an air pipe connected with said lower section substantially opposite the mouth, a movable bed knife for cooperating with the rotary knife, and means connected with the bed knife and flexibly connected with the lower edge of the mouth for partially closing said mouth.

1,573,576. FOOTBALL AND METHOD OF MAKING THE SAME. FRED THOMAS ROBERTS, Upper Montclair, and WILLIAM EUGENE ROBERTS, Little Falls, N. J., assignors to Paramount Rubber Consolidated, Inc., Little Falls, N. J., a Corporation of Delaware. Filed Apr. 16, 1923. Serial No. 632,228. 11 Claims. (Cl. 18—59.)



1. The method of making foot balls comprising forming a biscuit of rubber and applying to the same an external patch with a valve casing clamped to the inner and outer face of the patch, and vulcanizing the article as a unit.

1,573,577. METHOD AND APPARATUS FOR MAKING FLUSH-TANK BULBS. FRED THOMAS ROBERTS, Yonkers, N. Y., assignor to Paramount Rubber Consolidated, Inc., Tuckahoe, N. Y., a Corporation of Delaware. Filed Mar. 15, 1924. Serial No. 699,416. 18 Claims. (Cl. 18—56.)

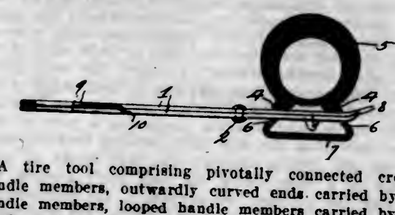


3. The method of making flush tank bulbs comprising the positioning of a spud in the cavity of a forming mold section, surrounding such spud with a mass of raw rubber, placing a sheet of raw rubber over the mouth of the cavity pneumatically forcing such sheet into engagement with the mass of rubber and with the wall of the cavity and then bringing the seated sheet into engagement with other rubber stock and cutting around the junction to form a completed biscuit.

1,573,578. AUTOMOBILE ACCESSORY. EDWIN M. ROSENBLUTH, Wallingford, Pa. Filed Nov. 22, 1921. Serial No. 516,961. 9 Claims. (Cl. 240—8.2.)

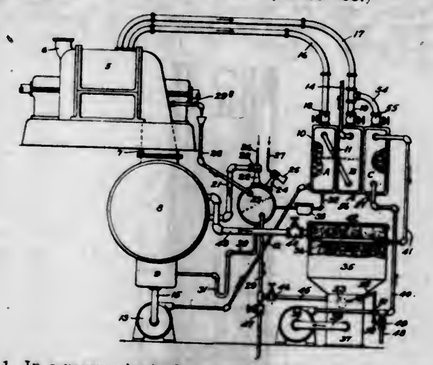
3. The combination with a lamp casing formed of complementary, substantially semiannular sections; of an annular plate detachably fitted to said casing, and including means arranged to clamp it on said casing.

1,573,579. LID FASTENER FOR BOXES. CLIFTON H. ROSS, Junction City, Kans. Filed Apr. 13, 1925. Serial No. 22,741. 4 Claims. (Cl. 292—145.)



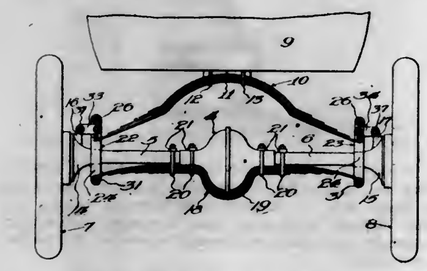
2. In combination, a box, a cover therefor, and means for fastening the cover to the box, said means comprising a tubular member at the end of the box cover extending across the end of the box, and having notches, staples carried by the box engaging the notches, and a rod frictionally engaging the inner wall of a tubular member, and passing into the staples.

1,573,580. CANOPY HOLDER. HARRY E. RUTTLE, Chicago, Ill. Filed Mar. 10, 1924. Serial No. 698,115. 6 Claims. (Cl. 240—100.)



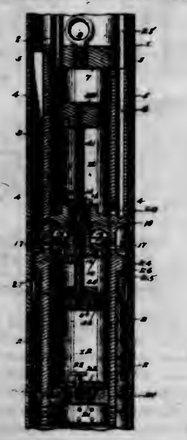
1. A canopy open at the bottom, a support therefor having an upstanding flange part, fasteners embracing said flange part for support, said fasteners having outwardly disposed upstanding arms to receive and support said canopy, and cushioning means to receive the bearing of said canopy.

1,573,581. TIRE TOOL. ROY RUTZ, Navarre, Kans. Filed Mar. 26, 1925. Serial No. 18,505. 1 Claim. (Cl. 157—6.)



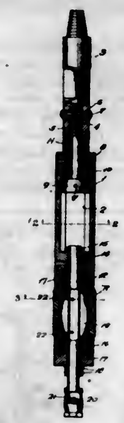
A tire tool comprising pivotally connected crossed handle members, outwardly curved ends carried by the handle members, looped handle members carried by one of the ends of the crossed handle members, said looped handle members terminating in oppositely bent ends adapted to engage opposite sides of the crossed handle members for limiting the movement of the handle members in one direction after they have reached registering positions and the curved ends are in registration.

1,573,582. POWER PLANT. ARTHUR R. SMITH, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 5, 1921. Serial No. 513,006. 6 Claims. (Cl. 60—95.)



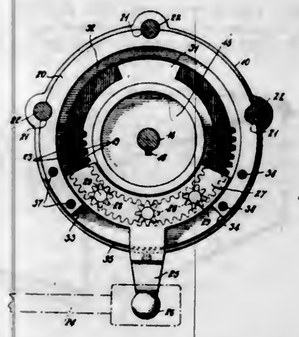
1. In a power plant, the combination of a prime mover, a condenser therefor, a feed water heater, means for supplying elastic fluid which has done work in the prime mover to the feed water heater, means for circulating the condenser condensate through said heater, an evaporator, a conduit for conveying steam from it to the condenser, a second heater, means for supplying elastic fluid which has done work in the prime mover to said second heater, means for circulating water through said second heater, and means for conveying it from the second heater to the evaporator.

1,573,583. SPRING SUSPENSION FOR MOTOR VEHICLES. CHARLES H. SMITH, Aurora, Ill., assignor of one-half to Alfred W. Mitchell, Janesville, Wis. Filed Apr. 2, 1925. Serial No. 20,183. 5 Claims. (Cl. 267—46.)



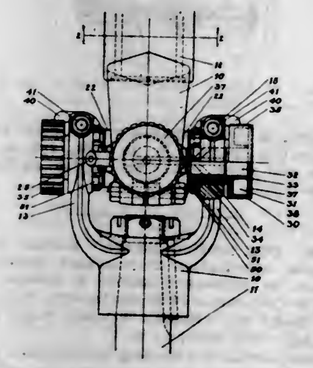
1. The combination with the differential housing and the rear axle housing reaching sidewise therefrom and the transverse rear end leaf spring of a chassis, of a supplemental leaf spring having its central portion concave upwards to receive the lower portion of the differential housing and its end portions reaching sidewise below the axle shaft housing, clips at both sides of the differential housing serving to secure the leaf spring rigidly thereto at points adjacent to both sides of the differential housing, and a shackle connection at each end of the device, each shackle comprising a pair of side plates embracing the axle shaft housing between them, a cross pin joining together the side plates of each shackle at a point below the axle shaft housing and receiving the adjacent end portion of the supplemental leaf spring, another pin joining together the side plates of each shackle at a point above the axle shaft housing, a hanger reaching downwards therefrom between the side plates and above the axle shaft housing, a connection between the adjacent end of the first mentioned leaf spring and the lower portion of said hanger, and links pivotally connected to the upper portions of the side plates of each shackle and the adjacent end of the axle shaft housing, substantially as described.

1,573,584. OIL-WELL PUMP. WILLIAM J. SMITH, Philadelphia, Pa., assignor of one-half to William R. Blair, Philadelphia, Pa. Filed Apr. 6, 1925. Serial No. 20,899. 5 Claims. (Cl. 103—46.)



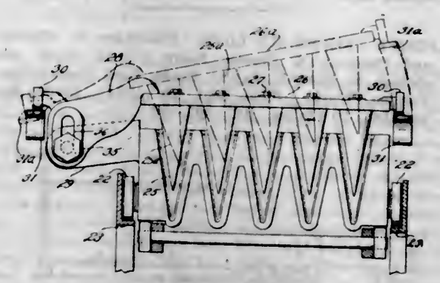
1. A pump of the kind described comprising a cylindrical shell or casing provided with elongated exterior ribs extending longitudinally of the shell or casing, a piston located in the shell or casing, means for reciprocating the piston, a second piston connected and movable with the first, and located in a chamber having inlet and outlet openings, the exterior of the shell or casing being provided with a surrounding flexible projection located between the inlet and outlet openings of the chamber.

1,573,585. SWIVEL SWAB. HARVEY R. STANDLEE, Tulsa, Okla. Original application filed Aug. 17, 1922, Serial No. 582,500. Divided and this application filed Oct. 25, 1924. Serial No. 745,759. 3 Claims. (Cl. 103—202.)



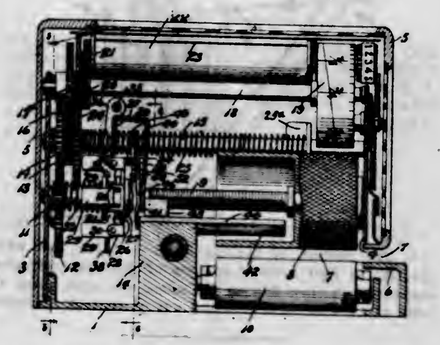
1. In a swab, the combination of a tubular mandrel, a cage, an end portion of the mandrel being fitted through the cage in communication with the interior thereof, means coacting with the end portion of the mandrel within the cage for holding the mandrel against displacement with respect to the cage, said cage being slotted to permit positioning of said means, a sub, and means for swivelling the sub to the mandrel.

1,573,586. STEERING GEAR. JACOB M. STONE, Breckenridge, Tex. Filed Dec. 19, 1923. Serial No. 681,517. 5 Claims. (Cl. 74—79.)



1. A steering gear comprising a disk adapted to be rigidly secured to the lower end of the steering post and having rack teeth upon its periphery, a plate adapted to be rigidly secured to the chassis of the vehicle adjacent the lower end of said steering post, an annular ring secured to said plate, rack teeth upon the inner periphery of said ring, a steering arm, a segment overlapping portions of said ring and disk and guided in its movements by other portions thereof, a steering arm rigidly secured to said segment, planetary gears journaled upon said segment and meshing with said rack teeth whereby to actuate said steering arm by movements of said disk.

1,573,587. UNIVERSAL JOINT. GURDON LUCIUS TARBOX, North Plainfield, and CLARENCE WINFRED SPICER, Plainfield, N. J. Filed Dec. 24, 1924. Serial No. 757,887. 15 Claims. (Cl. 64—102.)

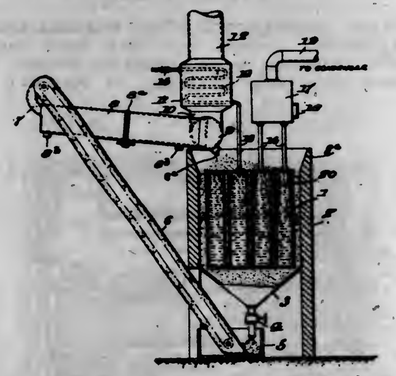


1. A universal joint comprising two forked members journaled to a trunnion block at right angles to each other, journal bushings adapted to screw into the forked members and provided with cylindrical and annular shaped reservoirs integral therewith and outside the journal pins.

1,573,588. MACHINE FOR MAKING ICE-CREAM CONES. JAMES T. TURNER, Atlanta, Ga. Filed Aug. 6, 1923. Serial No. 655,853. 8 Claims. (Cl. 107—58.)

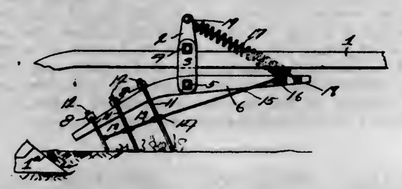
8. In a device of the character described, the combination with a conveyer comprising a series of pivoted links, said links having open sided recesses in their sides, means operable upon a change of direction in the movement of the links for closing and opening said recesses, male members adapted to coact with the recesses, means for mounting the male members on the links so as to provide a lost motion connection therewith, and other means for withdrawing the male members by moving them in a vertical line so as to take up the slack in the lost motion connection and then to move them in a curved path by swinging them about a pivotal connection.

1,573,589. RETURN-SPEED CHECK FOR MEASURING MACHINES. ANTHONY VANDERVELD, Grand Rapids, Mich. Filed Feb. 26, 1923, Serial No. 621,269. Renewed Jan. 6, 1926. 15 Claims. (Cl. 235—144.)



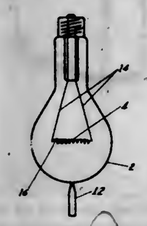
1. In a cloth measuring machine, a roller adapted to be driven by contact of cloth therewith drawn thereby, spring means tensioned by the driving of said roller tending to return the same to initial position when free to do so, means for stopping the mechanism at an exact and predetermined position on said return, and means for automatically checking and slowing the return speed of rotation of the machine immediately prior to the stopping thereof, substantially as described.

1,573,590. WATER-TIGHT CONTAINER. JAMES GURNEY WALLACE, Baltimore, Md., assignor of one-half to Andrew R. Keckler, Baltimore, Md. Filed Oct. 24, 1923. Serial No. 670,521. 3 Claims. (Cl. 150—8.)



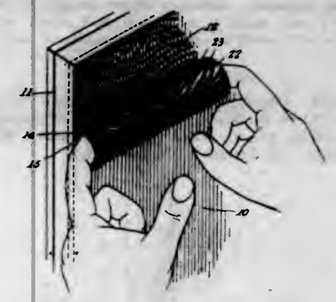
1. An inflatable container having one end open and including a porous compressible filler within the open end, and means for shirring the wall of the container around the filler and compressing the filler and thereby precluding entrance of moisture from the contents of the container.

1,573,591. PROCESS OF HEATING FLUIDS. FRANK E. WELLMAN, Kansas City, Kans., assignor to The Kansas City Gasoline Company, Kansas City, Kans., a Corporation of Kansas. Filed Sept. 18, 1921. Serial No. 500,424. 2 Claims. (Cl. 196—119.)



1. The process of heating fluids and the like which consists in first heating a mass of granular refractory material and then flowing the same over and about the body of fluid to be heated and out of contact therewith.

1,573,592. WEED GATHERER FOR PLOWS. JOHN WICKER and JOSEPH E. MCGOUGH, Sprague, Wash. Filed Aug. 25, 1925. Serial No. 52,348. 1 Claim. (Cl. 97—193.)



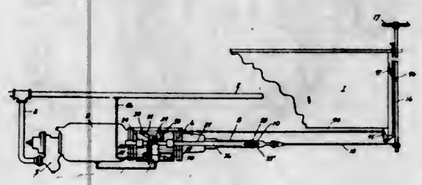
The combination with a plow beam carried weed gatherer comprising a rock bar disposed beneath the beam, spring means for forcing the rear end of the rock bar downwardly, outwardly and downwardly curved arms carried by the rear end of the rock bar, of link connections between said arms, a brace rod connected to the forward arm in alinement with the link connections, said brace rod extending forwardly and upwardly and anchored to the forward end of the rock bar.

1,573,593. ELECTRIC BULB. ALBERT A. WILKINS, Middleton, Mass. Filed Apr. 19, 1922. Serial No. 555,609. 4 Claims. (Cl. 176—16.)

1. A bulb into which sodium nitrite has been introduced before the bulb was sealed.

1,573,594. GRAINING TOOL. KONRAD WINKENBACH, Newark, N. J. Filed Jan. 31, 1925. Serial No. 5,928. 4 Claims. (Cl. 41—5.5.)

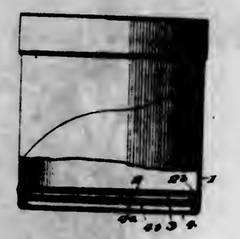
1. A graining tool comprising a solid roller containing finger receiving recesses in its ends, and a resilient sleeve on said roller said sleeve having an irregularly corrugated surface.



1,573,595. DYE COMPOSITION. EDWARD J. WALL, Wollaston, and DANIEL F. COMSTOCK, Boston, Mass., assignors to Kalmus, Comstock & Wescott, Boston, Mass., a Corporation of Massachusetts. Filed July 6, 1917, Serial No. 179,050. Renewed Sept. 12, 1923. 14 Claims. (Cl. 95—7.)

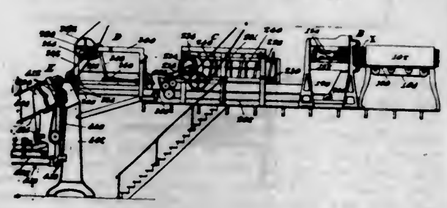
5. A composition for treating photographic emulsions comprising a colloidal color sensitizing dye solution, and an amount of gelatine of the order of a small fraction of one percent for restraining the coagulation of the colloid.

1,573,596. METHOD OF TREATING PHOTOGRAPHIC EMULSION AND COLOR-SENSITIZING COMPOSITION. EDWARD J. WALL, Wollaston, and DANIEL F. COMSTOCK, Boston, Mass., assignors to Kalmus, Comstock & Wescott, Boston, Mass., a Corporation of Massachusetts. Filed July 11, 1917, Serial No. 179,791. Renewed Sept. 12, 1923. 21 Claims. (Cl. 95—7.)



1. A composition for treating photographic emulsions comprising a color sensitizing dye ingredient and an oxidizing agent.

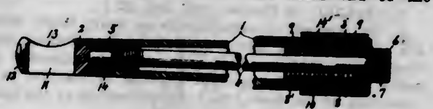
1,573,597. AIR-BRAKE LOCK. BERNHARD W. WESTBO and PERCIVAL N. BISSON, South Prairie, Wash., assignors to Railway Safety Brake Lock Corporation, Tacoma, Wash. Filed Sept. 10, 1924. Serial No. 736,854. 10 Claims. (Cl. 303—89.)



1. The combination with an air brake mechanism of the character described including a train pipe, an auxiliary supply reservoir and a brake lever, of a normally disengaged locking means for the brake lever adapted to be set under the control of air pressure in the train pipe and to be released under control of air pressure in the auxiliary reservoir.

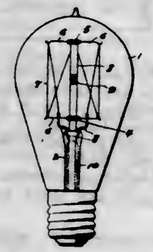
1,573,598. PAPER CONTAINER. WILBUR L. WRIGHT, Fulton, N. Y., assignor to Oswego Falls Corporation, Fulton, N. Y., a Corporation of New York. Filed Aug. 25, 1922. Serial No. 584,168. 3 Claims. (Cl. 229—5.6.)

1. A paper material container having an end closure embodying a relatively thin annularly flanged inner closure disk within the container barrel, and an outer flat disk of oversize with respect to the diameter of said annular flange and driven thereinto against the flanged disk and maintaining radial expansive pressure against the base portion of said flange and driving the same into merging contact with the inner surface of the barrel to prevent liquid leakage longitudinally of the flange and inner surface of the barrel, the disks being permanently secured in and to the barrel by a locked crimp embodying a doubled end portion of the barrel forming an annular knee bearing inwardly against the outer surface of the rim portion of said oversize disk with the inner disk flange crushed within the doubled end portion of the barrel to lock the inner disk to the outer disk.



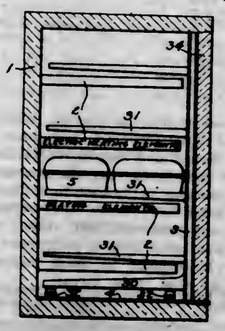
1,573,599. SYSTEM FOR MAKING PADS. WILLIAM E. ELLIOTT, Lynn, Mass. Filed Dec. 27, 1919. Serial No. 347,852. 77 Claims. (Cl. 154—29.)

4. A system of making pads from a bale of compacted fibrous material comprising means for feeding the bale, movable separating means acting upon a face of the moving bale from the interior outwardly to disintegrate the bale and to prevent the fibres thereof from again matting together, a conveyer for the fibres delivered by said separating means, relatively reciprocating shredding members acting upon the moving layer of fibres upon said conveyer to disintegrate any matted fibres delivered to said conveyer and further to separate said fibres and continuously to deliver a body of loosely associated fibres, means for advancing the body of loosely associated fibres and equalizing means acting to compact the fibres into a body of uniform density per unit of length.



1,573,600. HAIR WAVING AND CURLING DEVICE. HENRIET O. FREDERICS, New York, N. Y., assignor to E. Frederics, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 8, 1924. Serial No. 730,855. 8 Claims. (Cl. 132—34.)

1. In a hair waving and curling device of the character described, a tubular section having one end threaded externally, an end section journaled on said threaded end, an additional end section having an externally threaded extension journaled in the other end of the



tubular section, and means extending through the tubular section for transmitting rotary motion from end section to the other end section.

1,573,601. ARTICLE CONTAINING VISIBLE TEMPERATURE RECORDS AND METHOD OF OBTAINING THE RECORDS. CARL T. FULLER, Nutley, N. J., assignor to General Electric Company, a Corporation of New York. Filed Jan. 26, 1922. Serial No. 532,047. 9 Claims. (Cl. 176—16.)

1. The method of obtaining a permanent visible indication that a part of an incandescent lamp or similar current consuming device comprising a sealed glass envelope containing said part attained during manufacture of the device a predetermined temperature higher than said part attains during operation of said device, which consists in depositing on said part a colored material which permanently changes in color when said part attains said predetermined temperature.

1,573,602. ELECTRIC BAKE OVEN. ELMER LLOYD GEHMAN, Seattle, Wash. Filed Oct. 2, 1923. Serial No. 666,075. 1 Claim. (Cl. 107—56.)

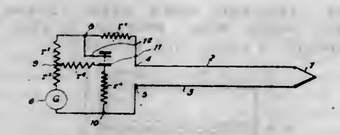
The combination with an electric bake oven having electric heating elements projecting from the side walls and having an unsupported edge spaced from the wall a distance to accommodate rack standards, and carrying racks having a supporting base, standards at one side of the base tray carrying racks extending horizontally from the standards, said racks being vertically spaced to clear the heating elements and the standards to be in the space at the unsupported edges of the heating element.

1,573,603. PROCESS FOR MAKING HEAVY BASIC CARBONATE OF MAGNESIUM. BERTRAND B. GRUNWALD, Alameda, Calif. Filed June 30, 1924. Serial No. 723,151. 3 Claims. (Cl. 23—67.)

1. The process of manufacture of heavy basic carbonate of magnesium, which consists in introducing carbon dioxide gas into a mixture of calcined magnesite and water and utilizing the resulting heat of reaction in the formation of the desired physical properties of the resulting product.

1,573,604. PROCESS FOR MAKING LIGHT BASIC CARBONATE OF MAGNESIUM. BERTRAND B. GRUNWALD, Alameda, Calif. Filed June 30, 1924. Serial No. 723,152. 10 Claims. (Cl. 23—67.)

6. The process of manufacturing a light basic carbonate of magnesium, consisting of heating a mixture of heavy carbonate of magnesium and water under agitation to a temperature not exceeding 180 degrees Fahrenheit, whereupon the carbonate of magnesium expands in volume, and then cooling the mixture by adding cold water to prevent further expansion.



1,573,605. MANUFACTURE OF AZO DYESTUFFS. FRITZ GÜNTHER, Ludwigshafen-on-the-Rhine, Germany, assignor to Badische Anilin- & Soda-Fabrik, Ludwigshafen-on-the-Rhine, Germany, a Corporation of Germany. Filed July 13, 1925. Serial No. 43,410. 3 Claims. (Cl. 260—72.)

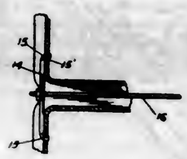
1. As new articles of manufacture azo coloring matters for animal, vegetable and mixed fabrics, which contain the grouping

$$-N{=}N-\text{aryl(p)}-X-\text{(p)aryl}-N{=}N-$$

(X standing for the azo or azoxy group or the urea grouping), coupled with an ortho-oxy-carbonxylic acid, and containing sulfonic acid groups.

1,573,606. METHOD AND APPARATUS FOR MAKING ELECTRICAL MEASUREMENTS. THOMAS RANDOLPH HARRISON, Philadelphia, Pa., and PAUL DARWIN FOOTE, Washington, D. C. Filed May 3, 1924. Serial No. 710,913. 5 Claims. (Cl. 175—183.)

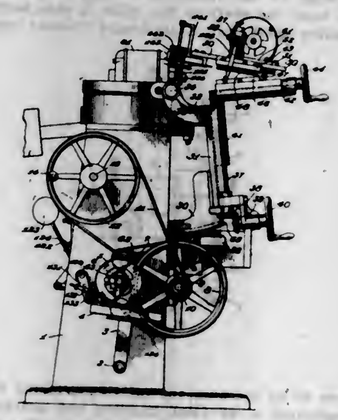
1. An electrical measuring system comprising a main circuit of fixed predetermined resistance, means connected in said circuit and responsive to changes in conditions external thereto to vary the current flow in said circuit; an instrument calibrated to indicate changes in said external conditions when the resistance of said circuit is at said predetermined value; and auxiliary circuit connections comprising a permanent shunt around said indicating instrument to cause indications of substantial faults in said main circuit.



1,573,607. UPRIGHT PIANO ACTION. JOSEPH HIMPEL, West Haven, Conn. Filed Mar. 19, 1923. Serial No. 626,223. 1 Claim. (Cl. 84—240.)

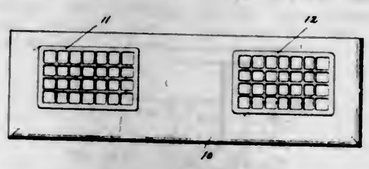
In a check and adjusting device for piano actions, the combination with a hammer, a hammer-butt, and jack of a piano action, of a lug formed on and adjacent to the upper end of the jack and extending outwardly therefrom in an angular direction and provided with a continuously curved uninterrupted face, a check device including a head carried by the hammer-butt and formed with a curved depending body forming a pocket for the lug, and a block adjustably carried by the head and movable

to engage the lug in a direction at approximately right angles to the vertical axis of the jack for regulating the position of the hammer.



1,573,608. METAL FILING CASE. SAMUEL C. HUFFMAN, Lincoln, Nebr. Filed Sept. 21, 1923. Serial No. 664,094. 6 Claims. (Cl. 45—2.)

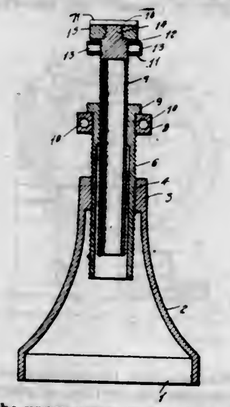
6. A filing case comprising a plurality of units, reinforcing webs surrounding each of said filing units at their front and rear ends, said reinforcing webs provided in their vertical portions with sockets equidistantly positioned from the upper and lower edges of said filing units, connectors overlapping adjacent filing units with a pair of connectors at the front and a pair of connectors at the rear end of said filing units, each of said connectors having inwardly projecting pins fitting said sockets in the reinforcing webs to positively connect said filing units, and means for independently interconnecting the front and rear pairs of connectors.



1,573,609. MACHINE FOR MAKING OPTICAL PRISMS. CHARLES FRANCIS JENKINS, Washington, D. C., assignor to Radio Pictures Corporation, Washington, D. C., a Corporation. Filed Nov. 4, 1922. Serial No. 599,171. 36 Claims. (Cl. 51—31.)

1. In a machine of the character described, the combination of a support; means for moving said support around a center; means for securing a circular transparent member to said support; means for reciprocating a finishing member radially of said circular member; and means to

move said last named means around a second fixed center while said transparent member is being moved around said first named center.

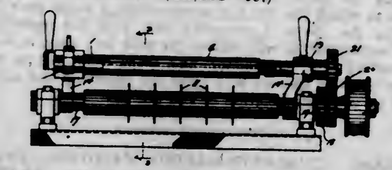


1,573,610. RADIATOR INCLOSURE. MAX JESSEMANN, Brooklyn, N. Y. Filed Oct. 4, 1924. Serial No. 741,690. 3 Claims. (Cl. 257—138.)

1. In a radiator inclosure, a casing of wood, or the like, open at the bottom, comprising a front section and side sections having grill openings, a sheet-metal wall forming the back of the said casing, a cover having grill openings for closing the top of the said casing, and a piece of sheet-metal secured to the inside of the said cover and having a depending portion adapted to closely bear against the back of the said sheet-metal wall and provided with openings registering with the grill openings in the said cover, the edges of the said piece of sheet-metal surrounding the said openings being curled back forming traps for the dust particles suspended in the currents of hot air.

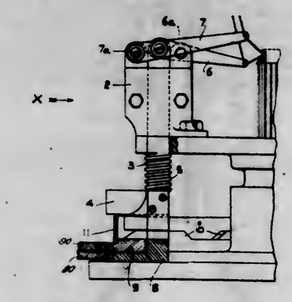
1,573,611. SCREW JACK. AUGUST JOHNSON, Toivola, Minn. Filed Apr. 17, 1924. Serial No. 707,202. 1 Claim. (Cl. 25—102.)

A screw jack comprising a support, a lower screw having threaded engagement with the support and provided at its upper end with a polygonal shoulder, a member provided with a plurality of openings and threadedly mounted upon said screw for adjustment into contact with said support to lock the screw against downward rotative movement with respect to the support and for adjustment into contact with said shoulder to permit the screw to be turned outwardly with respect to the support, an upper screw having threaded engagement with the lower screw and provided at its upper end with a shoulder, a member provided with a plurality of openings and threadedly mounted upon the upper screw for adjustment into contact with the upper end of the lower screw to lock the upper screw against downward rotative movement with respect to the lower screw and for adjustment into contact with the shoulder at the



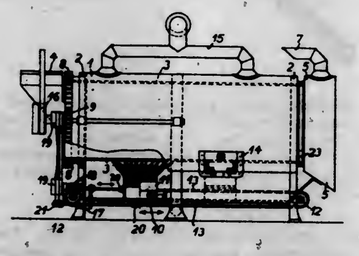
upper end of the upper screw to permit said upper screw to be adjusted upwardly with respect to the lower screw, and a cap or rest carried by the upper screw.

1,573,612. HAND GRIP FOR GOLF CLUBS. WALDO C. JOHNSTON, Cooperstown, N. Y. Filed Nov. 20, 1923. Serial No. 675,874. 4 Claims. (Cl. 273—81.)



1. A separable hand grip adapted to be applied to a shaft, comprising a plurality of thin segments, each of slightly less radius than that portion of the shaft to which it is to be applied, and means for securing the segments to the shaft, the segments being spaced apart from each other.

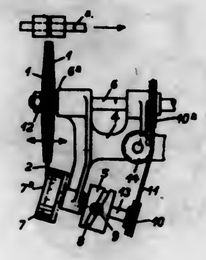
1,573,613. METHOD OF SPACING CORES. ROBERT McC. JOHNSTONE, Roselle Park, N. J., assignor to Cameron Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed May 2, 1923. Serial No. 636,133. 3 Claims. (Cl. 164—69.)



1. The method of spacing individual cores on a winding shaft which consists in securing a relatively long core member on the shaft, and then subdividing said core member into a group of individual cores while held on the shaft, which group is left undisturbed on the shaft.

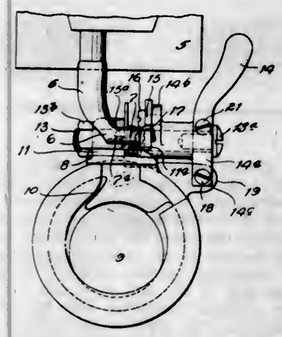
1,573,614. KNITTING MACHINE. THOMAS HENRY JONES, Nottingham, England. Filed Jan. 27, 1925. Serial No. 5,070. 3 Claims. (Cl. 66—12.)

1. In a knitting machine, the combination with a rotatable cylinder carrying the needles, of guides for delivering thread to the needles, arranged to move so as to occupy alternately different positions, whereby thread from any guide may be transferred from the back to the front of the fabric, or vice versa, accordingly as the guide is operated, stationary supports for the thread guides, a pattern cam ring arranged concentrically with the needle cylinder and operating to directly move the thread guides so as to deliver their threads to the needles to produce determined designs in the fabric being knitted, the cam ring being capable of variable rotary movements with reference to the movements of the needle cylinder, whereby the thread guides will function in differently timed relations to the knitting operations to cause different effects in the completed article to be produced, accordingly as the cam ring is operated.



1,573,615. DRYING APPARATUS FOR TOBACCO AND THE LIKE. EWALD KOERNER, Dresden, Germany. Filed Aug. 3, 1925. Serial No. 47,841. 3 Claims. (Cl. 34—5.)

2. A conveying device for use in an apparatus according to claim 1, comprising an endless travelling chain to which the fire box is connected, a worm gear for driving the chain, a reversing belt gear for operating said worm gear, a belt shifter for said belt gear, a lever controlling said belt shifter, and stops connected to the chain so as to operate said lever for reversing the movement at each end position of the fire box.



1,573,616. CIGARETTE-MAKING MACHINE. EWALD KOERNER, Dresden, Germany. Filed Aug. 3, 1925. Serial No. 47,842. 3 Claims. (Cl. 131—37.)

3. In a cigarette-making machine, the combination with a fly cutter secured to a rotatable shaft and provided with an eccentric cutting edge, of a grinding roller, a shaft arranged in an oblique position relative to the cutter shaft and holding said roller so that it can be swept by the edge of the cutter, means for communicating rotation from one shaft to the other, a cam secured to the grinding shaft, and a stationary element engaging

said cam so as to cause the rotating grinding shaft to be reciprocated in an axial direction and maintain uniform engagement between the grinding roller and all parts of the eccentric cutting edge.

1,573,617. SEWING MACHINE. HARRY W. KRAG, St. Louis, Mo., assignor to American Shoe Machinery and Tool Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 4, 1922. Serial No. 599,072. 10 Claims. (Cl. 112—51.)

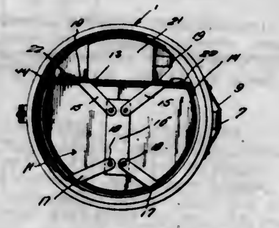
1. A sewing machine comprising a work support provided with a channel cutter, a presser-foot, and a spring-pressed member adapted to engage work comprising an upper layer and a lower layer projecting beyond said upper layer, said spring-pressed member being adapted to guide the work by contact with the marginal edge of the upper layer thereof and being adapted to press the work against said channel cutter by contact with the upper surface of the lower layer thereof.

1,573,618. WINDSHIELD CLEANER. CHARLES F. LAGANKE, Cleveland, Ohio, assignor to The Outlook Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 16, 1922. Serial No. 529,610. 2 Claims. (Cl. 15—256.)

1. In windshield cleaning apparatus, the combination of a resilient wiper carrying arm composed of two sections formed of sheet metal stampings and having flat overlapping portions, a headed screw passing through

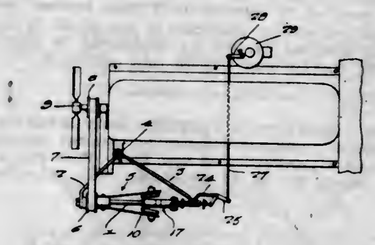
the overlapping portion of one of the sections and threaded into one of a plurality of spaced threaded openings in the other of the sections to clamp said over-

lapping portions together, a wiper supported by said arm in operative relation to the windshield pane, and means for actuating the arm to impart movement to the wiper.



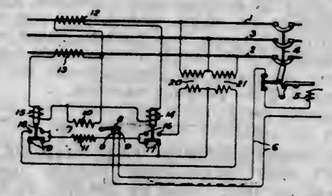
1,573,619. TOILET-SEAT COVER. PAUL JOSEPH LEMMER, Danbury, Conn. Filed Dec. 21, 1921. Serial No. 523,892. 1 Claim. (Cl. 4—248.)

A toilet seat cover formed from pliable material and having a centrally disposed opening, said cover being split, thereby forming adjacent ends a downwardly extending annular member carried by the inner edge of the cover and having a split in registration with the split in the cover and a downwardly extending water engaging member carried by one of the adjacent ends of the cover and downwardly extending annular member adjacent the split and adapted to be engaged by water during a flushing operation whereby the cover will be moved with its ends in advance of the main body of the cover.



1,573,620. MEAL KIT. JOSEPH B. ALLSTON, Georgetown, S. C. Filed Nov. 4, 1924. Serial No. 747,821. 1 Claim. (Cl. 206—4.)

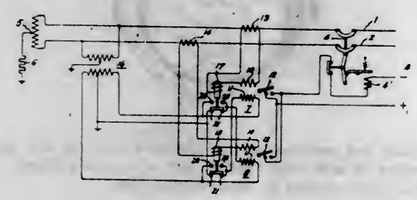
In a structure of the class described, a holder for a plurality of superposed pans comprising a backing plate provided with vertical end flanges, and at the center of its top and bottom with inwardly converging arms, a pair of U-shaped retainers, connections between the



angular end portions of the retainers and the free end portions of said arms, and a pair of spaced vertical retaining ribs carried by said backing plate.

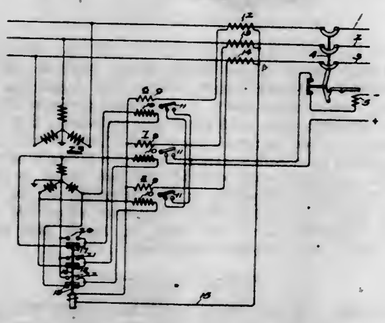
1,573,621. AUTOMATIC SPEED-CONTROLLED DEVICE. OSCAR ALSTAD, Evansville, Minn. Filed Apr. 15, 1925. Serial No. 23,321. 4 Claims. (Cl. 264—15.)

1. In a speed control device of the class described, a relatively stationary shaft, means for supporting said shaft from a motor block, a centrifugal governor slidable and rotatable upon said shaft and embodying a rotating pulley, a slide mounted upon said shaft, a bell crank supported from said shaft, a connection between said bell crank and said slide whereby the bell crank is swung upon its pivot according to the movement of the slide, and adjustable spring means supported upon said shaft and cooperable with said slide to resist said sliding movement in a rearward direction.



1,573,622. PROTECTIVE SYSTEM. JOSEF BIERMANNS and OTTO MAYR, Karlshorst, Germany, assignors to General Electric Company, a Corporation of New York. Filed Oct. 17, 1924. Serial No. 744,197. 10 Claims. (Cl. 175—294.)

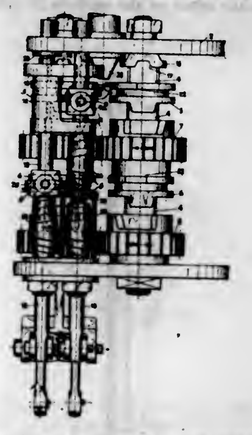
1. A protective system for an electric circuit comprising a relay having a current winding and a potential winding, and relay means operative in response to an abnormal condition on said circuit selectively to effect



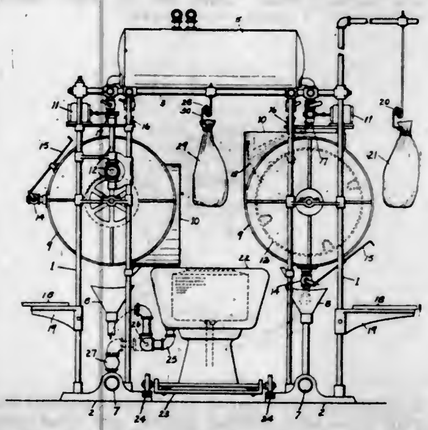
the energization of said potential winding in accordance with the potential difference between two of the conductors or said circuit.

1,573,623. PROTECTIVE SYSTEM. JOSEF BIERMANNS, Karlshorst, Germany, assignor to General Electric Company, a Corporation of New York. Filed Feb. 20, 1925. Serial No. 10,603. 5 Claims. (Cl. 175—294.)

1. A protective system for an electric circuit comprising a relay having a current winding and a potential winding, and means arranged normally to connect said potential winding for energization in accordance with the potential to ground of one of the conductors of the circuit operative in response to a fault between said conductor and another conductor of the circuit to connect said potential winding for energization in accordance with the potential between said conductors.



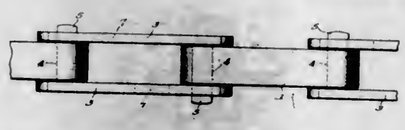
1,573,624. PROTECTIVE SYSTEM. JOSEF BIERMANNS, Karlshorst, Germany, assignor to General Electric Company, a Corporation of New York. Filed Feb. 21, 1925. Serial No. 10,975. 5 Claims. (Cl. 175—294.)



1. A protective system for an electric circuit comprising a relay having a current and a potential winding and means arranged normally to connect said potential winding for energization in accordance with the potential between two of the conductors of said circuit, and operative in response to a fault to ground on one of the conductors of the circuit to connect said potential winding for energization in accordance with the potential to ground of the grounded conductor.

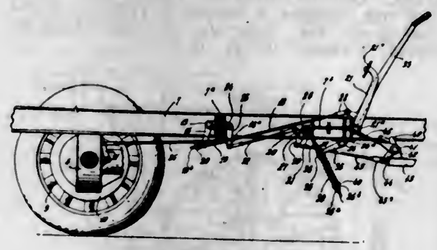
1,573,625. SINGLE-THREAD LACE-BRAIDING MACHINE. CARL BIRKENHAUER, Barmen, Germany. Filed Aug. 30, 1921. Serial No. 497,072. 21 Claims. (Cl. 96—12.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a lace braiding machine, a plurality of rotatable and arrestable carrier drivers adjacent to each other, means for rotating the drivers each clockwise and counterclockwise, and guide members adapted to be moved into and out of the path of the carriers so as to keep the carriers in engagement with the operating drivers and to prevent the carriers from travelling into the path of a driver adjacent an operating driver.



1,573,626. LAUNDRY APPARATUS. CHARLES L. BEALEY, Chicago, Ill., assignor of one-half to Charles F. Noftzger, Chicago, Ill., and of one-half to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 3, 1923. Serial No. 655,459. 13 Claims. (Cl. 68—18.)

8. In a laundry apparatus, the combination of a washing machine, a portable extractor adapted to be positioned to receive the laundry from the washing machine, a waste pipe for said washing machine, and an adjustable waste connection for said extractor adapted to be connected to said waste pipe when the extractor is in position to receive the laundry discharged from said machine.



1,573,627. CHAIN. LAWRENCE E. BAILL, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Oct. 8, 1924. Serial No. 742,430. 2 Claims. (Cl. 74—32.)

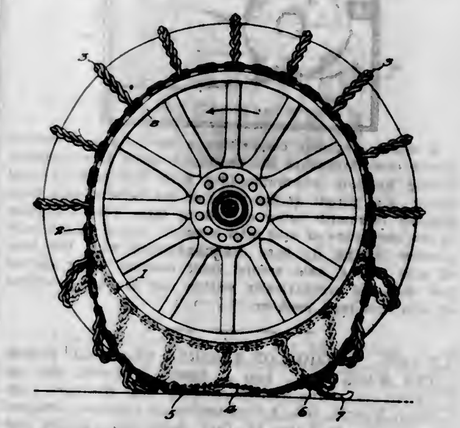
1. In a chain, a link having an elongated transverse slot at each end forming a pintle bearing at each end of the link, and a link comprising a pair of oppositely disposed similar side bars, a pintle rigidly secured to and projecting laterally from each side bar, said pintles having their free ends expanded in a transverse direction, the expanded ends of said pintles being insertable through the end slots of said first named link, when the

side bars are held at an angle to the latter, each side bar having a substantially key-hole shaped aperture adapted to engage in its reduced portion the projecting end of the pintle of the other side bar under the expanded portion of the said pintle for preventing relative lateral movement of said side bars.

1,573,628. METHOD OF AND MEANS FOR CONTROLLING THE OPERATION OF MOTOR VEHICLES. ANDREW K. BRUMBAUGH, Ardmore, Pa., assignor to The Autocar Company, Ardmore, Pa., a Corporation of Pennsylvania. Filed Jan. 6, 1925, Serial No. 786. Renewed Jan. 8, 1926. 14 Claims. (Cl. 192—2.)

1. The combination with a motor-vehicle having brake actuating mechanism and power applying devices normally operable from the driver's seat, of means located at a point remote from the driver's seat for releasing the vehicle brakes and simultaneously applying the power.

1,573,629. METHOD OF MAKING BLANKS FOR NOISELESS GEARS. JAMES H. CARVER, Carmen, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 19, 1924. Serial No. 693,938. 5 Claims. (Cl. 154—2.)



1. The method of making blanks for gears and the like which comprises taking woven textile material which has been treated with a binder, cutting the material into strips in such manner that each strip has a plurality of segmental elements which are joined along one edge only by a few threads, the elements of said strips being counterparts, assembling the strips in a circular mold to form a stack by bending them at said connecting threads, and finally subjecting the stack to heat and pressure to cause the binder to hold the material under compression.

1,573,630. SAFETY-RAZOR-BLADE HOLDER. NEWTON E. CHARLTON, Clayton, N. Mex. Filed Apr. 13, 1925. Serial No. 22,808. 1 Claim. (Cl. 30—25.)
